The total cost of this addition is estimated at $140,000. In combination with loops built the same year and certain additions made to other compressor stations, the increase in capacity will be in the order of 50 million cubic feet per day.

At Houstonia compressor station, we will be required to install in 1945 one 1300 horsepower Cooper-Bessemer compressor unit at an estimated cost of $175,500 which figure includes the cost of extending the main building, extending the present cooling tower and building certain additions to the existing piping system in and about the compressor station. The capacity increase—

Q. (Interposing) You do not need to repeat that each [fol. 6072] time. What you have heretofore said would apply to each of these, would it not?

A. That is correct.

Q. With respect to the increase in capacity?

A. That is correct.

At Louisburg compressor station, we will install one 1000 horsepower Cooper-Bessemer compressor unit at an estimated cost of $140,000.

This cost included the investment involved in extending the main building to accommodate this new unit and making certain additions to the cooling tower and yard piping.

Q. Proceed with your description of these compressor stations.

A. That is the extent of the compressor station additions which we estimate will be required in the year 1945. I am now referring, of course, to compressor stations east of Liberal station, including Liberal station itself.

Q. Are there to be any additions to the Liberal station in this year of 1945?

A. No.

Q. Now, I note, Mr. Burnham, that in the preceding year 1944, you expect to install one 1300 horsepower Cooper-Bessemer engine at Houstonia and that you plan to do the same thing in the next year, that is, in 1945. Is that correct?

[fol. 6073] A. That is correct.

Q. And in each of those years, you extend the building and rearrange the piping and so forth in order to accommodate the installation of one additional engine, is that correct?

A. That is correct except I do not like your choice of words when you say, "rearrange the piping". It merely means to extend the piping.

Q. Well, in the preceding year, that is, in 1943, you install two 1300 horsepower Cooper Bessemer engines, do you not?

A. That is correct.

Q. Now, why wouldn't it be more economical to do all of that work in one year than to go in each successive year and extend the building each time?

A. Well, there is considerable expenditure involved in each of these additions and while it is true that possibly the contractor could execute this work all at one time a little more efficiently than in steps such as I have indicated, nevertheless, the labor involved in installing these units is not the greater part of the costs of making the additions.

The cost of the unit itself and accessory equipment represents the greater part of the cost of making the addition.

We feel that it is economy for the company to proceed in [fol. 6074] the manner that I have indicated, spending its money and making its capital expenditures in the summer of the year preceding the winter for which we need this additional capacity.

Q. You mean to say, then, that if you knew for a certainty in 1943 when you went about increasing the capacity of the Houstonia station, that you were going to have to have four 4300 horsepower Cooper-Bessemer engines in order to meet the load which you knew you were going to have to meet in 1945, that you would not install all four of them at one time in 1943 but would proceed to install two in 1943 and then extend the building in 1944 and install one more and then extend the building in 1945 and install the fourth one?

Is that a correct interpretation of your testimony?

A. Yes, sir, but I did not finish a while ago. We have such things as that in mind when we are making these present additions today.

We install a temporary wall in the end of these buildings, that is in the end of the basement, which makes the extension of the building a rather simple matter and the retirements which necessarily follow the destruction of the temporary wall are only nominal amounts.

Q. Do any of your costs in Exhibit 47 include the retirements? A. Yes, sir.

[fol. 6075] Q. Do you have those amounts separately shown?

A. I do not. They are, as I said before, only nominal. I have retirements as shown in my working papers covering the additions to Tuscola, Glenarm and Pleasant Hill compressor stations which have only recently been completed but due weight was given to the retirements which take place in subsequent additions to compressor stations.

Q. What other retirements have you included in your amounts shown in Exhibit 47?

A. The only retirements I have given weight to are the retirements of these temporary walls that we now install in the end of these compressor stations which compressor stations will be extended from year to year.

Q. Now, the situation which I have described with respect to Houstonia compressor station is also true of other compressor stations, is it not?

A. Yes, but it is not quite so apparent on the other compressor stations.

Q. How about Glenarm? You install one 1000 horsepower Cooper-Bessemer engine in 1944 and then you install another 1000 horsepower Cooper-Bessemer engine in 1945, do you not?

A. Yes, that is true. But take, for instance, Pleasant Hill compressor station. We install one 1300 horsepower unit in 1942; two 1300 horsepower units in 1943 and that [fol. 6076] completes the story for Pleasant Hill compressor station.

The same is true of Centralia compressor station, in which we install two 1300 horsepower units in 1942 and three in 1943 and no further additions are made to that station.

It just happens that in the case of Houstonia compressor, the size of the pipe is such and other matters relating to the load that we do not feel warranted in installing this extra unit prior to the time when it would actually be in use.

We thereby save the interest on the money which is involved and possibly the little extra operating expense that might be required in keeping the unit in ship-shape condition.

Q. Now, the next item you have for 1945 is shown in Line 27, Exhibit 47, "Additions to Gasoline and Dehydration Equipment."

Are those additions to be installed at the Liberal station, according to your estimate?

A. They are.

Q. Will you give a description of those additions?

A. Those additions shown in the year 1945, amounting to $120,000, are practically a duplication of the additions made in the year 1942 as shown on my Exhibit 47.

It consists of two new absorber-contactors; one new boiler; the necessary piping, valves and fittings; insulation and so forth, as well as an extension to the boiler [fol. 6077] house building.

To arrive at the $120,000, I used the same estimate that I used for the year 1942, inasmuch as the increase in the quantity of gas handled through Liberal station indicated that approximately the same increase in gas treating capacity would be required.

Q. And undoubtedly the additions to the gasoline and dehydration equipment in the year 1945 would result in additional revenues derived from the sale of gasoline from the Liberal gasoline plant, is that correct?

A. It would result in additional gross revenue, no doubt.

Q. And it might very well result in additional net revenue, might it not?

A. Depending upon operating expenses.

Q. Now, that completes the capital additions comprehended by your Exhibit 47 through the year 1945. Am I correct in understanding, Mr. Burnham, that at that time, to-wit, at the end of 1945, you will have met the peak day requirements contemplated by Mr. Morton's Exhibit 40 for the year 1946 in the amount of 441,900 M.c.f. except for the readily interruptible industrial load to which you alluded in your testimony late in this morning's session?

A. That is correct.

Q. Going now to the capital additions set forth in Ex- [fol. 6078] hibit 47 for the year 1946, I note that the first item is shown in Line 30 as "Additions to Main Lines" in the total amount of $2,388,100. Is that correct?

A. That is correct.

Q. And also I notice that you have some additions to compressor stations in that year in the amount of $1,229,500, is that correct?

A. That is correct.

Q. What peak are you undertaking to meet now by the installation of these additional facilities?

A. We are undertaking to meet the peak of the winter of '46-'47. The estimate for that winter's peak does not appear—

Q. (Interposing) Does not appear in Exhibit 40, does it? A. That is correct.

Q. Nor does it appear anywhere else in this record, so far as I know, Mr. Burnham. I say that for your information.

A. It is incorporated in my working papers but possibly not on the record.

Q. Well, it is not in your testimony at any rate, is it, that is, any estimate of peak—

Mr. Wheat: (Interposing) Why don't we ask him what it is, if he has got it?

[fol.6079] Mr. Littman: I am not going to ask him what it is unless it is his estimate.

By Mr. Littman:

Q. Is it your estimate?

A. No, it is not.

Q. Of course, you cannot vouch for it, can you?

A. Except I have confidence in Mr. Morton's ability to make these estimates.

Q. I understand that. You have already expressed yourself on that subject.

At any rate, am I correct in understanding that the additions to the main lines in 1946 which are shown in Line 30 of your Exhibit 47 will complete the third loop of the main line east of Liberal station to Dana?

A. I am sorry that, off the record this morning, I indicated to you I would do so but I find now by referring to my working papers that at the conclusion of our construction program in 1946, the third line will be 66 percent completed or the loop constituting the third line will extend over 66 percent of our total distance from Liberal to Dana.

Q. At the end of 1946?

A. That is correct.

Q. Suppose you give us a description of the items comprehended by—

Mr. Culton: (Interposing) Mr. Littman, may I correct [fol. 6080] a statement which you made a while back.

You offered in evidence Exhibit 132 which was Mr. Hinton's estimate of the total amount of production which was required. That is, Mr. Hinton furnished it as having come from Mr. Morton and that carries the totals down through 1946, I believe.

You stated that the estimates were not in the record subsequent to 1946 and evidently you had forgotten that exhibit.

Mr. Littman: Well, Mr. Culton, there is no dispute about what is in the record. The only fault I find with your statement is, in the first place, I did not offer that in evidence.

I had it identified and you offered it in evidence, but that is of small moment.

In the second place, Mr. Hinton stands in no different position in regard to that purported estimate than does Mr. Burnham because it is not his estimate nor is it Mr. Burnham's estimate. I think the record is clear.

Mr. Culton: At any rate, while Mr. Hinton was on the stand you told him the record now contains Exhibit No. 132 and Exhibit No. 131 and it does.

Mr. Littman: Of course it contains it.

Mr. Culton: If the record contains it, it is in.

Mr. Littman: There are some figures in there that have not been vouched for by the estimator thereof. Now, if you will call that probative testimony, you are, of course, [fol. 6081] entitled to your opinion on that subject. I would not call it probative testimony because the man who estimated it has not testified with respect to it.

By Mr. Littman:

Q. Well, Mr. Burnham, will you please proceed with your description of the additions to the main lines in the year 1946?

A. By the year 1946, the system has become pretty well balanced in the way of power as compared to pipe and

the loops required to carry the extra quantities of gas will be more or less of the same length.

In fact, they extend only the distance from the last gate valve into which the third line loop was tied the year before to the next interconnecting gate valve.

Another reason that relatively short loops are required during the year 1946 is the fact that we have looped a sufficient quantity of the then-existing system to a point where a considerable amount of capacity is gained by further looping, that is, per mile of further looping.

I think it has been placed in the record here the fact or statement to the effect that when a new loop is started, relatively little additional capacity results from the first few miles of new loops but, as one proceeds to complete that [fol. 6082] loop, particularly after it has extended for half of the distance from one compressor station to another, the gain in capacity becomes accelerated to a great extent.

Therefore, I thus stated the loops required between our various compressor stations to carry this extra quantity of gas which amounts to some 27 million cubic feet per day are relatively short.

Beginning at Tuscola station; or rather beginning at the end of the Tuscola loop, we shall be required to build 9.08 miles of 26-inch pipe line at a cost of $272,400.

Q. Now, all of the 1946 loops, I presume, will be 26-inch pipe?

A. That is correct.

Q. Then we don't need to repeat that again.

A. All right.

Q. Now, we have the 9 miles running east of Tuscola station.

A. That is right.

Q. What is the next one?

A. The Glenarm loop will be extended 8.14 miles at an estimated cost of $244,200.

Q. What is the mileage on that?

A. 8.14. You understand these mileages bring us to the next gate valve.

Q. Yes.

[fol. 6083] A. That is the reason for the fractions indicated in my figures.

The Pleasant Hill loop will be extended 6.34 miles at an estimated cost of $190,200.

The Centralia loop will be extended for a distance of 8.18 miles at an estimated cost of $245,400.

The Houstonia loop will be extended 8.1 miles at an estimated cost of $233,393.

The Louisburg loop will be extended 8.5 miles at an estimated cost of $262,064.

The Olpe loop will be extended 8.27 miles at an estimated cost of $237,440.

The Haven loop will be extended for a distance of 7.88 miles at an estimated cost of $242,743.

The Greensburg loop will be extended 8.05 miles at an estimated cost of $236,783.

The Liberal loop will be extended 7.56 miles at an estimated cost of $223,458.

In totaling the estimated costs of those loops, I have rounded the figure off to the nearest hundred, giving a total of $2,388,400.

Q. Now, will you describe the additions to compressor stations for the year 1946 in the total amount of $1,229,500?

A. A new unit will be installed at Tuscola compressor station consisting of one 1300 horsepower Worthington [fol. 6084] gas engine driven compressor.

The building will be extended, the cooling tower will be increased in capacity and certain additions will be made to the piping in the yard.

The total estimated cost is $182,000 for that work.

At Glenarm compressor station, a new 1000 horsepower Cooper-Bessemer unit will be installed at a cost of $140,000 which figure includes the cost of extending the main building, making certain additions to the cooling tower and yard piping.

36, Testimony of Glenn G. Bartle	11010	4159
Schedule 3, Estimated Original Gas Content in the Hugoton Field, (Kansas, Oklahoma and North Texas Panhandle), under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	11038	4176
Schedule 4, Estimated unmetered Gas from Panhandle Eastern Pipe Line Company Wells in the Hugoton Field Kansas, connected to Argus Natural Gas Company, Inc. as of July 1, 1941	11041	4181
37, Testimony and Exhibits, Market Value of Leases of Panhandle Eastern Pipe Line Co.	11047	4187
R. J. Wallace	11047	4187
Summary of Market Value of Leases	11064	4199
38, Basic Statistics used in calculating Interest, ad valorem Taxes and operating Expense attributable to unused Capacity	12159	4203
39, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	12162	4206
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	12163	4206
Statement relating to Reproduction Cost—New—June 30, 1941	12164	4207
Summary	12165	4207
39-A, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	13130	4208
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	13130	4208

	Original	Print
Statement relating to Reproduction Cost New—June 30, 1941	13131	4209
Summary	13133	4209
40, Table showing estimated Main Line Sales, years 1941-1946, inclusive	13149	4211
41, Graph showing Sales and Gas Plant by Years, Panhandle Eastern Pipe Line Company and Subsidiary Companies	13150	4213
42, Testimony of C. H. Hinton relating to Future Capital Expenditures and Operating Expenses in Production and Gathering System West and South of Liberal, Kansas	13151	4215
43, Schedules presented in connection with the written Testimony of C. H. Hinton	13193	4244
Schedule 1, Additional Capital Expenditures required to produce and gather Basic Load, or Present Requirements	13194	4244
Schedule 2, Additional Capital Expenditures required to produce and gather Anticipated Increased Load	13195	4244
Schedule 3, Estimate of Operation and Maintenance Costs —west of Liberal Panhandle Field — Basic Load	13196	4245
Schedule 4, Estimate of Operation and Maintenance Costs — west of Liberal Panhandle Field — Estimated Future Load	13199	4251
Schedule 5, Probable Production from Panhandle Eastern's own Wells and Wells under Gas Contracts (Panhandle Field) during the Period July 1, 1940 to December 31, 1956	13202	4257
47, Panhandle Eastern Pipe Line Company and Subsidiary Companies, future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward	13206	4257
48, Statement showing Balance Sheets per Books Panhandle Eastern Pipe Line Company and Subsidiary Companies, as at each December 31, 1930 through 1940 and as at June 30, 1941	13207	4259
49, Income Statement per Books — Period from April 1, 1932 to December 31, 1941	13210	4265
50, Statement showing Earned Surplus per Books, Period from Commencement of Operations to June 30, 1941	13212	4269
51, Statement showing Capital Surplus per Books, Period from September 1, 1930 to June 30, 1941	13214	4273
52, Statement showing Investment in Gas Plant as at each December 31, 1930 through 1940 and as at June 30, 1941	13215	4275
53, Statement of Dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941	13217	4279
54, Statement of Dividends paid on Common Stock from beginning to September 1, 1941	13219	4280
55, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940 and 1941	13220	4281
55-A, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940, and 1941	13221	4283
56, Statement of Gas Produced, Period from April 1, 1932 to June 30, 1941	13222	4284
57, Statement of Gas Purchased, Period from April 1, 1932 to June 30, 1941	13223	4285

	Original	Print
58, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941 and Schedule showing Details of Sales to various Types of Customers, 1939 and 1940	13224	4287
Schedule 1, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941	13224	4287
Schedule 2, Detail of Sales to Gas Utilities; years 1939 and 1940	13225	4289
Schedule 3, Detail of Sales to Industrial Customers, years 1939 and 1940	13227	4293
59, Statement of Gas Revenue by States, Period from April 1, 1932 to December 31, 1941	13229	4297
60, Statement showing Sales Agreements with other Gas Companies as at June 30, 1941	13230	4299
61, Study of Current and Future Trends in Commodity Prices and Wages, by David Friday	13238	4310
Graph showing Wholesale Prices from 1800 to 1940	13239	4311
Index Numbers of Wholesale Prices of Commodities by Groups	13241	4313
Commodity Price Indexes of Ten Countries	13247	4318
Statement relating to Tax Collections in the United States, from 1913 to 1942	13258	4328
Index Numbers of Wholesale Prices of all Commodities by Months, from 1890 to 1940	13263	4333
Statement relating to Wholesale Prices for Week Ended September 20, 1941	13264	4335
Graph relating to Average Weekly Earnings in Manufacturing Industries of New York State from 1914 to 1941	13266	4339
Graph relating to Average Hourly Earnings and Average Actual Hours per Week per Worker in twenty-five Manufacturing Industries from 1914 to 1941	13267	4341
Graph relating to Average Cost of Living from 1935 to 1939	13268	4343
62, Deduction from Cost of Reproduction New for Depreciation and Present Value of Plant, Property and Business as of June 30, 1941	13270	4345
Letter from P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, September 30, 1941	13271	4345
General Summary	13272	4346
63, Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as compared with other Divisions of the Utility Industry, Summary of Analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corporation	13321	4349
Table of Contents	13322	4349
Statement of Experience and Qualifications of Paul B. Coffman	13327	4354
Investors' Appraisal of Capital Risks in Various Divisions of the Utility Industry	13348	4371
Statement A, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13351	4372

	Original	Print
Statement A-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13352	4375
Statement B, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13353	4377
Statement B-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13354	4379
Statement C, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13355	4381
Statement C-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13356	4383
Statement D, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13357	4385
Statement D-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941 January-August, Both Inclusive	13358	4387
Statement E, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13359	4389
Statement E-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13360	4391
Statement F, General Information Covering each Company as to the Nature and Size of the Business and the Territory served	13361	4393
64, Statistics supporting Data, Exhibit 63, Appendixes A, B, and C	13379	4414
Appendix A, Complete List of Companies studied and Reasons for eliminating those not used to determine Investors' Appraisal of Risks of Capital	13380	4414
Appendix B, Securities of forty-three Natural Gas Companies considered Representative of the Industry, etc.	13387	4426

Index, Volume X.

Appendix C, Working Papers showing the Computation of Investors' Appraisal of the Risks of Capital	13398	4446
Water Companies	13399	4447
Electric Operating Utility Companies	13420	4461
Manufactured and Mixed Gas Companies	13465	4501
Natural Gas Companies	13495	4521
65, Study relative to Rate of Return on Panhandle Eastern Pipe Line Company prepared by Paul B. Coffman, Vice President, Standard and Poors Corporation	13533	4547
Table of Contents	13534	4547
Chart No. 1, Main Transmission System of Panhandle Eastern Pipe Line Co. and Subsidiary	13542	4559
Chart No. 2, Growth of Natural Gas Industry in United States of America from 1906 to 1940	13548	4567
Chart No. 3, Consumption of Natural Gas in United States of America from 1919 to 1940	13550	4571
Chart No. 4, Revenue from Natural Gas Consumed in United States of America from 1919 to 1940	13552	4573

	Original	Print
Chart No. 5, Average Revenue per M. C. F. from 1929 to 1940	13554	4575
Chart No. 6, Panhandle Sales by States, vs. Industry Consumption of Natural Gas from 1934 to 1940	13556	4577
Chart No. 7, Trends of Gross Revenue from 1934 to 1940, Panhandle vs. other Pipe Line Companies and Industry	13558	4579
Chart No. 8, Operating Ratio of Panhandle Compared with other Pipe Line Companies from 1934 to 1940	13560	4581
Chart No. 9, Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Company from 1934 to 1940	13562	4583
Chart No. 10, Percent Earned on Invested Capital of Panhandle Based upon Capital Structure	13564	4585
Chart No. 11, Percent Earned on Invested Capital of Panhandle Based upon Net Property, Intangibles and Working Capital	13566	4587
Chart No. 12, Return to Common Stockholders of Panhandle Eastern Pipe Line Company from 1934 to 1940	13568	4589
Chart No. 13, New Tax Bill will reduce Income sharply Computations based on Operations — Twelve Months ended June 30, 1941	13570	4591
Chart No. 14, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13572	4593
Chart No. 15, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13574	4595
Chart No. 16, Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Company—from 1930 to 1941	13576	4599
Chart No. 17, Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company	13578	4603
Chart No. 18, Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Company from 1937 to 1941	13580	4605
Chart No. 19, Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks from 1937 to 1940	13582	4607
Chart No. 20, Current Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks	13584	4609
Chart No. 21, Cost of Financing Northern Natural Gas Company Common Stock — Offered to Public on September 10, 1941	13586	4613
Chart No. 22, Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Company	13588	4615
Chart No. 23, Continuing Growth of Panhandle System Indicates Future Needs for New Capital	13590	4617
Chart No. 24, Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941	13592	4621
Chart No. 25, Preferred Stock Unusual in Natural Gas Pipe Line Companies	13594	4623
Chart No. 26, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13596	4625
Chart No. 27, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13598	4627
Chart No. 28, Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure	13600	4629

	Original	Print
Chart No. 29, Dollars needed Annually by Panhandle for Operations and Maintenance	13602	4633
Chart No. 30, Dollars needed Annually by Panhandle for Taxes	13604	4637
Chart No. 31, Dollars needed Annually by Panhandle to return Capital to Investors when Gas Reserves are Exhausted	13606	4639
Chart No. 32, Dollars needed Annually by Panhandle for current Capital Requirements — Bonds	13608	4641
Chart No. 33, Dollars needed Annually by Panhandle for current Capital Requirements — Preferred Stock	13610	4643
Chart No. 34, Dollars needed Annually by Panhandle for current Capital Requirements — Common Stock	13612	4645
Chart No. 35, Dollars needed Annually by Panhandle for total current Capital Requirements — Total Invested Capital	13614	4647
Chart No. 36, Dollars needed Annually by Panhandle to provide Service to Customers, a Fair Return to Investors and restore Invested Capital when Gas Reserves are Exhausted	13616	4649
Chart No. 37, Dollars needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors and restore Invested Capital when Gas Reserves are Exhausted	13618	4651

444 III

At Louisburg compressor station, a new 1000 horsepower Cooper-Bessemer unit will be installed at an estimated cost of $140,000, including the cost of extending the main building, cooling tower and making certain additions to the yard piping.

At Olpe compressor station, a 1300 horsepower Worthington unit will be installed at an estimated cost of $162,500, which cost includes the necessaary additions to the main building, cooling tower and yard piping.

At Haven compressor station, a new 1300 horsepower Cooper-Bessemer unit will be installed at an estimated cost of $162,500, which figure includes the cost of building certain additions to the main building, the cooling tower and to the piping in the yard.

At Greensburg compressor station, a like unit will be installed and it is estimated that this work will also cost $162,500, which figure, as I have mentioned before, in- [fol. 6085] cludes extending the main building and building certain additions to the cooling tower and yard piping.

At Liberal compressor station two 1000 horsepower Cooper-Bessemer units will be installed at a cost of $280,000, which figure includes extending the main building, enlarging the cooling tower and the making of certain additions to the yard piping.

That constitutes all of the additions to compressor stations to be made in the year 1946. A resume of our additions at the end of that period may be of interest for the purposes of the record.

According to my figures, at the end of 1946 the total horsepower installed in our various compressor stations, beginning at Tuscola station and proceeding westward, will be as follows:

Tuscola—10,900 horsepower

Glenarm—11,000 horsepower

Pleasant Hill—11,700 horsepower

Centralia—13,000 horsepower

Houstonia—13,000 horsepower

Louisburg—13,000 horsepower

Olpe—14,300 horsepower

Haven—14,300 horsepower

Greensburg—14,300 horsepower

Liberal—14,000 horsepower.

[fol. 6086] You will note from these figures that, generally speaking the power increases from the east to the west indicating that considerable quantities of gas are delivered at various points starting at the eastern terminus of our lines and dropping off at various points in Illinois and Missouri.

Q. What will be your total daily capacity as of the end of 1946 after all of the capital additions contemplated by Exhibit 47 will have been installed?

Mr. Culton: You mean peak load?

Mr. Littman: Yes, 24-hour daily capacity which is comparable to those which you have heretofore given.

The Witness: The total sales or delivery capacity will be 457,250 M.c.f. at the conclusion of our construction in the year 1946.

By Mr. Littman:

Q. Mr. Burnham, what studies, if any, did you make to determine that it would be most economical and expedient to install these capital additions in the manner contemplated by Exhibit 47 and as described in your testimony?

A. Do you refer to the size of the pipe and such matters as that?

A. I am referring particularly to your selection of installing loop lines in a given quantity as compared to so much horsepower and, in some years, you install horsepower and no main lines.

[fol. 6087] In other words, what studies did you make to determine the precise manner and method that you have selected for the installation of these capital additions?

A. Well, if I recited all of the studies that we have made in respect to that question, it would take considerable time.

However, I will say this: That it has been our experience and our economic studies made from strictly an academic point of view with no particular designed capacity in mind, indicate that if we maintain a ratio between the suction and discharge of our compressor stations close to 1.6, that the maximum economy will result in the over-all picture of transporting this gas.

That is particularly true of main line stations. I would not say it is true of field stations and, as we make these flow studies which are the basis of my estimates, we determine the amount of looping required in each instance to approximate this ratio that I just mentioned of 1.6.

Mr. Culton: Mr. Burnham, would you tell us just exactly what that ratio means?

The Witness: As I just stated, it is the ratio of the suction to the discharge pressure.

Mr. Culton: How do you determine that?

The Witness: I beg your pardon, that is the ratio of the discharge to the suction.

[fol. 6088] Mr. Culton: Will you get it down so a layman like myself can understand it? How do you determine what that relationship is?

The Witness: I will refer to some of the testimony that I gave last year.

I mentioned the fact that when we set about to make one of these flow studies, we started at Dana, Indiana, with the given quantity of gas to be delivered at that point and with the given pressure to be maintained at that point.

By the application of certain formulae, we worked backwards down the line to the next point of gas delivery.

By Mr. Littman:

Q. Now, just there, you speak of certain formulae. What are those formulae, generally?

A. They are gas flow formulae derived from certain fundamental data which have been used by the industry

for a number of years and to which we have applied certain refinements.

Our experience has shown that the coefficients that we have applied in our calculations come very close to giving the correct answer.

Q. Are these formulae called by a name in the industry?

A. Gas pipe line flow formulae as a group or as a classification.

Now, among them are the formulae developed by T. R. [fol. 6089] Weymouth which, until a few years ago, we used exclusively. The refinement I referred to just a moment ago is an adaptation of Weymouth's Formula to more nearly fit the condition which is experienced when transporting large volumes of gas to large pipe lines and it involves the application of a coefficient developed by a physicist by the name of Nikuradse.

Nikuradse published, a few years ago, a flow formula very similar to Mr. Weymouth's Formula which involved the flow of gas or assumed the flow of gas through a perfectly smooth pipe line under perfect conditions.

By using Nikuradse's Coefficient with a correction factor which compensates for the fact we do not have a perfect line because a perfect line could not be built under any conditions for a long distance, we are able to predict within very close limits the pressure drop along our system, the suction pressures at these various compressor stations in which we are vitally interested and, of course, the pressures at the points of delivery.

Q. Can you determine from the application of those formulae precisely where to install horsepower along your system and precisely whether it is economical to install loop lines rather than compressor stations or vice versa, as a matter of economics?

A. Those formulae constitute tools to determine those things. Of course, the power will be installed at the ex- [fol. 6090] isting compressor stations. The formula gives us the suction pressure at these stations and since our discharge pressures are limited by the maximum working pressure on the line, namely, 300 pounds per square inch gage, we, by means of comparing suction to discharge,

know how closely we are approaching the theoretical ratio of 1.6 which gives us maximum economy.

Mr. Culton: That is what I wanted you to tell us, what 1.6 represents. What two figures do you put together to get your ratio, suction pressure and discharge pressure?

The Witness: Absolute. That means suction pressure expressed in pounds absolute divided into discharge pressure in pounds absolute.

Mr. Culton: That is what I wanted you to give.

The Witness: Now, if we used a ratio or if we let the suction drop so low that a ration of 1.8 might result, the power in each of these stations would increase or the power required at these stations would increase tremendously.

That is, instead of having 14 engines in a row, say, at Liberal station, we might have as many as 25 engines in a row there and the resulting labor, maintenance, cost of fuel and such other items going into the cost of compressing the gas, would amount to a very large figure at that one station.

Well, multiply that by 12 stations and you have a situation which would increase in the transportation of gas in a very uneconomical manner.

[fol. 6091] Mr. Wheat: Do you mean increase the cost?

The Witness: What did I say?

Mr. Wheat: You said increase the transportation of gas.

The Witness: I meant to say, increase the cost of transportation of gas.

Mr. Wheat: Is the converse true, that if you had a pressure situation which resulted in a factor of 1.3 or 1.4, you would have greater cost to get your gas through?

The Witness: Yes. In that event, we would have to have tremendous investments in pipe lines in order that the suction pressure at these stations which would be operating at a ratio of 1.3 would be so high as to result in the ratio between the discharge and the suction of 1.3.

Mr. Wheat: Is this 1.6 figure a theoretical figure or something based on studies of your line which show the most economical point?

The Witness: It is both. It is based on our experience. It is based on academic studies which we have made which indicate that the ratio should be in that order.

Mr. Culton: In other words, pardon me, Mr. Littman, the same principle relates to field lines, does it also, in keeping the pressures on the most economic ratio?

The Witness: The most economic ratio in the field might not be as low as 1.6.

Mr. Culton: Whether it is 1.6 or not, is there a point [fol. 6092] in the field which you find to be the most economic point?

The Witness: There is, and that point is determined by the cost of gas used as fuel in the field and other costs that go into compressing, but principally the cost of fuel.

Mr. Culton: Then in the economical standpoint of pipe lines, it is important to keep the suction pressure at the compressor station high enough so that when it is compared to the outlet pressure, approximately that ratio will result, is that true?

The Witness: Yes, that is true.

By Mr. Littman:

Q. I note in the year 1944 you installed $6,684,100 of additions. In order to secure additional capacity of 24,650 M.c.f. for 24 hours, how do you know that it is economical to spend that much money to take on that additional capacity, or don't you know that?

A. We do know, within certain limits, of course.

Q. While you are at it, please tell me how you go about determining that.

A. I thought I had already told you because we try to stay as closely as possible to this ratio of 1.6. That results in the maximum economy in the over-all picture, according to our studies and our experience.

[fol. 6093] By Mr. Goodman:

Q. Assuming that the work has to be done, is that right?

A. Always.

Q. I see, but isn't that somewhat begging the question? Doesn't whether or not the work is to be done depend upon the economy of doing it?

A. As I understand the way a natural gas pipe line company is operated and I hope I understand it, you have to take care of your markets and, quite naturally, in making these economic studies, I have assumed that there will be no shortage of gas on these cold days.

Q. So that, for the purposes of giving testimony in a rate case, you proceeded to exemplify this taking care of the markets with the exhibit which you have introduced?

A. I would not say that. I say that I was handed certain estimates as to what our maximum requirements would be and I was asked to prepare studies showing the most economical way of serving those markets those quantities of gas indicated in those estimates.

Q. And your testimony is limited to that?

You did not answer.

A. Is that a question?

Q. Yes.

[fol. 6094] A. I assume that this information I have developed would be applicable to any similar situation.

Q. Well, there is nothing in your testimony to the effect that Panhandle Eastern actually contemplates doing this, is there?

A. Well, take the year 1942, we are already doing some of that work.

Q. Yes, but beyond that, you would not make a definite commitment?

A. I have already testified we have not submitted budgets nor have they been approved.

Q. In other words, the situation may arise in which it will not pay you to supply the additional gas as estimated by Mr. Morton?

A. There are a lot of things that can happen. It might come to pass that we may have to supply greater quantities than those shown by Mr. Morton's estimate.

In that event, we will be forced to make greater investments than I have shown here.

Q. Have you prepared estimates in that direction?

A. I have sufficient information so that when I am confronted with one of these estimates of capacity requirements, I can very shortly furnish an estimate of the cost of providing the necessary capacity.

. . . . . .

[fol. 6095] Q. Mr. Burnham, in making your estimates as to the most economical method of adapting your lines to the required capacity, have you taken into consideration any alternative methods of supplying capacity?

A. We have, in the last year or two, given some consideration to developing underground storage and are at the moment engaged in activities which might result in the acquisition of underground storage eventually, but that is more or less an ephemeral sort of matter because underground storage is like oil, it is where we find it. You cannot build it, that is, you cannot build it in any huge [fol. 6096] quantities such as we would require to get any great benefit so if certain gas fields are later acquired by us, assuming they might be acquired, there is a possibility that underground storage might be utilized by this company to get the benefit for its customers.

Q. You have negotiations pending for the acquisition of underground storage, have you not?

A. I understand that we have.

Q. And in what fields do they relate?

A. I think those negotiations involve fields in Michigan.

Q. And what part of Michigan?

. . . . . .

[fol. 6097] The Witness: May I add something. We do know that, as a matter of supplying capacity, Exhibit 47 does reflect, in a positive manner, means by which capacity can be installed without any question about whether the proper kind of a storage field is developed or whether liquified storage can be developed to the extent—

Mr. Goodman: (Interposing) Now, Mr. Burnham—

The Witness: (Continuing) And at the figure that would result in a saving.

. . . . . .

[fol. 6098] By Mr. Goodman:

Q. Now, Mr. Burnham, you mentioned as an alternative means of securing capacity, liquefaction.

To what extent have you considered it?

A. We are following the development of the project at Cleveland, Ohio. That was the first plant ever built in the United States utilizing that principle.

Mr. Littman: That plant is owned by the East Ohio Gas Company, is it not?

The Witness: That is correct.

And should it develop that liquefaction is the answer to this storage problem and should we come to the conclusion that it may result in economies greater than, say, starting our third line, I believe that there is no question but what we may have recourse to liquified storage.

By Mr. Goodman:

Q. Do you have cost figures at your hands here as to the availability of liquefaction?

A. I do not.

Q. But it is something that you have in mind?

A. Yes, sir.

Q. And it looks to you as a distinct possibility worthy of being kept in mind?

A. I would not go as far as to say a distinct possibility. It is a possibility.

[fol. 6099] Q. At any rate, here is one concern which saw fit to liquefy gas in preference to putting in pipe line carrying capacity.

A. I do not know as to that because that same concern is now considering the building of a new pipe line into that area.

I would conclude that possibly their desire to build another pipe line into that area might be prompted by the fact that liquefied storage did not entirely solve their problems.

Q. I presume so, and they may need more capacity.

Mr. Littman: Pardon me for interrupting there, Mr. Goodman, but I should like to inquire from where to where is this proposed line expected to run?

The Witness: The information I have is only hearsay, but I understand it is to originate in the midcontinent, possibly in Louisiana and is to be built to some point in Ohio.

By Mr. Goodman:

Q. Well, you have in mind, Mr. Burnham, that liquefaction is not a means of a constant supply of gas. It is only a means of storing gas for future use, isn't that so?

A. That is so, and the same can be said of underground storage.

Q. Yes, but at the same time, though, while they may at times be used for the same purpose, that purpose coin- [fol. 6100] cides with the fact you were talking about meeting a peak demand, isn't that so?

A. That is correct.

Q. And with a pipe line, you also have the advantage of supplying a constant demand, is that right?

A. That is right.

Q. So that the building of a pipe line or contemplating a pipe line where there is a liquefying plant is pretty poor evidence of the efficiency of the liquefaction plant by itself, isn't it?

A. Well, it is all a matter of load factor. Quite naturally, if a load develops that would require a pipe line to operate in the order of 99 percent of its capacity or better at all times, there would be no gas available to be placed in storage.

However, if there is capacity at or during off-peak periods available for storage, either in the underground reservoirs or as liquefied gas, the application of storage in that event is possible.

Q. Yes. Now, another alternative is above-ground storage, is it not?

A. Yes, but that is very expensive.

Q. In other words, you are definitely of the opinion that the pipe line capacity is a cheaper means even of meeting [fol. 6101] peak loads than above-ground storage?

A. Yes, indeed, it is.

Q. And no doubt you have considered in that connection the cost of above-ground storage?

A. We have.

Q. Do you review that occasionally?

A. It is not necessary, in such periods as this, with steel prices rising, to give a great deal of consideration to storage which requires so much steel as is required in the above-ground storage in gaseous form.

If steel should ever become extremely cheap, we might again examine the figures on above-ground storage.

Q. Does that exhaust the alternatives to pipe line capacity? Is there any other means that you know of that might be available?

A. We have been giving some consideration of late to the storage of gas in the solid form.

Q. That is merely an extension of the liquefaction process, isn't it?

A. It might be considered so. However, it is a different compound entirely. It is a hydrate of natural gas and if the information is true that we have, it might offer possibilities which would indicate it might be preferable to liquefied storage.

Q. And to what extent has your consideration of that [fol. 6102] subject gone?

A. We have only talked to the company which controls the research that is being made in this direction.

* * * * * * * *

[fol. 6103] Q. Mr. Burnham, you have stated a few moments ago that a new line was contemplated to be constructed for the service of Cleveland, Ohio, running from the gas fields in Louisiana over into Ohio.

Isn't it a fact that that line is proposed to be built by the Hope Natural Gas Company? Is that the line to which you refer?

A. It is very possible that is the line.

Q. And isn't it a fact that the terminus of that line [fol. 6104] will be in West Virginia?

A. Well, I inferred that it would go to Ohio markets.

Q. The gas would go to Ohio markets?

A. That is the reason I thought the terminus might be in Ohio.

Q. As a matter of fact, so far as you know, there are no new lines contemplated to be constructed by East Ohio

Gas Company from the Ohio River northward to Cleveland?

A. Not to my knowledge.

Q. Now, as I understand your testimony, this estimate which is set forth in your Exhibit No. 47 is simply an engineering job performed by you and your staff for the purpose of estimating the additions at Liberal station and eastward that would be required to meet the peak loads estimated by Witness Morton in Exhibit 40. Is that correct?

A. Yes, I believe that is a fair statement.

Q. You did not take any part in making any determination as to whether or not it would be economical to construct these capital additions in so far as the revenues to be derived from any new markets or new additional sales are concerned. Is that correct?

A. That is correct.

Q. In other words, to be a little more specific, when you determined, for instance, that it was necessary, in your opinion, to expend the sum of $6,684,100, for example, in [fol. 6105] 1944 for additions to main lines and additions to compressor stations in order to increase the 24-hour capacity of the system from 355,800 M.c.f. in 1943 to 380,450 M.c.f., you were not making any determination that it would be economically sound and feasible and expedient to expend that sum of money in order to increase that capacity in so far as revenues were concerned, is that correct?

A. That is correct.

Q. In other words, you simply determined that this is the amount, as an engineer, you would advise your company that it would have to expend in order to meet this additional load, and that is all?

A. That is correct.

Q. And, of course, before Panhandle Eastern or any other company would expend such sums as are set forth in Exhibit 47, a determination as to the economic advisability and expediency will have to be made by the management itself?

. . . . . .

[fol. 6106] The Witness:—I cannot agree with your conclusion. As I stated before, a natural gas company is duty bound to care for its customers.

In other words, it is devoted to the public service and if, by the expenditure of $6,684,100 in 1944, Panhandle Eastern Pipe Line Company could maintain good service on its system and if the money could be raised, there is no doubt in my mind but what the expenditure would be made.

As to the matter of whether it was economical or not, presume that if a loss was incurred by making the expenditure, the Federal Power Commission could be appealed to and relief might be had from the Federal Power Commission in that event.

By Mr. Littman:

Q. Now, suppose the total increase is due to an ambitious reaching out program on the part of Panhandle [fol. 6107] Eastern in a search for entirely new markets. What would your answer be in that event?

A. Well, the instance that you have picked here for 1944 is not applicable in that case because this is merely main line additions to already connected markets.

Q. Well, a good part of it is new industrial business, isn't it? Of course, Mr. Morton's estimates show what it is.

Mr. Goodman: Maybe I can state this.

You have in mind, no doubt, that Michigan Consolidated Gas Company proposes to cut its peak demand by its acquiring facilities for underground storage and transmission of gas from the point of storage to Detroit.

If that project is completed and in operation, that will substantially modify Mr. Morton's figures of maximum day, will it not?

Mr. Culton: We think that again brings in a matter that is in the hands of the Power Commission at this time and is not related to a particular date.

The Michigan Consolidated Gas Company did not represent they would immediately have that. They recognized that it would be at least two years before they could possibly start the service.

Mr. Goodman: I simply addressed a question to the witness based upon future probabilities which is exactly what his testimony relates to and I asked him if it would

[fol. 6108] have any effect. I do not know whether it would or not.

Mr. Culton: His testimony has not related to future probabilities of that character. His testimony has assumed that these volumes would be required and he said, "Under those circumstances, here is what the capital expenditures would be."

Mr. Morton was examined on that question and Mr. Morton was the appropriate witness to be examined on that question.

This witness has not estimated the volumes required by the people at Detroit or any other purchaser.

Trial Examiner: I think we should try and keep away from the consideration of speculative alternatives except in so far as the witness admits they are under consideration as a part of the program of the Defendant company.

The witness has stated that consideration has been given to underground storage, to the liquefaction of gas for reserves and to the possibility of a chemical process resulting in solid gas for reserves.

Exhibit 47 is to support the inclusion in a rate base of future investments, if so far as it is shown in cross-examination that these investments are problematical, may or may not be made, the cross-examination, it seems to me, is decidedly of importance.

Mr. Wheat: May I add, Mr. Examiner, that at least one of the main purposes of Exhibit 47 is also to disclose that [fol. 6109] this company, this enterprise, must go to the money markets in the future in order to obtain the funds requisite for large additional capital expenditures.

Mr. Culton: Irrespective of whether any of it be included in the rate base.

Mr. Wheat: Yes.

Trial Examiner: The question occurs to the Trial Examiner whether any sums can be properly considered in the rate base which are not of a rather definite certainty.

Your inquiry into the field of a speculative future, it seems to me, is something that we cannot inquire too closely about because it is so clearly a speculative future.

I would like to have counsel express their views on this. I think we are in a rather difficult field.

Mr. Goodman: Well, I am frank to say, your Honor, that I think, in the first instance, we would be obliged to consider the total cost of rendering service for a reasonable period in the future inasmuch as the job of promulgating a rate is prospective in its application. The period must be reasonable and the cost must be shown by persuasive evidence.

Now, that I think is the entire question. Here is an exhibit presented which has only a hypothetical basis. The witness frankly admits that we have no plans afoot to make these expenditures but if we are to meet the estimates of another witness, this is what it is going to cost us.

[fol. 6710] Mr. Wheat: To what years do you refer now in that statement, Mr. Goodman? You certainly don't refer to 1941 or 1942, do you?

Mr. Goodman: I do not want to be cross-questioned on the thing. I think my statement, as I make it, is clear.

Mr. Wheat: I think we have got to be honest with ourselves, for the 1941 and 1942 expenditures are now being made.

Mr. Littman: Certain ones, I think you mean, Mr. Wheat, are now being made.

Trial Examiner: It seems to me we are entitled to a rather frank discussion of what period is involved. I think that is a matter of importance.

The matter was somewhat discussed in the Chicago case that was referred to early in the hearing as to just what future investments might be incorporated in the present rate base. It is clearly not in some remote, speculative future.

The Commission considered a 20-year claim for future investments which was outlined and discussed. The Commission, I believe, allowed, was it, Mr. Littman, 2½ years?

Mr. Culton: Three and one-half years.

Mr. Baldridge: Three and one-half years.

Trial Examiner: But that certainly is a definite factor to consider when we get into that remote period when there is no certainty concerning investments and Commission counsel or Complainants are certainly entitled to show it.

[fol. 6111] Mr. Culton: May I give just one sentence to express our position.

We think that unquestionably the investments which the evidence shows are of sufficient certainty to satisfy the Commission, that is, these investments that this witness has been discussing, should properly go into the rate base. They are immediate.

Now, these subsequent investments which are, to some extent, looking a little into the future and dependent upon certain increases, we do not contend they should go into the rate base as of now, but we do consider that we have a right to show the probability that we will expend those sums and what they will have to be spent for if the present indications are realized.

Trial Examiner: As bearing upon rate of return, a need for large sums of capital?

Mr. Culton: That is right, Mr. Examiner.

Mr. Littman: If your Honor please, I would like to respond to your Honor's request for a statement. I think the law is clear that only property presently used and useful may go into a rate base for rate-making purposes in the absence of any special circumstance.

Now, that is a general rule and I do not believe any special circumstances have been here shown that would warrant the inclusion of capital additions proposed to be [fol. 6112] made after the date as of which this Commission will speak. That is Point No. 1.

The second point I would like to make is that the evidence thus far discloses pretty much to my satisfaction, at least, that assuming for purposes of argument that all of these capital expenditures will be made in the future

as contemplated by Exhibit No. 47, in view of the increased sales as set forth by Mr. Morton in his Exhibit 40, and in view of the increased revenues which Mr. Morton has estimated will be derived from those sales it can be demonstrated and will be demonstrated that even if all of these capital additions were included in [in] a rate base extended theoretically into the future, that it would not justify any increase in rates arrived at without a consideration of those capital additions, increased the sales, and increased the revenues.

In other words, they would not have the effect of causing any upward revision in rates over those determined in the conventional manner.

Trial Examiner: It would not necessarily affect the rate which will constitute a fair return on the total capital.

Mr. Littman: That is what I am quite certain the evidence in this proceeding will show.

[fol. 6113] Now, moreover, I would like to make another point, and that is this:

When this Commission fixes a rate as of, let us say, today, we must, in looking into the future, consider not only if we are going to give future capital expenditures any consideration at all, we must also consider the depreciation that will accrue each year in the future and we must make proper allowance for that.

For example, if depreciation is accruing on the property of Panhandle Eastern in an amount of, let us say, just for purposes of example, $2,000,000 a year, why, of course, we must deduct that amount from the gross to secure the net additions.

I state that notwithstanding all of that, I am certain that the figures in the record thus far will show that the capital additions proposed by Exhibit 47, as well as the capital additions proposed by Mr. Hinton, would not have any adverse effect on the rate if Mr. Morton's estimate of sales and revenues is to be given consideration.

That states our position at this time.

Mr. Goodman: I would like to add a word on this subject as to how far in the future it is permissible to go. Under ideal conditions, that is, the conditions of perfect knowledge, I think it rather evident that that perfect knowledge would propound a unit cost for the total serv- [fol. 6114] ices of an enterprise which would be the lowest possible unit and it is because we do not have that perfect knowledge that we are compelled to limit how far we will enter into speculation.

Now, implicitly, we do give weight to the past and future of a business when, for example, we make an allocation as between an original value and remaining value.

For example, if we say that property has depreciated so much, we implicitly ascribe the proportion of depreciation to expired services and thereby apportion the remaining value to the services of the future. I mean this: That capital value differs only from annual expense in that the capital value is spread over more than one accounting period and the services expire in the course of what we may term a service life but that value with which we started, it is contemplated, will be ultimately used up in terms of annual expenses.

Now, one can never be correct or one can never make an approximation which itself is not an approximation having reference to the past and a simultaneous reference to the future. We think that we are saying the costs of the current year, but, in so far as those figures relate to or have reference to a cost which was incurred for services of several accounting periods, that is to say, capital costs, our thought is largely a delusion or, say, an inaccurate approximation.

Now, when we come to talk about the cost of service for the year 1942, we are compelled to make allocations [fol. 6115] which necessarily regard as much future as it is reasonable to contemplate, and I would say that they do necessarily regard total future and thus a depletion allowance, an allowance for depreciation of existing property necessarily contemplates the services of the future as distinguished from what has already transpired, so that I do not think that the formula as to what is included in

the rate base represents a hard and fast approach to the problem in every instance.

I would say that what Courts have done in applying the rate base standard is simply to pass upon the facts as presented by the parties. If a case lines up that way, the decision will line up in that way but, if one is able to show that our unit costs of service actually are thus and so, even though that involves consideration of future conditions, I see no reason why you should not be permitted to show that, for there is no desire to allow an unreasonable rate.

I would like to give a certain example of that. Let us suppose that I have a machine which is capable of operating without any maintenance expense for a period of 8 years and, at the end of 8 years, it will require a pretty general overhauling and then will last for about two years more.

Now, isn't it clear that the money you are going to spend 8 years hence is part of the cost of today's service? It is to me.

Now, I admit that there may be disputes about that so I [fol. 6116] think that the actual latitude here is large. I am concerned with how adequate the evidence is. I do not think that there is any legal inhibition about searching the future in so far as it is reasonable, but I do think that the limitations are strictly those of a practicality. The one way of approaching the subject is to divide it up into periods or phases of exploitation. For example, one might say if the business is adapted to it, that we will consider the future to be like the present, a repetition of the present in so far as we are compelled to do so for purposes of depreciation or for purposes of getting at what we term present expenses and we will keep on considering it until certain events transpire in which case, there enters into the picture what we may term a new phase of exploitation.

We keep on going then of we contemplate keeping on going until some further new phase of exploitation takes place.

Now, it may well be that that will turn out to be the most convenient approach to this particular problem. That

is, that we should approach it on the basis of an output comparable to 1941 or 1942 and compute all things as on a stabilized basis for that phase of the exploitation. Then when a thing fails of exploitation and large capital expenditures are required, then we admit we have not considered it.

Trial Examiner: I will be glad to hear from the other side of the room. It might help us to "keep on the beam."

[fol. 6117] Mr. Culton: I say "amen" to a great deal of what counsel has just said, Mr. Examiner.

I think the appropriate thing for us to do is to get all of the evidence on all of these phases the best way we can before the Commission and then, when the case is all over, we can approach this from all of the angles possible in determining what the correct answer is.

Unquestionably, all of this evidence is proper for consideration on at least two grounds. Then the weight to be given with respect to rate of return, with respect to rate base, can all be determined when the evidence has all been completed.

Mr. Littman: If your Honor please, I might amplify our position by stating if a company were operating at a 100 percent load factor, for example, and they had no additional markets and did not propose to acquire any or could not acquire any and if it were clear that they had to spend certain capital sums next year and the succeeding year in order to keep their business going and in order to deliver the same quantities of gas that they are now delivering, that is at the 100 percent load factor, then I presume the company would be in a position to demonstrate that its unit cost of service for the next two years will necessarily be increased, and I would say that under those circumstances, certainly the Commission might be very much interested in determining to what extent [fol. 6118] these increased capital additions will affect the cost of service. But here, we have not only capital additions, we have the evidence in the record, as shown by Exhibit 40, of great increases in sales, which I am certain can be demonstrated in this record more than offset the increases in costs occasioned by the capital additions.

To peer into the future, of course, is something that Commissions have been admonished to do in fixing a rate for the future in order that it may determine whether the rate it fixes today may not, in all probability, become confiscatory tomorrow.

* * * * * * * * *

[fol. 6133] Mr. Littman: Let me ask you this, Mr. Burnham.

Assuming that your company is successful in its quest for underground storage, would that require you to revise your estimate shown in Exhibit 47?

The Witness: Certainly.

Mr. Littman: In other words, you would not require all of the pipe line capacity shown in Exhibit 47?

The Witness: No, but it might involve expenditures that might even offset entirely the expenditures we contemplate that might be required in pipe line and compressor station equipment.

* * * * * * * * *

[fol. 6160] (Exhibit No. 47 was received in evidence.)

* * * * * * * * *

[fol. 6163] Leith V. Watkins a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination.

By Mr. Gorman:

* * * * * * * * *

[fol. 6171] Q. Mr. Watkins, will you turn your attention please to Exhibit No. 48? Now, commencing at the top of the first page of this exhibit, Mr. Watkins, line 3, account entitled "Other Investments", can you tell us what these investments represent? As I recall your direct testimony you stated that they were obligations of the Southwest Kansas Oil & Gas Company and the Saturn Oil & Gas Company which were due and payable to the Panhandle Eastern Company. Can you explain the nature of

the transactions which brought about this indebtedness to the Respondent?

I am referring, of course, to the amount shown at June 30, 1941, in column "M", Mr. Watkins.

. . . . . .

[fol. 6172] The Witness: To try to summarize and save as much time as possible, Southwest Kansas Oil & Gas Company and the Saturn Oil & Gas Company were the owners at the time of the inception of Panhandle Eastern of some considerable amount of acreage in southwestern Kansas and may have had some producing wells at that time, with whom Panhandle Eastern entered into certain gas purchase and operating contracts for the exploitation of that acreage and the continuation of the right by Panhandle Eastern to purchase the gas produced from such acreage.

It may have been that the contract had certain drilling provisions in it.

Some time subsequent to the date of the original contract and June 30, 1941, the nature of those contracts was changed. The original contracts provided for Panhandle Eastern or it might have provided for Missouri Kansas Pipe Line Company to act as the operating manager and provided for the repayment to the operating manager of certain operating expenses and certain investment in both [fol. 6173] acreage and in the wells by the Southwest Kansas Oil & Gas and the Saturn Oil & Gas Company, the net result and sum of which was at June 30, 1941, there were balances due Panhandle Eastern on open accounts and notes, aggregating around $210,000.

Q. You mean less than the amount shown on page 1, Exhibit 48, line 3, column "M"?

A. The amount shown on line 3 in column "M" of Exhibit No. 48 is a consolidated figure. You will notice the exhibit is headed "Panhandle Eastern and Subsidiary Companies".

The indebtedness of Southwest Kansas Oil & Gas Company and the Saturn Oil & Gas Company is entirely indebtedness to Panhandle Eastern or the amounts that

make up the difference. If you wish the exact amounts due from those companies at June 30, I am prepared to give it.

Q. The other amount is rather inconsequential, amounting to about $4,000.

Now, is it correct that there is due on open accounts under this title the amount of $165,479.01 and that the balance represents notes payable?

A. Are we still talking about corporate balances or consolidated balances?

Q. Consolidated balances.

[fol. 6174] A. I will have to compute that if you wish it. I can give you the amount due on notes from a corporate standpoint.

Q. Well, I am speaking at the time of the manner in which you have set up this balance sheet, Exhibit No. 48, and the amount shown thereon.

A. Do you wish to take a recess while I compute it?

Q. No, you stated that the amount due from these two companies aggregated approximately $210,000, as I recall it. Is that correct?

A. That is correct and comprises both notes and open accounts.

Q. For the purposes of my questions, Mr. Watkins, suppose we do this: Assuming that there is approximately $165,000 due on open accounts, would that be by reason of the incurrence by the Panhandle Eastern Company of certain expenses in connection with the drilling of the wells which you have referred to previously?

A. If by "expenses" you mean actual operating expenses and construction cost—

. . . . . .

(Continuing)—the answer is yes.

. . . . . .

[fol. 6175] A. You will recall in response to a previous question the witness stated that at some time during the period from the inception of the original contracts and June 30, 1941, the contracts were changed. At that time, the unpaid balance was either represented by notes or the

open accounts took the form of notes. Those notes mature at specific intervals.

Q. Right there, Mr. Watkins, do you mean by that the entire amount was represented by notes?

A. The entire balance at the time the contracts were changed, if my memory is correct, was converted to notes.

The operating expenses charged to these companies by Panhandle Eastern and the amounts advanced for construction purposes subsequent to the conversion of the entire balance to notes is represented by the open account. The open account at June 30, 1941, is being amortized,—I should probably say paid, rather, over the life of the new contract, monthly payments being separated as to interest and principal, so that at the date upon which the contract naturally expires, the account will have been paid in full.

. . . . . .

[fol. 6176] Q. Commencing at page 862, line 17 there on that page you stated as follows, in speaking with reference to this account of "Other Investments" as it stood at June 30, 1941:—

. . . . . .

Q. (Continuing) "This amount represented on June 30, 1941, an amount due Panhandle Eastern Pipe Line Company by Southwest Kansas Oil & Gas Company and Saturn Oil & Gas Company on open account, amounting to [fol. 6177] $48,819.24. I beg your pardon. That represents four notes of equal amount dated January 6, 1936, of which one note is due each year during the years 1943 to 1946 and an open account due from the same companies amounting to $165,479.01."

Now, does that refresh your recollection, Mr. Watkins, the breakdown of this account of which we have been speaking?

A. It does and is the correct breakdown. Unfortunately, when testifying a moment ago as to those balances, I referred to a statement dated September 30, 1941.

Q. So that, if my addition is correct, the total of these two amounts, that is the amount due on notes and the amount due on open account, represents $214,298.25, which

is the total amount you have shown on this account at June 30, 1941. Is that correct?

A. That is correct.

Mr. Wheat: Mr. Gorman, as is shown on line 12 of page 862.

Mr. Gorman: Yes.

The Witness: And, also, as can be shown on line 3, column "M" of Exhibit 48.

. . . . . .

Q. Can you tell us who owns or controls the Southwest [fol. 6178] Kansas and the Saturn Companies, Mr. Watkins?

A. Not specifically, no.

Q. Do you have any information on that subject?

A. My understanding is that these companies are now owned and controlled by some of the officers or directors or individuals, either directly associated with or indirectly with Michigan Consolidated Gas Company, some of its subsidiaries or parents.

Q. And there is no affiliation with the Panhandle Eastern Pipe Line Company insofar as you know?

A. Well, I should hope, sir, that we would have some direct neighborly affiliation with the Michigan Consolidated Gas Company confined in some of these accounts and some information, that is one of our largest customers and surely we must have some working affiliation.

Q. Well, of course, Mr. Watkins, I think you understand when I say "affiliation" I mean common control of ownership or through stock control or something of that nature.

A. There is nothing of that, as far as I know.

Q. Referring now to line 5 of page 1 of Exhibit No. 48, the account "Current Accrued Assets Representing Cash", will you tell us whether there has been any change in company policy in recent years in the handling and [fol. 6179] disposition of revenues?

A. I am afraid I don't understand that question.

Q. Well, I can explain it this way, then: Referring to this account I notice that from and after 1938, specifically during the years 1939 and 1940 and 1941, the com-

pany is carrying much larger cash balances than it had theretofore.

Does that represent any change in the policy of the company?

A. Not so far as I know and, as far as this witness knows, the fact that the balances at December 31, 1939, June 30, 1940, are larger than some prior dates is of no particular significance.

Q. Well, it indicates, does it not, that it was not in conformity with the practice of the company prior to 1939? In other words, they made some disposition of the cash received as revenues other than merely placing it in a cash account and holding it on hand?

A. Well, I shouldn't say that it indicated any change of policy, Mr. Gorman. There may be a set of circumstances or conditions present at these particular dates that explain why the balances are larger. Any organization such as ours must have funds with which to pay its bills, to do its construction work and carry on its business [fol. 6180] generally. It might have just so happened that at these particular times the funds shown by the amounts on line 5 in columns "K", "L" and "M" of Exhibit No. 48, were present and no particular need for them at that moment.

I don't attach any significance to it at all.

Q. Do you, in your official position, have any particular explanation for such large balances in those years?

A. Not at the moment, no. As a matter of fact, the explanation for any such balances would likely not rest with the comptroller. That is probably a question that should be directed to the treasurer.

Q. Yes, but you would have cause to believe that the secretary and comptroller are constantly in touch with the treasurer and Board of Directors and would have any familiarity with the decision of either which would necessitate the retention of such large cash balances, would you not?

A. I would likely have knowledge of it, yes, but having such knowledge I attach no special significance to it literally.

Q. Is it your testimony then that this is just a happenstance and has no relation to any direction of the president or the Board of Directors of your company?

A. I know of no direction of the president or the Board of Directors with respect to these three amounts that put [fol. 6181] them in any different category than the cash balances shown at the end of any other previous period shown by Exhibit No. 48.

Q. Do you know of any particular purpose for which any part of the cash balance shown at June 30, 1941, has been earmarked by the president or the Board of Directors?

A. Mr. Gorman, as my memory runs over the ten years that I have been connected with Panhandle Eastern Pipe Line Company, the Board of Directors have not necessarily earmarked any of dollars the company possessed. Earmarking dollars is a tremendously difficult problem. There may have been in the mind of the president or the treasurer the thought that the balances on hand at the dates we are discussing were to be ultimately used for construction or some other purpose.

If there was such a view in their minds you would have to ask them as to that.

Q. In other words, as I understand, you merely are charged with the responsibility of showing what was on hand in the way of cash during these years and have no responsibility whatsoever as to the disposition to be made of that cash.

A. Well, I would hardly go that far. As comptroller of Panhandle Eastern and its wholly-owned subsidiary, Illinois Natural Gas Company, I have, naturally, a decided in- [fol. 6182] terest in the input and output of cash.

I should not, myself, permit or within my knowledge permit any of my assistants to allow any disbursement to be made from the Company's funds that was not properly authorized. In the performance of the duties associated with my official capacity with the companies, I must, naturally, be responsible to some great extent to the collection of the amounts due it.

[fol. 6183] I have the responsibility of seeing that a proper record, along with the treasurer, is kept of all

matters pertaining to cash and, to that extent, I think, without belaboring the record here with a great deal more explanation of what such duties would be, I do have a decided interest and responsibility in connection with the cash of the company. As to trying to earmark it for this or to provide a certain amount for some particular purpose, that is within the scope of someone else's view.

Q. Well, summing up, then, and overlooking the repetition of this statement, is it correct that in so far as you know the amount of cash on hand at June 30, 1941, represents merely cash balances and in so far as you know was not being held for any particular purpose?

A. Well, it was being held for all the purposes for which is might be required, certainly.

Q. Yes, but I mean it was not being held for any particular construction that you were aware of, or for dividend purposes, or anything of that nature?

A. Well, I certainly do not know of it being held for dividend purposes. I am conscious of the fact that we have had a very large construction program in mind, and very naturally if such a construction program were carried out it would have to be paid for.

Q. Yes, of course, that would be the general operation, wouldn't it?

[fol. 6184]

A. Surely.

Q. And that requires cash, of course, to meet your bills?

A. That is right.

Q. Turning now to line 6, the account designated as "Special Deposits," which is located in Column M of this Exhibit and June 30, 1941, it shows $1,489,127.23 which was an increase of approximately $1,480,000 over the balance remaining at December 31, 1940. Can you explain to us the reason for this considerable increase in this particular account?

A. The amount shown in Column "M" on line 6 of Exhibit No. 48—

Mr. Wheat: (Interposing) Page 1.

The Witness: Page 1 of Exhibit No. 48, represented in June 30 the amount of special deposits that Panhandle Eastern Pipe Line Company had made irrevocably with

either a trustee for the redemption of some bonds that had been previously called or special deposits of various natures with respect to service deposits for public utility service or right of way deposits in connection with the occupancy of certain properties, or deposits in connection with the guarantee of insured premiums, or deposits in connection with the payment of interest and the balance of [fol. 6185] $1,489,127.23 was largely made up of the amounts remaining in the hands of the corporate trustee for the redemption of the company's 4 per cent bonds called for redemption on or about April 1, 1940.

Have you any interest in the standing of the balance at September 30, 1941? It was materially reduced.

Q. Before we get to that, Mr. Watkins, do your papers set forth a breakdown of this amount which is shown at June 30, 1941?

A. No, I am sorry, I don't have such a breakdown.

Q. So that you don't know specifically what amount is represented as being held for the purpose of retiring this debt of which you just spoke?

A. No, but it was a large amount of the total shown at June 30, 1941.

Q. Can you indicate to us, Mr. Watkins, the source of this amount of approximately $1,480,000, which was placed in this account during the first six months of 1941? By the way, I, of course, don't mean revenues of the company, but I mean an indication of what account was credited with this amount when the charge was made to the special deposit account?

A. I believe you mentioned an amount somewhere in excess of $1,400,000.

Q. Well, I am speaking of the difference between the [fol. 6186] figure at December 31, 1940—

A. Actually there were several million dollars placed in the account on or about February 3, 1941. I don't have, at this moment, the exact amount, but it represented the principal amount of the four per cent bonds then outstanding and the accrued interest on them up to a certain date. The funds out of which such a deposit was irrevocably made with the corporate trustee came from the sale of other securities delivered at the same time the funds were deposited with the corporate trustee for the

redemption of the four per cent bonds called for retirement at that time.

Q. This account then at June 30, 1941, represented, as I understand, the balance remaining after certain refinancing operations were consummated during the month of February, 1941?

A. That, plus a small amount of deposits for other purposes, as the witness previously testified to.

Q. Yes. Now, you offered a moment ago, Mr. Watkins, to give us the balance remaining in this account, at September 30, 1941. Will you do so, please?

A. At September 30, 1941, the balance of the special deposits of Panhandle Eastern Pipe Line Company and subsidiary companies was $111,463.66.

Q. Does that indicate to you that there had been a certain amount of bonds or other indebtedness retired [fol. 6187] during the three months following June 30, 1941? A. It does.

Q. Referring now to line 13, page 1, of Exhibit No. 48, the account for "Materials and Supplies," can you tell us whether or not the amounts shown on December 31st of the several years indicated on this page fairly represented the amounts which the company was maintaining in its inventories during the months preceding and following December 31 of these years?

In other words, I will put it this way, does this account remain more or less static, excepting for periods of construction?

A. To an extent, yes. We have to think a bit about periods in answering that question. If you observe Exhibit No. 48 during the years 1930, 1931, and 1932, which was, so to speak, a part of our initial construction period, the Materials and Supplies account was the clearing ground, after a fashion, of the acquisition of materials intended for use for construction which was not delivered directly to construction jobs, so that subsequent to the year 1932, if you will recall, was the period in which the country generally began to feel the pinch of funds and the necessity for economies, conservation of cash, and so forth, quite acutely.

Our Materials and Supplies account began to slide down- [fol. 6188] ward, so that at the end of 1938, as shown by

line 13 in Column "G" or, rather, at the end of the year 1931, as shown by line 13 of Column "K", the balance had been reduced to slightly under $160,000.

Subsequent to that period, and during the entire period, the company felt that its policy with respect to materials and supplies was certainly on the conservative side and perhaps somewhat niggardly. We have never carried as much materials and supplies as we felt were actually needed. It has always been reasonably easy to get materials, and we didn't have, always, too much cash. We had constructions for which we needed our cash. We were growing rapidly. We didn't have as many compressor stations. Our load wasn't as much as it now is, and there were a variety of conditions that caused us to pinch as much as we possibly could with respect to our materials and supplies until the last few years we started somewhat in the other direction.

I believe there has been introduced in these proceedings quite a substantial amount of information with respect to material and supply requirements of the company as they now exist and may hereafter exist.

Q. Yes. Well, of course, we are now speaking of the conditions as they actually existed during the years shown on this exhibit.

A. I don't know whether I have answered your ques-
[fol. 6189] tion or not, sir.

Q. Yes, you have, quite completely.

Is it the practice of the company that when materials or supplies are withdrawn from the warehouse to immediately place an order for the replacement of such articles as are withdrawn?

A. Well, Mr. Gorman, I don't know that I can answer that question as categorically and as fully as I should imagine you would like to have it answered. Off of the top of my head, I would say that, generally speaking, the company is constantly striving toward a certain level of basic materials and supplies needed for ordinary routine or for construction, and that it follows the practice of not being caught asleep when materials and supplies are needed.

Q. Yes. So that in so far as you know, it is the obvious policy of the company to attempt to maintain on hand such inventories as are necessary to enable it to maintain its business properly?

A. With the exception, as I have previously testified, in the period during which we were encountering the same business and economic conditions that confronted all other business enterprises, we couldn't always follow our inclination in that direction.

Q. Yes. You mean by reason of the lack of adequate funds you cut your inventories as much as it was possible [fol. 6190] to do so?

A. Not only that, there has been a time when the ability to obtain materials was much freer than if is at the moment or has been in the last few years. A wide variety of things governed exactly what we did or did not do with respect to our materials and supplies besides actual cash conditions.

Q. Yes. Well, of course, you did not at any time cut these inventories to a point below that which was necessary to maintain the system property, did you?

A. Well, Mr. Gorman, we have always preeminently in mind the requirement of an organization such as ours, regardless of what happens in other directions, to keep our properties in such condition that they can perform most satisfactorily from the standpoint of the customer.

There have been intervals over the ten years that I have been connected with the company that I have heard a good deal of griping from our operating departments and our construction forces that our materials and supplies were entirely inadequate. I do definitely know that over the period of my connection with Panhandle Eastern we have not had a sufficient amount of spare parts, for instance, at our compressor stations.

Not being an operating man, I can only tell you what I believe was responsible for such a condition. The man- [fol. 6191] agement, naturally, would not have permitted a situation of this sort to exist if it interfered with operating conditions, but we had at times a bit more capacity than we needed, perhaps, a bit more power than we actually needed, so that if we suffered a breakdown at some particular point we could pick up somewhere else and not

interfere with our ability to deliver or to meet our customers' requirements.

One couldn't just categorically put their finger on one particular thing in materials and supplies and say, "That is the reason we did this particular thing at that particular time."

Q. Yes. Well, to get back to my original question, Mr. Watkins, do you know of any instance where your inventories were too small to permit the company to adequately maintain its properties?

A. Personally, I do not.

Q. Mr. Sperry has testified in this proceeding, Mr. Watkins, that during recent months the company has undertaken to acquire a much greater inventory of materials and supplies and Mr. Sperry broke this down into different categories, one of which, I believe, was the materials and supplies actually on hand, secondly, were those which were on order, and thirdly, were those which the company anticipated ordering. Is that your understanding of that situation with respect to this account?

[fol. 6192] A. Well, I don't have any understanding whatever with respect to the account and Mr. Sperry's testimony that you speak of. I don't know that there is any direct connection between the account and his testimony. My understanding is that he did prepare and has introduced in these proceedings such information.

Q. Yes.

A. When the things concerning which he testified become actualities they will be interpreted by the account and not until then.

Q. But during the course of Mr. Sperry's testimony there was given the total which was in this account as of September 30, 1941. Can you give us the amount which was in this account at December 31, 1941?

A. At what?

Q. December 31.

A. No, I am sorry I don't have that. I could get it for you.

Q. Would you undertake to do so, please, and supply that for the record?

A. I may say, Mr. Gorman, that I don't know that our materials and supplies account is entirely closed for the year ended December 31. As you know, at the end of the year there is quite a considerable amount of work to be done to close the books of a corporation, and so forth, [fol. 6193] so that I might not be able to give you the actual final amount that will be shown per the books of December 31, 1941, but I will attempt to get it.

Q. Well, the answer which you would be able to give would very closely approximate the actual total, would it not?

A. I hope that will be the case.

Q. Yes.

In furnishing this information which I have requested, Mr. Watkins, could you break that down to show the amount of materials and supplies which are on hand due to the construction work which is presently in progress on your system and that which is now on hand to maintain the operating efficiency of the system as it now stands?

A. I am afraid not, Mr. Gorman, because generally this is the procedure that we follow: When materials and supplies are purchased directly for construction, they are forthwith charged to work orders covering such construction. We do not keep a balance of such amounts; as the construction work progresses, there is no reason to. If at the end of the construction period some of the materials are not used, they are then returned to the warehouse and the warehouse materials and supplies balance would reflect those amounts at that time.

I shall try to ascertain what were in the Materials [fol. 6194] and Supplies account at December 31, 1940, for construction purposes, and if the amount is significant we will give it to you, if we can obtain it.

Q. Well, do I understand correctly that the amount of materials on hand for construction purposes would have no relation to this account for materials and supplies, or would be charged directly, as you seem to indicate, by vouchers to Gas Plant account?

A. No, they are not charged to Gas Plant account. Perhaps if I restated it I could give you the picture a little more clearly.

Q. I might indicate to you, Mr. Watkins, my reasons for desiring an explanation of this item. You referred previously that during the years 1931 and 1932, when the company was engaged in a large construction program, that the large amounts shown for these items in those years was attributable in part to this construction. I am trying to find out whether that situation still obtains during the present time of construction.

A. There is a difference between the years 1930, 1931, and 1932, by the way. The witness wouldn't consider those amounts very large.

Q. They are large by comparison with the others?

A. Perhaps that is correct. The difference is this: In 1930, 1931 and 1932, there were materials purchased for con- [fol. 6195] struction, not in all cases used for construction for those particular periods, so that some of the materials and supplies balance in the years 1930, 1931, and 1932 represented the purchase of materials not actually used in construction in those years. That is the figure which I shall attempt to get for you at December 31, 1941, as being part of the materials and supplies.

Now, likewise, in the early construction period during the years 1930, 1931, and 1932, there were a great number of work orders and construction projects to which material was charged and which in our accounting procedure did not go through the warehouse at all. It was ordered specifically for and delivered directly to the job and never saw its way into the Materials and Supplies account.

Does that help you?

Q. Yes, it does.

Is it a correct statement to say that following construction and possibly during the period of construction that the amounts shown in the account for Materials and Supplies do not represent merely those items which have been ordered for maintenance and small extension work, but, also, represents left-overs, so to speak, of materials and supplies which were not used in the construction work, that is, the new construction work?

A. Yes, that is correct. I don't think our situation [fol. 6196] differs there from any other organization such as ours.

Q. Yes. Do you know whether or not the amounts which were shown in the balance sheet of September 30, 1941, for this account represented any items which had been returned or which had been charged, rather, to Materials and Supplies from construction work in progress?

A. Well, I am sure, Mr. Gorman, that at the end of any period shown by Exhibit No. 48 there were certain amounts in the Materials and Supplies account that had actually at some time been charged to construction work, because the very nature of the account would indicate that you just couldn't perform construction work and use up every specific piece of material that you purchase for it.

By the same token, you don't specifically purchase every piece of material or equipment for a construction job that is used on it. Some of it you withdraw from the warehouse. Furthermore, we have retirements in progress more or less all the time, and some of that material finds its way into the Materials and Supplies account, and to that extent we even have at all these periods some value or cost in the Materials and Supplies account that at one time or another was in Fixed Capital Gas Plant, as we call it under the Federal Power classification.

[fol. 6197] Q. Yes, so that it is a correct statement then to say that at no time and probably necessarily so, does the amount charged to this account represent only those items which are necessary to maintain the operating efficiency of the company?

A. Well, I don't believe I can agree with your statement, because the operating efficiency of the company does not, in my judgment, go entirely to the things necessary to turn the wheels day by day. There must be and should be a certain amount of materials available always to take care of unusual conditions as they arise, whatever their nature may be. We might have a river crossing that would go haywire on us or we might have some difficulty in a compressor station or there might be a great number of things that would involve the immediate use of materials to maintain our ability constantly to deliver the requirements of gas imposed upon us.

Q. Yes, well I think that more or less agrees with my statement too which I put the question. The primary purpose of this account, I think we will both agree, is for pro-

viding materials and supplies for maintenance and replacements, is it not?

A. I won't agree with that at all, sir.

Q. Well, with the exception of possibly small extensions, it does not undertake to provide materials and sup-
[fol. 6198] plies for the extensive construction, does it?

* * * * * * * *

The Witness: Well, I must frankly admit that my interpretation of the use of the materials and supplies account of Panhandle Eastern, and its subsidiary companies, maintained as provided by the Federal Power classification of accounts, lends it to the customary and ordinary needs of the company with respect to their recordation of the debits and credits for the materials, the purchases, and uses in any manner whatever in its operations in the maintenance of its properties and the construction of its properties.

I don't know that I can narrow it down, Mr. Gorman, to the specific purpose more than that. I am not trying to confuse this thing.

* * * * * * * *

[fol. 6199] By Mr. Gorman:

Q. I assume, Mr. Watkins, that you are aware, as Mr. Sperry testified, that at the present time there is a considerable amount of unfilled orders for materials and supplies, are you not?

A. Yes, I am familiar with that condition.

Q. Are you familiar with the conditions which brought about the placement of these orders?

A. By that do you mean do I have knowledge of the construction authorized that gave rise to those orders?

Q. Yes.

A. Oh, surely, I know whenever any piece of construction is authorized—

Q. (Interposing) Well, of course, now maybe we are deviating a little bit, Mr. Watkins. I am speaking of those materials and supplies which are to be inventoried and placed in the warehouses.

A. I have some general knowledge of the things that
[fol. 6200] brought it about, yes, sir.

Q. But do you know whether or not the aggregate amount of these orders is affected in any degree by the long periods of delivery which the manufacturers are requiring at the present time?

A. Mr. Gorman, I think you had better direct your questions with respect to that to the witness who gave evidence in connection with it?

Now, let me say this: As to any difficulty that the company is experiencing with respect to delivery, I am not too familiar. I know, generally, that we are having trouble, just as one knows in general about a lot of things that are happening in an organization. The purchasing of materials, the following through to see that we get deliveries and payment for those materials, and so forth, is something that I run up against in the manner that you run up against things of that sort in the day-by-day operation of an organization such as ours. Specifically I don't keep very closely in touch with it.

Q. Does that mean, Mr. Watkins, that you have no information or knowledge as to this matter that I am speaking of now?

A. I wouldn't say exactly that. You couldn't ask me whether or not we had purchased an order for 14 automobiles and whether or not we had delivery of those, be- [fol. 6201] cause I wouldn't know. If you were to ask me whether or not we were generally getting decent deliveries with respect to such purchase, I could tell you yes or no. If you were to ask me whether or not all of the materials purchased for our present expansion construction program had been delivered, I could not answer you specifically, yes. I could tell you that I thought the deliveries were coming along satisfactorily or I probably would have heard somebody doing a considerable amount of growling concerning them.

Q. Does your knowledge permit you to say whether or not the placement of such a large amount of orders as this has apparently been customary, as indicated by the amounts shown on this exhibit, and is due in part to the fact that by the time that actual deliveries are made the present inventories will have been depleted to a considerable extent?

A. I don't have any opinion with respect to that other than that I am quite positive that Panhandle Eastern Pipe Line Company would not be ordering unnecessary materials.

Q. Well, I am not making any such accusation or suggestion. I am just trying to find out what your information and knowledge is as to this policy and what the present practice might be.

A. Well, I am frank to admit, sir, I don't know how I can answer you any differently than I have. I have [fol. 6202] stated that I am not charged with the responsibility of procuring materials and supplies. I do not follow the orders after they are placed. I don't know to what extent deliveries are being received, except in a general way. I do know very definitely that we, as an organization, watch our requirements so that there are sufficient materials when we need them for the requirement of our operations or construction. Now, if you are trying to elicit testimony from this witness with respect to Mr. Sperry's statements, you are going to have difficulty, because I had nothing to do with the preparation of his material, although I have a very definite belief that it is absolutely correct.

Q. Well, I am not trying to elicit information from this witness with respect to Mr. Sperry's testimony. I am trying to find out from this witness what is the arrangement with respect to this particular account. Now, do I understand correctly that you are not prepared to answer the question which I put to you a few moments ago?

A. I think I have answered it, sir. If I haven't, I have given the answer as far as I know that I can go.

* * * * * * * * *

[fol. 6204] By Mr. Gorman:

Q. Turning your attention now, Mr. Watkins, to Lines 17 and 18 on Page 1 of this exhibit, which is the account for Unamortized Discount and Expense, can you tell us whether or not the Directors of the respondent company have recently made any decision as to the disposition to be made of the $2,101,985.62 which was in this account as of June 30, 1941, as indicated at Column M?

* * * * * * * * *

A. At the meeting of the Board of Directors held December 19, 1941, the Directors of Panhandle Eastern authorized the charging of the balance in the accounts called Unamortized Debt Discount and Expense to Surplus after having credited to that account the saving resulting from the retirement of the funded debt in existence prior to February 3, 1941, and after restoring to income the amount of amortization taken on the unamortized balance subsequent to February 3, 1941, and after restoring to expense duplicate interest amount to $79,667.11, which had previously been charged to the Unamortized Debt Discount and Expense so that the general effect of such action was that the unamortized balance of the Debt Discount and Expense Account was charged to Surplus as of February 3, 1941—I mean effective as of February 3, 1941, and the call premium for redemption on February 3, 1941, which [fol. 6205] also was included in the debt discount and expense and the expense in connection with the issuance of the securities the proceeds from which were used to redeem the bonds outstanding prior to February, 1941, was likewise charged to surplus.

Q. Have the entries for these various charges which you have just enumerated, actually been made on the books of the company?

A. They are being made in the month of December.

* * * * * * *

[fol. 6209] Q. Is the effect of these entries which you have just detailed such that it leaves, as of the present time, no remaining balance in this account for unamortized debt discount and expense?

[fol. 6210] A. That is correct. However, there are work orders in existence which, if our present proposed refinancing is consummated, may ultimately give rise to further amounts of unamortized debt discount and expense.

Q. Yes. Am I correct in understanding that that is the proposal which you now are seeking approval of by the Securities and Exchange Commission?

A. That is correct.

Q. I invite your attention now to Line 19 of this exhibit, which is the account for "Extraordinary Property Losses." Can you tell us, generally, what charges are made and what they represent in this account?

A. Generally, the balances shown on Line 19 as extraordinary property losses at December 31, 1932, '33, '34, '35 and '36 in Columns D, E, F, G and H, Page 41 of Exhibit No. 48, represent the cost of property retired by certain of the subsidiaries of Panhandle Eastern, since dissolved.

These charges arose as a result of the fact that at the time the properties were abandoned, there had not been sufficient reserves provided to absorb the charges.

The classification of accounts the company was following at that time permitted the charges of such amounts to an account titled, "Extraordinary Property Losses", subject to some subsequent distribution.

At the time the companies were dissolved, the amounts [fol. 6211] were charged to surplus or some liquidation account and the result of the charges as to Panhandle Eastern itself was reflected in any loss that it might have had to absorb at the time the subsidiaries were dissolved.

As far as my knowledge goes at the moment, I do not believe there were ever any amounts in this account and here we are speaking of a consolidated amount, that is, an amount representing Panhandle Eastern and subsidiary companies.

Q. Yes.

A. There was never any charge, as far as I know, in these amounts for property of Panhandle Eastern itself. I could be wrong there, but if you have any interest in the development of that fact, I will be very glad to give you a specific answer tomorrow. I think my answer, however, is correct.

Q. Well, may it be understood, Mr. Watkins, that you will make this check and if there is no reason for changing it, it will stand as correct?

A. That is quite all right, sir.

Q. Do the charges to this account, Mr. Watkins, represent transfers from the plant account?

A. Generally, over the years, our practice with respect to retirement of property has been this: There may [fol. 6212] have been some slight variations here or there or refinements as we went along, but when the time arose for us to retire any property, we followed the practice of

the issuance of a retirement work order and immediately upon the issuance of a retirement work order, the amount at which the property to be retired was carried in the gas plant account, known by us as another account at the time, was charged to suspense-retirement clearance.

When the retirement job had been completed, the original cost of the property retired plus the cost of retiring it less salvage recovered during the retirement was charged either to a reserve account or, if the reserve account was not sufficient, as was the case in the subsidiaries where the charges to extraordinary property losses arose, the charge was made to that account and later, as I previously testified, in liquidation the amount became a part of the loss, if there happened to be one, that Panhandle Eastern sustained in the disposition of the company or in connection with the dissolution.

I believe that the result of all of those amounts will be found in this witness' Exhibit No. 50 where it may be observed that certain charges have been made as a result of the dissolution of some of the companies that, at some previous time, had been a subsidiary of Panhandle Eastern.

Q. Is it correct to say, Mr. Watkins, that the primary [fol. 6213] purpose in transferring these items from the gas plant account to the account for extraordinary property losses was necessitated by reason of the fact that it was necessary to amortize these amounts in some manner different from that amortization or depreciation which was then provided for gas plant property?

A. I think that is correct. If I understand your question, it boils itself down simply to the fact that there were insufficient reserves, some disposition had to be made of the amounts, the classification of accounts used at that time provided the disposition by a charge to extraordinary property losses to be held pending some disposition and the disposition in cases of companies involved here was dissolution.

Q. Yes. Has the company had any similar instances which might be classified as extraordinary property losses since 1936 which have been disposed of in some manner other than that which you have just indicated?

A. One would have to have some definition, would they not, as to what would comprise an extraordinary loss, to answer specifically that question.

Maybe I can state the condition that I believe you are interested in in this fact: That any losses sustained by Panhandle Eastern or its subsidiaries subsequent, shall we say, to December 31, 1936, were not of the nature that there had not been reserves provided against which they [fol. 6214] could be charged.

Now, to characterize them as being extraordinary or not being extraordinary, I should think we would have to give weight to the particular loss, whatever it happened to be. Does that cover it?

Q. Yes, it does. Your answer indicates the thought that I had in mind, that is, that property losses presently are charged directly to the reserve for plant account without carrying them through some such account as this for extraordinary property losses.

A. That is correct and had the companies involved in these charges to extraordinary property losses had reserves sufficient, that same situation would have prevailed with respect to those companies.

Q. Will you please turn your attention to Line 22 of this exhibit, which is the account designated as "Other Work in Progress".

Can you explain to us the reason for the increase in this account from December 31, 1940, as shown in Column L when there was an amount of $2,975.91, to the amount remaining at June 30, 1941, as shown in Column M of $643,791.98?

A. I can, sir, and that is a very natural increase.

Q. Will you do so, please, that is, explain for us?

A. The $643,791.08 balance shown on Line 22 in Column M on Page 1 of Exhibit 48 was made up of the following items:

[fol. 6215] Expenses in connection with the issue of first mortgage and first lien bonds, Series A, due serially, November 1, 1946, to November 1, 1950, inclusive; first mortgage and first lien 3 percent bonds, due November 1,

1960; and serial notes, Series A, B, C, and D, due serially November 1, 1942, to November 1, 1945, inclusive;

Call premium on first mortgage and first lien bonds, Series A, 4 percent, due March 1, 1952;—$420,040.

Expense of new issues (since January 1, 1941)—$244,074.03.

Making a total of—$664,114.03.

Less estimated amortization recorded as of June 30, 1941—$24,585.61

Leaving a balance of—$639,528.42.

Work in progress—chargeable to Others—$1,242.18.

Preliminary expense—proposed construction projects—$2,471.75.

Electrical protection tests on lines and other minor items—$549.63.

The expenses in connection with the securities amounting to—$639,528.42 were cleared from the account "Other work in progress" in the month of October by a charge to unamortized debt discount and expense, and in the month of December, as this witness has previously testified, disappeared from the company's records altogether by a charge to surplus.

[fol. 6216] Does that give you the information?

Q. Yes, it does.

Now, will you please turn to Page 2 of this exhibit. In your direct testimony, Mr. Watkins, you stated on page 894 with reference to the account shown at Line 2, Page 2, of Exhibit No. 48 as representing the account titled, "Common Capital Stock", that an amount of $15,017,300 was transferred from capital surplus to common stock.

Can you tell us what part of this amount, so transferred, represented cash?

A. I cannot.

Q. Do you know whether any part of it represented cash?

A. I am quite positive that a substantial amount of it represented cash.

Q. Do you know whether or not a part of it represented property?

A. Are we talking about representing cash or property of Panhandle Eastern or to some other organization?

Q. Well, since this is a consolidated balance sheet of the Panhandle Eastern Pipe Line Company and subsidiary companies, as the title indicates, I think we must necessarily talk about a consolidated item.

A. Maybe I do not ask the question correct, Mr. Gorman.

If you will refer to Exhibit 51, you will observe that on Lines 3, 4 and 5 there appears an amount of $19,335,867.47 [fol. 6217] in Column B. Without reading the testimony that I have previously given in connection with this amount of 19 million-odd dollars, I believe my statements with respect to the $15,017,300 which likewise is shown in Exhibit 51 on Lines 39 and 40 in Column H, referred to the fact that the $15,017,300 was a part of the capital surplus or $19,335,867.47 appearing on Lines 3, 4 and 5 of Page 1 of Exhibit 51.

The $19,335,867.47 became capital surplus on the part of Panhandle Eastern as a result of the donation to it of certain assets, funds and indebtedness canceled by Missouri-Kansas Pipe Line Company as of August 31, 1930.

This witness has had no access to the books and records of Missouri-Kansas Pipe Line Company, but, in the disposition of the $19,000,000-odd dollars donated to Panhandle Eastern by Missouri-Kansas Pipe Line Company as of August 31, 1930, and the many ways in which, during the course of the ten years I have been connected with the operation of the books and accounts of these companies, I am very definitely of the opinion that a great portion of the $19,335,867.47 represented cash originally invested by some organization in properties.

Now, at the time the entries with respect to this amount were recorded on the books of Panhandle Eastern certain of the properties received by Panhandle Eastern were owned by subsidiaries, since dissolved.

[fol. 6218] However, most of such properties remain a part and parcel of the general properties and facilities

owned by Panhandle Eastern. Some of the $19,000,000 represented indebtedness of Panhandle Eastern to Missouri-Kansas Pipe Line Company as a result of advances made by Missouri-Kansas Pipe Line Company to Panhandle Eastern; either secured by notes or on open account for construction purposes.

They represented, likewise, advances made to certain companies which became subsidiaries of Panhandle Eastern as a result of the donation on August 31, 1930, by Missouri-Kansas Pipe Line Company and that indebtedness to Missouri-Kansas Pipe Line Company likewise represented amounts due it from these subsidiaries, either on open account or notes, for funds advanced to the subsidiaries and actually used by them in construction purposes and further represented the amounts invested by Missouri-Kansas Pipe Line Company in certain other subsidiaries and in the company's so-called Local Area System.

I believe, sir, without trying to say categorically that I have definite knowledge that each of the dollars represented by the $19,335,867.47 were actually invested in property, it is quite proper and logical to state that my knowledge of the amounts is such that I can have no hesitancy in saying that the greater part of it actually was invested in properties.

Q. But was this acquisition of assets of properties and [fol. 6219] other items from the Missouri-Kansas Pipe Line Company brought about through an agreement which was made between the Missouri-Kansas Pipe Line Company, the Columbia Oil and Gasoline Corporation and the National City Company as of September 17, 1930?

A. That is correct, together with certain amendments made within the next month or so thereafter.

Q. And was this amount of $19,335,867.47 set up for the purpose of determining how much the Columbia Company would provide to continue the construction program undertaken by the Panhandle Eastern Company at that time?

A. No, not as far as I know.

Q. What is your understanding of it?

A. The agreement of which you spoke dated September 17, 1930, as amended in October, 1930, perhaps Oc-

tober 23, and actually consummated along about that time, provided the amount of assets, properties and so forth to be donated to Panhandle Eastern by Missouri-Kansas Pipe Line Company.

Q. Are you quite sure of that statement, Mr. Watkins, or did it not provide the manner in which such calculations should be made?

A. That is correct. Generally speaking, the effect was to provide it.

Q. But it did not specifically state any amount whatsoever except I believe there were certain figures given [fol. 6220] with reference to the so-called Local Area properties, is that correct?

A. Well, I do not really know just exactly what figures were given in the September 17 contract without referring to it except that it is my remembrance that the contract was the basis upon which the donations, concerning which we have been discussing here in the last few minutes, came into the possession of Panhandle Eastern.

Q. It also follows, does it not, that this amount of $19,000,000-odd of which we have been speaking, was a calculation resulting from the terms and conditions of that agreement of September 17 which provided for the transfer of these properties to the Panhandle Company?

A. So far as Panhandle Eastern is concerned, the $19,000,000 concerning which we have been speaking is the amount at which the assets, properties, cancelation of indebtedness and so forth were recorded on its books.

I do not hardly know how to characterize your observation with respect to "calculation."

My memory goes that the September 17, 1930, contract, as modified, did provide the machinery by which certain amounts would be determined. Now, so far as Panhandle Eastern is concerned, it was the recipient of certain assets which were recorded on its books on the basis of the best information available to it.

[fol. 6221] Q. Have you ever made an investigation to determine what portion of this $19,335,867.47 actually represented the value of property or what amounts actually represented cash transferred?

A. Well, I believe I can be helpful in that respect, perhaps, if you will bear a moment or so with me.

Q. If you will, please.

A. It appears from an analysis the witness has before him of the paid in capital and surplus of Panhandle Eastern Pipe Line Company as of September 1, 1930, that the capital stock of the Company at August 31, 1930, was carried on its books at $50,000;

That there were acquired from Missouri-Kansas Pipe Line Company, without cost to Panhandle Eastern Pipe Line Company, the following assets:

Property, plant and equipment (Local Field),		$ 2,197,475.40
Purchase and sales contracts (Local Field),		$ 2,398,402.19
Construction work in progress (Local Field),		$ 220,473.12
Investment in associated companies:		
Missouri-Kansas Gas Company,	$ 627,661.22	
Central States Gas Utilities Company,	$ 112,420.74	
[fol. 6222] J. D. Judd & Company (51%)	$ 35,266.72	
Shale Gas Corporation (51%)	$ 164,902.37	
General Supplies,	$ 46,140.41	
Inter-Company Accounts represented—		
Notes Receivable from—		
J. D. Judd & Company,	$ 57,500.00	
Accounts Receivable represented by accounts receivable from—		
Central States Gas Utilities Co., amounting to	$ 16,094.21	
Missouri-Kansas Gas Co.,	$ 392,564.75	
J. D. Judd & Co.,	$ 10,354.93	
Prepaid Accounts amounting to	$ 3,565.19	
Less Deferred Liabilities,		
Jacksonville Property,	$ 18,569.56	
And Less Accrued Taxes,	$ 14,066.06	
Those items make a total of		$ 6,250,185.63

Missouri-Kansas Pipe Line Company canceled the following Inter-company accounts on the books of Panhandle Eastern Pipe Line Company:

Notes Payable to Missouri-Kansas Pipe Line Company by Panhandle Eastern,	$ 1,990,975.00
Accounts Payable by Panhandle Eastern to Missouri-Kansas Pipe Line Company,	$ 4,377,407.16
Accounts Payable by Panhandle Eastern [fol. 6223] to Texas Interstate Pipe Line Company,	$ 245,613.18
Less a credit represented by interest during construction,	$ 7,617.38
Making a total of,	$ 6,606,377.96

Missouri-Kansas Pipe Line Company made a payment to Panhandle Eastern to liquidate the current indebtedness of Panhandle Eastern, Panhandle Illinois Pipe Line Company and Texas Interstate Pipe Line Company obligations shown in purchase price, $ 6,479,303.88

All of which items aggregate, $19,385,867.47

Q. Was that 385,000 or 335,000?.

A. 385,000, sir, because, if you will recall, the analysis covered both paid in capital and surplus.

Q. Yes.

Do I understand from your answer, Mr. Watkins, that this analysis which you have just given showed by detailed accounts and amounts the charges which were made on the books of the Panhandle Eastern Pipe Line Company at the time of these acquisitions from Mo-Kan Company?

A. I think that is substantially correct. There may have been some slight deviation in the accounts when recording the amounts on the books of Panhandle Eastern.

Counsel for the Commission might be interested in the table shown on Page 17 of a report on the accounts and records of Panhandle Eastern Pipe Line Company as a [fol. 6224] result of an examination made by the Federal Trade Commission, copies of which I am quite positive would be available to the Power Commission.

This table gives a comparison of the amounts at which the donated assets just described were carried on the books of Missouri-Kansas Pipe Line Company and later recorded on the books of Panhandle Eastern Pipe Line Company.

* * * * * * * *

[fol. 6242] By Mr. Gorman:

Q. Mr. Watkins, at the time of taking the luncheon recess, we were discussing the amounts which had been set up on the books of Panhandle Eastern Pipe Line Company as representing assets and other items acquired from the Missouri-Kansas Pipe Line Company in 1930. I don't recall

[fol. 6243] whether I asked the question. If I did, I would like to have the answer repeated now, and that is whether or not the figures which you read as representing the value of these properties represents the extent of your knowledge as to the cost of various items transferred to the Panhandle Eastern Company.

A. I believe you did ask that question and my remembrance is that the witness replied that his knowledge with respect to these amounts began with the time when they were donated to Panhandle Eastern, and that we had no direct knowledge of the amount at which any of them were carried on the books of Missouri-Kansas Pipe Line Company, or any other company that may have theretofore owned them.

. . . . . .

[fol. 6245] By Mr. Gorman:

Q. Now, referring, again, to the reference which I made previously to the original Registration Statement as filed on December 24, 1941, there appears the following note attached to the balance sheet and made an integral part of such balance sheet of the Panhandle Eastern Pipe Line Company:

> "Property plant and equipment is stated at cost except for $2,417,948.52 thereof assigned by the Board of Directors to assets acquired as of August 31, 1930, as a capital contribution."

Now, that, as I understand, Mr. Watkins, relates to this property which was acquired from the Missouri-Kansas Company, does it not?

A. It relates to a portion of such property and states the amount thereof as of September 30, 1930. A good deal of this property represented by the $2,417,948.52 has since been retired and some of it replaced.

Q. Now, can you explain to us the significance of the statement that the property plant and equipment is stated at cost except for this $2,000,000-odd?

A. I can.

Q. Will you do so, please?

A. We have had a great deal of testimony today about certain assets, obligations, and so forth donated to Pan- [fol. 6246] handle Eastern by Mo.-Kan.

Mr. Culton: By "Mo-Kan" you mean Missouri-Kansas Pipe Line Company?

The Witness: That is correct. It was my understanding that in the proceedings Panhandle Eastern Pipe Line Company and Missouri-Kansas Pipe Line Company have been referred to as Panhandle Eastern, and as Mo-Kan, and if I may be permitted to do so I shall follow that procedure.

(Continuing) Included in the amount of this donation or, rather, included in this donation was certain property plant and equipment consisting of Organization amounting to $10,018.14; Miscellaneous Intangible Capital amounting to $25,192.17; Land, amounting to $1,940.75; Measuring Station Buildings, amounting to $9,793.95; Other Transmission System Buildings, amounting to $4,750.48; Meters and Gauges, amounting to $52,035.48; Compressor Station Equipment, amounting to $270,534.33; Field Lines, amounting to $214,324.74; Transmission Lines, amounting to $1,494,487.79; Furniture and Fixtures, amounting to $41,728.81; Automobiles and trucks, amounting to $65,459.17; Shop Equipment, amounting to $3,867.22; Laboratory and Engineering Department, amounting to $2,509.77; Other General Equipment, amounting to $832.60; Construction Work in Progress, amounting to $220,473.12.

These amounts make up the total shown opposite the [fol. 6247] caption "Property, Plant and Equipment" on page 17 of the Federal Trade Commission report by Mr. M. C. Steele, referred to in the testimony of the morning session, and the amount of construction work in progress shown thereon.

Mr. Wheat: May I ask, Mr. Watkins, under what general heading is that shown in Mr. Steele's report?

Mr. Gorman: This is identified, is it not, as Table 2?

The Witness: That is correct, it is so identified.

I believe I have with me, although I am not able to find the Table readily, a statement which will show the changes in the $2,417,000-odd figure since September 30, 1930. A great deal of the property represented by the charges to the accounts which the witness stated in the record a

moment or so ago has been retired and portions have been replaced and additional property has been constructed, so that out of the $2,400,000-odd we still have a residue of the amount represented at September 30, 1930, as property received by Panhandle Eastern, Organization, Miscellaneous Intangible Capital, and so forth, as shown by the detail previously stated.

* * * * * * *

[fol. 6248] A. The reason for the statement to which you refer in the Registration Statement is a well recognized requirement of independent public accountants and reports made as a result of their investigations and was followed by the public accounting profession quite a while in advance of the advent of the Natural Gas Act or the Securities and Exchange Act of 1934, or the Act of 1933.

However, there are manifestations in the requirements of certain forms to be filed under those Acts, that the basis upon which properties are carried on the books of an organization should be stated in accounting certificates or notes with respect to accounting reports and I verily believe, sir, that if we do not make some such statement in any Registration Statement filed with the Securities and Exchange Commission we would immediately get a deficiency.

Q. Well, in that connection, Mr. Watkins, I note at page S-1 of this Registration Statement, to which we have been making reference, there appears the Auditor's Certificate of Arthur Andersen & Company. Do I understand from the testimony which you just gave that that note [fol. 6249] which we have read from the statement was inserted at the request and insistence of the auditor?

A. And you should deduct, sir, the accounting information included in the Registration Statement which is covered entirely by the accountant's certificate to which you have just made reference.

Q. That is correct.

A. The financial information included in the Registration Statement is certified to entirely by Arthur Andersen & Company with respect to Panhandle Eastern and the matters covered by their work, and with respect to Michigan Gas Transmission Corporation and Indiana Gas Dis-

tribution Corporation the matter is certified to by Messrs. Price, Waterhouse & Company with respect to the matters covered by their work.

I don't believe you meant to infer that the company suggested to Messrs. Arthur Andersen & Company or the other firm of public accountants what those organizations should put in the balance sheet or in the Registration Statement as their comments?

Q. No, I merely intended to indicate, without any harmful intention whatsoever, that the certification of the auditors of that balance sheet was qualified to the extent indicated in the notes attached to that balance sheet. Was that the correct assumption?

[fol. 6250] A. Oh, I think it has to be, sir.

* * * * * * * *

[fol. 6254] By Mr. Gorman:

Q. Mr. Watkins, at the time of the recess, you were to undertake to find certain notes which would explain certain matters in connection with the amount of $2,417,948.52 to which we have previously made reference.

Were you able to locate those notes?

A. Yes, I was, and the particular reason I wanted to locate the notes was because of the fact that I felt that there might be some question in someone's mind that this $2,417,948.52 received by Panhandle Eastern as a part of the total of $19,300,000-odd donated by Mo-Kan did not represent actual cost and, by the introduction of the total amount of retirements made out of the $2,417,948.52 from August 31, 1930, to September 30, 1941, [fol. 6255] a portion of that question, if there be any, would be dispelled from anyone's mind.

The retirements of property represented by the $2,417,948.52 from August 31, 1930, to September 30, 1941, amounted to $1,034,043.54.

During that same period, there was subsequent additions made having a cost of $534,243.91.

Q. What was that figure again? A. $534,243.91.

Q. Thank you.

A. So that the balance represented by the original amount, $2,417,948.52 less subsequent retirements plus subsequent additions was $1,918,148.89 at September 30, 1941.

Q. From this statement, Mr. Watkins, is it correct to say that as of September 30, 1941, there remained of the property acquired from the Missouri-Kansas Company, which is related to this statement which we have quoted, $2,417,948.52, less retirements of $1,034,043.54, is that correct?

A. I am afraid, Mr. Gorman, we could not quite say that properly because some portion of the retirements amounting to $1,034,043.54 may have represented retirements of a portion of the subsequent additions amounting to $534,243.91.

I do not actually have with me a segregation of the retirements as to the amount originally received from Missouri-Kansas represented by the $2,400,000-odd and as [fol. 6256] applicable to the $534,000 item comprising the subsequent additions.

Q. Do your notes indicate the period during which these additions comprising the total of $534,000-odd were made?

A. Yes, they do, and I believe I have stated that they were made between August 31, 1930, and September 30, 1941.

Q. Would it be your opinion that in all likelihood there would have been only a very small amount of this $534,000 retired up to September 30, 1941, by reason of the newness of this property?

A. If I express such an opinion, I would have to give consideration to the fact that the properties originally represented by $2,400,000 were what has been characterized in these proceedings as the Local Area properties in which there is a considerable turnover in investment by reason of the diminution of supply, the movement of gathering lines, field lines and measuring stations, and I am afraid it would be improper for me to hazard a guess.

Q. Your reference to the Local Area properties is predicated upon the fact that it is anticipated that the reserves of gas in the Local Area will be exhausted within the next few years, is it not?

A. No, sir. My statement with respect to the rapidity of turnover in investment in the Local Area is because [fol. 6257] there have been certain producing properties which, since August 31, 1930, have become non-producing properties. The wells in this Local Area are shallow wells, the gas reserves under them are not great.

There is a great deal of drilling and a great deal of recovery of materials in the property, movement from one place to another within the Local Area field, not so much crystal gazing as to what might happen to the reserves in the future.

My statement is predicated entirely upon what I know has happened in the past. I would be afraid to state that only a small portion of the $534,000 figure had been retired.

I would want to be as realistic as one possibly can about the matter and I cannot conscientiously make such a statement.

Q. Well, to accurately and definitely determine that would require an analysis of each retirement which has been made from August 31, 1930, through September 30, 1941, of the property originally donated by Mo-Kan?

A. That is true and which I certainly hope you will not ask us to prepare.

Q. No, I understand. Do you have no accounts from which this amount could be easily and readily ascertained?

A. As to the investment as it existed at August 31, 1930, and as to the subsequent additions, we do not have [fol. 6258] any records from which a segregation could readily be made of the amount of retirements during that period applicable to those two classes of investment.

Q. And you are, therefore, not in a position at the present time to indicate specifically what portion of this amount of $2,417,000 which has been included in your gas plant account was donated by the Mo-Kan Company?

A. Yes. I have specifically testified during the proceedings today that the whole of the $2,417,948.52 was among the assets donated by Mo-Kan.

Q. I was speaking—

A. (Interposing) As to the retirements, no.

Q. I was speaking as of the amount remaining at the present time.

A. No, I could not segregate that.

Q. You understand, of course, I am speaking of the gas plant account as it stood at June 30, 1941?

A. With respect to this particular item only?

Q. Yes, that is right.

A. Yes.

Q. Mr. Watkins, all of this discussion which we have been recently engaged in concerned only $15,017,300 of the total shown in Column M of Line 2 of Page 2 of Exhibit No. 48 which, at June 30, 1941, was $20,184,175, the difference being, according to my calculations, $5,166,875.

[fol. 6259] Can you tell us what portion of this valuation of common capital stock represents property and cash?

A. I am afraid you have me confused, sir.

We have recently been talking about $19,300,000-odd that came into the proceedings as a result of the question previously predicated and you are now asking about the $15,017,300, is that correct?

Q. That is correct.

A. Now, we are going back to the $15,000,000-odd figure that is in the capital account, is that right?

Q. No, to the difference between the $15,017,300 and the $20,184,175, which was present in this account as of June 30, 1941. Do you understand my question now?

A. Yes, I believe I have your question in mind correctly.

If I may give you the general substance of what happened without testifying with respect to specific amounts, I believe it would speed things along and perhaps reach the conclusion that you have in mind.

If you will observe Page 2 of Exhibit No. 48, you will observe that at December 31, 1930, the common capital stock is stated on Line 2 of Column B at $100,000. If we may begin there and proceed toward the $20,184,175, will that be satisfactory?

Q. I am sure that will be.

[fol. 6260] A. At or about October, 1930, a contract was entered into between Columbia Oil and Gasoline Corporation, Missouri-Kansas Pipe Line Company and, I believe, the Chase National Bank—

Q. (Interposing) I believe it was the National City?

A. This, I believe, was the Chase National Bank, providing the medium through which some $10,900,000, I believe, would be available to Panhandle Eastern Pipe Line Company to complete the construction program under which, at the time, Columbia Oil and Gasoline Corporation acquired one-half of the outstanding stock of Panhandle Eastern from Missouri-Kansas Pipe Line Company.

Without indulging in too much explanation as to the nature of that contract, it provided that by the submission by Panhandle Eastern of certain construction certificates, there would be made available to it 100 percent of the amount of such construction certificates out of funds provided by Columbia Oil and Gasoline Corporation and Missouri-Kansas Pipe Line Company.

Now, when the witness refers in this respect to Missouri-Kansas Pipe Line Company, he is stepping through several corporate walls because, actually, there was another corporation interposed that provided the funds, but the effect was they came from Mo-Kan.

Q. You are speaking of the Panhandle Corporation?

[fol. 6261] A. That is correct, and the funds made available to Panhandle Eastern for construction purposes were to be represented by notes and common stock in the proportion of $90 of notes and two shares of common stock to each $100 of construction.

You will observe the common capital stock account increased up to a total, in 1935, of $1,199,000 as shown in Column G on Line 2 of Page 2 of Exhibit No. 48.

That increase was the result of the issuance of stock as a part of Panhandle Eastern's obligation to the two companies under this three-part contract through which the additional construction funds were provided.

Q. Was that for cash received?

A. Entirely for cash received. As I have stated, Panhandle Eastern was required, under this contract, to sub-

mit to the Chase National Bank, I believe, certain specific construction certificates and there was some legal procedure followed by the bank or its nominee to acquire the funds from Columbia Oil and Mo-Kan upon the receipt of which Panhandle Eastern gave its notes and stock certificates.

The increase beginning in 1936 came about from two directions. My memory runs to the fact that in March, perhaps March 24, 1936, Panhandle Eastern issued the right to its stockholders, there being only two at that time, to subscribe to 160,000 shares at $25 a share.

[fol. 6262] One of the two stockholders subscribed to its 80,000 shares on April 1, 1936, which increased the common capitalization by $2,000,000.

Then, as shown by Exhibit 51, there was transferred from capital surplus to the common stock account an amount of $15,017,300 as a result of action by Panhandle Eastern Pipe Line Company's Board of Directors.

These transactions increased the common capital stock to $18,216,300, as shown on Line 2 in Columns H, I and J of Page 2 of Exhibit 48.

In 1939, the 80,000 shares warrant, which had been issued to the second stockholder in 1936 and held subsequent to that time by that stockholder's receivers, was offered to the stockholders of that organization and all but 1,285 shares of the 80,000 shares were subscribed by such stockholders on or before October 29, 1939.

This increased the balance in the common capital stock account, as shown on Page 2, Line 2, Column K, to $20,184,175, which amount remained unchanged to June 30, 1941 and, for that matter, to January 20, 1942.

Q. Does that complete your answer, Mr. Watkins?

A. If it answers your question, it does.

Q. Yes, it does. Can you tell us, Mr. Watkins, to the best of your recollection how many shares of common stock were outstanding at December 31, 1935, as represented [fol. 6263] by the amount shown in Column G, Line 2, of this exhibit?

A. I believe there were 2,298.

Q. Referring to Page 1 of Exhibit No. 51, Lines 39 and 40 bear the following statement, "Capital surplus assigned to stock dividend paid by the issuance of 646,354 shares of common stock" which, according to Column H for the year 1936, represented the amount of $15,017,300 of which we have been speaking.

Therefore, the common stock outstanding was increased as of that year to the extent of 646,354 shares, was it not?

A. That is correct.

Q. Will you explain to us the circumstances, that is, explain somewhat briefly the circumstances which brought about the issuance of this stock?

A. I am not sure that it was entirely a result of the agreement entered into in October 1930, between Panhandle Eastern, Mo-Kan and the Chase National Bank or as a result of some other corporate action that the stock of Panhandle Eastern was represented in the hands of the stockholders by voting trust certificates.

In 1935, I believe at July 31, the voting trust was dissolved and either coincident with the dissolution of the voting trust or the common stock or perhaps slightly prior thereto, the number of shares of common stock was reduced from 229,800 such shares to 2298 of such shares.

[fol. 6264] The latter number of shares remained unchanged until the stock dividend referred to in Lines 39 and 40 of Exhibit No. 51 was paid.

The Board's action was, I believe in conformity with the general corporate laws of the State of Delaware, that the price at which the 648,354 shares paid as a stock dividend was deemed to have been issued was $25 a share and by a simple arithmetic calculation, we arrived at the $15,017,300.

Does that answer your question, sir?

Q. Yes, excepting for another thought which I have in mind.

Was the issuance of this stock related in any way whatsoever to the settlement of a suit which had been instituted by the stockholders or receivers for the Missouri-Kansas Pipe Line Company against certain individuals claiming,

I believe, some $180,000,000 in damages? You had better answer that phase of the question first.

A. I doubt that it had too close a connection to that. There might have been some connection. Frankly, I do not know. There was a recapitulation of Panhandle Eastern Pipe Line Company under way at the time. There were a great many corporate matters being disposed of.

The fact that the corporation had 2,298 shares was a terrific amount in its capital account and was a bit awkward and that perhaps gave rise to some additional taxes [fol. 6265] and shares were unwieldy as represented by the amount as stated by the books and unquestionably, there were a great number of things considered by the stockholders and the Directors in determining to increase the number of shares from 2,298 to 668,652 outstanding.

My memory also runs to the fact that the entire authorized capital stock had likewise been increased. There may have been some desire on the part of the stockholders to have the evidence of their ownership of Panhandle East- broken up into smaller pieces in order that they might deal more freely with them.

Along about the middle of 1936, Panhandle Corporation, an organization to which you referred a short while ago, transferred the common stock of Panhandle Eastern it owned to the receivers of Missouri-Kansas Pipe Line Company.

Missouri-Kansas Pipe Line Company, I believe, asked that the one large certificate for the total number of shares that it received be broken down into smaller pieces and, as I say, there were those and perhaps a great number of other things that entered into the consideration involving the stock dividend.

Q. Yes. Now, Mr. Watkins, you referred in your answer to a question of a few moments ago to two stockholders of Panhandle Eastern Pipe Line Company. Those stockholders were the Columbia Oil and Gasoline Corpora- [fol. 6266] tion and the Missouri-Kansas Pipe Line Company?

A. The Missouri-Kansas Pipe Line Company has not held stock as a corporation throughout the entire period.

It was about the middle of 1936 when Missouri-Kansas Pipe Line Company became the record holder of a portion of the common stock of Panhandle Eastern.

Apparently at that time, the stock that it became the record holder of had either been in the name of a voting trustee or Panhandle Corporation or maybe back in the early days, some other nominee.

Q. Might it not be well to explain at this point that the Panhandle Corporation was an entity set up by the Missouri-Kansas Pipe Line Company for the purpose of certain financing arrangements which it undertook in 1930?

A. I do not really know.

Q. I do not want you to go into the detailed explanation.

A. I do not really know the basis upon which it was set up. My personal observation of the corporation was that that might have been the case.

Q. Yes. Do you know whether or not, Mr. Watkins, the issuance of this 646,354 shares of common stock was brought about, in part, by a consent decree entered in the District Court of the United States for the District of Delaware on January 29, 1936, as a result of an anti-[fol. 6267] trust action brought by the United States Government?

A. Now, I am just a simple sort of a person. If you will not involve me in any actions that might have been brought by the Department of Justice or any consent decrees that may have been issued, I certainly will be obliged to you.

I have tried to say, in answer to your previous question, that it is my belief that the origin of the 646,354 shares was as a result of a wide variety of things, one of which might have been this particular transaction to which your question is directed.

Q. You personally, as secretary and controller of the company, are not aware of the facts with respect to that matter?

A. I would not say that. I am aware of the fact that there is a consent decree, that there was an anti-trust suit. Whether those particular circumstances were the only

circumstances that have anything to do with the issuance of the stock dividend, I do not know.

I presume that it probably did have something to do with it.

There may have been some provision in the consent decree or the stipulations I presume issued thereunder or concurrent with it that caused the issuance of these stock dividends.

Q. Can you say at the present time whether the minutes of the Board of Directors of the Panhandle Company [fol. 6268] would set forth in detail the reasons for the issuance of this amount of stock?

Mr. Wheat: Do you mean the Panhandle Company?

Mr. Gorman: That is right.

Mr. Wheat: Yes.

Mr. Gorman: Panhandle Eastern Pipe Line Company.

The Witness: I think there would be some reference, unquestionably, in the minutes of the meeting in which the stock dividend was declared as to its purpose.

Whether that statement would run to the anti-trust suit to which you referred to or to the consent decree, I am not sure that I know.

I believe Panhandle Eastern made an offer to issue certain shares of stock and to issue certain stock rights and to do certain other things to its stockholders somewhere along about June 19, 1935.

These transactions we are referring to might even have a part of their origin back in that offer.

By Mr. Gorman:

Q. I believe you stated, Mr. Watkins, that the 80,000 shares of stock which were purchased by one of the stockholders in 1936, whom I assume to be the Columbia Oil and Gasoline Corporation were purchased actually on a cash basis, were they not?

A. That is correct.

[fol. 6269] Q. And is that also true of the sales of stock

which took place in the year 1939 to which you made reference?

A. That is correct.

* * * * * * * * *

I was not controller, of course, back in 1936.

Q. Well, we understand, of course, you were only secretary at that time.

Referring now to Line 3 of Page 2 of this exhibit, which is the account for preferred capital stock, at December 31, 1936, and continuing up to and including June 30, 1941, there was outstanding some $11,000,000 in this account.

Can you tell us whether or not this preferred stock was all issued for a cash consideration?

A. Yes, I can explain that.

Going back to the responses I gave with respect to the fact that Missouri-Kansas Pipe Line Company may not have been a record holder at all times of the stock it now owns, my mind is refreshed that there was a nominee of Panhandle Corporation involved.

I presume it is sufficient, so far as our interest in this matter is concerned, to refer only to Panhandle Corporation.

Now, as to the $11,000,000 principal amount of preferred [fol. 6270] stock which came into existence in 1936, we must turn again to the three-party agreement entered into to provide for the additional $10,900,000-odd of cash needed to complete Panhandle Eastern's construction program as it existed in the latter part of 1930 and to the fact that Panhandle Eastern thereafter issued certain of its notes, together with certain shares of stock, to the organizations advancing to it approximately $10,990,000 in cash.

This cash was advanced to Panhandle Eastern in equal amounts by Columbia Oil and Gasoline Corporation and by the Ottiwell & Company, the latter in behalf of Panhandle Corporation for construction requirements of Panhandle Eastern and its subsidiaries.

These advances, as the witness has stated, represented $90 in principal amount of Panhandle Eastern notes and two shares of its no-par common stock.

There were issued, during the years of 1931 and 1932, Panhandle Eastern Pipe Line Company's 6 percent promissory notes due October 2, 1950, aggregating $9,891,000. There had accrued but was unpaid in 1936, interest on such notes in excess of the difference between $9,891,000 and $11,000,000.

On February 6, 1936, according to the revised plan of readjustments of funded debt and capitalization of Panhandle Eastern Pipe Line Company dated June 19, 1935, Panhandle Eastern authorized the issuance of 94,000 shares [fol. 6271] of convertible cumulative preferred stock, having an aggregate par value of $9,400,000 and $1,600,000 principal amount of promissory notes convertible into convertible cumulative preferred stock at par at option of the holders, against the receipt for cancelation of $9,891,000 principal amount of 6 percent promissory notes due October 2, 1950, with unpaid and accrued interest thereon in the amount of $1,440,789, so the witness believes, to answer the question originally put; that the total of the $11,000,000 carried in Exhibit No. 48 on Page 2, Line 3, in Columns H, I, J, K, L and M was represented by cash or its equivalent.

. . . . . .

[fol. 6275] Q. Referring now, Mr. Watkins, to Line 6, Page 2, of this exhibit, which is the long-term debt accounted for by bonds, I note that in Column M as of June 30, 1941, there was outstanding a total of $18,250,000 in bonds and that prior to that year, specifically shown in Column I for the year 1937, there was outstanding a total of $24,000,000 worth of bonds.

Can you tell us the total amount of money which has been raised by the Panhandle Company through the issuance of bonds?

A. The actual dollars, no, without some preparation. There is, however, in the record testimony by this witness with respect to three major financial transactions involving bonds, aggregating, in the first instance, a total principal amount of $20,000,000; in the second instance, a total principal amount of $24,000,000; and, in the third instance, a total principal amount of $18,250,000.

If it is necessary to supply the actual dollars received by the company as a result of the sales of those securities, I will have to have that prepared.

Q. Before I discuss that, Mr. Watkins, can you tell us whether or not certain of the issues which you have just [fol. 6276] spoken of were used, in part at least, for the retirement of bonds which had been issued previous to such later transactions?

A. Yes, I can do that.

* * * * * * * *

Q. Without specific detail, I merely intended to ask a general question. I believe you answered by saying "yes."

What I meant by my question is this, I see you do not understand, that certain of your issues have been used, in part, for the retirement of outstanding bonds, have they not? A. That is correct.

* * * * * * * *

[fol. 6277] Q. Will your notes also indicate the amount of such money that was received that was used for the construction of plant and properties?

A. No, they will not, and I do not know how in the world one could determine such an amount because the proceeds of the sale of securities, along with any other funds that the company received, are thrown into a general bank account from which payments of varied nature are made, either for construction, for operation or for payment of salaries or any other payments that need be made in the ordinary course of business.

We have made no attempt whatever and I do not know how we would go about making an attempt to try to earmark the dollars that go into the general treasury.

Q. Of course, in making such statements, you are taking into consideration all of your books and records and the fact that they would not disclose such information?

A. The books and records do disclose the actual amounts expended for any purpose for which funds have been expended.

One could refer to the income statement introduced as Exhibit No. 49 in these proceedings and observe, for in- [fol. 6278] stance, that the operating and maintenance expense for the period from April 1, 1932, to December 31, 1940, as shown on Line 9 of Column K on Page 1 of Exhibit 49, have amounted to more than $15,600,000.

Now, obviously, that money had to come from some place and there is a complete and very definite record in the company's accounts as to what that money was spent for.

Further than keeping a most accurate record as to where the money is spent, what it is spent for, the account to which it ultimately must properly be charged, the company has no records that show how much of any dollar it received is spent for construction, maintenance, or for any other purpose.

Q. Has it been the experience, according to your information, Mr. Watkins, that in each succeeding issue of bonds the company has been able to acquire funds at a lesser amount of interest?

A. It has not only been the experience but that is the fact.

Q. Yes, that is what I meant by experience.

A. What the future will hold is an entirely different matter.

. . . . . .

[fol. 6282] LEITH V. WATKINS a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Mr. Wheat: Mr. Examiner, in connection with yesterday's cross-examination of Mr. Watkins, certain documents were referred to, and I should like to offer now for identification the following documents:

First, "Panhandle Eastern Pipe Line Company—Compiled Registration Statement", being registration No. 2-4919; date of filing, December 24, 1941; Amendment filed, January 20, 1942; effective date, January 21, 1942, as of January 12, 1942, covering issues of $10,000,000 first

mortgage and first lien 3 percent bonds, Series C, due January 1, 1962, and 150,000 shares of a yet unstated percent cumulative preferred stock (par value $100 per share) and I ask that that be marked with the next exhibit number.

Trial Examiner: The document which you have just described will be marked for identification as Exhibit No. 145.

(Exhibit No. 145 was marked for identification.)

Mr. Wheat: Second, I should like to offer similarly for identification a document entitled, "Prospectus—Panhandle Eastern Pipe Line Company—$10,000,000 First [fol. 6283] Mortgage and First Lien 3 Percent Bonds, Series C, Due January 1, 1962, and 150,000 Shares of (Unstated) Percent Cumulative Preferred Stock, (Par Value $100 Per Share)" dated January 21, 1942.

Trial Examiner: This will be marked for identification as Exhibit No. 146.

(Exhibit No. 146 was marked for identification.)

Mr. Wheat: In addition, I would like to have marked for identification, with the right to withdraw later and substitute a typed copy, an order of the Securities and Exchange Commission made at a regular session of the Commission at its office in Washington on the 21st day of January, 1942, "In the Matter of Columbia Gas and Electric Corporation, Columbia Oil and Gasoline Corporation, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation and The Ohio Fuel Gas Company, File Nos. 59-33, 70-263, 70-371, 70-387, 70-430 and 70-431, under Public Utility Holding Company Act of 1935."

* * * * * * * * *

Trial Examiner: This is the order, I take it, which entitles the Panhandle Eastern Pipe Line Company to ac- [fol. 6284] quire certain interests in the Michigan Gas Transmission Corporation?

* * * * * * * * *

Trial Examiner: Very well, we will mark this Order to which you have just referred as Exhibit No. 147 for identification.

. . . . . .

[fol. 6285] Mr. Wheat: May I say with respect to Exhibit No. 146, that this is a bidding prospectus and not the one which offers the securities in question to the public.

I think that distinction is one which possibly should be made of record.

Now, Mr. Examiner, I would also like to offer for identification, also with the right to substitute a mimeographed copy for this typewritten and carbon copy, the Order of the Securities and Exchange Commission in File No. 2-4919, "In the Matter of Panhandle Eastern Pipe Line Company", made at the session of the Securities and Exchange Commission on January 21, 1942, consenting to the filing of amendments to the Registration Statement.

I think that will make the entire group of these documents complete.

Trial Examiner: This will be marked for identification as Exhibit No. 148.

. . . . . .

[fol. 6287] The Witness: In some of the answers to questions put to me yesterday, I may have referred to Columbia Oil and Gasoline Corporation as a stockholder of Panhandle Eastern Pipe Line Company.

Subsequent to the consent decree to which Mr. Gorman made reference during yesterday's proceedings, the stock of Panhandle Eastern Pipe Line Company, beneficially owned by Columbia Oil and Gasoline Corporation, was registered in the name of Gano Dunn, Trustee for Columbia Oil and Gasoline Corporation, appointed pursuant to a decree dated January 29, 1936, in Cause 1099, in Equity in the District Court of the United States for the District of Delaware.

. . . . . .

The Witness: If I may at this juncture, however, suggest that if we could, each time we refer to Columbia Oil

as a stockholder, if such reference is hereafter made, understand we are referring to its beneficial interest and not to the fact it is a record owner subsequent to January, 1936, it might simplify our work.

Mr. Gorman: Can you advise us at this time, Mr. [fol. 6288] Watkins, whether or not that trusteeship is still in effect?

The Witness: It is.

Mr. Gorman: However, as you have indicated, Columbia Oil and Gasoline Corporation is the beneficial owner of such stock?

The Witness: That is correct.

. . . . . .

[fol. 6290] Now, as to the information requested yesterday which the witness is prepared to supply, shall we proceed with that?

Mr. Wheat: Mr. Gorman, would that be satisfactory now?

Mr. Gorman: Yes, quite.

Mr. Wheat: It seems to me that would be a good method to handle this.

Mr. Gorman: Yes, I am agreeable to that.

Mr. Culton: These are the special deposits, are they not?

The Witness: That is correct and the breakdown which the witness is about to supply is that referred to in the question appearing on Lines 7, 8 and 9 at Page 6185 of the transcript of yesterday morning's session.

[fol. 6291] "Special Deposits", amounting to $1,489,127.23 as of June 30, 1941, appearing on Line 6 of Page 1 of Exhibit 48 in Column M. consisted of:

First mortgage and first lien bonds, Series A, 4 percent, due March 1, 1952, City Bank Farmers Trust Company, paying agent (called for redemption March 1, 1941)—$3,820.

First mortgage and first lien 3 percent bonds, Series B, due November 1, 1960, City Bank Farmers Trust Company—paying agent,—$2,055.

Those two items make a total of $5,875.

Miscellaneous Special Deposits are as follows:

Sinking Fund—first mortgage and first lien bonds, Series A, 4 percent, due March 1, 1952, City Bank Farmers Trust Company-Paying agent (called for redemption March 1, 1941)—$9,000.

Funds for redemption of first mortgage and first lien bonds, Series A, 4 percent, due March 1, 1952, City Bank Farmers Trust Company-Paying agent (called for redemption March 5, 1941),—$1,473,524.23.

Funds in Escrow consisted of:

Service Deposits made with the City of Belton, Missouri $5.00;

City of Hugoton, Kansas, $40.00;

Missouri Public Service Company, $5.00;

Kansas Utilities Company, $3.00;

[fol. 6292] These comprise a total of $53.00.

Right-of-Way Deposits consisted of:

State Highway Commission of Kansas, amounting to $25;

Jackson County, Missouri Highway Department, $50;

Making a total of, $75.

There was also a deposit for guaranty of insurance premium with Zurich General Accident and Liability Insurance Company, amounting to $600.

The total of the Miscellaneous Special Deposits was $1,483,252.23 which, taken together with the interest special deposits amounting to $5,875 as an aggregate, made up the total of special deposits amounting to $1,489,127.23 as shown on Exhibit No. 48 at the place hereintofore referred to.

Cross-Examination (Continued)

By Mr. Gorman:

Q. Do you have any other statements that you desire to make, Mr. Watkins, before we proceed?

A. Yes, I do.

At Lines 19 and 20 on Page 6192 of the transcript of yesterday morning's session, the witness was requested to supply for the record the balance in the materials and supplies account as at December 31, 1941.

This amount was $374,839.09, and to completely clear up the record—

Q. (Interposing) Mr. Watkins, before you proceed to [fol. 6293] another subject, does that figure which you have just given represent the closed account or is that account still open for further adjustments prior to closing?

A. As far as I know, it is completely closed. However, if it does not represent the final balance in the account comparable with such balances shown elsewhere at different periods on Exhibit 48, the witness will advise the Commission in some proper manner of whatever the difference may be.

Q. But, in so far as you know at the present time, that does represent the amount which will be in the closed account as at December 31, 1941?

A. That is right.

Now, at Lines 16, 17 and 18 on Page 6211, the matter was left if there be no reason for changing the statements made by the witness, the statements would stand as correct.

Mr. Wheat: To what does that refer?

The Witness: That referred to the fact that there had been no extraordinary property losses experienced by Panhandle Eastern.

The witness has verified the fact and the statements heretofore made in that respect are absolutely correct.

* * * * * * * *

[fol. 6295] By Mr. Gorman:

Q. Mr. Watkins, will you please refer to Page 2 of Exhibit No. 4-S. Line 6, the account "Long Term Debt-Bonds", and particularly to Column M which shows the status of this account as of June 30, 1941.

A comparison of the amounts shown as of that date of $18,250,000 with the amount shown at December 31, 1940, of $22,500,000 indicates that certain bond retirements have been made during the first six months of 1941.

Can you tell us briefly of the transactions which resulted in such diminishment of the bond account of the bonds outstanding?

A. As a result of certain financial transactions consummated as of February 3, 1941, a portion of which was accomplished following the making effective of Registration No. 2-4975 on Form A-2 filed with the Securities and Exchange Commission on November 18, 1940, under the Securities Act of 1933, there were issued and sold on February 3, 1941, $12,000,000 principal amount of Panhandle Eastern Pipe Line Company Series B bonds and, at the same time, $6,250,000 of Panhandle Eastern's Series A bonds, and $5,000,000 principal amount of Serial notes, a more complete description of such securities the witness believes is in the transcript of his original testimony in response to questions directed to him by Mr. Wheat. My remembrance is that the maturities of the securities is [fol. 6296] stated in complete detail in the record.

Having issued and sold these securities, coincident with their delivery, there was deposited with the Corporate Trustee under the company's previous mortgage trust indenture an amount sufficient to redeem the full principal amount and accrued interest on a prior issue of 4 percent bonds.

Is that sufficient, sir?

Q. I think it is, yes.

Can you tell us also whether or not certain refinancing operations are proposed to take place pursuant to an order granted by the Securities and Exchange Commission which has been identified as Exhibit No. 147 and the concurrent findings which are identified as Exhibit No. 148?

A. Yes, I can, and they consist of the expectation of the company to issue and sell $10,000,000 principal amount of first mortgage and first lien 3 percent bonds, Series C, due January 1, 1962, and 150,000 shares of cumulative preferred stock with a par value of $100 per share, all of which is more fully described in Registration Statement No. 2-4919, and in the bidding prospectus, both of which documents have been heretofore identified in these proceedings as Exhibits Nos. 145 and 146, respectively.

Q. Is the purpose of this proposed financing operation to acquire additional properties or will they also result in certain refunding operations? If the answer is [fol. 6297] completely set forth in these exhibits to which you have made reference—

A. (Interposing) The answer is completely set forth and on Page 66 of Exhibit No. 145 is a part of Item No. 28 which is not yet fully complete.

These details are shown with respect to approximately how the net proceeds from the sales are to be applied.

Would counsel like for that information to be read into the record or shall we leave the matter by referring to the item?

Q. I think it might be well for the witness to read into the record that portion of the answer to Question No. 28 which appears on Page 66.

Mr. Wheat: Of which Exhibit, No. 145?

Mr. Gorman: Of Exhibit 145.

Mr. Culton: The same information appears on Page 3 of the Prospectus, Exhibit No. 146, does it not?

The Witness: That is correct. In the Prospectus the designation of the section is, "Application of Proceeds".

In the registration statement, the item is identified as "Furnish a reasonably itemized statement of the approximate amount devoted to each purpose, so far as determinable, for which the net proceeds have been or are to be used."

In said Item No. 28, there appears the following tabulation:

1. To the purchase from Columbia Gas & Electric Cor-
[fol. 6298] poration of all the outstanding securities (stock and indebtedness) of Michigan Gas Transmission Corporation, $10,676,000.

That amount is followed by an asterisk referring to a footnote which reads as follows:

"This figure will be adjusted upward or downward in an amount equal to the increase or decrease, as the case may be, of the surplus of this corporation during the period between September 30, 1941, and the date of purchase."

Section No. 2 reads as follows:

"To the purchase from Columbia Gas & Electric Corporation of all the outstanding securities (stock and indebtedness) of Indiana Gas Distribution Corporation. $154,000.

The note previously read in connection with Item No. 1 likewise refers to this amount.

Section No. 3:

"To the purchase from The Ohio Fuel Gas Company of certain natural gas pipe lines in Indiana and Ohio. $439,000.

No. 4:

"To the redemption of all of the Company's outstanding Class A Preferred Stock (now owned beneficially by Columbia Oil & Gasoline Corporation), exclusive of accrued dividends which will be paid out of the Company's general funds. $10,000,000.

Item No. 5:

"To the payment of part of the cost of construction
[fol. 6299] work now authorized as more fully described in Item 7 hereof."

There is no amount shown opposite No. 5 but, in the position where the amount would ordinarily [shown] are two asterisks referring to the following footnote:

"The balance (estimated at blank dollars as of September 30, 1941) of the payments of the cost of con-

struction work now authorized, is to be made from the general funds of the Company."

There follows a footnote referring to all of Item No. 28 reading as follows:

"The answer to this Item 28 will be amended by post-effective amendment to this Registration Statement to show the amount of funds, other than from net proceeds, that will be paid from the general funds of the Company for the purposes aforesaid."

The witness neglected to read, but perhaps the record should show, that preceding the tabulation of the application of the proceeds of the sale of securities to which reference has been made, the Prospectus on Page 3 makes reference to the net proceeds after deducting expenses in connection with the issue and sale of said bonds and preferred stock.

In connection with Portion No. 5 of Item 28 appearing on Page 66 of the Registration Statement, and here it might be noted that we have been referring to this as a "Registration Statement", whereas it states on its very [fol. 6300] face that it is a "Compiled Registration Statement", meaning that it is a compilation of the original Registration Statement and Amendment No. 1 thereto.

I believe I was referring to Section No. 5 of Item 28 on Page 66 of the Compiled Registration Statement which refers to construction work authorized and described in Item 7 of the Compiled Registration Statement.

Item 7 carries a description "Property" and neglecting all of the answer to Item 7 except that portion appearing on Page 23 under the general heading "Authorized Construction Work", there appears the following:

"During the year 1941 the Company authorized certain construction work, a large part of which is now in progress, involving expenditures then estimated at approximately $9,000,000, in order to extend natural gas service to a number of communities in the State of Michigan and increase the peak load delivery capacity of its system. It is anticipated the ultimate cost of such work

may exceed such estimate by approximately 10 percent. The principal construction work includes:

"(1) Construction of approximately 256 miles of 20-inch, 18-inch, 16-inch and 12¾-inch pipe line in the State of Michigan for the purpose of delivering natural gas from the Michigan Gas Transmission Corporation system to Consumers Power Company and others;

[fol. 6301] "(2) Construction of aproximately 146 miles of 26-inch, 24-inch and 20-inch pipe line parallel to the Company's present system in the States of Kansas, Missouri and Illinois, and

"(3) Installation of additional gas engine driven compressors in the Company's Pleasant Hill, Glenarm and Tuscola compressor stations.

The Company estimates that all presently authorized construction work will be completed by July 1, 1942."

Which ends the quotation from Page 23 of the Compiled Registration Statement under the general heading "Authorized Construction Work", being a part of Item No. 7 thereof.

By Mr. Gorman:

Q. Mr. Watkins, in connection with the matters which you were discussing, specifically the purchase from Columbia Gas & Electric Corporation of the outstanding securities, including stock indebtedness of the Michigan Gas Transmission Corporation of an amount stated in this Item 28 which you have been reading of $10,576,000, reference to Item 29, part A thereof, indicates that the items to be purchased are certain demand notes and certain demand loans which are respectively $5,900,500 and the demand loans being $2,420,000, aggregating, as I add it, $8,320,500, plus common stock which is said to be stated on the books of Michigan Gas Transmission Corporation of $2,240,000. [fol. 6302] As I add the total of these three items, it produces a result of $10,560,500 which is approximately $115,500 difference from the figure stated in Item 28. Will you explain the items, if any, which comprise this difference of $115,500 or can you invite my attention to any part of this exhibit No. 145 which would explain that difference?

A. You find approximately $150,000 less—

Q. (Interposing) My total of the three items which I mentioned specifically, demand notes, loans and stated stock [stock] value, aggregate $10,560,500 as compared with the stated total in Item 28 of $10,676,000 which is a difference, I believe, of $115,500.

A. As the note on Page 28 referring to the Item $10,676,000 indicates, an adjustment must be made in the amounts at which these securities are carried on the books of Columbia Gas & Electric Corporation with respect to the surplus at the time of acquisition.

Mr. Wheat: You referred to Page 28. You mean the answer to Item 28 on Page 66?

The Witness: Thank you very much.

Mr. Wheat: On Exhibit 145.

The Witness: That is exactly what I meant.

The order issued by the Securities and Exchange Commission provides for an adjustment of Columbia Gas' investment in these securities [downard] by an amount, I [fol. 6303] believe, that ranges around $130,000 odd.

If you have a decided interest in this difference, I shall be glad to work it out for you, either at noon or this evening.

By Mr. Gorman:

Q. No, I think that it will be satisfactory, Mr. Watkins. As I understand your statement, this total of $10,676,000 is interpreted, for the purpose of the proposed purchase, to be the investment of the Michigan Gas Transmission Corporation in its properties, is that correct, properties and other assets?

A. It would hardly be proper to say that as the plan provides and as the Registration Statement speaks and as the Order of the Securities and Exchange Commission speaks, the acquisition is to be made on the basis of the investment of Columbia Gas & Electric Corporation in these securities as of September 30, 1941, adjusted upward or downward for the amount of surplus created by Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation up to the time they are actually acquired by Panhandle Eastern Pipe Line Company and provides further for an adjustment in Columbia Gas &

Electric Corporation's investment by the amount the witness previously referred to, ranging around $125,000 to perhaps $130,000.

That adjustment is one which represents some fees in-
[fol. 6304] curred in connection with the original construction after having reduced such fees, their original amount having been, as I believe, about $165,000, by the amount of depreciation provided by the company since the date such fees were incurred.

It is somewhat difficult to give expression, in a document that has not yet become effective and which depends on a transaction to be consummated at some time in the future, to an exact, precise amount.

Mr. Culton: The price is based on Columbia's investment in these properties?

The Witness: That is correct, plus the surplus less this adjustment that we have just referred to.

By Mr. Gorman:

Q. Wouldn't the result of the statement that you have just made that the figure resulting after the calculation is made, according to your explanation, wouldn't the result be the net investment of the Michigan Gas Transmission Corporation as of the time of acquisition by Panhandle Eastern Pipe Line Company of the properties and assets of the Michigan corporation?

A. You may interpret it that way sir, if you wish. As far as the witness is concerned, the Compiled Registration Statement clearly defines the basis upon which the properties are about to be acquired.

As far as this witness knows, there has been no discus-
[fol. 6305] sion, plans or anything else that would indicate that the purchase is based on anything other than the investment of Columbia Gas and Electric Corporation in the securities as of a certain date plus or minus the adjustments I have described.

Q. Yes.

A. If that connotes to you net assets, why, that would be entirely all right, I suppose.

Q. Well, would it not be a true statement to say that the aggregate of these outstanding notes and loans and the

common stock as of the value stated represents the equities in these properties and other assets of the corporation?

A. Let's put it this way, sir. They will represent at the date Panhandle Eastern acquires the properties, if it ever does, the amount that Panhandle Eastern is perfectly willing to pay for them regardless of how it came into existence.

There are reams and reams and reams of description and testimony in Combined Docket No. 59-33, I think, in the Securities and Exchange Commission to which the witness might suggest reference be made if further or more complete details are desired than those shown in the combined Registration Statement and Prospectus offered here and identified as Exhibits Nos. 145 and 146.

Q. What is your answer to my previous question, Mr. Watkins, with respect to the equities of the company as [fol. 6306] divulged by the balance sheet of Michigan Gas Transmission Corporation?

A. I have no answer to it, sir. I do not understand it.

* * * * * * * * *

[fol. 6319] Q. Do you have any understanding of the phrase "equity in the property"?

A. Your questions directed to me with respect to Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation may tend to develop some data with respect to whether or not Panhandle Eastern was purchasing equities or purchasing something else in the event it is entitled to acquire these properties. I should like to let my answer take this form:

I have no doubt, whatever, that each of the figures and all of the data included in Exhibit 145 with respect to Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation are anything other than an exact statement of those amounts and that data with respect to those companies, in other words, that they are entirely accurate whether they represent reasonable costs, whether they represent equity; whatever they represent, the statements are included in the Registration Statement. They are adopted by Panhandle Eastern Pipe Line Company, they have been certified to by independent public accountants for all periods with the exception of September 30, [fol. 6320] 1941, and are unquestionably correct.

Now, if the specific thing you are trying to get me to say is whether or not, aside from any purpose for which these statements may have been included in this Registration Statement, it is possible to determine the equity in a corporation from its balance sheet, the answer, naturally, is yes.

Q. Yes, that is what I have been seeking all the time, Mr. Watkins.

A. And the customary manner in determining that is to observe its surplus.

Q. Without reference to the stock or bonds outstanding?

A. Well, if we are talking about net equity without respect to debt—

Q. (Interposing) Yes.

A. (Continuing) —we must refer to surplus. If we are talking about the net assets of a corporation, I should think we are referring to a simple deduction of the total assets less the total liabilities excluding debt, stock and surplus. Does that help you, sir?

Q. Well, yes, and then, again, no.

Turning now to page 66 of this Exhibit 145, referring to Item 29 on that page, can you tell us whether or not the total of the demand notes, which is stated at $5,900,500, [fol. 6321] plus the stated amount of the demand loans of $2,420,000, plus the stated book value of the common stock of $2,240,000 plus surplus represents the equity and investment of the owners, including the creditors of the Michigan Gas Transmission Corporation as reflected in the figures which I have read?

A. I doubt seriously, sir, whether it can represent both equity and investment. Now, actually, the amounts you have enumerated represent simply this: The debt of Michigan Gas Transmission Corporation to Columbia Gas & Electric Corporation in the form of demand notes and demand loans and the amount at which it, Michigan Gas Transmission Corporation, carried its 44,800 shares on its books. Those sums, those amounts added, including the surplus of Michigan Gas Transmission Corporation, less the adjustment that they spoke about heretofore, is approximately the $10,676,000 shown in Part No. 1 to Item 28 on page 66 of the Registration Statement.

(Discussion off the record)

By Mr. Gorman:

Q. Mr. Watkins, in your answer you indicated a doubt as to whether or not the figures which I have read properly represented the investment of the Michigan Gas Transmission Corporation in property and other assets held by that company.

[fol. 6322] Mr. Wheat: Now, Mr. Gorman, wouldn't you prefer to put that as a question? I do not believe it is quite fair to the witness to state that he indicated a doubt. He said that it could not be both, probably, or would not represent both the equity and investment.

I am wondering if that would not be fair to the witness, to put that as a question, rather than to make a statement on the record.

Mr. Gorman: I was going to put the following question, but it was a matter of clarification. Suppose we have the witness' previous answer read back so that I may be correct.

(Record read)

The Witness: Let me see if I can clear up this whole thing.

By Mr. Gorman:

Q. I will appreciate it if you can.

A. Michigan Gas Transmission Corporation has an indebtedness to Columbia Gas & Electric Corporation according to the portions of the Registration Statement to which we have been referring and according to the statements included in the Registration Statement, the accuracy of which the witness has already testified to, amounting to $8,320,500. That is in the form of demand notes and demand loans, and here we are speaking as of the date re-
[fol. 6323] ferred to in the Registration Statement.

The equity of Columbia Gas & Electric Corporation in the form of common stock is represented by the 44,800 shares of common stock without par value of Michigan Gas Transmission Corporation which it, Columbia Gas, owns.

I believe it is stated, perhaps in this Registration Statement, or at some other place, that Columbia Gas carries that on its books at $2,240,000.

. . . . . .

Q. Yes, your answer there indicates that this common stock represents the equity of the Columbia Gas & Electric Company in the Michigan Gas Transmission Corporation. Isn't that correct?

A. In the form of common stock, yes. Whether that value represents the entire value of such equity, I make no pretense of trying to testify.

Q. Now, of course, you must understand, Mr. Watkins, that we are dealing at all times with these figures which I understand were taken from the books and records of the Michigan Gas Transmission Corporation and which reflect items excerpted from the balance sheet of that corporation, do they not? A. That is correct.

Q. Yes.

Mr. Wheat: May I ask, Mr. Watkins, what was the [fol. 6324] principal amount of that adjustment referred to in the order of the Securities and Exchange Commission?

The Witness: In the neighborhood of $105,000.

By Mr. Gorman:

Q. Is it correct for me to understand, Mr. Watkins, from your various statements that your hesitancy in expressing an opinion as to whether or not the total of these figures represents the investment in the properties and assets of the Michigan Gas Transmission Corporation is due solely to your inability to state specifically that the common stock is of the value of $2,240,000, which is carried on the books of the Michigan Gas Transmission Corporation?

A. That does not seem to be the proper statement of my position at all. I have no hesitancy in making any representation that I properly know. I am not an officer of Michigan Gas Transmission Corporation, I am not an officer of Columbia Gas & Electric Corporation, I know nothing about their books or records except those things that it has become necessary for me to learn as a result of the pendency of the possible acquisition of certain

securities, and so forth, from them. I have no doubt, however, but that the $2,240,000, if stated in the Registration Statement as the amount at which Columbia Gas & Electric Corporation carries its investments in Michigan Gas [fol. 6325] Transmission Corporation's common stock, is correct.

Furthermore, Panhandle Eastern took the precaution when, in June of this year, Columbia Gas & Electric Corporation and Missouri-Kansas Pipe Line Company entered into an agreement, reference to which I believe has heretofore been made in the proceedings, to forthwith have its public accountants, Messrs. Arthur Anderson & Company, determine from the books of Columbia Gas & Electric Corporation just what these amounts were. We have a report from the accountants with respect to that and that report is, I believe, a part of the proceedings in the Securities and Exchange Commission, Consolidated Docket No. 59-33, if I remember correctly, to which I respectfully refer you for further information.

Mr. Culton: I wonder if Mr. Gorman had noted how closely the capital stock and surplus come when added to the loans and notes to making he $10,676,000?

Mr. Wheat: May I state the figures for you, Mr. Gorman?

Mr. Gorman: I am not denying that figure in any way.

Mr. Wheat: Just for your information, may I state the figures, which, looking at page T-3, Michigan Gas Transmission Corporation balance sheets, if you add the items of demand notes, demand loans and common stock, and then add the three items of surplus stated on the bal- [fol. 6326] ance sheet, will give you a total of $10,780,840.59.

Now, if you deduct from that the $105,000 adjustment which the witness has stated to be an approximation of the adjustment which must be made, you have $10,675,840.59, or a difference of only $159.41 out of the $10,676,000 figure stated on page 66.

I don't know whether that helps you or not, but if that adjustment mentioned by the witness were $159.41 out of $105,000, the figures would be exactly the same.

Mr. Gorman: I accept that as accurate. As a matter of fact, my questions have not, I hope, indicated anything to the contrary.

Mr. Wheat: No, they have not, I just thought, possibly, that might assist you in this matter.

Mr. Gorman: But taking those figures which you have just read, and the aggregate result which they produce, my questions have been solely directed to this witness to determine whether or not that is considered by the proposed purchaser, Panhandle Eastern Pipe Line Company, to represent the investment of the Michigan Gas Transmission Corporation in its properties of gas plant, and other assets. That, stated very concisely, is the whole question that I have been attempting to secure an answer to from this witness. That is the net investment, of course, that I was referring to.

[fol. 6327] As a matter of fact, stated even more simply, if we put that on one side of the page, that is, these amounts which I have termed, appropriately or inappropriately, as equities of the owners and creditors, my question which is directed to this witness is to find out what would be put opposite that to balance it on the other side of the page.

I do not know that I can ever, if we stay here all day, state it more concisely or simply than that.

Mr. Wheat: Are you in a position to answer that question?

The Witness: I do not understand that to be the question.

Mr. Wheat: I understood Mr. Gorman to say that was the question.

By Mr. Gorman:

Q. I will say, can you put the balance on the other side of the sheet to the last illustration I gave?

A. The first part of your question, if I remember it correctly, now that we are considering your statement a question, had to do with whether or not this witness could state certain things with respect to the investment of Michigan Gas Transmission Corporation. Maybe you

did not include Indiana Gas Distribution Corporation, but I presume you intended to do so.

[fol. 6328] Q. No, we are dealing solely, at the present time, with Michigan Gas Transmission Corporation.

A. In properties and so forth. With the hope that this answer may avoid any further time in this matter—

Q. (Interposing) I will go along with you in the hope.

A. (Continuing)—let's have a look at the balance sheet of Michigan Gas Transmission Corporation on page T-3 of Exhibit No. 145 where we note that the total assets at December 31, 1940, and September 30, 1941, are stated at $14,413,819.06 and $14,303,305.07, respectively.

Now, if we deduct from those amounts the sum total of all of the liabilities except the $8,720,500 and $8,320,500 representing, respectively, at December 31, 1940, and September 30, 1941, notes and loans payable to Columbia Gas & Electric Corporation and the $2,677,945.07 and $2,460,340.59 representing, respectively, at December 31, 1940, and September 30, 1941, the combined capital stock and surplus of Michigan Gas Transmission Corporation, we have the net assets of that corporation.

After you have made those computations, if you make them correctly, I shall immediately adopt them, sir, as being correct.

Q. Thank you.

Now, so that we may all readily understand the answer, [fol. 6329] may it be read back by the reporter, please?

(Answer read)

The Witness: May I have the privilege of adding, after we have the net assets as stated by the books—

Mr. Gorman: Yes.

The Witness:—of Michigan Gas Transmission Corporation.

Mr. Gorman: As shown by this balance sheet to which reference has been made?

The Witness: Correct.

By Mr. Gorman:

Q. And would you, also, say, Mr. Watkins, that the addition of the figure of $8,320,500 and the figure of $2,460,346.59 would represent the investment by the owners and stockholders, including creditors, of the Michigan Gas Transmission Corporation in the net assets as shown by this balance sheet?

A. The balance sheet, itself, does not show, so far as I know, the investment by the owners, and when we say "owners", I presume we are speaking of Columbia Gas & Electric Corporation. This balance sheet refers entirely to the affairs of Michigan Gas Transmission Corporation and to the extent that it refers to the affairs of Michigan Gas Transmission Corporation it is, unquestionably, correct in every respect.

[fol. 6330] Q. And you say that it has no relation to investment?

A. I do not say that, sir.

Q. Did you not say—

A. (Interposing) I simply said that the balance sheet of Michigan Gas Transmission Corporation gives no evidence whatever of the investment of the owners, and when we refer to "owners" we must be referring to Columbia Gas & Electric Corporation. That is as far as I go in that connection. I do not know what Columbia Gas & Electric Corporation's investment is other than, as I have previous explained, reported to us by Messrs. Arthur Anderson & Company, and I have given counsel for the Commission the place where he may go to obtain a copy of that, refer to it and find out whatever it is that he is seeking with respect to Columbia's Gas investment.

Q. Well, of course, I think you will recall, Mr. Watkins, that my question included not only owners as represented by the holders of the common stock, but the creditors of the company who hold the demand notes and demand loans which aggregate the total of $8,320,500, to which I made reference.

A. Well, you will have to break such a question as that in parts. I cannot deal with it in that form in any fashion whatever.

[fol. 6331] Q. Do you have before you a copy of the findings of the Securities and Exchange Commission which has been identified as, I believe, Exhibit No. 147?

A. I have before me an order of the Securities and Exchange Commission. The order of the Securities and Exchange Commission which has been identified as Exhibit No. 147 in these proceedings has been sent to the photostatic organization who will reproduce the copies necessary for distribution.

The Exhibit, as you will recall, was received and marked for identification with the right of substitution later in the day. We are having the copies prepared for substitution.

Q. May I ask, Mr. Watkins, whether you are generally familiar with the terms and the conditions of the proposed findings and opinions of the Securities and Exchange Commission?

A. You may.

Q. Well, are you familiar with that?

A. I am not. I zipped through the thing when it came [fol. 6332] out two or three days ago in about ten minutes to find out what the general purport was and further than that I have no knowledge of it.

Q. Do you know whether or not such opinion contains a statement as follows, which I quote:

"The price fixed in the application for the sale and acquisition of Michigan Gas is stated to be the actual investment of Columbia Gas therein, plus any undistributed surplus of Michigan Gas at the time of the consummation of the transaction. With the exception of one item the record indicates that the figure stated in the application, $10,780,840.59, as constituting the investment of Columbia Gas and Michigan Gas, plus surplus at September 30, 1941, constitutes actual system expenditures, and is equal to net plant account after depreciation less the excess of current liabilities over current assets."

A. I may have observed that when I read the proposed findings. I attach no special significance to it. I presume the staff of the Securities and Exchange Commission are qualified to properly interpret documents and information filed with them so that they may correctly reach the conclusion stated in the proposed findings.

I have not made the computations, I cannot specifically [fol. 6333] answer you. I assume they are correct. If the Securities and Exchange Commission state they are correct, I believe I would accept their statements.

Q. Yes. Well, was not that proposed opinion and findings submitted to the Panhandle Eastern Pipe Line Company for examination and possible argument upon any objections which they might have to the proposed findings and opinion?

A. To the extent that a copy of it was submitted to the General Counsel for Panhandle Eastern Pipe Line Company, I presume we would very naturally say that it had been submitted to the company. Actually, as far as I know, there was never a copy sent directly to the company and I have wondered, to some extent, about that, because I know that copies of the proposed findings were sent to other organizations involved without the procedure of approaching them through their counsel.

Certainly we had copies of it after the general counsel received it, but my answer to you is that the only way that it was presented to the Panhandle Eastern was through its general counsel. That may be proper procedure under the Securities and Exchange Commission's rules of practice. I do not really know.

Q. Do you know whether the submission of it to the general counsel of the company was for the purpose which [fol. 6334] I mentioned specifically, for the purpose of voicing any objections that they might have thereto?

A. I did not see any communications that came with it to the general counsel. I had general knowledge, the same, I believe, as most of the officers and men connected with the various companies who were participating in these proceedings, that there would be tentative or proposed findings distributed and that there would be an invitation to the participants to appear, argue, file briefs or whatever you do in a matter of that nature. I believe the date upon which those appearances was to have taken place was last Friday. I am not too sure about that. Whether there were any appearances, whether there were any arguments, whether there were any briefs filed, whether there were any exceptions taken to the proposed findings, I do not rightly know. My remembrance is that I heard one

or two representatives of some of the participants state they thought the proposed findings were ship-shape.

Mr. Lee: Pardon me: You are famliiar with the fact, are you not, that all the parties in interest in that case,—City of Detroit was an intervener,—had copies of the proposed findings and that last Friday, January 23, 10:00 A. M., was the time set before the Securities and Exchange Commission for the purpose of filing objections, if any, and that nobody appeared and no objections were filed?

[fol. 6335] The Witness: I believe I stated, Mr. Lee, that I thought it was Friday the 16th, did I not?

Mr. Lee: That is right.

The Witness: I will accept your correction as to the date.

Mr. Lee: No, it was the 16th.

* * * * * * * * *

By Mr. Gorman:

Q. Do you know, Mr. Watkins, whether or not your general counsel did make exception to this proposed opinion and findings and specifically to the paragraph which I have quoted?

A. We thought the findings were swell. So far as I know we have no reason to object to them, sir, and I feel rather sure that our general counsel did not object.

[fol. 6336] Q. Well, did you agree with the principles in the statements made in the paragraph which I quoted?

A. I will have to let my previous remarks with respect to that answer this question, sir. I believe I stated rather fully what my view was in answer to your previous question. I do not know how I can enlarge on it. I do not believe I could make it any more precise.

* * * * * * * * *

[fol. 6337] Q. Well, I would like to get your opinion, of course, Mr. Watkins, on different things.

Now, the paragraph which I quoted mentions a figure of $10,780,840.59, which is a total of the figures to which you made reference to previously on page T-3 of Exhibit No. 145 in the amount of $8,320,500 as representing notes

and loans payable to the Columbia Gas & Electric Corporation, and the figure of $2,460,340.59, as representing the total capital stock and surplus.

Now, appreciating these component parts and the significance of the statement you have made heretofore with respect to these component parts, are you in agreement with the statement which I have read from the reported paragraph of the proposed findings and opinion to the effect that, "With the exception of one item the record [fol. 6338] indicates that the figure stated in the application, $10,780,840.59, as constituting the investment of Columbia Gas and Michigan Gas, plus surplus at September 30, 1941, constitutes actual system expenditures, and is equal to net plant account after depreciation, less the excess of current liabilities over current assets."

Now, are you in agreement with this quotation in so far as it states that it constitutes the investment of Columbia Gas and Michigan Gas, plus surplus, and, also, constitutes actual system expeditures and is equal to net plant account after depreciation, less the excess of current liabilities over current asset?

. . . . . .

[fol. 6343] A. Here we go again, sir. I do not know anything about the Securities and Exchange Commission's proposed findings. I do not knew anything about the books and records of Columbia Gas & Electric Corporation. I am quite willing and have said repeatedly this morning that to the extent that information is included in Panhandle Eastern Pipe Line Company's Registration Statement with respect to Michigan Gas Transmission Corporation or with respect to Columbia Gas & Electric Corporation, or with respect to any other corporation or individual that I stand squarely behind them.

Now, if I may say this, I have no reason in my own mind, I have not the slightest hesitancy, whatever, to state [fol. 6344] that if Michigan Gas Transmission Corporation, if Columbia Gas & Electric Corporation, or if the Securities and Exchange Commission represent these

amounts you have been discussing as what you characterize them, that they are exactly those things.

* * * * * * * * *

[fol. 6345] LEITH V. WATKINS a witness, having been previously duly sworn, resumed the stand and testified further as follows:

* * * * * * * * *

[fol. 6346] By Mr. Gorman:

Q. Mr. Watkins, continuing with our discussion of the items disclosed on Page 2 of Exhibit No. 48, I invite your attention now to Line 7, which is the account, "Miscellaneous Long Term Debt", which, at June 30, 1941, is indicated in Column M as $5,017,543.80.

Does this amount represent certain notes of the company which are outstanding and certain cumulative interest thereon?

A. It represents certain notes that were outstanding at June 30, 1941, the nature of which has heretofore been testified to by this witness but does not include any interest on such notes or on any other of the company's obligations for, as you will observe, the amount of interest accrued for whatever purpose at June 30, 1941, is shown on Line 17 in Column M on Page 2 of Exhibit No. 48, and my remembrence is that details information concerning such accrual has heretofore been made a part of the record.

In addition to the serial notes comprising the major [fol. 6347] part of the $5,017,543.80 shown on Line 7 in Column M of Exhibit No. 48, Page 2, there was an unextinguished balance of $17,543.80 on a leasehold purchase obligation to J. T. Sneed, Jr., and Elizabeth Sneed Poole, the principal amount of which was $62,000 which concludes the remarks the witness has with respect to this item.

Q. Yes. Are these notes explained in some detail on Pages 75 and 76 of Exhibit No. 145 for identification under the part or item numbered 3, commencing on the lower half of Page 75?

A. They are.

Q. Turn your attention now, please, to Line 16 of this page we are discussing which is the account for "Taxes Accrued" which, according to Column M at June 30, 1941, amounted to $3,176,774.41.

In your direct testimony, you itemized, somewhat in detail at Page 868 of the transcript, certain State income taxes, Federal income taxes and excess profits taxes which were a part of the total which I have just stated and you indicated also that certain of these taxes were for the years 1938, 1939, 1940 and 1941 and, in response to a question of Respondent's counsel as to why there appeared in this account at June 30, 1941, taxes other than those for the year 1941, you replied as follows:

"Without being facetious, by reason of the Acts of [fol. 6348] State Legislature, principally", could you explain in somewhat more detail than that why there were outstanding amounts for taxes in the years 1938, 1939 and 1940?

A. Putting it as simply as possible, the time of accrual of the various types of taxes heretofore enumerated in the record at Page 867, et seq., does not coincide with the actual time of payment of such taxes, so that in any statement which Panhandle Eastern Pipe Line Company and its subsidiary companies may prepare at any given period, there will always be accrued but unpaid taxes representing periods not exactly coincident with the accounting period for which the report is prepared.

As an example, my remembrance is that in the State of Missouri, ad valorem taxes are assessed as of July 1. Perhaps I am wrong there to this extent: It may be that our return is due on July 1, that the assessment is made by the State Tax Commission sometime between July 1 and December 31 of each year, but the amount of such taxes is not due until the following December.

Likewise, accrued Federal income and excess profits taxes at any date prior to December 31 in the year in which any statement may be prepared will contain unpaid portions for, as you know, Federal income and excess profits taxes are generally paid on a quarterly basis.

Furthermore, the Federal capital stock taxes are paid [fol. 6349] on or about July 1 of each year and at any date other than on that date, there may be such taxes applicable to a prior year or to a subsequent period and the same general situation exists, to some degree, more or less with practically all the taxes that Panhandle Eastern Pipe Line Company or its subsidiary, Illinois Natural Gas Company, are confronted with.

Q. Does that complete your answer, Mr. Watkins?

A. It does not.

In addition to the condition governing such of the taxes to which the witness has made references, there is most always present in the affairs of any organization accrued but unsettled Federal income taxes of prior years.

Very few organizations are fortunate enough in being able to exactly determine the amount of their Federal taxes of whatever nature and find it necessary, in a great many instances, to carry those accruals for some substantial period until an agreement has been reached with the taxing authorities covering the final determination of such taxes.

If that explanation is satisfactory for your purposes, I believe the witness has no further statements to make.

Q. You stated, Mr. Watkins, that the Federal income taxes are paid by this company in quarterly divisions. Can you tell us when the first quarterly payment is normally made, that is, approximately when it is normally made?

A. I believe we have no choice in that matter, do we? [fol. 6350] Q. I do not think so, but I just wanted the record to state what the date was.

A. I think the date is each March 15th, is it not?

Q. Yes.

A. And to the extent that the company has any taxable income, whether or not it has finally determined its return for the preceding year, it must make an estimate and pay a portion of the estimated amount of taxes at the time the tentative return is filed.

Q. Yes, and by analogy, of course, the second quarterly payment would be due and payable on June 15, would it not?

A. That is correct.

Q. Is it a correct conclusion to draw from your statement then, Mr. Watkins, that any reference to balances in this account for taxes for the years 1938 and 1939 represent amounts which were, as of June 30, 1941, in an indeterminate status? A. Yes, that is correct.

Q. In other words, they were amounts left over your actual payments but which might possibly be paid as a result of a final determination by the Bureau of Internal Revenue, the taxes required of you during those years?

A. Yes, that is correct. However, prior to the reduction of the original accrual to the amounts heretofore [fol. 6351] shown in the record with respect to the years 1938 and 1939, there may have been some adjustment made in the accrual by reason of an Examiner's Report if we found that our accrual had been excessive or if it had been insufficient.

Q. Yes.

A. I would not wish at this moment, without further investigation, to state that the $24,000-odd for 1938 and the $14,000-odd for 1939, Federal income tax accruals, had not been subjected to such adjustments although my belief is that they have not.

Q. And if upon a final determination it were decided that further payments in these amounts were not required for the years 1938 and 1939, would such amounts, according to the bookkeeping practices of the company, be transferred to earned surplus?

A. The company's bookkeeping practice does not recognize that adjustments of such an inconsequential nature should be made through earned surplus.

Our procedure which, if I am correctly informed, meets with the concurrence of the company's public independent auditors, is to route such adjustments through income rather than through surplus.

Now, if we had an item of some substantial nature as we may have in the year 1940, after our examination had been completed and we had arrived at some basis upon [fol. 6352] which the total taxes for that year were to be paid and there remained a substantial amount, we might give consideration to treating that as a surplus adjustment,

if, to do otherwise, it was of the nature to seriously distort income.

My remembrance is that the classification of accounts adopted by this Commission for use on and after January 1, 1940, recognizes as proper accounting procedure the treatment the witness has just described.

I have finished, sir.

Q. Yes, I was just pondering your answer, sir. I am not certain whether I got lost or not. Did you state, Mr. Watkins, specifically what accounts such adjustments would be made to? A. I did not.

Q. Would you do so, please?

A. May we proceed without repeating the previous statements?

Q. Yes, indeed.

A. And simply state that if the adjustments were to be made through income, it would very naturally be made to the account to which the prior accrual had been charged or credited.

If it were to be made to surplus, the credit or debit would be made to the appropriate surplus account as prescribed in the Power Commission's Classifiication of Accounts.

[fol. 6353] Q. Do I understand correctly that if it was made to surplus, it would not go through your income account?

A. Not again, no.

Q. One further question on that subject. If such an adjustment was required, the normal effect, no matter how the bookkeeping transaction might be made, would be to increase the net income of the company to that extent for the particular year, would it not?

A. I am afraid we are at cross purposes there. If the credit were made to the expense account, it would increase the net earnings of the company, net operating revenue of the company for that particular year.

If it were made to surplus, it would simply increase or decrease the surplus account.

Now, if you choose to interpolate any increases or decreases in the surplus account itself within a given account-

ing period as a part of the net income for that period, then the answer to your question would be "yes".

Q. Yes. What I was getting at, simplified, was this, Mr. Watkins, without any attempt to confuse you or any other such thought: taxes are paid, are they not, out of gross income and such payments necessarily effect a reduction in the net income?

A. Well, without quarreling over the word "paid", that is correct. Actually, they are paid out of cash. They [fol. 6354] are recovered out of gross income.

Q. Of course, the lesser the amount of taxes paid, the greater the net income would be as a consequence thereof, is that a correct statement?

A. Yes, that is correct.

Q. Now, Mr. Watkins, on Page 3 of this Exhibit No. 48, there are certain notes to the balance sheet, the first of which refers to this item of taxes accrued states that: "Including Federal income taxes and excess profits taxes computed"—that is as of June 30, 1941—"without regard to special deductions resulting from the refinancing consummated during February, 1941, and without making provision for possible increases of rates or otherwise during 1941."

Have any computations envisaging the qualifications set forth in this note Number 1 been made since this Exhibit No. 48 was submitted?

A. There have been some such computations made.

Q. And would those computations of which you speak accurately or more accurately reflect the proper balance as of June 30, 1941?

A. The proper balance of the accrual account?

Q. Yes.

A. The computations were not made as of June 30, 1941. They were made in connection with Exhibit No. 145 and at September 30, 1941, appear in the income account consolidated on Page S-7 of that Exhibit under the general head- [fol. 6355] ing of "Charges in lieu of", Federal Taxes, $100,000; Federal Excess Profits Taxes, $487,000.

There is a reference with respect to the first of these two amounts in Note D on Page S-8 of the same exhibit.

Mr. Wheat: That is "D", is it not?

The Witness: That is correct.

There will be further adjustments of credit or rather charge in lieu of taxes during the year 1941 so that at December 31, 1941, there will have been given effect to the total adjustment resulting from this cause amounting to $823,881.49.

Mr. Wheat: May I ask a question. That will be the amount which you figure would have been payable annually if the company had not had the benefit for tax purposes of deduction for discount, premium and expense resulting from the refinancing of its long-term debt during 1941?

The Witness: That is correct, and which amount has been credited to the unamortized debt discount and expense prior to the charging of the unamortized balance of the debt discount and expense accounts to surplus in the manner described by this witness in the testimony given yesterday.

Mr. Wheat: Yes.

By Mr. Gorman:

Q. Do understand correctly that your last response [fol. 6356] to Mr. Wheat's inquiry indicates that the total income taxes payable for the year 1941 would have been $823,000-odd?

A. More than they actually will be because of the refinancing consummated in February, 1941.

Mr. Wheat: In that connection, I think possibly the witness ought to explain why there is that difference in taxes so that the record will be clear.

Mr. Gorman: I think that might well be done.

The Witness: Simplified, the reason is this: The regulations of the Internal Revenue Department and under the effective Revenue Acts, when long-term debt previously issued is disposed of, by refinancing or otherwise, require that the entire portion of the existing debt expense in connection with it must be taken as a deduction for Federal tax purposes in the year in which the refinancing is consummated.

Now, the $823,881.49 will be distributed in subsequent financial statements prepared by Panhandle Eastern Pipe Line Company for its internal purposes after this fashion —I am about to supply that information by months and if we do not need it, I will forego the explanation or I may give you—

By Mr. Gorman:

Q. (Interposing) I do not know that we would need that at all, Mr. Watkins.

. . . . . .

[fol. 6357] Mr. Chamberlain: Mr. Watkins, do you have the ultimate division of the $823,000 as between Federal income taxes and the excess profits taxes?

The Witness: I do.

Mr. Chamberlain: What would those amounts be as of the end of the year?

The Witness: The amount applicable to Federal income taxes as of the end of the year 1941 will be $141,106.77 and the amount applicable to Federal excess profits taxes will be $682,774.72.

The sum of the two is the $823,881.49 concerning which we have been speaking.

By Mr. Gorman:

Q. Now, as I understand, Mr. Watkins, the taxes which you actually will be required to pay for the year 1941 will be some $823,881.49 less than they would have been otherwise is the adjustments had not been made which you have previously testified to, is that correct?

A. That is correct, if we are speaking of the actual taxes to be paid. If we are referring to the amounts that we have heretofore or may hereafter accrue for the year 1941, that amount will be subject, of course, to consideration as to any differences the Internal Revenue Department Examiner may disclose and we may agree to or disagree with.

[fol. 6358] Q. Yes, naturally so. Are you prepared to tell us what the Federal income tax will be for the year 1941 as you presently compute it and estimate it?

A. No, our books have not been completely closed yet.

Mr. Chamberlain: Have you made you accruals?

The Witness: Why, Mr. Chamberlain, since our books have not been closed, I have no preliminary figures with respect to any of the amounts at the year-end.

They will be available and will be shown in our Annual Report when released. As you may know and as Mr. Tuttle will verify, you do not arrive at your year-end figures without a good deal of clean-up work. Ours has not been completed.

Mr. Chamberlain: Don't you accrue by the month on those Federal taxes?

The Witness: That is not the point, sir. You asked me whether or not we have them for the end of the year and I stated we have not.

Mr. Chamberlain: What I intended to ask you for what amount you had accrued in the accounts up to the end of the year?

The Witness: We do not yet have our year-end figures. Now, if you care to observe the accruals at September 30, you will find them in Exhibit No. 145, a copy of which you have.

[fol. 6359] Further than that, there has been no information introduced in these proceedings with respect to the accruals and I do not have the accruals as at December 31, 1941.

By Mr. Gorman:

Q. Mr. Watkins, can you, by reference to Page S-7 and the notes and explanations which appear on Page S-8 of this Exhibit No. 145, indicate to us what the Federal income taxes would have been as you computed them at September 30, 1941, without the adjustment of debt discount and expense to which you have previously made reference?

A. Assuming we had no such deduction?

Q. Yes.

A. Would you please look at Page S-7 and note an amount under the heading "Charges in lieu of—Federal income taxes" of $100,000.

Will you further observe under a heading "Provision for income and excess profits taxes" opposite Federal in-

come—$1,202,000. At September 30, the accrual for such taxes, had there not been the deduction concerning which we have been speaking, would have been the sum of those two amounts or $1,302,000.

Will you also observe an amount opposite Federal Excess Profits Taxes under the heading, "Charges in lieu of—" amounting to $487,000 and, on the same page, under the general heading "Provision for income and excess [fol. 6360] profits taxes" opposite Federal excess profits taxes—$648,000.

The sum of those amounts would have been the accrual at September 30, 1941, for Federal excess profits taxes had there not been such deduction and the amount would have been $1,135,000.

On this assumption, the net taxable income, as estimated by the company, would have been the actual net taxable income were the company required to render a report of its net taxable income to Federal authorities and make such payment on the basis of the nine months ended September 30, 1941, and could have exactly and correctly estimated such tax.

Q. Now, on the basis of your recomputation, including the amortization of debt discount and expense, are the accruals which were set aside for taxes accrued as of September 30, 1941, and June 30, 1941, in excess of the taxes which the company will be ultimately called upon to pay, according to its present computations?

A. That is, reinstating the credit of $487,000 for charges in lieu of taxes or representing that portion of the $823,000-odd heretofore referred to as the total savings and taxes as a result of the refinancing consummated on February 3.

Q. Yes.

A. The total thus arrived at would be greater than the [fol. 6361] amount of the Federal income and excess profits taxes this company would have to pay were it necessary to render a report and make a settlement for such taxes as of September 30, 1941, or, for that matter, as of June 30, 1941, as well.

Q. Have the recomputations which you have made necessitated any adjustments in the account for taxes ac-

crued? What I am inquiring about, Mr. Watkins, is whether or not it has been necessary, by reason of your revised estimates and certain transactions on your books relating to amortiation of debt discount and expense, to transfer from your income and excess profits tax accrual account certain amounts previously accrued therein?

A. We have charged, by Journal Entry No. 10 74 entered in the month of October, an aggregate of $823,881.49 to the Federal income and excess profits tax accrual accounts for the year 1941 and have credited such amounts to the appropriate unamortized debt discount and expense accounts.

That credit having been made prior to the charging of the unamortized debt discount and expense to surplus as discussed in yesterday's proceedings, there was also an entry made through the Journal Entry 10 75 in October, 1941, charging to two new accounts created by the company under the No. 507-1 entitled "Charges in lieu of Federal income taxes" and "Charges in lieu of Federal excess profits taxes", with a corresponding concurrent credit to Account 507, "Taxes Federal Income" and [fol. 6362] Account 507, "Taxes Federal excess profits taxes", the total of $823,881.49; this amount having been divided between the debit and credit accounts in the order stated in this testimony in the amount of $141,106.77 and $682,774.72, respectively.

Of these latter amounts, the journal entry shows their application to the period from January 1 to September 30, 1941, and for the period October 1 to December 31, 1941.

Have you any interest in that segregation?

Q. I might ask you this question which I believe would obviate any answer such as you have just suggested and that is whether or not such entries, as you just mentioned, would reflect any change in the income accounts for the first six months of 1941 and when I say "Income accounts" I mean any change in the net income.

A. They will not.

Q. That is true not only of June 30, 1941, but also of September 30, 1941?

A. That is correct. So far as the net income of the operation for the company and its subsidiary, Illinois

Natural Gas Company, is concerned at those periods, the effect of these entries was simply to lift the $823,000 from the tax expense accounts to expense accounts which we have characterized as "Charges in lieu of Federal income and excess profits taxes" and made no change whatever in the net income.

[fol. 6363] Q. That was my understanding and, with that understanding, of course, I do not believe any further explanation is necessary.

Now, Mr. Watkins, referring to this Line 16 for taxes accrued, with the exception of the amounts which you have indicated in your direct testimony as being attributable to the years 1938, 1939, 1940 and 1941, due the balances shown at December 31, for each of the years on this line reflect taxes actually paid or do they reflect the accruals in this account based upon estimates of taxes to be paid?

A. For the most part, the amounts shown on this line for the end of each of the respective periods covered by this exhibit represent the best possible estimate the company has been able to make and when I say "company", I include the subsidiary, of the amount of taxes it will eventually have to pay.

There were, however, and are in each of the periods, certain specific taxes that were determined during that period and, to that extent, however much or however little such amounts may be, they are not pure accruals.

As you know, Social Security taxes clear themselves within an annual accounting period. There are certain gross sales taxes in some of the States in which we operate, certain gross production taxes and certain other taxes that will find their way into our accruals in one [fol. 6364] month and are paid in the next month.

Q. Yes, your statement is that, with the exception of those taxes which are capable of definite ascertainment during the periods taxable, the balance represent accruals based upon estimates of taxes to be paid rather than actual payments subsequently made?

A. That is correct. However, we may—before passing from this subject—be assured that for the most part our acutal taxes have been somewhat in excess of the accruals.

Q. Could you, Mr. Watkins, for the year 1936 and the years following, furnish a statement of the actual taxes paid to date for those respective years?

A. Such a statement could be furnished. It would be difficult to match the payments made in those years with the accruals in those years because of the lag or overlapping of the period of accrual and dates of payment.

When I made the statement a moment ago that, for the most part, the company's accruals have been slightly less than its payments, there was, in the year 1937, a situation such as that which we have described here this afternoon wherein the company had the benefit of certain deductions as a result of the financing operation carried out in that year.

There was likewise, I believe, a slightly excessive accrual in both the Federal income and State income taxes in the [fol. 6365] year 1936. That was the first year in which we had Federal taxes to worry about. Prior to that time, we had losses, both from a corporate standpoint and from a tax standpoint.

There is a situation in connection with the year 1940 which may involve something on the order of $200,000. This arose because of the fact that the income tax laws were changed in that year or rather were changed in the year 1941 and our accruals for the year 1940 were on what is known as the invested capital method rather than the income method.

After the change of the law in early 1941, it appeared we might have some advantage by using the income method and, as far as we now know, although the year 1940 has not been examined by the Federal authorities, there will be an excessive accrual for that year.

Now, to go a bit further with respect to the excessive accruals and to perhaps make a little speed, may I call your attention to an amount of $624,800.94 appearing on Line 36 in Column M on Page 2 of Exhibit 48, and supply a statement showing the amounts that constitute that reserve?

Q. If you will, please.

A. $76,580.60 of such reserve represents a transfer of the balance remaining in Federal income tax accrual account for the year 1936.

Now, said differently, there was $76,580.60 of accrued taxes for the year 1936 not used for that purpose. In that [fol. 6366] same year, 1936, there was $20,220.34 of the accrual for the State income taxes not used.

In the year 1936—

Q. (Interposing) Just a minute, Mr. Watkins, may I interrupt.

That statement tends to indicate, does it not, that the accruals were approximately $125,000 in excess of the actual taxes paid, is that correct?

A. If I may finish, I believe I will be able to answer the question—

Q. (Interposing) I am sorry.

A. (Continuing)—answer the question with respect to the whole amount.

There is a further transfer with regard to accrued but unpaid taxes in the year 1937 as a result of the financing operation carried out in that year of $492,000 and an addition of $36,000 because of State income taxes accrued for the year 1937 not needed.

Now, the entire $624,806.94 does represent taxes accrued but not paid. It is being carried on the company's books in general reserve to be used with regard to any demands that may be made on the company hereafter for undetermined or disputed income taxes.

It is the reserve of the nature, naturally, that the Board of Directors or the management of Panhandle Eastern [fol. 6367] Pipe Line Company or of Illinois Natural, if some of this amount belonged to Illinois Natural, can be returned to surplus and used for the general purpose that surplus is customarily used for.

Whether that will be done or not, is something the witness cannot say at this time.

Now, the transfers to this account of other reserves that you are speaking of, were those transfers from the taxes accrued account?

A. That is correct.

Q. Are the figures shown at Line 16 for the taxes accrued the balances remaining from the total accruals after such transfers have been made in the respective years to which you have previously testified?

The Witness: May I have the question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: Save for the amount $36,002.66 shown on Line 36 in Columns B, C, D and E, the amount shown on this line on Page 2 of Exhibit No. 48 represent amount transferred from tax accruals because of accrued but unpaid Federal and State income taxes during the years 1936 and 1937.

The transfers may not have actually been made exactly in those years, the returns not having been completely examined by the Federal authorities cause delay in the transfer.

One observes in Column I, that only $96,000 was trans- [fol. 6368] ferred in the year 1937 whereas this amount increased at December 31, 1938, to $424,800.94 as shown in Column J on Line 36 and, at the close of the year 1939, had been built up by an additional $200,000 so that at the end of the year, the total became $624,400.94 and continued at this amount to June 30, 1941, and to this very date, for that matter.

Q. And there have been no payments, have there, Mr. Watkins, from this other reserve account since 1936 or charges to this account which would tend to diminish the amount remaining there?

A. There were never any payments from this account.

Q. Yes.

A. I stated that rather positively. That is my remembrance at the moment.

Q. I think that is borne out by reference to your Registration Statements which indicate that the amounts set aside in the particular years which add up to the total shown at June 30, 1941—I am not testifying—

Mr. Wheat: (Interposing) That amount of $36,002.66 shown on the earlier years, that had nothing to do with what you are talking about, did it?

The Witness: That had nothing to do with that, no.

* * * * * * * * *

[fol. 6370] By Mr. Gorman:

Q. Mr. Watkins, turning our attention to the reserve for depreciation of gas plant, you have heretofore in your direct testimony stated the rates which were applied to the gas plant account for the accruals for depreciation, allowance for the various years from 1931 through 1940. An examination of such rates indicates a considerable variance over a period of years. Can you tell us, somewhat generally, of course, how the rates were arrived at during the years I have just mentioned?

A. Will the record bear out the fact that rates were stated for all of those years?

Q. I think that it will. I will check it.

Yes, I think if you will turn to page 884 of the transcript you will find that a reading was made from Registration Statement No. 2-2867 before the Securities and Exchange Commission effective March 29, 1937, which set forth the rates for the years 1931 through 1936, and at page 887, there is a reference to another Registration Statement which sets forth rates for the years 1938, 1939, and 1940.

A. I believe, sir, that is a statement showing the percentages which the provision for the years 1938, 1939, and 1940 was equal rather than the rate used. Is that correct?

[fol. 6371] Q. I believe that is so stated. Is that true in each of the years that I have mentioned?

A. No, only for the years stated on page 887.

Q. That is 1938, 1939, and 1940?

A. That is correct.

Q. And for the other years a definite rate was determined and applied to the plant accounts for the years in question. Is that correct?

A. Yes, that is correct, and is so shown on page 884 of the transcript.

Q. But taking up, first, the years 1931 through 1936, when definite rates were determined, can you indicate to us how such rates were determined?

A. You may well imagine that in a situation such as that maintained by the companies from an earnings standpoint through the earlier years of its existence, the ques-

tion of the provision for depreciation, depletion and otherwise might not carry with it the prominence that such consideration would receive when the facilities began to be operated more nearly to their capacity. The rates used in the earlier years were recognized by the company officer or company officers as being inadequate. There was no great reason, as we saw it at that time, to provide provisions and, as a matter of fact, we lacked a good deal of [fol. 6372] information upon which to predicate what might be a reasonable provision over the probable life of the properties for this purpose, and it was not until around the year 1936 and, as a matter of fact, at about the time when Mr. Creveling became our president, that real consideration of this problem took very definite form.

Among the first things which Mr. Creveling was interested in when he came with the organization and among the things that the present witness had awaiting some determination was this particular question.

Now, I do not mean to say that over the previous years we had not been thinking something about what we would eventually use and when we would begin to use it.

By reference to Exhibit No. 49, it will be noticed that the amounts deducted from gross income beginning with the year 1936 for this purpose, including, shall we say, the amounts shown on Lines 10, 11, 12, 13, 14, and 15 in Columns F, G, H, I, J, L, and M of page 2 of that exhibit, were increased.

Since Column L is an average of the period for the years 1932 to 1940, it should be stricken from the previous statement being merely the result of a stipulated period and not particularly applicable to an accounting period.

Our consideration in the year 1936 was such as to cause [fol. 6373] us to arrive at what seemed at that time, and as far as we could gaze into the future, a proper basis upon which our depreciation accruals should be predicated. This question, as you know, is not one left entirely to the officers or to management and must, in most cases, be acted upon by the Board of Directors. Those of us connected with the organization giving consideration to this matter felt it appropriate to have some independent approach made to the question of the amount that should be recommended to

the Board for this purpose and the services of Mr. P. MacDonald Biddison were engaged for that purpose. Mr. Biddison, as you know, has been a witness in these progeedings. His aproach was entirely different, as far as I know, from any consideration theretofore given or being given by the company at that time. We did not confer with him as to what method we had in mind, what conclusions we had tentatively or finally reached, but simply requested that he make a determination as to what should be an approximate annual amount and whether or not the reserves accrued to that date were adequate.

There were at least two of the officers of Panhandle Eastern Pipe Line Company somewhat astonished at the result of Mr. Biddison's consideration. My remembrance is that his conclusions were within, perhaps, one-tenth of one per cent of the amounts independently determined by the com-
[fol. 6374] pany, that is to say, the rate resulting from the annual amount of Mr. Biddison's determination was within, say, one-tenth of one per cent of the resultant rate determined by the management.

Mr. Culton: That is in dollars you are within that percentage of each other?

The Witness: Applied to the base upon which they were determined, yes, sir.

Now, there has been introduced in these proceedings as Exhibit No. 108, a letter from Mr. Biddison dated December 13, 1937, which speaks for itself, and, if I interpret it correctly and if I did at that time, it was more or less a green light to the company, in Mr. Biddison's opinion, to follow on the method we had, without his assistance previously arrived at.

Our independent public accountants have had, very naturally, some interest in this matter, and beginning with the year 1937 or the year 1938 their certificates used in connection with the company's annual reports have been of such nature that the auditors were satisfied that the annual accrual and that the provision to date was reasonably adequate.

Now, as a result of all this study by both the company officials and by the independent engineer and by the consid-

eration of the accountants, and I mean independent public [fol. 6375] accountants, although they made no specific study other than to satisfy themselves, as accountants usually do, that the proper basis was being followed and that the provision was within reasonable bounds of what it should be, and that the amounts at the end of the year were reasonably adequate and not excessive and of such nature that it was unnecessary for them to qualify their certificates, the amounts shown were provided.

At page 887 of the record, particularly on Line 14 thereof, the provision for this purpose,—and in using the word "provision" here the witness intends to take in the reserve for depreciation, depletion and amortization and all of such reserves,—was equal to 2.98 per cent, 3.2 per cent and 3.16 per cent of the Consolidated Property, Plant and Equipment Accounts at the beginning of the respective years.

I believe the equivalent amounts for the year 1941 and for the year 1942, if no change is made in the plan of accrual, will be somewhere on the order of 3.2 per cent.

I believe it was yesterday that we took into the record a portion of Note A to the Income Account of Panhandle Eastern Pipe Line Company and subsidiary companies included as a part of Registration No. 2-4919. Need I describe that further?

By Mr. Gorman:

[fol. 6376] Q. I believe not. I think that is sufficient.

That appears, does it not, at page S-8 of the Registration Statement to which you have just made reference?

Mr. Wheat: Exhibit 145, you refer to?

Mr. Gorman: No, I believe the witness is referring to a document which is not an exhibit.

The Witness: Yes, it appears on page S-8 and likewise, is substantially repeated again on page—well, it was not repeated. As a matter of fact, by reference to periods here today were to the same registration statement.

Mr. Wheat: Exhibit 145?

The Witness: That is correct.

. . . . . .

[fol. 6377] By Mr. Gorman:

Q. Now, as I understand your statement, Mr. Watkins, for the years 1937, 1938, 1939, 1940, and, I believe you also mentioned 1941, the management submitted to the Board of Directors an amount of dollars, which should be, in their opinion, that is, the management's opinion set aside for depreciation, depletion and amortization based upon the Gas Plant Account, as of the beginning of each of these years. Is that correct?

A. The amounts were not necessarily based upon the Gas Plant at the beginning of each of the years. The amounts gave consideration to possible increases in Gas Plant during the year for which the recommendation was being made and were intended to provide under such circumstances substantially the equivalent rate that resulted from the determinations made by the management and made by the independent consulting engineer back in the year 1936.

Q. Yes, and I assume, naturally, that the objective in considering expenditures to be anticipated during the [fol. 6378] current year was for the purpose of giving recognition to the average balance in this account during that year? A. On the order of that, yes.

Q. And was my statement that this recommendation was in the form of an amount of dollars correct rather than a specified percentage of individual items of Plant Account?

A. Yes. We made no submission to the Board at any time of any specific rates applicable to any portion of the Plant Account other than to perhaps state that there was a provision in the Certificate of Incorporation which made necessary the amortization each year of an amount carried on the company's books as gas sales and purchase contracts, being the equivalent of twelve times $24,419.05; that there were other gas sales and purchase contracts being amortized on the basis of their respective lives; that depletion would be based on gas withdrawn, and that the difference would represent the amount applicable to all of the rest of the properties.

The amounts determined gave consideration, as the witness has previously testified and as the registration statements to which certain reference has been made in this and

yesterday's proceedings show, to the necessity for an amount each year representing amortization as distinguished from amortization of the gas sales and purchase [fol. 6379] contracts.

Q. I do not recall, Mr. Watkins, that in your statement a short while ago you indicated more or less definitely the manner of determining the percentages which were applied during the years 1931 through 1936. You did discuss them, but I do not believe that you stated how those percentages were determined. Do you recall at the present time?

A. Well, as a matter of fact, I do not believe I know because in some of those years when I was assistant secretary and assistant treasurer of the company, I was not present at some of the Board meetings at which the amounts were discussed and decided upon. I learned of the result of such discussion after the facts had been accomplished.

Q. So your present answer is that you have no recollection or knowledge of the manner in which those percentages were determined?

A. Oh, I might go back over the records for those years and be able to state that it appeared from the information available to me at this time that this was about the method or manner of approach.

Q. Well, I am speaking of your knowledge right at this instance without consultation of company records.

A. Well, I should have to say, sir, that I have no [fol. 6380] very great knowledge as to the method used in their determination. I believe I have previously said, however, that they did impress me as being inadequate.

Mr. Wheat: You are referring now to the percentages which you read into the record at page 884, are you?

The Witness: I am referring now, Mr. Wheat, to not only the percentages used in the years prior to 1936, if percentages were used in those years, but, likewise, to the amounts resulting from the use of any such percentages in any such of those years.

. . . . . .

By Mr. Gorman:

Q. Your answer was, was it not, to my previous question that the amounts set aside in 1937, 1938 and 1939,

and 1940, as reflected in the Income Account of Exhibit No. 49, were determinations made by the management and confirmed by an independent consulting engineer, namely, Mr. P. MacDonald Biddison?

A. The amounts now shown in this income statement or rather this Exhibit are the result of recommendations [fol. 6381] made to the Board of Directors and of authorization by the Board of the establishment of certain amounts for annual provision, all of which was predicated upon and the direct result of studies made by the management and the independent engineer.

Now, a moment ago you asked the question as to what the witness' view was with respect to the provisions for the year 1931 or, rather, for the nine months of 1931 up to and including 1936, and Mr. Wheat tied it up with previous testimony by this witness on page No. 884 of the record. In connection with that I should like to draw attention to the fact that a few moments ago in discussing this question the statement was made, notwithstanding the witness' view with respect to those years, that the independent engineer's first determination proved that the reserve made up to that time was adequate.

. . . . . .

My personal view of those particular years, taken as such, is that the provision for the years, if we consider it on a basis of the operation of the facilities, somewhat on the basis of the manner in which they might have been intended to operate, would have been inadequate.

Q. That is the years through and including 1936, as [fol. 6382] you testified?

A. Not necessarily including 1936, because in 1936—no, I am wrong, it was not until 1937 that we substantially increased the provision.

Q. So it did include 1936? A. Yes, it did.

Q. And that opinion, of course, is based upon your more recent experience from and after 1936 and studies made by the management from that date?

A. Just how do you mean that, sir?

Q. Well, I mean primarily that you have gained a great amount of information and knowledge on this subject which led you to the opinion that the provision in the

original years was inadequate. I am not attempting to confuse you, I am just—

A. (Interposing) Well, I want to get it straight, so that I can answer it properly. I do not believe my opinion is based upon anything that I may have learned and I will admit that I have learned considerable in late years,—I should hope I never stop doing so,—but, rather, as I recall upon the condition existing in those years.

Now, as I have said before, possibly twice, the independent engineer's conclusion,—and that was one of the reasons why we employed him,—was that the total amount of the provision up to and including, shall we say, the [fol. 6383] year 1937 was adequate and that the amount that management was about to recommend to the Board for the ensuing year was, likewise, adequate.

Now that condition, as far as I know, remains unchanged for all the years since.

As I have stated, our public accounting firm has not found it necessary to make any exceptions in their certificate with respect to this particular matter subsequent to that time.

Q. Yes. When you use the term "adequate" in connection with the accumulated reserves as of the particular years in referring to the letters of this independent engineer, which are Exhibits 108 to 111, both inclusive, you mean, do you not, that they were not only adequate provisions, but they were not excessive amounts?

A. No, Mr. Gorman, we are talking, I hope, about records and not about whether or not these amounts are adequate for rate purposes. I cannot qualify to express an informed opinion with respect to the rate side of it. We have considered them and wherein this witness has referred to them as being adequate and where, in my judgment, Mr. Biddison has referred to them as being adequate and so far as the public accounting firm is concerned we are dealing entirely with the provision made per books and without respect whatever to a rate proceeding.

[fol. 6384] Mr. Culton: Or to actual accrued depreciation observed?

The Witness: Our actual sustained depreciation, if you please, whether or not our guess over the period as to which we shall recover our amortization is correct.

Our philosophy, I believe, could be summed up this way, that over the life of the properties devoted to the service that Panhandle Eastern Pipe Line Company's properties are, there must be recovered through the income that is earned a certain amount of depreciation. We hope we have made an estimate which will produce desired results.

By Mr. Gorman:

Q. Of course, the accruals which are set aside each year include not only depreciation, but amortization, do they not?

A. Well, they include in our minds some specific amortization of certain specific things.

Q. Yes.

A. But the other amortization to which this witness is making reference is that which must in the very nature of these properties be inexorably tied up with any determination as to what annual provision is made for books or for any other purpose, for that matter, because we are dealing with a wasting asset. We are in a mining industry. We do not know how long our reserves will last. We have [fol. 6385] some estimates, certainly. Our facilities may be worth something, we may be able to use them for some other purpose after those reserves are gone. We do not know so that we cannot wait until the time approaches when that condition is evidenced and then come to the Federal Power Commission, or any other regulatory body under which we may be operating, and say that we have to collect from the consumers this year blank millions of dollars to take care of this particular thing that we see at this particular moment.

Q. May I qualify my previous question, then, and ask whether or not your opinion and, also, your conclusion as drawn from the statements or letters submitted by Mr. Biddison to the management of the company, that the annual accruals in these specific years referred to were adequate and that the accrued amount in such years was ade-

quate, meant to you that such accruals and such accrued amounts were not only adequate, but were not excessive when considered as amounts provided for depreciation and amortization of your property?

A. For the company's internal purposes and for the purposes of these records, my answer is yes.

Q. Yes.

A. For all other purposes I have no answer.

Q. Mr. Watkins, in your opinion, do the same forces and [fol. 6386] reasons that determine the amount of the annual accrual also determine the total amount of accruals to date in the reserve accounts?

A. I do not believe I understand just what you mean.

Q. Well, let me put it this way: If your annual accruals are determined properly, the amount resulting from such accruals must necessarily have been determined properly?

A. Well, I do not believe I can—

Q. (Interposing) Well, that is so simple it sounds confusing, I imagine.

A. We have a situation here, as I see it, where the company has used reasonable, perhaps more than reasonable prudence in determining for its internal use and purposes what should be the amount set aside annually for this purpose and whether or not when those amounts have been set aside the result, after having deducted any retirements made prior thereto, is reasonably adequate for the purpose.

Now we believe that to be the condition. Whether the year 1937 or the year 1931 was all haywire, whether it was 1,000 per cent high or 7 per cent low may, in this witness' estimation, be of little consequence. In looking at the results of what has happened in restrospect, we are dealing [fol. 6387] with a certain condition that existed at June 30, 1941. There are exhibits here that show what happened in the various accounting periods prior to that time. There have been a multiplicity of things that might now, as we look back at the results of some of those years, change them. I should not want to state categorically whether the year 1938 accrual picked up any deficiency in any prior year or provided any excess for any subsequent year.

Again, I am speaking entirely from the standpoint of the company's internal needs, and not with respect to any rate proceedings or otherwise.

Q. Yes. Of course, we are all aware of the fact that the company has made a determination in previous years of the amount which it considers necessary to set aside in a reserve account during that year for depreciation and amortization. You have so testified, of course, have you not?

A. Well, I have not only testified that there have been such amounts determined, but I have presented an exhibit showing what is the result of such determination. That exhibit is No. 49.

Q. Yes. And has the company and the management of the company,—when I say "company", of course, it must necessarily be the management and the Board of [fol. 6388] Directors,—also determined that the accrued amounts remaining in these accounts to date represent a proper reserve for depreciation and amortization?

A. For what purpose?

Q. Well, for the purpose of these exhibits which you have put in here showing the condition of the company on its books and records.

A. The Board of Directors have made no determination whatever, as far as this witness knows, with respect to the accumulated accruals at any particular time, nor has the Board of Directors made any determination with respect to any of the exhibits submitted in these proceedings by any of the witnesses, as far as I know, that have appeared, but the Board of Directors has determined and authorized certain annual amounts and the officers of the company have carried out the Board's determination. We may have squeezed a little extra once in a while, we may have failed to take quite as much as the Board determined, but, generally speaking, the amounts provided in each year have been most comparable with the Board's determination for that particular year.

If that is not responsive to your question, will you please ask me another one?

Q. Well, I was just examining the response in my own mind. Of course, the Board of Directors' determina- [fol. 6389] tion in each year of the amount to be set aside

in the reserve accounts for that particular year represents, does it not, the opinion of the Board of Directors?

A. It represents their action, certainly. I may inform you, sir, that the Board of Directors is cognizant of the fact that the company has received these annual letters from an independent engineer.

Q. Yes.

A. The matter is presented to the Board when the annual accrual is suggested to the Board; the amount of it. The Board is informed that it is in concurrence with the suggestion of the independent engineer. The Board then, very naturally, has the right to accept it or reject it.

Q. Well, in these letters to which we have been making reference, Exhibits 108 to 111, the consulting engineer has stated that the reserves at the end of the years which he has studied are reasonable reserves based on the age and estimated life of the property. Of course, he is referring there, is he not, to the accrued reserves as of the date mentioned?

A. Would he not have to be?

Q. I say, is he not there making such reference?

A. It seems to me that he is.

Q. Yes. Well, has the management, also, made a [fol. 6390] similar study, resulting in an opinion on this subject?

A. Based on the age and estimated life, no. The management has no mortality tables available to it with respect to this class of property. Long-distance transmission lines are relatively new. It may very well be that because the greater amount of their retirements to date has been functional rather than physical we may suddenly awake one of these times and find that the aggregate of the accruals, less the amounts charged to the accruals up to that particular date certain, is astonishingly disproportionate to what we might require. We might even find that it is too much. Time alone will tell us that.

Q. Yes, I think that is true. Of course, you are merely basing your estimates on your best present information?

A. For internal company purposes.

Q. That is right, the accuracy of which can only be borne out and proved by future experience?

A. Is that a question?

Q. Yes. A. I think that is correct.

Q. Can you tell us, Mr. Watkins, what amortization period the management uses in determining the amounts to be set aside each year?

[fol. 6391] A. Amortization of what?

Q. Of plant property, speaking now, still, of the—

A. (Interposing) Well, let's put it this way, Mr. Gorman: We do actually amortize a portion of the investment of the company over specific periods, that is, the gas sales and purchase contracts. We, also, have some investment in unoperated leaseholds.

Q. Yes, if I may interrupt, Mr. Watkins, I wanted to confine this question to the account for the reserve for depreciation of gas plant as indicated at Lines 28 and 29 of page 2 of Exhibit No. 48, as distinguished from the other reserves.

A. You understand, of course, that in the preparation of the exhibits introduced through this witness, we tried to relate all of the facts shown by those exhibits to the classification of accounts adopted by the Federal Power Commission and made effective January 1, 1940, notwithstanding the fact that in some of the prior years our accounts had not been exactly in conformity with that classification and, further, that the reclassification required as a result of the adoption of the classification of accounts prescribed by the Federal Power Commission had not been completed.

You are also aware, I m sure, that there must be some determination of the adequacy of the depreciation reserve [fol. 6392] and, further, that that information is available to the company and to the Commission itself, but not necessarily part of the formal records. The reserve accumulated at January 1, 1940, and annually thereafter must be segregated as to production, transmission, distribution, general property, and so on.

Now, in the determination made by the management, concurred in by the consulting engineer who was independent and approached the problem without any knowledge whatever of the company's conclusions, and subsequently recommended to the Board of Directors, we had an objective of a rate, an effective rate or a percentage that would represent the result of the combined total we were going to ask the Board to act upon of around three per cent. Three per cent represented the total property subject to either amor-

tization, depreciation or any other cost. If that were translated to a life span and if the corporation ultimately recovers through earnings 100 per cent of its investment, it is pure mathematics to see that it would be about 33 years, but actually we did not determine 33 years because, as this witness has testified, there are so many things that we yet do not know about what the life span of these properties will be that we may have to change our views next year, maybe five years from now, perhaps at the very end of the life of the properties.

[fol. 6393] Does that help any?

Q. Yes, it does, considerably. But do I understand correctly that in providing an amount for amortization you do not, necessarily, predetermine a period for such amortization? A. And depreciation.

Q. And depreciation?

A. No, we do not. That is a life span.

Q. That is right.

A. We determine a period for the amount we suggest which is one year.

Q. And the fact that in late years you have been setting aside each year an amount equal, approximately, to three per cent of the Gas Plant Account, despite the fact that it, if carried continuously on throughout the succeeding years, would amortize and depreciate the property within a period of 33⅓ years, does not carry any connotation that in arriving at such three per cent you did, in fact, consider a life span of 33⅓ years?

A. It does not. If I may correct your statement, sir, we did not arrive at three per cent as such. We found three per cent when we were finished with our conclusions.

Q. I intended to say equal to three per cent, but I did not. A. Pardon me.

[fol. 6394] Q. Is it correct, then, to draw the conclusion from your statements that in providing an annual accrual for depreciation and depletion you give no consideration to the estimated life of the reserves presently available to the Panhandle Company?

A. It would not be proper to say that, no.

Q. Why not, may I ask?

A. We are conscious, always, of the probability that the reserves available to Panhandle Eastern Pipe Line Com-

pany's facilities may be overestimated. It may not last anything like as long as our estimates show that they probably will last. There could be some act of God that none of us know anything about that would completely destroy them. I do not know anything about geology, but something of that sort might happen. There might be some change in the utilization of natural gas that would make it a product that nobody would want. There might be the introduction of sulphur, a sulphur content in our natural gas such that it could not be used.

Now, whether that is possible or not, I do not know. I cite these things to show that we are naturally conscious that if one determines the probable life of a facility at any particular date certain, they must be conscious of the things, the very nature of which can make that estimate erroneous the next instant.

[fol. 6395] Certainly, we gave consideration to the possible length of the life of the properties. That did not necessarily mean, however, for internal purposes that we acted upon the estimates that we might have had at that time as to reserves.

We, also, had in mind the possible rate at which we were going to withdraw those reserves. We have in mind and have constantly in mind how we were going to develop our facilities, where we were going to sell our products, and a very wide variety of things that must be considered in approaching a matter as important as the determination of a provision for depreciation for internal, and no other purposes.

Q. What do you mean by "no other purposes", as distinguished from "internal"?

A. Well, sir, I am simply trying to say to you that I am in no wise trying to testify to depreciation to be or not be included in a rate proceeding.

Q. Well, I gather the impression, from your last statement, Mr. Watkins, that your company and the management thereof, in fixing an annual accrual, takes cognizance of the fact that the operations of the company are dependent upon a wasting asset, but that in fixing such annual accruals they do not give definite expression or weight to any particular span of years which these reserves will

[fol. 6396] last in the opinion of any expert geologist or other competent experts who undertake such estimations?

A. That strikes me as a fair statement of the situation, except that each of us approaching this subject very naturally have in the back of our minds something with respect to the probable life span of the properties and the reserves.

Q. But you and the others who participate in the management of this company have not looked upon any particular figure as representing the probable life of your reserves?

A. No, Mr. Gorman. We would like to be flexible in such matters. It would be improper, it seems to me, and highly so, for the present management of Panhandle Eastern or the management of Panhandle Eastern three years hence, or the management of Panhandle Eastern back in 1930 to have signed a blank check here for the company that was so hide-bound that attention could not be given to changing conditions.

It is not only true with respect to the depreciation reserve, but everything that we do in connection with the company.

Q. Yes. Is it your opinion and, if you know, is it also the opinion of others who participate in the management of this company, that for internal purposes, as you have [fol. 6397] expressed it, your accruals to date are adequate?

A. Speaking entirely for myself they appear to be and as far as my memory goes to any observations that may have been made in my presence by others, I think the same thing would be true. There has been some attitude expressd here and there that perhaps some of these days the Internal Revenue Department, for instance, will require us to give expression on the books to the same amount we seek as a deduction for income tax purposes. There have been many discussions concerning a thing of this sort. One just does not catalog in their mind every viewpoint expressed, but I think you have stated it fairly correctly.

Q. Now, in determining in your own mind that this accrued amount is adequate and not excessive, were you guided by the same factors and did you consider the same things which you take into consideration each year in de-

termining the amount of the accrual for that particular year?

A. There is no question but that the consideration given to this question each time it has been considered has been the result of a sincere effort on the part of the individuals involved in such consideration to take into account all of the factors present at that time, whether they be factors present in other considerations or whether they be factors that [fol. 6398] may never be present again.

Is that understandable?

Q. I think so. That is true in considering both the amount accrued, as well as the annual accrual at the time of consideration, of course? A. I think so.

Q. Yes. Now, Mr. Watkins, you made reference a short while ago to page S-8 of Exhibit No. 145, for identification, to certain statements contained therein to the effect that the Articles of Incorporation of this company require it to set aside certain amounts annually for the amortization of gas sales and purchase contracts. I notice on this same page that Note A refers to certain provisions of the Articles of Incorporation, as amended, and requires certain provisions to be made for depletion, amortization and depreciation of property, plant and equipment prior to the distribution of dividends. Is that correct?

A. There is a statement on page 8 of that general nature.

Q. Yes. Now, you have undertaken in this paragraph A to state certain amounts which, on the basis of the provisions of the Articles of Incorporation, as amended, would have been provided for the years 1938, 1939, and 1940, and the first nine months of 1941. Those amounts and those computations have no direct relationship, do they, to the [fol. 6399] annual accruals which are set aside in a reserve for depreciation of gas, gas plant, shown at Lines 28 and 29 of page 2 of Exhibit No. 48.

A. No, those amounts are the result of a computation based on one-third of one per cent per month as stipulated in the Certificate of Incorporation, as amended, to determine to what extent the dividends may be paid out of surplus in accordance with the provisions of the Certificate of Incorporation. We considered them as restrictions of surplus with respect to dividends.

Q. Yes, and only with respect to dividends?

A. I think that is correct. And if you have any interest in the amount of such restrictions at September 30, 1941, June 30, 1941, or any other date, the witness will attempt to supply it. It is available for June 30, 1941, included, I believe, as a part of one of the exhibits. The witness can supply it for September 30, 1941.

There is a further and greater restriction in the mortgage and deed of trust dated November 1, 1940, which is on the order of $4,113,000, so that, in effect, the restriction, as provided by the certificate of incorporation, does not come into play until it accumulates an amount in excess of the restriction provided by the mortgage and deed of trust.

* * * * * * *

[fol. 6403] LEITH V. WATKINS, resumed the stand and testified further as follows:

Cross-Examination (Resumed).

By Mr. Gorman:

Q. Mr. Watkins, at the time of recess yesterday afternoon we were discussing the account for reserve for depreciation of gas plant as shown as Lines 28 and 29 of page 2 of Exhibit 48. This reserve represents, does it not, those annual accruals which were shown at Line 10, account entitled "Depreciation Under Operating Revenue Deductions (Including Amortization)" on page 1 of Exhibit 49?

A. You mean it shows the residue?

Q. Yes, that is right.

A. (Continuing) Of the accruals made over the period as shown by the point specified in your question, that is correct.

Q. And accurately speaking, this reserve for depreciation of gas plant includes a provision for amortization, does it not?

A. Yes, I believe we covered that rather fully yesterday. We must not lose sight of the fact that it includes [fol. 6404] amortization with respect to gas sales, and purchase contracts and, also, an element of amortization with regard to the physical properties themselves.

Q. Yes.

My point was merely for clarifying the title which is shown in Exhibit 48, which merely refers to depreciation.

A. I believe the company is not necessarily responsible for that title.

Q. You mean that that is the title which is contained in the Commission's uniform system of accounts?

A. That is correct, and the total amounts shown in the various columns on page 2 of Exhibit No. 48 on Line 29 are the amounts or aggregate amounts of the reserves of any class the company might have had on its books at any of these periods, even though they were not specifically designated as "Reserve For Depreciation of Gas Plant."

Q. Yes. I believe you indicated, did you not, in your testimony of yesterday, that you were one of the officials of the company who assisted in the determination of the annual accruals to be set aside for this reserve each year?

A. My statements were not that definite with respect to the entire period. You will recall, and I believe the transcript of yesterday's testimony will reflect the fact, [fol. 6405] that the witness stated that during the earlier years of his association with the company that he was assistant secretary and assistant treasurer, and, as such, did not necessarily have direct contact with or assist, other than in a general way, in the determination of some of the matters of policy that I have, since I became secretary-treasurer and since my titles were changed from secretary-treasurer to secretary-controller, been quite intimately associated with and have participated in such determinations subsequent to those changes to a much greater degree than before that time.

My senior officers in the earlier days of my association had more to do with matters of policy than the witness, himself.

Q. Well, it is correct to conclude that since the time, at least, when you became secretary in 1935, that you have been intimately connected with such determinations?

A. Well, even before that, Mr. Gorman.

Q. Yes, but I mean since that time, at least.

A. That is true.

Q. Can you tell us, in a general way, without going into too much detail, how or what method or basis is

used by the management in determining such annual accruals? We touched upon that somewhat briefly yesterday.

[fol. 6406] A. Well, I do not believe I can add any more in that respect than is already in the record. I should be very happy to read the portions of the record that I think are responsive to your question, if that would be helpful.

Q. My inquiry was whether or not you could give it in any greater detail than you did on yesterday. My recollection of your testimony,—of course, it will speak for itself,—was,—

A. (Interposing) I think I am willing to let it rest as we left it yesterday.

Q. Your present thought is that you can add nothing to it?

A. Oh, I might, but I do not believe it would be particularly helpful. If such a thing would be helpful to whatever point you have in mind, I should like to give you a little of my philosophy with respect to depreciation.

Q. Well, I am only interested in that to the extent that that represents the basis or method of determining accruals of the management of this company.

A. I think, to an extent, it probably will.

Q. Suppose you proceed to do so. In looking back through yesterday's transcript I, myself, fail to find where you offered any explanation of such method or basis. You offered to refer me to the pages, and if you can do so, [fol. 6407] I would appreciate it.

A. I do not believe I offered to refer you to the pages. I referred you to the entire transcript of the proceedings of yesterday.

Q. I see. Well, will you go ahead with such explanation as you propose to offer?

A. I do not believe I characterized it as an explanation. I think I said that I would be glad to give you what I think is the management's philosophy with respect to depreciation and its determination.

Q. That definition is all right with me.

A. We do not believe that depreciation is subject to the application of a mathematical formula. We do not believe that it proceeds uniformly with the passage of time.

. . . . . .

[fol. 6410] Q. Now, to get back to the subject of our original discussion, can you give us a statement of the basis or method or reasoning which is applied by the management of the company in determining each year the annual accruals to be set aside and the reserve for depreciation of Gas Plant Account?

. . . . . .

[fol. 6411] A. Now, Mr. Gorman, I am going to be as brief as I possibly can, because we have spent a terrific amount of time on this question. I should like to help all I possibly can and if I may try to answer your question, your most recent question, by describing what we may have done with regard to the determination of an amount for the year 1940 and skip any efforts to try to recall all these questions that arose in the tabulations that we might have made in various directions, and the consideration we gave to our wasting-asset problem, and the fact that we might not have as property tomorrow [fol. 6412] or that our product would not be susceptible to use or any of the variety of things that would alter one's estimate made for the immediate future, perhaps we can come to a point where the information you seek is available.

Q. Yes.

A. So that approaching the estimated amount for the year 1940, we, first, gave consideration to the fact that there was on the company's books a certain amount of gas sales and purchase contracts which, for our own purpose, we look upon under the classification of "Old".

I imagine before we get too far along in this proceeding we will hear more about those gas sales and purchase contracts. There is a provision in the Certificate of Incorporation that says that we must amortize those gas sales and purchase contracts on an annual basis at the rate of $24,419.05. Computing that, we find that we must have about $293,000 for that purpose.

There are other gas sales and purchase contracts which, using our own vernacular, we classify as "New". Those gas sales and purchase contracts came into existence subsequent to the procurement of our contract with Detroit City Gas Company; now Michigan Consolidated Gas Com-

pany, and we must provide an amount to take care of those over their life span based on units of sales, as the conditions may be, and we determined an amount for that period.

[fol. 6413] Did I mention the amount that we determined for amortization of the old gas sales and purchase contracts?

Q. The provision of the certificate, the Articles of Incorporation? A. Yes.

Q. Yes, you did.

A. (Continuing) So that we add another $40,000 for amortization of the new gas sales and purchase contracts.

We have found by studies made over a period of years that our investment in unoperated leaseholds should be completely recovered over a period of about ten years because the average life of the leases themselves, is that period. That gives rise to another $86,000.

Several years ago we determined that, based on the estimated amount of recoverable reserves, it would take about three mills per m.c.f. of production to recover the cost of operated leases.

As I mentioned yesterday, we employed the services of an independent consulting engineer, and his approach to the matter of depletion was on a little different basis than that of the company and, generally speaking, we came to the same end.

The depletion on unoperated leases for the year 1940 would be, naturally, based on the estimated amount of gas we were going to produce during that year, and it [fol. 6414] was fixed for the year 1940 at $72,000.

Now, as I mentioned yesterday, somehow we came to a point where, when our total amount of provision was applied to the Plant Account, we had a result of about three percent, so to the figures that I have mentioned we add an amount which, divided by the total Plant Account at the beginning of the year, would give a resultant figure including all of these items that the witness has enumerated, and the amount to be added was something in the neighborhood of three per cent.

That, sir, represents our best judgment for the year 1940 as to the amount that should be set aside and was

the basis upon which a recommendation was made to the Board of Directors. The Board authorized the establishment of $1,900,000. That figure, however, did not include the amount already stipulated in the Certificate of Incorporation, because it is unnecessary for the Board to, again, take action each year on something that the stockholders had already acted upon. The plan, therefore, at the beginning of the year 1940, called for the appropriation from income of, approximately, $2,200,000. I believe, if you will refer to the company's published annual report and, perhaps, also, to Form No. 133, which is a form used by natural gas companies to make a financial and statistical report to this Commission you will find [fol. 6415] that the actual amount appropriated was $2,210,000.

Mr. Culton: You said "this company." You mean this Commission, did you not?

The Witness: If I used the word "company" in place of the word "Commission," I was incorrect, sir. Thank you.

By Mr. Gorman:

Q. Now, of course, that aggregate provision which you just referred to includes reserve other than reserve for depreciation of gas plant, which we have been discussing and which is shown at Line 29 of page of Exhibit 48, does it not?

A. Mr. Gorman, the witness enumerated the items that made up the amount.

Q. Yes, I realize that. I just wanted to ask that clarifying question.

A. If the accounts on Exhibit 48—

Mr. Wheat: (Interrupting) Page 2.

The Witness: (Continuing) —segregate the amount determined by the Board of Directors and the amount actually appropriated, the answer to your question is, "Yes."

Now, as you know, the classification of accounts prescribed by the Commission requires a reclassification of the depreciation reserve, just as it does the Plant Account itself.

[fol. 6416] By Mr. Gorman:

Q. That is correct.

A. So that our actual accounts, per the books, may not carry the exact segregation shown in Exhibit No. 48 and may not, at this moment, represent the amounts that would have shown, shall we say, at the end of the year 1940 in Column L on the appropriate lines or in Column M on the appropriate lines of June 30th, had such segregation been made. It is not yet completed.

Q. Can you supplement your answer by giving us a statement of the consideration by the management of the fact that the company is dealing with a wasting asset in providing an amortization provision annually for Gas Plant Property as distinguished from contracts for producing and non-producing acreage which you have previously mentioned?

A. I am afraid I do not understand what it is that you would like to have me do.

Q. Well, as I recall your testimony of yesterday, you stated that in determining the annual accrual the management did consider and provided a certain amount for amortization in addition to depreciation of Gas Plant Property and that this was brought about by reason of the feeling of the management that they were dealing with a commodity which, by reason of the manner of its production, was considered as a wasting asset and that [fol. 6417] in determining and considering amortization allowance there was no specific period or term of amortization provided.

Now, I am asking you if you can give us a little more complete explanation of just how the management did consider this matter of amortization of Gas Plant Property other than those amounts which have specific rates to which you have previously made reference.

A. I assume, sir, you will take no offense if I suggest that your reference to what I stated yesterday be limited to the inability of each of us to exactly remember what we may have said in the precise words. I think I said, in general, what you recited.

Now, if you have this in mind, perhaps I can get to the point you are after.

If you are seeking to learn whether or not, in all the effort we consume to determine these annual amounts, there was a specific rate that we used for amortization of the physical properties, or a specific number of years we used to determine that, the answer is no.

Q. I understood that from your testimony of yesterday, but I do not understand that the management merely considers that they are dealing with a wasting asset and, accordingly, plucked some specific amount out of the air.

A. Oh, certainly not.

Q. What I am trying to get at is how they arrived [fol. 6418] at the amount which they do so provide for amortization.

A. Well, that is based on our best judgment. Now, we do have certain things, as the record of this morning's session will show, that are provided on specific bases. As the witness has testified, there is then added to those amounts an amount which includes both amortization and depreciation, as it is commonly known, and as it relates to the wasting away of the physical assets in actual use.

Specifically, we have not had a definite rate for either of those two amounts. We used our best judgment, which converted into a percentage after we were finished, that amount plus the sum of the specific amounts, came to about three per cent, sir.

Mr. Wheat: What you are trying to say is that you do not start with a percentage and apply that, but that over these years which you have had to do with this matter you have had certain specific amounts and you have added other amounts and afterward, as you come to look at that, you have found that it has approximated three per cent in those years?

The Witness: If that satisfies Mr. Gorman, Mr. Wheat, I have certainly wasted a lot of time.

Mr. Wheat: No. Can't you answer my question?

The Witness: That is what I have been trying to say.

[fol. 6419] Mr. Wheat: Thank you.

By Mr. Gorman:

Q. Yes. Well, I think you have said that on several occasions, but that, as you seem to think, would not quite satisfy me.

A. Well, I do not know, sir.

Q. Well, I am not sure that we still have got to the point which satisfies me, Mr. Watkins, and that is, you stated the amount which you add to your other figures, which amount is a provision for amortization, represents a judgment figure. That was your statement, was it not?

A. Yes, I think so.

Q. Yes. Now, what I am trying to secure from you, Mr. Watkins, is the basis of that judgment. In other words, what factors do you consider? Do you just consider the fact that it is a wasting asset?

A. Oh, no, indeed. Mr. Groveling has been engaged in the gas industry for years and years and years. He knows it backwards, forwards, top and bottom, inside and outside. He has bumped into, unquestionably, all the problems that can be gathered together that have been the experience of all the gas companies. Of course, he has not bumped into the ones that we will have in the future.

Q. We will agree with that.

A. My experience in the gas industry goes back to 1926. [fol. 6420] In know a few of those things. There are others connected with our organization in an operating capacity and in a managerial capacity that have the same line of experience either in the gas industry, or otherwise.

Now, the composite of the thoughts of all of us, based on our experience, our investigations, our discussions, our general knowledge, has led us to the conclusion that this is a good thing, and that is what we are using for internal purposes, not for rate purposes and not for income tax purposes.

Q. Well, by that do you intend to indicate that the approximate figure of about three per cent annually, is a good figure? Is that what you meant?

A. It is a good figure for our purpose. It is not intended to represent a life span. We went over that time after time before and, if I may anticipate, that is the thing that is troubling us now; we have not definitely concluded in our mind what should be a proper one because we do not have enough knowledge at this time.

I mentioned yesterday that this is a new industry; long-distance transmission of gas is something that probably is not over ten years of age. Many of the long-distance transmission lines did not get into what one would consider full operating condition until perhaps seven years ago, or something of that nature. Our retirements have not been suffi- [fol. 6421] cient at this time to indicate what might happen by way of physical deterioration. We do not know what confronts us by way of functional effect of depreciation. We do not know what confronts us in the way of depletion. There are so many unsettled things that it would be most unwise at this time to try to arrive at a mortality figure. The information just is not available.

Q. Yes. Well, you answered my question very quickly and your answer was that the figure to which you previously had reference was the resultant figure of approximately three per cent.

A. It resulted in approximately three per cent, sir.

Q. That is right. I thought that was what I said.

Now, do I understand correctly that after you have computed your depreciation and the various amortization provisions for other items of property, that to that resultant figure you add an amount which we have been designating as an amortization provision for gas plant property which is sufficient to bring it up to the resultant figure of approximately three per cent?

A. No, sir, we do not make any such addition. The addition that you speak of is a mental process.

Now, if we could move time back, shall we say, to about [fol. 6422] 1936, when we went through all of the things that we have been discussing here, and determined an amount that we thought was sufficient for our internal purposes at that time, and that, as we have gotten into the record numerous times, resulted in rate of about three per cent, so that as we came along in the subsequent years and we found no particular reason to change the basis upon which we had approached this matter before, it was simply a mathematical calculation of what we expected to have at the end of the year.

Q. Well, when you say "mathematical calculation", do you mean that the amount provided for amortizing gas

plant property is a calculation? I understood previously that that was a judgment figure.

A. No, sir, I am talking about the composite whole.

Q. Oh, I see. This amount provided for amortization of gas plant property is wholly a result of a discussion, so to speak, around the table and then in that discussion you arrived at an amount which you are going to set up for that particular year?

A. Well, I think that probably would be all right. Let's put it this way: If we were using a fixed rate of six per cent or 60 per cent, some portion of the six per cent or the 60 per cent, in our judgment would represent the amount that an industry such as ours should provide annually as [fol. 6423] amortization of facilities that would not be completely used up when its reserves has been completely exhausted. It is part of the composite whole, just as you might say that because of the retirement unit provision in the classification of accounts used by this Commission our depreciation reserve or our reserves for depreciation and amortization, however we choose to characterize them, are going to be increased substantially, because we now have to work small units of property in and out of capital, whereas before we may have charged them to maintenance, or that one of the reasons for an upward trend in the annual provision is because the State Highway Commissions in Kansas, Missouri, and Illinois, are going to indulge in a tremendous road buildnig program which is going to involve the changing of a lot of facilities and, as a result of that, we, again, have our units of property to contend with and that affects the depreciation reserve.

There are so many things of that nature that can cause the conclusions to be changed at different periods, even changed within an annual accounting period, that one cannot specifically put their thumb down on them and catalog them or characterize them as something that is going to recur constantly in the same manner, in the same fashion, at the same time, and in the same proportion.

What I am trying to say is that we have made a desperate [fol. 6424] effort to arrive at a conclusion which when applied to the company's property and taken out of the company's gross earnings will be such year for the purpose these reserves are intended. We may have erred terribly.

That error, if [they] be any, may be on the upward side. It may be on the downward side. Here is what we have done; it is our best judgment, and I am afraid we will have to leave it just as I once heard of a Negro boy who had bought a watch. Another high brown came along and asked him what time it was. The second Negro looked at the watch and said, "Dar she is," and the other Negro said, "Damned if it ain't!"

Q. Well, now, of course, your analogy there is not, in my mind, a good one, so that is neither here nor there. I think you will agree with me when I say that apparently I am very dense because I still do not understand just what you do or why you do it.

A. I would not say that at all, sir.

Q. I am just trying to clarify it in my own mind. If everybody else understands it, I apologize for taking up so much time.

Now, as I understand your feeling and the feeling of others of the management, after you arrive at an amount, before you provide this other amount for amortization of Gas Plant Property, you have the feeling that your result [fol. 6425] is not adequate. Is that correct?

A. Oh, no, no.

* * * * * * * *

Q. Let me put it this way, you do have a definite feeling that to reflect your best judgment and to provide what you consider to be an adequate amount, you must provide a specific amount which you determined by a judgment calculation for amortization of your Gas Plant Property?

A. We make no specific calculation, applicable only to the amortization. Now, there is only one of the several things that the witness mentioned a moment ago that is specifically based upon the Certificate of Incorporation, and that is this amortization figure which runs around [fol. 6426] $293,000 a year and is stipulated in the Certificate of Incorporation at the rate of $24,419.05. That is the only definite thing that our Articles of Incorporation say we must do.

Now, everything after that is something that we arrive at without direction from the Certificate of Incorporation, if I may use that language.

Q. Yes? Well, I think we all so understand.

A. So that, to repeat, we take the other gas sales and purchase contracts and work out an amount which will provide the recovery of the total amount at which those gas sales and purchase contracts are carried on the company's books over their life or, if they be based on some unit of sales, on the basis of the unit of sales that is added to the amounts specifically required by the Certificate of Incorporation.

We then treat our amortization of unoperated leaseholds separately. As I have testified, we find that a 10-year period is about what is required for those, so we set up one-tenth of that in this mental computation and then we come to our operated leaseholds and we have found, as I have previously testified, that a rate of about 3 mills per M.c.f. of gas produced was good enough for that, so we then make that computation.

Now, the sum of those items represents the things that we have thus far determined.

. . . . . .

[fol. 6427] Now, when we get to that point, there is then the necessity of providing for both what we choose to consider physical deterioration and amortization.

That is a composite figure and it, added to the sum of these other four elements that I have mentioned, divided by property, usually comes out to 3 percent.

. . . . . .

Q. Yes. Now, if we just understand each other that we are only talking about this last amount, disregarding everything prior to that but the physical depreciation and the amount provided for amortization, which goes together as I understand your last statement, which is separate and apart from everything else you have mentioned such as contract provisions, reserve for amortization, depletion for producing natural gas lands, reserve for abandoned leases and other things of that ilk which have a specific manner of annual determination, it is this last figure that you mentioned which I am discussing solely and that, as I understood you to say, is strictly a judgment figure.

A. Well, there are many things that enter into the determination of that judgment and I have tried to tell you what they were this morning.

[fol. 6428] If we want to wave those all aside and just simply call the amount a judgment figure, I do not think I could agree with that. I can state, as I have two or three times, that it is not based on a specific life span.

Q. Yes.

A. And, therefore, has not specific rate.

Now, it might very well be that if we took that figure alone and divided by property, it would come out to, let us say, somewhere in the neighborhood of 2.75.

I do not know whether it will, but suppose it did, it is not significant, so far as we see.

Q. Of course, it has great significance, the whole resultant figure. Whether you come out at 3 percent or whether you come out at 10 or 15 percent, I think it has a great significance.

However that might be, you indicated that this last amount, which you understand we are now discussing, is to provide not only for physical deterioration but, also, a certain provision which may or may not be set aside or cataloged in your own mind as an amount sufficient to amortize and depreciate your property by the time that you anticipate your gas supply will have been exhausted.

Now, is that correct?

A. Well, the combined total of the two has been provided by us for those purposes and any other purpose that a [fol. 6429] depreciation and amortization reserve applicable to property may be needed at some indeterminable time in the future.

Q. Now, isn't it your testimony that you and others of the management feel in considering this last figure that we have been discussing that an amount, which you estimate to be equivalent to physical deterioration, considered in conjunction with the other amounts provided for amortization and depletion of producing natural gas lands, reserve for abandoned leases, and your reserve for contracts, would not be sufficient to recover your investment at the time the gas supply had been exhausted?

A. We sincerely hope that it will be.

Q. Now, I wonder if you understood my question properly. A. Perhaps not.

Q. Because I did not mention any provision for amortization of gas plant property over and above the amount you had provided for physical deterioration.

A. We have made no specific provision for either deterioration or for amortization of the physical property.

We have made a provision and our records do show the result of that provision and the residue of the provision made to take care of those things and any other elements or functions that give rise to the march of our properties to the junk heap.

[fol. 6430] Q. Well, of course, Mr. Watkins, that is merely repetition of what you have said before and does not clarify my question whatsoever.

Let's go back and put it down in somewhat detail. First, you have an amortization provision.

A. First, we determine, sir, that we must follow the Certificate of Incorporation, we have no choice.

Q. Which provides an amortization for gas contracts?

A. So if we follow that we have to have $293,000.

Q. That is for the gas sales and purchase contracts?

A. (Continuing) As stipulated by the Certificate of Incorporation and over a ten-year period.

Q. Secondly, you have what?

A. We have other gas sales and purchase contracts for which we provide amortization and apply that amortization monthly to the Asset Account.

That varies from year to year, based on the amount of such account, and is determined by the life of the contracts to which the amounts are associated, or on a gross sales basis, or some unit basis, if such a thing is present.

For the year 1940 it ran around $40,000, so you may write down, in addition to the $293,000, $40,000 for other gas sales and purchase contracts.

Q. Thirdly, you have what?

A. We have investment in unoperated leases which, as [fol. 6431] has been stated many times this morning, we determine should be recorded over a ten-year period.

The computations with respect to that developed an approximate amount for the year 1940 of $86,800.

Q. Fourthly, you have what?

A. Unoperated leases. On the basis of the estimated gas to be produced in the year 1940 times 3 mills we arrive at a figure of $72,200.

Q. Did you say "unoperated" or "operated" leases?

A. If I said, "unoperated", I am incorrect.

Q. Well, I understood you to say "unoperated". You meant "operated"?

A. This last item we are talking about is operated leases. It is providing depletion for that purpose.

Q. Your fifth item is what?

A. The fifth item we call depreciation in a very broad sense of the word and is intended for all other purposes that it may be needed. That figure, in our estimate for the year 1940, was $1,708,000, the total of which is $2,200,000.

When this was presented to the Board, the only action the Board took was with respect to $1,900,000 of that.

Q. Now, as I tried to indicate before, I think we have disposed, at least for the time being, of the first four items which you have mentioned, which leaves only the fifth item. [fol. 6432] A. $1,708,000 estimated.

Q. (Continuing) Which, in your last analysis, you have characterized as depreciation. A. Very broadly.

Q. Yes. Now, was it not your previous testimony that in this fifth item you include not only physical deterioration as depreciation, but you, also, include an amount for amortization?

A. It gives consideration, sir, to both of those items.

Q. Yes.

A. And any other item that we may have. Whether or not we include in our mind's eye blank dollars for the one or the other, I do not believe anybody can say because we simply did not do that.

Now, if you could tell us or anyone else could tell us exactly and precisely what we should do with respect to that item, you certainly would render a tremendous service to us.

Q. I am not trying to indicate what you should do, Mr. Watkins, I am merely trying to find out what you did do.

A. I am telling you that your help would be quite welcome.

Q. I can fully appreciate that.

So that in arriving at the amount to be provided for this last item, which you said in 1940 was estimated to be $1,708,000—

[fol. 6433] A. (Interposing) And actually was $1,720,744.97.

Q. (Continuing) That represents the best judgment of the amount to be set aside for this Item No. 5 of depreciation, including amortization, by the management of the company as arrived at by a round table discussion?

A. Many, perhaps, such discussions.

Q. Yes, but it is solely the result of discussion by the management?

A. No, I do not think you could say that, Mr. Gorman, in the light of all the remarks the witness has made with respect to this.

We do not want to go around that circle again, I hope. We just did not simply sit down and discuss this, certainly not. The length and breadth of the experience of the people connected with the company, the information we could assemble from all other organizations similarly situated to ours, the general knowledge that we gained with respect to these matters, the interest that was developed with regard to such things in the American Gas Association, The Controllers Institute, The American Institute of Public Accountants, the advice that we could get from our own accountants, the man in the ditch that could help us about this, that or the other thing, the things we observed that were happening to other gas lines and gas properties, the knowledge we gained of what might be the trend of the develop-
[fol. 6434] ment of further reserves, the things that we sought that might shorten the life of the reserves and all of the conglomeration, if you please, of things that must be considered went into the consideration of this and we did not sit down at any particular table and any particular time and make such a determination. It was a long, laborious thing.

Q. And it, as I understood your testimony, represented no division for physical deterioration or other provisions for other purposes?

A. No, it is a composite amount for whatever purposes it may be required.

Q. And did that figure result in any sense from a feeling of the participants in such discussions that the amount to be set aside for this Item No. 5 in each year when added to the amount provided in the first four items must be suffigient to enable the management to recover its investment within a given period?

A. Not with respect to a given period. I do not know how to make that any more definite than I have many times during this testimony.

We expected and hoped that the amount would be sufficient if continued and if adjusted as adjustments were necessary or required, either upward or downward, to recover at the time when such recovery became necessary the entire investment in the facilities, the use of which gave rise to [fol. 6435] such determination.

Q. Yes. A. If I may interrupt?

Q. You may.

A. I should like to caution us about characterizing this one thing as Item No. 5. Let's think of it as Element No. 5.

Q. I will appreciate it if you will.

A. Mr. Gorman, perhaps this would add to what you have in mind, I do not know; if it won't, you may stop me if you please.

The result of the method that we have been discussing here this morning for the years 1937, 1938, 1939, 1940 and estimated for 1941, comparing the plan with the actual and what follows, would you like to have that?

Q. Well, by that you mean the recommendation of the management as compared with the final determination of the Board of Directors?

A. I am going to give you, sir, the resultant percent of the plan and of the amount actually provided after the determination by the Board as compared with the investment at the beginning of the year, if it will be of any service to you.

Q. Suppose you do that.

A. This we understand to be simply a percent.

Q. An equivalent percent?

[fol. 6436] A. Yes, an equivalent percent of the fact, shall we say?

In 1937 the plan and the authorization by the Board resulted in 2.58 percent; the actual amount recorded was 2.7 percent.

In 1938 these comparable figures were 2.77 and 2.8.

In 1939 they were 2.82 and 3.

In 1940 they were 2.96 and 3.0.

In 1941 they are estimated to be 2.99 and 3.09 percent.

Q. The first figure that you gave was—

A. (Interposing) 2.58.

Q. No, I did not mean specifically in numerals.

A. It represented the result of the application of the amount the management determined and recommended to the Board and the Board acted upon plus the amounts stipulated by the Certificate of Incorporation to the Property Account at the beginning of the year, each year.

Q. And the figure each year represented—

A. (Interposing) The actual application of such determination and such approval by the Board.

Q. That is the application on the books? A. Oh, yes.

Q. Yes.

A. I believe I mentioned yesterday that for the year [fol. 6437] 1942 the plan might run on the order of 3.2.

Q. Yes.

A. Actually I think it is somewhere in the neighborhood of 3.18. I should not like to be bound by those last two figures.

Q. Now, of course, at the time of the determination of the annual accrual, I assume it is the judgment of the management that upon the circumstances as of the time of determination their decision, of course, is a proper one for that year and upon such facts as they stand at that time, in so far as they know them, it would be entirely proper to continue, all other things remaining the same, the allowance of such amounts throughout the history of the property?

A. Well, the answer to the first part of your question would, necessarily, have to be that management could not very well impeach itself.

If it determined an improper amount, it will certainly have to stand by it.

As to the second phase of the question, if I understand that correctly, if there be no presence of disturbing influences with respect to the futu[illegible] and such an amount were applied proportionate to the investment in property over the subsequent years and if the amount up to that time had been adequate and we had come out exactly even, then the answer is "yes".

[fol. 6438] Q. Yes.

Mr Watkins, you have from time to time in the discussion of this question of reserves for depreciation and amortization referred to the fact that these figures and computations and methods used were satisfactory for internal purposes but for no other.

Now, will you please explain to us what is the significance of your phrase, "internal purposes"?

A. First, at Page 6395 of the transcript of the session of the afternoon of January 22, on Lines 16, 17 and 18, the witness in response to a question you asked stated, "Well, sir, I am simply trying to say to you that I am in no wise trying to testify to depreciation to be or not to be included in a rate proceeding."

The position of the company with respect to its provision for this purpose, as shown by the witness' statements relating to internal purposes, is that its records are not kept for purposes of determining the net taxable income in the manner prescribed by the regulations pursuant to the effective Revenue Acts nor do its records in any fashion [pretent] to represent a base upon which there could be applied a rate of return in rate proceedings, nor are the records maintained in such manner that information may be extracted immediately from them and used, without adjustment, for any other purpose which it might become [fol. 6439] necessary to treat with, any investment or liability or other item that was shown on the company's books at any time in any manner wherein such an adjustment need be considered in the development of data responsive to any regulation, question or otherwise.

Now, when we speak of internal purposes, including the explanation that has just preceded this remark, we think of the company affairs in the light of their use in any direc-

tion other than those that I have heretofore specifically mentioned.

Q. Well, as I understand your answer then, your books and records are satisfactory for the purposes of consideration by the management but for no other purposes?

A. Oh, no.

Q. Well now, let's see. You said they were not satisfacory—

A. (Interposing) Our books are predicated upon sound accounting practices and accepted standards for correct and proper accounting methods.

Q. Yes, but, of course, they are not satisfactory for rate proceedings?

A. I do not believe that it is possible at this moment, at least, to interpolate rates into books of accounts, sir.

Q. So that for a rate proceeding you will have to, more [fol. 6440] or less, set up a new set of books?

A. Oh, I do not know about that. When you come to rate proceedings, sir, you have me out beyond my depth. I know little or nothing about rate proceedings, I am having my eyes opened, however.

Q. You were the one that made the statement, Mr. Watkins, that they were not satisfactory for rate purposes.

A. I do not believe I said that at all.

Q. I so understood.

A. I should not like for you to so interpret my remarks in that respect.

Q. I just misunderstood, then. I understood—

A. (Interposing) I said they were not kept specifically for that purpose.

Q. Well, naturally not.

A. If I said something else, I must correct myself, because I did not intend to say that.

Q. We understand now what is your statement.

A. O. K.

Q. Do you think that they could not be used for rate proceedings' purposes? A. As such?

Q. As such.

A. I do not believe they could, no, from what little I know of rates.

[fol. 6441] Q. So from what little you know of rates, you do think it would be necessary to set up the equivalent of a new set of records?

A. Well, I would not characterize it as a new set of records. I see in this proceeding here where we have something in regard to claims for this or a statement made with respect to something else.

There have been over 6,400 pages of testimony thus far. The record must have some purpose with all that stuff in it.

Q. Yes, I imagine that is true, but you do not know the answer to my question?

A. I do not know but very little about rates, if that is what we are talking about. When I say "rates", I mean rate proceedings, of course.

Q. Yes.

A. Let us say this, Mr. Gorman, maybe this will be helpful, it is most infrequent that records can exactly coincide with the statutory conception of information that much be extracted from those [recrods] for a varied number of purposes.

Recognition, I believe, of that theory, is present in most everything we do with our books of accounts. For instance, this Commission, by its Order No. 86, has established a very voluminous report with respect to companies subject to the Natural Gas Act and that report includes a tremendous amount of information that is not present in a company's books of accounts.

• • • • • • • • •

[fol. 6443] By Mr. Gorman:

Q. Let us turn our attention, now Mr. Watkins, to the next account shown on Page 2 of Exhibit 48 at Lines 30 to 32, which is the "Reserve for Amortization and Depletion of Producing Natural Gas Lands and Land Rights."

This reserve represents, does it not, the balance remaining of the accruals which are shown at Lines 11 and 12 on Page 1 of Exhibit No. 49?

A. It does, and is a result of a part of the plan that we have been discussing here this morning.

Q. Yes.

A. Our discussion, as I understood it, took into consideration all of the reserves shown on Lines 27 to 33, inclusive on Page 2 of Exhibit 48.

Q. Well, I attempted, of course, to confine it to the several accounts. However, I realize that the testimony got beyond that scope and did touch upon these other matters.

Now, the accruals in this reserve, as I recall your previous testimony, are provided upon a basis of three mills per thousand cubic feet of gas produced, is that correct?

A. At the present, yes.

Q. And how long has that been the method of computing [fol. 6444] the annual accrual to this reserve?

A. Since the first accrual of this nature made by the company, so far as I know.

Q. And that was made when, do you know? You mean that goes all the way back throughout the history of these properties?

A. Apparently it was made in the year of 1932. Yes, it goes all the way back throughout the history of these properties.

Q. Including the time the property was held by a subsidiary of the company which has since been dissolved?

A. We are referring to Texas Interstate Pipe Line Company?

Q. Yes. A. Yes.

Q. Now, I notice that on Exhibit 56 you have set forth the annual production of natural gas by the company. Are these figures computed upon a basis of measurement other than that which is used for the determination of the annual accrual for this reserve we are now discussing?

A. The basis of measurement has nothing to do with the accrual. We determined the amount of production, on whatever basis was used, and then reported the amount of gas produced upon that determination.

We give no consideration to the fact that it may have [fol. 6445] been anything other than 16.4 absolute pressure gas as shown in Note No. 1 on Line 13 of Exhibit No. 46. As a matter of fact, it is my remembrance that that has been the basis that has been used throughout the entire history of the company, so far as gas produced is concerned.

Q. And the annual accrual will be determined simply by the multiplication of the figures which appear in Column E

of Exhibit No. 56 for the respective years by the amount of three mills per thousand cubic feet?

A. Well, it would not be exactly that because the accrual, as a matter of fact, is made monthly and based upon the monthly production figures.

It should be substantially the same.

Q. I see. Referring to another item in your direct testimony at Page 885, you stated that for drilling costs, well equipment and other production system property, the annual accruals are computed at a rate of 6 percent per annum. That is correct, is it?

A. No, not computed at that, but, in determining distribution of accruals and so forth, we give consideration to 6 percent per annum for the properties referred to there.

Q. And has that figure been used throughout the history of this property? A. Yes, it has.

Q. Turning now to the account for the reserve for [fol. 6446] abandoned leases shown at Line 33—

A. (Interposing) The amounts shown there represent the third element of our determination for the total amount to be authorized or rather to be recommended to the Board for consideration.

That is simply the result of the amount set aside monthly for the eventual time when the investment in the unoperated leases must be fully recovered and is based, as I have previously testified, on an estimated ten-year life, so that we take the total amount when our accruals are made of our investment in this particular type of assets and apply the ten-year basis to it.

Mr. Culton: In other words, your ordinary lease provides if it is not drilled within ten years, it terminates?

The Witness: That is true and the average that we are using of ten years, Mr. Culton, is based on the average life of all the leases that we own.

We find that the ten-year period has not changed a great deal over the past years. Some of the leases may, from the time we acquired them, run for a very, very few years. Others, their primary terms may have been extended so the life represents about a life of ten years.

By Mr. Gorman:

Q. When you say "all leases", do you include operated and unoperated leases?

[fol. 6447] A. No, the operated leases are provided for, as the record shows, in the reserves shown in Exhibit 48, on Lines 30, 31 and 32. That is depletion, as we understand it.

Q. Your phrase then, 'all leases" merely refers to all unoperated leases? A. That is correct.

Q. And is this reserve set up with the idea of recovering those amounts which are shown in the gas plant account, Exhibit No. 52, Page 1, at lines 11 and 12 and there designated "Natural Gas Producing Leaseholds—Not Drilled"?

A. Yes, that is correct. The amounts shown at the end of the respective periods stated in this exhibit do not necessarily become the basis upon which the monthly accruals are made because they change from month to month, as you can imagine.

Q. But these reserves are set up as a credit to this [accout] for natural gas producing leaseholds—not drilled, is that correct?

A. That is correct, and my remembrance of the need for the repetition of the language, natural gas producing leaseholds, is that the Power Commission Classification makes no distinction between drilled and not drilled leaseholds.

Am I correct there?

Q. I think you will find that is true.

Now, Mr. Watkins, do I understand that the ten-year term [fol. 6448] over which you provide amortization for these abandoned leases is due to the term of the lease itself or to the period during which the lease is operated or held?

A. It is due to the term of our ownership in the right granted by the lease. Frankly, I do not know the exact difference between a lease and a leasehold. I construe the lease to be the instrument and the leasehold to be the thing that you get by reason of the instrument.

Now, the thing that our ten-year period is based on is the fact that we own whatever right the lease gives to us on an average of ten years for the leases that we have and have

done so over the entire life span of the company up to this date.

Some of them we may have had ownership in only a few years. Others we may have owned them for their entire primary term, which is customarily ten years, and may have extended it for another ten years.

Now, our period of amortization gives consideration and contemplates the ownership of all the leases for an average of ten years.

Q. Referring again to Exhibit 52, and I skip to this exhibit because the questions are so correlated, does the significance of the language "Natural gas producing" and I emphasize "producing", "leaseholds—not drilled", indicate these leases are producing although they have no wells located thereon? Is that the intention?

[fol. 6449] A. No, sir, that is not the intention, necessarily. I believe the witness has stated, on several different occasions, that in the preparation of the exhibits introduced in these proceedings through him, we thought we were being considerate, shall we say, of the Commission in trying to prepare the exhibits after the manner of the balance sheets, income statements and so forth, generally included in the Commission's Classification of Accounts.

Q. Yes.

A. And if we used some language in them that is susceptible to ambiguous interpretation or rather differen interpretation, it was not intentional.

Q. Would you say that this account is set up under the instruction contained in Account 100.4 in the Commission's System of Accounts for Natural Gas Companies?

A. I have not given consideration to that, sir.

Q. You say you have not? A. I have not, no.

Q. Well, that account is designated as "Gas Plant Held for Future Use". Would you say that the items contained in your account for natural gas producing leaseholds—not drilled, is land and land rights held to insure a future supply of natural gas?

A. Without indulging, if I may avoid doing so, in any [fol. 6450] discussion as to what my personal feeling might be with respect to property in use or property held for future use, I should like to answer your question this way:

That we have segregated, in our records, our ownership in leaseholds as between drilled and not drilled. There is some difference of opinion, I think, between myself and the Classification of Accounts in more places than that.

My feeling is that whatever leaseholds the company has, whether they be at that particular moment producing or not producing or in service, we have separated them here and have kept them separated on our records so they may be treated in whatever manner is termed appropriate.

Q. Yes. Is it the proper interpretation of your intention in designating these accounts to refer to the account shown at Lines 9 and 10, Page 1, of this Exhibit No. 52, instead of saynig, "Natural Gas Producing Leaseholds—Drilled" would it be proper to say, "Natural Gas Producing Leaseholds distinguished from Non-Producing Leaseholds"?

A. The distinction is simply this: The amounts shown on Lines 9 and 10 in Exhibit No. 52, for all the periods, represent the company's investment in leaseholds which, at the date certain for which the information has been prepared, were producing or they were drilled, as you wish, and that the amount shown on the lines opposite the caption on Lines 11 and 12 represented the company's investment at the date certain shown on this exhibit in natural [fol. 6451] gas leaseholds which had not been drilled.

Q. I see.

A. Now, it could very well be, if I understand correctly, that some of the leases included on Line 12 in the various columns of this exhibit, or a great many of them for that matter, were susceptible to drainage at that particular time.

If we look at the year 1932, for example, out of the $1,455,000-odd shown there, there may be values in the neighborhood of $5,000 or $50,000 or $500,000 that later become a part and parcel of the amounts shown on Line 10 in the various years on this exhibit.

Q. May we properly conclude from this, then, that the producing leaseholds designated as "drilled" are those upon which you pay royalty payments to the lessors?

A. Yes, because we own no producing lands in fee.

Q. And would it also be proper to conclude that on the leaseholds set up in the accounts shown in Lines 11 and

12 as being not drilled, you do not make royalty payments but only pay delay rentals?

A. As far as I know, there is not a single lease represented by any of those amounts to which you have just referred on which the company makes any royalty payment whatever.

Mr. Culton: The latter part of your question, Mr. Gorman, I might clarify.

[fol. 6452] Are there some tracts which have not been drilled but on which the company pays no delay rentals because of drilling operations on other tracts covered by the original lease?

The Witness: Yes, and to that extent, Mr. Culton—

Mr. Culton: (Interposing) There may be no delay rentals payable on portions of the items on Lines 11 and 12?

The Witness: I doubt very seriously, sir, that any of those amounts remain in the classification shown here, "Natural Gas Producing Leaseholds—Not Drilled."

That has been our custom throughout the years where a leasehold was involved in a block of land cured by the drilling of a well.

Mr. Culton: There are delay rentals on all of those covered by 11 and 12?

The Witness: Correct.

Mr. Culton: That answers the latter part of your question.

Mr. Gorman: Yes.

By Mr. Gorman:

Q. When a well is drilled on any of the leaseholds which are included presently in the account shown at Lines 11 and 12 for not drilled leaseholds, I assume it is transferred then to the account for drilled leaseholds?

A. Our investment in such acreage, including the acreage [fol. 6453] covered by the lease upon which the well is actually drilled, plus the cost to use any acreage for which we no longer have to pay delay rentals by reason of the drilling of that well, are forthwith transferred to the other account.

There is this point that I should explain to you and you may have some questions to ask about it later, and that is this: That at the time such transfers are made, there is no transfer made from the reserve accounts.

Now, our ten-year life span and our three mills per M.c.f. contemplate that fact. We are engaged just now, as you know, in the reclassification of our reserves and it may very well be that there should be some transfers made from the amounts shown opposite Line 33 on Page 2 of Exhibit No. 48 to the amounts shown opposite Line 32 on the same page of the same exhibit, or vice versa.

Q. And you say there have been no transfers from that reserve account in past years?

A. Coincident with the transfer of the investment in a non-drilled lease to the account in which the drilled leases are placed, there has not been any such transfers.

I do not mean to say by that, if I may speak further, that the result of that would be that the reserves have been duplicated. I tried to make that plain. I hope you understand that.

Q. I think so, yes. I think the record will so disclose. [fol. 6454] Of course, in connection with your last statement, the result would be, would it not, that for a period you have depreciated your investment in these leaseholds on a basis of 10 percent per year or one-tenth based upon your life of ten years, as you have previously testified, and then when you transfer that to your drilled leasehold account, you again commence the depreciation of these same dollars upon a basis of three mills per thousand cubic feet of production?

A. We continued the amortization upon the basis of three mills.

Q. Do you not—

A. (Interposing) We do not transfer the balance from one of the reserve accounts to the other but the composite basis of arriving at the reserves contemplates this situation.

Q. Yes, but my question, of course, is directed to the fact that at the time you make your transfer from your non-drilled account to the drilled account, you transfer your entire investment—

A. (Interposing). Yes, I have stated that.

Q. Can you state offhand at the present time, Mr. Watkins, whether or not there have been any substantial amount of leaseholds abandoned by the Panhandle Company in recent years?

A. Quite a substantial amount, yes. If you wish to [fol. 6455] have me do so, I will see if I have something here that will be helpful. If not, I probably can answer your question more specifically this afternoon. What is your pleasure?

Q. If you have the information, we will be pleased to have it in the record.

A. I have an analysis which shows the balance of this account at the end of 1931 and at the end of the year 1940, those amounts being, respectively, $17,100 and $710,486.45.

During that period, charges were made to the reserve account aggregating slightly over half a million dollars.

Q. That is for the period from 19—

A. (Interposing) If you will excuse me, please.

There have been included in [thos] charges, certain amounts representing the cost of leases transferred to the production group, that is, the natural gas producing leaseholds.

My data here does not show the exact charges represented by leases abandoned or surrendered or disposed of in some other manner.

If it will be helpful to the Commission, I shall attempt to supply that information for the period or for any annual period.

Q. Well, as I understand the qualification of this, the amount which you have just read would include not only abandonments and surrenders but also leaseholds transferred to the drilled account?

[fol. 6456] A. Yes, or any other adjustment which it is necessary to normally make in the account.

. . . . . .

[fol. 6457] Q. Will you please turn your attention to Line 36 of this Page 2 of Exhibit No. 48 which is the account for "Other Reserves".

I think in your explanations of yesterday you testified up this matter somewhat.

A. Well, I would say completely, sir. I think we covered it rather broadly.

Q. I believe that is so to the extent, at least, of showing the charges made to this account in the various years.

A. May I refer to those as credits rather than charges?

Q. Well, when I used the phrase "charges" at that time, I merely meant "entries".

A reference to a Registration Statement which was filed by the Panhandle Eastern Pipe Line Company with the Securities and Exchange Commission on July 7, 1939, indicates at Pages S-20 and S-22 of such statement that in 1937 there was added to this reserve $96,800.94 and in 1938, there was added to this reserve $328,000 and, on Page S-22 of this Registration Statement, is an explanation which reads as follows:

"Excess of provisions for Federal and State income taxes over revised estimated liability therefor ($96,800.94 applicable to 1936 and $328,000 applicable to 1937) transferred to the reserve for contingencies pending final determination of such liability by the Treasury Department and the State income tax authorities," and further, at Page S-24 of the Registration Statement identified as Exhibit [fol. 6458] No. 145, there is indicated that during the year 1939, there was made a further charge to this account of $200,000 and, on that same date a reference to a note which reads:

"Excess of 1937 provisions for Federal and State income taxes over revised estimated liability therefor, transferred to the reserve for contingencies."

Of course, as will be seen, the addition of these three items represents your total at June 30, 1941, of $624,800.94.

May I ask whether, since June 30, 1941, there has been a final determination with respect to any of these tax obligations for which provision has been made in this reserve account?

A. Well, you are asking a question of me that has likewise been one that I should like to ask of someone else.

When, if ever, you reach a final determination of some of your Federal income tax matters, it is a thing I should like to know.

As to the year 1936, which really is the only year open among those you included in your question—

Q. (Interposing) Mr. Watkins, I believe that was 1937, was it not? You said 1936.

A. The amount of $624,800.94 includes some $76,000-odd that had to do with the excess accrual for the year 1936 so that, to start again, as to the year 1936, we have recently executed the Internal Revenue Department's Form 874, I believe it is, agreeing to the refund by the Revenue Depart- [fol. 6459] ment of a certain amount of the taxes heretofore paid by the company for that year and, as the record will show as to the year 1937, there were no Federal income taxes for that year because of the refunding operation consummated during that year.

The Internal Revenue Department thus far has had no particular interest in the year 1937. Apparently it appeared to them to be such a big loss year that it was not fertile ground for further cultivation.

This witness could not definitely say that the year 1937 is closed or that there will be no further assessment. I should say there will be no assessment instead of further assessment because there has been none for that year.

Those are the only two years involved in the credits in this particular account.

My testimony yesterday, I think, went to the fact that upon a final determination, this amount was available for whatever disposition the management or the Board of Directors or the stockholders or whoever has the authority to dispose of it sees fit to make of it.

Q. Yes. Your statement is that so far as you know, up to the present date, there has been no disposition of this particular reserve?

A. That is correct and it may be we may decide it is a possible cushion for possible taxes which would be normal for an organization such as ours to preserve. I am not

[fol. 6460] predicting that will take place but I am saying that is an eventuality.

Q. Would not the fact of any elimination of this account in its entirety or in part result in an increase in the net income of the company during the years when such amounts were set aside?

A. I should think not. We went over the ground yesterday with respect to what the company's accounting policy has been with respect to such adjustments.

The normal procedure that we would follow, I believe, would be to restore whatever amounts ultimately remain of the $624,000 to surplus rather than to take it through income.

Q. Yes, you mean that you would handle this account in the same manner which you indicated yesterday you would handle any excesses in the account for taxes accrued as shown at Line 16?

A. Yes, I think that is correct and I believe such plan would be generally in conformity with "Instructions—General" included in the Federal Power Commission's Classification of Accounts for natural gas companies.

At any rate, if it did affect income, it would affect it before regulation overtook us.

Q. Can you tell us, Mr. Watkins, what is represented by the account shown at Line 38, "Contributions in Aid of [fol. 6461] Construction"?

A. I observe at Page 30 in the Federal Power Commission's Classification of Accounts prescribed for natural gas companies subject to the provisions of the Natural Gas Act effective January 1, 1940, an account, No. 241, the title of which is "Customers' Advances for Construction".

Generally speaking, the amounts to which you refer fall in the general category of the explanation to the account in the Power Commission's Classification just referred to.

I cannot give you the detail as to whose advances they were or exactly what the advances were for but the purpose coincides with the instruction in No. 241 in the Classification.

. . . . . .

[fol. 6464] Q. Mr. Watkins, as Controller of the company you are charged with the responsibility; are you not, of reporting balance sheets and other similar statements showing as accurately as possible the financial position of the Panhandle Eastern Pipe Line Company?

A. Even were I not so charged, that is exactly what I would do to the best of my ability.

Q. That is one of your responsibilities, is it not?

A. I think it may be prudently said that it is.

Q. And is the balance sheet so prepared by you a financial report of the Panhandle Eastern Pipe Line Company and its subsidiaries?

A. Are we now referring to Exhibit No. 48 of this proceeding?

Q. Yes, that would be necessarily—

A. (Interposing) That means all of the periods covered by that exhibit?

Q. That is correct. A. They are.

Q. And such balance sheets are designed, are they not, [fol. 6465] to give information and a financial report to all interested parties?

A. That is correct, to the extent that they are available for general distribution.

Q. Do the balance sheets show the status of each equity in the business of the company?

A. With respect to Panhandle Eastern's affairs?

Q. Yes. A. I think they do.

Q. Yes.

And, consequently, it is of marked significance to those who have invested capital in the enterprise or to those who are contemplating the investment of such capital, is it not?

A. There has been no opportunity for such investments. Generally, prior to the year 1939, other than in the sale of senior securities in the form of funded debt.

There is a Registraiton Statement pending through which some substantial holdings may develop in equity securities and it is the witness' belief that to the extent that a prudent investor may wish to measure the affairs of the company any information, including balance sheets, which Panhandle Eastern Pipe Line Company prepares and distributes for that purpose may be relied on entirely by the investor.

Q. Yes.

[fol. 6466] A. When we speak of "investor" here, I presume we mean possible or potential or proposed investor?

Q. That is correct. And is the balance sheet, also, of marked significance to the management because it represents the standing or the condition of the business by presenting a periodic statement of assets and equities?

A. From an operating standpoint, sir, I should think we would treat the income statements with a great deal more significance than the balance sheet, itself, necessarily, however, they both form mediums through which management, owners, the public or anyone else can draw certain conclusions and make certain measurements of the status of the company at any date certain when such information is made available or for any periods for which such reports or statements speak.

Q. Yes, but, of course, the income statement does not show the assets and equities in the business?

A. Well, if my remarks were such that one would infer that the income account did make such shownig, they should be corrected to the extent that you have indicated.

I believe what I stated was that the income account from an internal company standpoint would probably have as much, if not more, significance to us than the balance sheets, themselves.

Q. Yes.

[fol. 6467] Now, is it necessary for the management to consider the relationship of the assets and equities in the business in determining the actual working capital situation?

A. Mr. Gorman, I doubt that I am qualified to discuss working capital with you to any great extent.

Q. Well, by that do you infer that you are unable to answer the question I have propounded?

A. I do not quite understand just what you mean. Let me see if I can give you an answer that is satisfactory. If we are thinking, when we speak of working capital, of the funds the company needs to carry on its day-by-day operations, to take care of any construction program it may

have authorized, to take care of any construction program which may be anticipated; to provide funds to pay taxes and to have on hand sufficient cash for any and all other purposes that it may find necessary during the course of its operations my answer would be that certainly we must take into consideration all of the information available not only from the books and records but elsewhere.

Q. Yes. Of course, the balance sheet is a reflection of certain of the books and records of the company?

A. Well, doesn't it epitomize the entire books and records of the company, so to speak?

Q. Well, I think so, yes. I did not know whether you wanted to go so far or not.

[fol. 6468] A. Well, I stand solidly, sir, behind any of the statements that have been prepared with respect to the company and submitted here through me.

Q. Is the balance sheet considered by the management of showing the relationship of assets and equities in determining the amount available for the payment of dividends?

A. The balance sheet, alone, would not necessarily be subject to such considerations. The first move we make, very naturally, with respect to dividends is to find what our legal hurdles are.

We must consider the laws of the State in which we are incorporated. We must then turn to our Articles of Incorporation to find what restriction, if any, there is there that is superimposed over and above the laws of the State.

I do not mean by that that our Articles of Incorporation can be in violation with the provisions of the general corporation laws of the State of Delaware. We must, also, have a look at our mortgage and deed of trust, we must turn to our note indenture, we must think something of whether or not the funds that we might otherwise use for the payment of dividends would serve a better purpose in the interest of the public, the investor or the consumer and a vast number of other elements go into our consideration of a matter of this sort.

Q. Including the balance sheet?

[fol. 6469] A. Oh, very naturally, we think of the balance sheet.

Q. Well, does not your statement of earned surplus, as qualified by the note contained on Page 3, that is Note 2 on Page 3 of Exhibit No. 48, reflect all restrictions which are placed upon your disposition of earned surplus?

A. Not all of them, no sir. It reflects the one restriction which is applicable at the moment. As the witness explained yesterday, there is a restriction in the Certificate of Incorporation running to the amount which must be set aside in determining—now, when I say "set aside" here I do not mean as per books—the amount of earned surplus under certain conditions available for dividends.

So long as the restriction in the mortgage and deed of trust exceeds that restriction, then the mortgage restriction is applicable.

Q. I see. And if, perchance, the securities covered by Registration No. 2-4919 were to be issued with restrictions which imposed greater barriers than those now in existence, they would be controlling?

Ordinarily, in issuing a balance sheet statement, do you qualify the issuance of such statement not only by the Note No. 2, which is on Page 3 of Exhibit No. 48, but, also, append the note to such balance sheet the qualifications of the Articles of Incorporation to which you have just made reference?

[fol. 6470] A. There has been no annual report released by the company since the mortgage and deed of trust dated November 1, 1940, was consummated in February of 1941.

Unquestionably if and when we do release an annual report, we shall see that the public is fully informed as to any restrictions that we may have.

The annual report for the year 1940, a copy of which I show you, carries a balance sheet note on Page 10 with respect to the restriction of surplus as provided by the Certificate of Incorporation.

We hope we shall always be cautious enough to see that any information we prepare and release for the public is sufficiently qualified to avoid any difficulty for the public, the investor or the company.

Q. Yes, and of course, as we have seen previously, such notes have been appended to balance sheets containd in Registration Statements and made an integral part of such statements as they are filed before the Securities and Exchange Commission. Is that correct?

A. That is correct, sir.

Q. Now, does the management consider the relationship of assets and equities as reflected on the balance sheet in determining the programs for expansion of facilities or the raising of capital to be used by the company?

A. Mr. Gorman, we have this situation in our organi- [fol. 6471] zation:

We have a go-getter who expands property and then tells us to worry about how we are going to get the funds.

Q. You mean—does that intend to indicate that this individual gives no consideration to the—

A. (Interposing) Oh, no indeed, sir, his primary purpose is to develop the properties to their full economic potentialities.

The predominating thought in his mind—and I think that is more or less true with the whole organization—is, "let's get this job done and then let's get busy and pay for doing it."

As a matter of fact, we have to pay for it before we do it, but we approach it, perhaps, from a slightly different angle than it might be with someone else or even some other organization.

Q. I see.

A. That does not mean to say, sir, that we do not eventually give consideration to everything that should be given consideration. I merely state that the order is slightly different and it is a rather refreshing way to do things, if I may say so.

Q. Yes, I can understand that. Of course, assuming that I know who the individual is, I rather gather the impression that he is undoubtedly familiar with the as- [fol. 6472] sets and liabilities as reflected on the balance sheet anyway, without a detailed study of such sheet?

A. That is quite correct, sir.

Mr. Wheat: Well, Mr. Watkins, you do not want to keep it a secret whom you are referring to, do you? You are referring to the President of the company?

The Witness: That is right. I did not think it was necessary to name names. I believe the individual is quite well known to everybody in the hearing room here.

Mr. Wheat: I was afraid that, on the cold record your meaning might not be apparent.

The Witness: Well, for the benefit of posterity, then, we are referring to Mr. J. D. Creveling.

By Mr. Gorman:

Q. Is it essential in any planning for the issuance of long-term securities, is it necessary to consider the disposition of equities of the company?

A. Let me see if I understand that. Do you mean the proportion of senior securities, junior securities and so forth as to the total capitalization?

Q. That is right.

A. I believe you will find, if you care to observe the record, quite a considerable amount of data that would indicate that such consideration has most recently been given with respect to applications that were pending be- [fol. 6473] fore the Securities and Exchange Commission in its Consolidated Docket No. 59-33 and if there be further interest in the matter, I might refer you to the material which you will find in the copies of Form U-1 in File No. 70-387 and Amendments 1 to 5 thereof which have heretofore been delivered to you.

Mr. Wheat: When you refer to Form U-1, you refer to a form of the Securities and Exchange Commission, do you not?

The Witness: A form filed in the matter designated by the Securities and Exchange Commission's File No. 70-387.

Mr. Wheat: Thank you.

By Mr. Gorman:

Q. So the answer to my question, briefly stated, is "yes"?

A. Oh, surely we give consideration to the avoidance of overloading our capital structure with a type of security that is going to rise up to haunt us when business conditions are different from what they are at the moment.

Q. Does the balance sheet show the equities of the owners and the creditors and the assets of the business?

A. From the company's standpoint or from the investors' or owners' standpoint?

Q. From the standpoint of anyone who examines the balance sheet for the purpose of determining such information.

A. On the basis of the balance sheets, themselves, they do give such a reflection. I am laboring with the fear [fol. 6474] that you are asking me to say that if I were an investor in Panhandle Eastern Pipe Line Company or a major owner of some of its equity securities, that my personal feeling or evaluation of my ownership in Panhandle Eastern Pipe Line Company would be exactly reflected by any equity determination made from its books.

If that is the purpose, I shall have to say that my view would be "no".

Q. Well, by that you mean, can you divide up, on the basis of the balance sheet information, the equity of a bondholder as distinguished from the equity of a common-stock holder and such things as that?

A. Not only that, sir, but I might have an entirely different view of the worth of my investment in any corporation than that which could be reached by simply referring to cold facts and figures taken from its records.

Q. Yes. Well, let me put it this way: Does the balance sheet show the combined equities of the owners and creditors in the assets of the business?

A. As reflected by the company's books, yes.

Q. Yes.

A (Continuing) For any other consideration which the owners might wish to give, I do not consider it as making any such showing.

Q. Yes. Well, of course, we understand that at all [fol. 6475] times the balance sheet is, as was stated before, merely a reflection of the books, themselves?

A. Then, we seem to have a meeting of minds as to this particular thing.

Q. Yes, that is right. And, as we stated before, the balance sheets have been in the past, and in the very recent past submitted to and made an integral part of Registration Statements filed with the Securities and Exchange Commission?

A. Not for all periods represented by the company's operations, no.

Q. I did not say throughout the years.

A. To the extent that the periods were applicable at the time the Registration Statement was filed, yes.

Now, there has been a constant audit of the company's affairs and its balance sheets have been certified to from its very inception by independent public accountants.

Q. And it is also true that, generally speaking, the management bases its decisions upon data set forth upon the balance sheet?

A. Not altogether, no.

Q. I say "generally speaking".

A. Well, the management gives consideration to the information shown in the balance sheet, certainly but there are so many other things other than cold facts and [fol. 6476] figures and records that must be treated with in most everything that we do that this witness could not agree that that would be a proper statement.

Q. Yes. Well, of course, we all understand that the management also considers other reports in connection with the information set forth on the balance sheet.

I merely intended to indicate that that is one of the main objects of their study.

A. It is one of the objects of their study, not necessarily the main one.

Q. One of the main ones, I said.

A. O. K.

Q. And, of course, in the past, as I think we have seen from an examination of certain Registration Statements, public accountants have on occasions certified to the financial position of the company as disclosed from the balance sheets, have they not?

A. They have.

Q. And can it be properly said that the balance sheet per books is the presentation of the general ledger accounts

and is, so to speak, the master control of the books and records of the company?

A: I would hardly characterize it as a control. Any balance sheet, it would seem to me, is simply a statement prepared from the books of the company. I do not know [fol. 6477] to what extent it could [—] said that a balance sheet controls the books.

Q. Well maybe we should put it this way, Mr. Watkins:

It does reflect the general ledger, which general ledger shows the control accounts?

A. That would be correct, yes.

Q. Mr. Watkins, the presentation of this Exhibit No. 48 for identification in this proceeding, was it done for the purpose of representing to the Commission the financial position of the company and the equities of the owners and creditors in the assets of the corporation?

A. I do not know that I remember that at the time that we were planning to present an exhibit showing the balance sheet of the company for the periods shown by Exhibit No. 48 that we had any particular discussion as to what purpose it would serve in the proceedings other than the fact that the Federal Power Commission would likely want it for the entire periods and here it is.

Q. Yes. If you had that particular thought in mind, you would have presented a balance sheet which would not differ from that which is presently identified as Exhibit No. 48, would you not?

A. I do not know, sir. I would have to go back, I suppose, to the time that we were doing all this work and try to evaluate what the purposes were and how the information could best be shown and what time we had in which to [fol. 6478] prepare the exhibit.

If I remember correctly, we threw a tremendous mass of information together here for you in the space of a very few weeks upon not too great notice. My personal decision might have been one of a half dozen approached from 40 to 50 different ways.

Q. Do you know of any reason at the moment why the balance sheet presented with such a thought, as I have indicated, in mind would have differed in any respect from that which is presented as Exhibit No. 48?

A. I have not given any thought to the matter, really.

Q. You have no thought of any differentiation?

A. None that I would care to express at this moment.

Q. You, of course, have no doubt at the present time that the balance sheets, as reflected on this Exhibit 48, properly reflected the position of the company for the various years shown thereon?

A. Not the slightest.

Q. Mr. Watkins, do you presently have any intention of revising the balance sheet in any manner which would change it from that which is shown on Exhibit No. 48?

A. If it were so revised, the facts would not change.

Q. Well, that does not exactly answer my question. Do you have presently any intention of making any revision?

A. Do you mean for internal purposes?

[fol. 6479] Q. For any purpose.

A. It is my remembrance that when and if our proposed securities are registered with the New York Stock Exchange and are registered under the Securities and Exchange Act of 1934, we must give some indication as to the manner in which our annual reports, our certified annual reports, if I recall, are required by both the New York Stock Exchange and the Securities Act of 1934.

To the extent that those requirements bring about a different presentation than that shown by Exhibit No. 48, such changes will be made.

The witness has not made a comparison of the proposed balance sheets in the new form of annual report.

Mr. Wheat: You are referring now to the Federal Power—

The Witness: (Continuing) Prescribed by the Federal Power Commission in its Order No. 86, so that he is not in a position to state even as to that whether it will require a restatement of the assets and liabilities in any form other than that shown by Exhibit No. 48.

Further than that, we haven't any particular view with respect to the balance sheets. They seem adequate to us.

By Mr. Gorman:

Q. Yes. Well, of course, any such changes would be minor in character and, also, would be only in form rather than in effect, would they not?

[fol. 6480] A. I do not believe I understand that you are inferring that a formal balance sheet could change the effect as of a date certain?

Q. No. The point I wanted to make is certainly clear here.

A. Well, we seem to be in the same bed there.

Q. Well, we seem to be getting there quite often.

A. Mr. Gorman, before we leave the subject, if you please, the witness does not know of any restriction whereby a corporation can not present its balance sheets in any form it wishes if making such a balance sheet for any purpose other than the specified one under certain stipulated conditions. We are not in disagreement there, are we?

Q. Oh, I think not.

Have any representatives of the company, that is the Panhandle Eastern Pipe Line Company, or expert consultants employed by that company presented any information or opinions which would cause you to revise or restate the equities or assets as shown in the balance sheet?

A. By "restatement" do you mean change them, change the amounts either upward or downward?

Q. That is right, change the—

A. (Interposing) Why, I would not have any authority to do such a thing, sir. As Controller of the company and as its Secretary and an officer of the company and as a [fol. 6481] prudent individual, why, I would be astonished if anyone offered any such suggestion as that.

Not only would I be astonished, I think I would more than likely beat the stuffing out of them.

Mr. Wheat: I wonder, Mr. Gorman, in connection with that question, which I think is as unintelligible to us as it apparently was to the witness, whether you could define what you mean by "change" in the balance sheet or items of the balance sheet?

Mr. Gorman: Well, of course, counsel recognize the general terminology of the word "change" means substituting something for that which previously existed or presently exists.

Mr. Wheat: You mean renaming some account or changing its name?

Mr. Gorman: Well, I thought I said "in amounts" or, if I did not, at least that was what I meant, that is, changing the amounts which are shown on the balance sheet to reflect some other amount.

Mr. Wheat: You mean a substitution of one item for another, is that what you are asking the witness?

Mr. Gorman: Well, by "item" I do not suppose you mean an account designation. I am speaking of the amounts reflected.

Mr. Wheat: No, I meant to take $1,000 out of the ac- [fol. 6482] count on Line 18 and put it into the account on Line 19. Is that the kind of a change that you meant?

Mr. Gorman: Either that or take $1,000 out of one account and not put it in another account.

The Witness: Well, maybe I misunderstand. If you are talking about any corrections that might have to be made, I would ask nobody about any proper correction, I would simply make the correction.

When I say "correction" there, I mean if we find an improper charge to a wrong account.

By Mr. Gorman:

Q. Well, that is merely an adjustment.

A. If you are directing your question toward improper procedure, I do not have to work for Panhandle Eastern Pipe Line Company, if it ever gets to a position where we are doing some things that are illegal.

I can still starve, sir, before I encounter a situation of that sort.

Q. Well, of course, now, Mr. Watkins, I do not think there was any reflection of any kind whatsoever. That was not intended by my question.

Mr. Wheat: Mr. Gorman, if you have any idea of any misplaced items, I know we would appreciate it if you would suggest them.

I know the witness would be the first one, if he knew [fol. 6483] something was wrong at same place in the balance sheet, to correct it. He has stated that he does not know of any such.

Mr. Gorman: That was the answer to my question. I have no such thought in mind. I am not proposing any adjustments, I just asked if any such adjustments had been proposed.

By Mr. Gorman:

Q. Has there been proposed any modification of the equities, as shown on the balance sheet, by the President and the Chairman of the Board of Directors or the Board of Directors, themselves?

A. We have no Chairman of the Board of Directors and as to any such proposals with respect to the Board, itself, or to the President, the witness must confess that he does not quite understand what you mean.

Q. Well, do you know of any modifications whatsoever that have been proposed?

A. The Board of Directors, generally, does not have any direct contact with the record, that is in the keeping of the records of the company, and our President has not, to my knowledge, suggested to anyone that any of the accounts be changed in any manner whatever.

If they are not right, he takes the heads off of us and if they are all right, that is the way we should have them [fol. 6484] in any event.

Q. Well, of course, Mr. Watkins, without quarreling with you whatsoever, I believe you previously testified, did you not, that the Board of Directors annually passed upon at least the reserve accruals for that year?

A. Oh, surely, with respect to the matters of policy, naturally.

Q. And, of course, those are ultimately reflected in the balance sheet?

A. Some of them have to be, directly or indirectly.

Mr. Gorman, is this the thing that your most recent line of questioning is directed at, do I know of any instance during the time I have been associated with Panhandle Eastern or most recently where any member of the Board of Directors, or the President of the company or anyone

else connected with the company in authority may have expressed some view that some phase of the company's accounting did not correctly represent conditions that had actually transpired or were present that particular moment?

Q. No, as a matter of fact, definitely to the contrary. We are not intimating any impropriety in any past actions of the company or officials.

A. Well, I asked my last question with the view of trying to get to the point that you were driving toward.

Q. Yes. Of course, I think you will readily recognize [fol. 6485] that all of the questions I have previously asked tend to emphasize by the answers given thereto on your part the importance and accuracy and propriety of the balance sheet statements as contained in Exhibit No. 48.

A. Oh, they are accurate, there is no question about that.

Mr. Wheat: I think the simple question, Mr. Gorman, of the witness is whether he stands on the balance sheets as shown in Exhibit 48.

The Witness: And if such a question were put, the answer would be "implicitly."

By Mr. Gorman:

Q. Well, we so understand. We just want to find out whether everybody stands on it as well as Mr. Watkins does.

Mr. Wheat: Well, he cannot answer for other people except as they may have expressed themselves to him, if they have.

By Mr. Gorman:

Q. Do you, Mr. Watkins, know of any presently proposed changes which will materially affect the financial position of the Panhandle Eastern Pipe Line Company?

Mr. Wheat: Changes in what, Mr. Gorman, just to clarify your question. Changes in its capitalization or changes in its operations?

Mr. Gorman: Well, I think it would include all of those, [fol. 6486] most certainly changes in equity or changes in assets would affect the financial position of the company.

The Witness: Could we limit that to the things that would normally happen to an organization?

Mr. Gorman: I think so.

The Witness: Such as the additional investment in income-producing properties?

Mr. Gorman: That is what I had in mind.

The Witness: The change of the character of its capitalization and things of that nature?

By Mr. Gorman:

Q. Yes. What I have in mind, particularly, Mr. Watkins; is any present plans underway or proposed plans which will materially change the position of the company as evidenced by the balance sheet at June 30, 1941, which is the date shown on Exhibit No. 48?

A. I wish I could answer specifically as to what our tax situation is going to do to us. All of us know the tremendous load that is going to be put on an organization to help pay for our war activity and, generally speaking, I believe organizations will be happy to pay up to the limit of their ability, providing they pay proportionately.

That will, naturally, make a change. The company, as you know, anticipates the purchase of some additional properties.

[fol. 6487] That will bring about a change. It will add assets, liabilities, income, just what it will do to the net I do not know because there will come along the additional taxes.

If you have any interest in that particular phase of possible changes, take a look at Page 3, I believe it is, of the Prospectus accompanying Registration Statement No. 2-4919.

* * * * * * * * *

The Witness: There are now under construction some $9,000,000 of additional facilities, a portion of which will be income-bearing, a portion of which will simply strengthen the facilities as they now exist.

There may be some considerable additional load available to the company in off-peak periods. It may be pos-

sible that as a result of the control by the National Defense Authorities, whoever they may be or whatever organization in which such activity may ultimately fall, which will result in the placement of our gas available for use in certain directions, that would tend to either increase or decrease our income.

There are so many things, sir, that might ultimately change the operations of the company and, thereby, have some immediate effect on its financial position as re- [fol. 6488] flected by a balance sheet that might be taken at any particular time, that this witness should hate very much to have any obligation thrust upon him to try to define all or even a great part of what potentialities might be in existence.

Now, said differently, at this particular moment I, personally, know of nothing that may tremendously affect the company in an adverse way.

We have found it necessary most recently to increase expenses because of certain conditions. Subsequent to December 7, 1941, we began a very definite program of property protection which brought about the necessity to employ more than 80 additional employees.

The annual cost of that addition, expressed in payroll, and any other expense that may result from it might range around $175,000 a year. Whether that shall be increased or decreased is something that this witness cannot answer.

My judgment is that as long as our world conditions remain as they are, we may look for an increase. We hear a good deal and read some in the papers about the possibility of a change in Social Security Laws, making necessary additional contributions on the part of the employers.

We see evidence every day of increased costs. Only yesterday morning, I believe it was, this witness noticed that railroad fares would be increased 10 percent. You [fol. 6489] hardly turn, toward the purchase of anything, either necessities for one's life or necessities used in connection with operation of an industry but what you do not bump into an astonishing increase in costs.

Certainly I am not crystal gazer enough to answer your question any more than I have in this general way.

Q. Well, that is quite satisfactory.

Now, Mr. Watkins, if the assets or equities as reflected in the balance sheet submitted by you are modified by representatives of the company or experts employed by the company for the purposes of this proceeding, do you propose to present a revised balance sheet or make any revision in your balance sheet to show the financial position of the company after giving effect to such changes?

A. Well now, sir, there is not going to be any expert that modifies any balance sheet that this witness submits, if I understand your use of the word "modification".

Q. That is correct.

A. Now, if your question means this:

Suppose, for instance, Panhandle Eastern has employed some expert for use in connection with these proceedings or, suppose, for instance, some of its officers or employees used by this witness in these proceedings placed some different interpretations on the balance sheet or any of the [fol. 6490] items disclosed by the balance sheet, then because of the factual interpretation that can be placed on the material included in Exhibit No. 48 does this witness intend to present another balance sheet giving expression to those modifications? Is that what we are talking about?

A. I should say, sir, that the answer would be most definitely "no".

Now, it may very well be that before these proceedings have been consummated that additional balance sheets with respect to Panhandle Eastern Pipe Line Company may be required.

There are certain transactions in the process of consummation, we hope, that would give rise to considerably more assets and considerably more liabilities. They would, likewise, change the income position.

It is my belief that the Commission will wish to be fully informed as to that condition, if it ever exists.

Q. Such a condition would, would it not, Mr. Watkins, change the balance sheets which are shown on Exhibit No. 48?

A. They might, for this reason: If the interpretation of the acquisitions which are contemplated is such that Panhandle Eastern Pipe Line Company becomes the owner of those properties on a date certain, shall we say as of September 30, 1941, it might very well follow that a proper presentation of the combined picture would be such [fol. 6491] as to require a consolidation of balance sheets and income statements prior to June 30, even.

Now; it may be that I misunderstand. In making such a consolidation the facts as shown by Exhibit No. 48 would remain unchanged.

Q. Yes. You are only taking into consideration the eventuality that a retroactive effective date to such an arrangement would provide additional items over and above those which you have presently shown?

A. That is correct.

Mr. Gorman: Mr. Examiner, I have here a statement entitled, "Panhandle Eastern Pipe Line Company, Statement Showing Investments Made by the Owners and Long-Term Creditors at June 30, 1941."

May this be numbered for identification as an exhibit, please?

Trial Examiner: This will be marked for identification as Exhibit No. 149.

* * * * * * * * *

Q. Now, for the purposes of the record and to clarify this statement in your own mind, Mr. Watkins, if you will bear with me, I should like to determine the source of each of the figures which are shown on this statement which has been identified as Exhibit No. 149.

[fol. 6492] Will you refer, please, to the heading "Plant Assets" and the subheading, "Gas Plant", which is shown to be a total of $66,689,669.57?

This, is it not, is the figure which is shown at Column M of Line 1 of Exhibit No. 48, Page 1?

A. It is.

Q. And is the next item "Contributions in Aid of Construction" the amount shown on Page 2 of Exhibit No. 48 at Line 38?

A. In Column M?

Q. In Column M, yes. A. It is.

Q. Is the next item, "Reserves for Depreciation and Depletion" in the amount of $10,135,513.92 shown in Column M of Page 2 of Exhibit No. 48 at Lines 28 to 33, inclusive? A. That is correct.

Q. And without asking you to make the addition, we will assume, subject to anyone's check, that the amount of $56,512,808.74 represents the amount of $66,689,669.57 less $41,346.91 and less $10,135,513.92 and is the total shown opposite the heading, "Net Investment in Gas Plant".

Now, the next item, "Other Investments" in the amount of $214,298.25—

A. (Interposing) Pardon me, sir, that assumption simply goes to the total and not involving any of us in an [fol. 6493] assumption that it is what it is stated to be here.

Q. Well, yes, I am speaking now only of the mathematical calculations.

The amount of $214,298.25, shown as being "Other Investments", appears on Page 1 of Exhibit No. 48 in Column M at Line 3, does it not?

A. It does.

Q. And does the amount of $9,990,919.84, shown as being, "Current and Accrued Assets" appear at Column M, Page 1 of Exhibit No. 48 at Line 15?

A. It does.

Q. And does the amount of $5,149,111.73, as shown here as representing "Current and Accrued Liabilities", appear at Lines 20 and 21 of Page 1 of Exhibit No. 48 in Column M?

A. It does.

Q. And this exhibit indicates, does it not, that the deduction of the latter figure from the one previously named produces a result of $4,841,808.11?

A. It does.

Q. And is the amount shown as "Deferred Debits", totaling $2,763,002.03, shown at Line 24, Column M of Page 1 of Exhibit 48? A. It is.

Q. Is the amount shown as "Deferred Credits", total-
[fol. 6494] ing $43,333.69, shown at Line 26, Column M of Page 2 of Exhibit No. 48? A. It is.

Q. And is the "Reserve of Uncollectible Accounts" in the amount of $44,819.88 reflected at Line 34, Page 2 of Exhibit No. 48, Column M? A. It is.

Q. And is the amount of $93,123.74 reflected as "Reserve for Injuries and Damages" shown at Line 35, Column M of Page 2 of Exhibit No. 48? A. It is.

Q. And is the "Reserve for Contingencies" in the amount of $624,800.94 shown at Line 36 of the same column and page of this exhibit? A. It is.

Q. And, of course, "Total Other Assets, Liabilities et cetera", in the amount of $6,798,731.89 has not, as yet, been checked by you? A. It has not.

Q. Nor has the total under this heading of "Other Assets, Liabilities, etc.," of $63,525,838.88 been checked by you?

A. It has not nor have any of the additions or subtractions shown on Exhibit No. 149 been verified by this witness.

[fol. 6495] Q. Yes. Now, under the main heading of "Net Equities of Owners and Long-Term Creditors" there appears under the subheading, "Long-Term Debt", an amount of $23,267,543.80.

Is this amount shown in Column M, Page 2 of Exhibit No. 48 at Line 8? A. It is.

Q. And is the amount of $20,184,175 representing "Common Capital Stock" shown at Line 2 of this same page of this exhibit? A. It is.

Q. And is the amount of $11,000,000 representing "Preferred Capital Stock" shown at Line 3 of the same page of this exhibit in Column M?

A. It is and the sum of those two items I will agree, is $31,184,175.

Q. And the "Earned Surplus" in the amount of $9,074,120.08 is shown at Line 41, Column M on Page 2 of Exhibit No. 48, is it not?

A. Not only there, sir, but at Line 41 in the same column on the same page of the same exhibit.

Q. Yes. And the total "Capital Stock and Surplus" would be represented by the addition of the two figures which we have just read which result on this proposed exhibit in the total of $40,258,295.08.

[fol. 6496] Assuming that to be an accurate addition, that does, does it not, represent the total capital stock and surplus outstanding?

A. Under such an assumption, it does.

Q. And assuming the addition which appears on the next line resulting in the total of $63,525,838.88 to be correct, that does, does it not, represent the total net equities of owners and long-term creditors?

A. It does.

* * * * * * * * *

[fol. 6497] Q. Mr. Watkins, is it correct to conclude, either from this Exhibit 149 or from Exhibit No. 48, that as of June 30, 1941, the equity and investment by the holders of long-term debt amounted to $23,267,543.80?

* * * * * * * * *

The Witness: It is correct to assume that the $23,267,543.80, to which you have just referred, represents the balance of the unpaid long-term debt of Panhandle Eastern Pipe Line Company at June 30, 1941.

By Mr. Gorman:

Q. Does that conclude your answer, Mr. Watkins?

A. Yes.

Q. What about the answer to my question?

A. To the extent that there may be provisions in any of the instruments which the long-term debt is created, imposing definite payment obligations or preferences as to the assets of the corporation, whether they be gross assets or net assets, this amount, $23,267,543.80, would represent a preference on the part of the holders of that debt as to such assets.

Q. Does that make any distinction between the invest-
[fol. 6498] ment and equity of the holders of this long-term debt?

A. I do not know whether it does or not.

Q. Are you attempting to make any distinction?

A. I am not attempting to state that a specific equity, as concluded to be such by the holders of securities, can definitely be determined from the books or records of a corporation.

Books and records of a corporation do not represent value. Values, it seems to me must be known before equity can be determined.

Q. Does that represent the equity and investment, as stated in dollars?

A. The amount $23,267,543.80, of itself, is not included as a part of the records of Panhandle Eastern Pipe Line Company to represent investment.

Portions of it may have been used for investments. Portions of the funds originally received, when the debt was created, may have been used to discharge certain obligations then existing by way of taxes or for any other purpose so that this witness cannot properly state that the $23,267,543.80 represents anything other than that which it is shown to represent by the balance sheet identified in these proceedings as Exhibit No. 48 and "balance sheet" as stated there means, of course, the balance sheets at the ends of the various periods.

[fol. 6499] Q. As I recall one of your previous statements, you stated that to this amount the holders of the long-term debt had a preference rating.

Is that recollection correct?

A. That is not correct, sir, because my statements were, I believe, to the extent that any of the indentures, under which this long-term was issued, gave preference to either gross or net assets, rather than as you put it.

Q. Yes.

A. As a matter of fact, as you know, a portion of the $23,000,000-odd is represented by first mortgage and first lien bonds which, very naturally, do carry some preference.

Q. Do the long-term notes also carry any preference, or do you know?

A. I cannot answer that properly for you at the moment. I do believe there are some restrictions that make

necessary the payment of notes in advance of either the Series A bonds or Series B bonds.

In effect, one might conclude that that carried some preference as to assets in a liquidation.

Is that a fair statement to make?

Q. I think so. Are the holders of the long-term debt entitled to recover, in any way whatsoever and excluding interest, an amount of the assets of the company which [fol. 6500] would exceed $23,267,543.80?

A. Mr. Gorman, as you might well realize, the indentures, under which the long-term debt in the form of bonds has been issued, is a tremendously large affair. There are probably as many as 300 pages in it.

This witness does not definitely recall all of the provisions of the mortgage. As a matter of fact, when he has needed to ascertain what the specific provisions are, he refers to the mortgage.

There is, unquestionably, in that indenture, certain provisions with respect to the payment of premium on the call of the securities issued under it which could increase the principal amount shown per the books.

To what extent it would increase that portion of the $23,000,000 represented by bonds, which is $18,250,000 at June 30, I am not prepared to answer you at the moment.

Mr. Wheat: There may be other items, such as expense of litigation and collection and so forth that may be covered? I am not suggesting there are but most indentures do.

The Witness: I presume, sir, that there are such provisions. It occurred to me, when the indenture was being prepared, that it certainly nailed the company in every way that the investor could possibly wish to have it nailed down and provided for all the exigencies or contingencies that could be provided for and further it has, of necessity, [fol. 6501] been made to conform to the Trust Indenture Act of 1935, which, per se, takes care of the public and investors.

By Mr. Gorman:

Q. Well, Mr. Watkins, if this amount to which we have just been making reference does not represent the investment of the holders of the long-term debt in the Panhandle Eastern Pipe Line Company and its subsidiaries, can such an investment be determined by a reference to the balance sheet?

A. Mr. Gorman, I do not believe that I have stated that the principal amount of the bonds shown by the balance sheet did not represent the investment of the investors in those bonds.

I would have no way to know that. Panhandle Eastern Pipe Line Company sold the bonds, received certain proceeds from them; the bonds were, in turn, sold by an underwriting group to the investors.

There may have been some intermediaries between those transactions and whether you happened to have been one of the investors and you paid $110 for something we sold for $100, or whether you were fortunate to purchase it for $60, you should not imagine I would be able to answer that question.

Q. Well, of course, my question is directed to whether or not it represents their equity and investment in the [fol. 6502] properties of the company as shown by such bonds and notes.

Now, when you get to discussing intermediaries and that sort of thing, of course we all recognize that those kind of transactions deviate from the face amount of bonds or the face amount of notes but, for balance sheet purposes, are those transactions of any importance?

A. Is that a question?

Q. Yes.

A. For balance sheet purposes, they would not be reflected in the company's books because the company would have no knowledge whatever of them.

Q. And, of course, for balance sheet purposes, the face amount of the bonds and the face amount of the notes present the liability of the company to the holders of those notes and bonds, do they not?

A. As to the principal amount of such securities, yes.

Q. Is it correct to conclude, Mr. Watkins, either from this Exhibit No. 149 or from Exhibit No. 48 that, as of June 30, 1941, the equity and investment of the stockholders amounted to $40,258,295.08?

A. Mr. Gorman, this witness has stated repeatedly that, in his judgment, equity, as such, in the hands of an investor or creditor cannot necessarily be determined from [fol. 6503] a balance sheet or balance sheets such as those shown by Exhibit No. 48.

Our books do not and have not been intended to represent value. It does not occur to me that, as an investor or as a creditor, I could ever determine what my equity was in an organization without knowing something about it.

I can, however, take that organization's balance sheet, have a look at its liabilities and assets, make certain deductions and so forth and see what the books say are my posibilities for recovery.

Q. From the statements reflected on this Exhibit No. 149 and Exhibit No. 48 and by an examination thereof, would you conclude that the equity and investment of the stockholders amounted to $40,258,295.08?

A. If I may take the liberty of rephrasing your question, I think I can answer it definitely.

Q. You may do so.

A. If you are intending to ask this witness what his personal view is of the value of the stock and notes of Panhandle Eastern Pipe Line Company, his answer will most certainly be that it is tremendously in excess of any figures that may be determined with respect to such thing from the books of the company.

Q. Now, of course, you must appreciate the fact, Mr. Watkins, and I think my question was predicated upon [fol. 6504] such fact, that we are here, in these questions, dealing with the representations made on Exhibit No. 48 and Exhibit No. 149 and no other extraneous matter.

A. There are no representations, as far as this witness knows, made on Exhibit No. 48 other than a pure statement of the facts as they existed at the dates shown on such exhibit.

You have prepared Exhibit No. 149 or have had it prepared and must have in mind something that you expected

to show and this witness does not have the benefit of the purpose for which you have had it prepared and is earnestly trying to answer the questions you put in the most sincere, honest and forthright manner he can possibly do.

Q. Of course, my questions were in the alternative, considering either Exhibit No. 149 or Exhibit No. 48, and with my suggested explanation that these questions are dealing with the figures shown on these two exhibits, can you now answer the question which I previously put to you?

A. I have answered it.

* * * * * * * *

[fol. 6505] Q. You answered the question as you proposed, by rephrasing it. I am asking if you can answer the question as I originally stated it.

The Witness: Let's have it read again, please.

(Whereupon, the question indicated was read by the reporter as follows):

"Q. From the statements reflected on this Exhibit No. 149 and Exhibit No. 48 and by an examination thereof, [fol. 6506] would you conclude that the equity and investment of the stockholders amounted to $40,258,295.08?"

The Witness: Without binding myself to the $40,258,295.08, I would conclude that their equity was at least that much.

By Mr. Gorman:

Q. Why do you make the exception, because you have not made the addition which results in the figure of $40,258,295.08?.

A. Not at all, sir. I believe I would be more willing to accept your figures than you would be willing to accept mine but, as I have stated several times this afternoon, you just do not determine equity from figures extracted from the books.

The books of any corporation do not reflect value at any certain time, if ever, and to determine equity, you must know that and that, sir, will be my answer to your question if you put it to me in the form you have from now until the time I am relieved as a witness.

Q. Would you say, Mr. Watkins, that these figures reflect the equity of the stockholders in so far as the books of the company are concerned?

A. In so far as the books of the company can show equity and on the assumption that the figures in Exhibit No. 149 have been correctly computated and at this mo- [fol. 6507] ment I have no reason to doubt but what that is correct. The answer to your question is "yes".

Q. Yes, and your answer is the same with respect to the investment of these stockholders in so far as the books of the company are concerned, is it not?

A. It would have to be, would it not?

Q. That was my impression. I did not know whether it would be contrarywise or not.

It is, therefore, correct to conclude, Mr. Watkins, either from Exhibit No. 48 or Exhibit No. 149 for identification, that, as of June 30, 1941, the permanent equities invested in Panhandle Eastern Pipe Line Company as reflected by the books of the company and these exhibits amounted to $63,525,838.88, assuming the addition made on Exhibit No. 149 to be correct?

A. We would not quite characterize those amounts as permanent equity, could we, because some of them change constantly. The long-term debt itself is subject to gradual reduction. The amount of earned surplus works upward or downward, dependent upon earnings or appropriations to surplus and it will not be a great while before perhaps our long-term debt will change.

So let us say that, as of June 30, 1941, in so far as it is possible for the books of Panhandle Eastern Pipe Line Company or its subsidiary companies to reflect the obli- [fol. 6508] gations of those companies and the amount of earned surplus at that particular date, it does show an amount of $63,525,838.88.

Q. Of course, I intended, if I did not do so, to confine my question to the situation as of June 30, 1941.

A. I wish to make that qualification particularly because we have had introduced in the proceedings in the last two or three days the fact that the earned surplus, for instance, will be reduced by an amount of something in the neighborhood of $2,000,000—

Q. (Interposing) Yes.

A. (Continuing) By entries being made in the month of December or rather being made in the work for the month of December.

Q. Now, the investment made by the stockholders, bondholders and note holders is represented by plant, property, other investments and other current and accrued assets, is it not?

A. You mean the amount of proceeds Panhandle Eastern Pipe Line Company received from the sale of such securities as represented, in some form, on its balance sheet by either plant, property and equipment, cash, special deposits, accounts receivable, deferred debits reduced by the amount of its obligations?

Q. Yes. A. Then the answer is "yes."

[fol. 6509] Now, as to any representation with respect to what the investment of the investors is, I cannot help you.

Q. Well, of course, in so far as we are getting down to detailed and specific amounts, we are and have been confining our questions and answers to the amounts reflected here on Exhibit No. 48 and Exhibit No. 149 for identification.

Now, assuming the figures and the mathematics applied thereto, as shown on Exhibit No. 149 to be correct, is the net investment in plant property of the Panhandle Eastern Pipe Line Company $56,512,808.74?

A. I do not know that I can concur in the fact that the net investment of a corporation at any date certain, resulting from a simple deduction of the reserve per its books, represents anything other than a mathematical computation resulting in the reduction of the investment as shown by the company's books in its gas plant, since we are dealing with a gas company, of the amount it had at that particular time included as its total reserve for depreciation and depletion, as you have characterized them in Exhibit No. 149.

We have had a very great amount of discussion here today about reserves. The record is replete with the thought that those reserves, at any particular time, may be either quite inadequate or they may be totally adequate

[fol. 6510] or they may be excessive, so that it would be difficult for this witness to state, without some reservation, that the net investment in gas plant as of June 30 could be arrived at simply by reducing the $66,689,000-odd shown in Exhibit No. 149, by the sum of $41,000-odd and $10,135,000-odd.

Q. Well, Mr. Watkins, giving careful consideration to your previous statements of the accuracy of this balance sheet and your statement that you propose no change in the balance sheet as here reflected, does that not, in your opinion, represent net investment in gas plant?

A. I would like to help you, Mr. Gorman, and I should like to be able to answer the question in the manner in which I believe you wish it answered but I must simply say that at June 30 the records of Panhandle Eastern Pipe Line Company and its subsidiary companies show figures which could be used and have been used in Exhibit No. 149 for the determination of what is there characterized as net investment in gas plant but as to whether or not that is definitely the net investment in gas plant for many and varied purposes, I really do not know.

Q. But according to the best information available to you and to other officers of the company and upon the considered judgment of you and other officers of the company and the Board of Directors as reflected in the books and records of your company, that did, did it not, represent [fol. 6511] net investment in gas plant property as of June 30, 1941?

A. It represents what it shows that it represented.

Q. Is that not what it represented as of that date?

A. Is that not what it represented?

Q. Yes.

A. I have stated several times that I do not believe I can answer the question specifically as you put it.

Q. And is that due to the fact that you do not know exactly what precise amounts should be set aside in reserves for depreciation and depletion—

A. (Interposing) That and other things.

Q. (Continuing) May I finish—as of June 30, 1941, because you are unable to look into the future and see exactly what is going to happen there?

A. It is due to that and other things.

Q. Yes, but in so far as these reserves for depreciation and depletion are concerned and as reflected on these exhibits which represent amounts taken from the books of the Panhandle Eastern Pipe Line Company and its subsidiaries they, as you have previously testified, represent the considered and final judgment of the officers and management and Board of Directors of the Panhandle Eastern Pipe Line Company as of June 30, 1941, do they not?

A. I cannot answer, sir, as to the considered judgment of the Board of Directors. I have made no examination [fol. 6512] of them to determine what their considered judgment might be.

I cannot answer as to the officers of the company because I have made no examination of them to determine what their considered judgment might be.

Whom else did you mention?

Q. Others who participate in the management of the companies.

A. I have made no examination of the minds of any others who participate in the management of the company to develop information upon which I might express an informed opinion as to their considered judgment.

Q. Are you referring to your inability, Mr. Watkins, to read the minds of others?

A. No, I believe I said I had made no investigation. I am, of course, not a mind reader.

Q. Well, to go back and reconsider certain of your testimony previously given with respect to reserves and depreciation and depletion, including amortization, did you not so testify that the amounts set aside annually represented the judgment arrived at after consideration by officials and others charged with the management of the company which conclusions were submitted to the Board of Directors of the company and passed upon by them?

A. Yes, I may have said that in somewhat that language. Now, if this will come at all close to satisfying [fol. 6513] your inquiry, let me state, without equivocation or without any mental reservation whatever, that the amount shown by the balance sheet or balance sheets included in Exhibit No. 48 as to gas plant do specifically

represent the amounts which the company or its subsidiaries, over the period of years, have considered as proper charges to such accounts and if they have made no substantial blunders in their classification, would represent actual investment in gas plant and to the extent the reserve for depreciation, either annual or the cumulative amount at the end of any of the accounting periods has been properly computed or rather I should say estimated, it represents an amount which, at that time, is sufficient for the purpose.

Now, if you choose to reduce the amount of gas plant by the cumulated reserves and characterize it as net investment, that, sir, is a matter for your own choice.

Q. Well, may I ask you, Mr. Watkins, if you were given the balance sheet as of June 30, 1941, as such balance sheet is shown in Column M of Exhibit No. 48 and were asked to [determined] from the figures contained thereon the net investment in gas plant property, would you do it in any other manner than as it is shown on Exhibit No. 149?

A. It is quite probable that the first thing I would do would be to reduce the amounts shown by the books of the company as investment in gas plant by total reserves.

[fol. 6514] I would then turn my mind to a determination of what was in both of the items, how it came to be there, and whether or not it was full of bugs—

. . . . . .

[fol. 6515] Trial Examiner: Are you unable to answer that question, Mr. Watkins, without qualifications? It is a very simple question, you know.

The Witness: Mr. Examiner, it is most probable the conventional way, the rule-of-thumb way, the everyday-man-in-the-street way of determining that investment is exactly as Mr. Gorman has put the question.

Here we are in a rather involved rate proceeding. The witness suspects that Mr. Gorman is trying to elicit testimony from him that this is the actual value of the assets of the company and the witness can not unqualifiedly state that such condition is present.

. . . . . .

[fol. 6516] By Mr. Gorman:

Q. And as I understand the witness' conclusion stated simply so that even I can understand it is, no, he would not. Is that correct, Mr. Witness?

A. You are drawing your own conclusion, sir.

Q. I am asking you whether or not that is a proper conclusion to draw from your answer?

A. That I would not assume that to be net investment?

Q. No, that you would not make such computation upon the basis I have previously indicated in a manner different from that which has been performed on Exhibit No. 149?

A. I do not believe I have given testimony that would indicate that that was my conclusion or, as you stated, the conclusion that I would agree to.

Q. [You] qualification being that you would start looking for bugs?

[fol. 6517] A. Not necessarily, no.

Now, I have tried to answer you as frankly as I can and have stated that the ordinary way, the man-in-the-street way, the perhaps conventional way of casual determination of the net investment would be as you put it.

Q. Yes. Would you conclude from that answer that you personally would do it in a manner different from what you have characterized may be the conventional way?

A. I believe my whole line of answers, sir, indicates that.

Q. By that you mean that you would not accept the figures which are shown on the balance sheet?

A. As net investment.

Q. As computation, Mr. Watkins, if you please, of net investment as reflected on the balance sheet set forth in Column M as of June 30, 1941, on Pages 1 and 2 of Exhibit 48?

A. As a conventional method of determining it and for the everyday use, yes, I would.

Q. Yes, that is what I tried to get you to say.

Now, the other investments in the Panhandle Eastern Pipe Line Company, other than gas plant investments, amount to $214,298.25 at June 30, 1941, as shown in Column M, Page 1 of Exhibit No. 48 at Line 3, do they not?

A. Did you characterize those as "other invest-
[fol. 6518] ments" or did you state they were other investments in gas plants?

Q. No, I stated they were other investments than investments in gas plant.

A. There is an amount of $214,295.25 stated in Column M opposite Line 3 on Page 1 of Exhibit No. 48, the complete details of which have heretofore been made a part of the record in this proceeding and the accuracy of which this witness has readily agreed to.

Q. The answer is, therefore, "yes", is it?

A. That the $214.295.25 represents other investments at June 30, 1941—I am only being careful here because I really did not understand the first part of your question and if I had a mental lapse, will you excuse it?

Q. Your last statement is absolutely correct except you did say "295" instead of "298".

A. Let's split the difference.

Q. I was going to correct it in the record so it won't be necessaray to do it later.

If the mathematics applied to the figures shown on Exhibit No. 149 are accurate, the total of other current and accrued items, both debit and credit, amounted to $6,798,731.89, did they not, at June 30, 1941?

A. Other current and accrued assets?

Q. Yes.

A. They did.

[fol. 6519] If there were assets unrecorded or liabilities unrecorded, it would change that figure. I do not know of any liabilities that have not been recorded.

As to the value of the assets, the books do not necessarily show such amounts.

Q. And finally, the total of the plant property, other investments, cash and other current and accrued items at June 30, 1841, amounted to $63,525,838.88, did they not, assuming the additions and subtractions shown on Exhibit 149 to be correct?

A. I think that is correct except that the Exhibit No. 149, as such, does not show a cash item separately.

Q. Yes.

A. It is included, I presume, in current and accrued assets.

Q. Yes, that is right. Of course, we have previously indicated that, I think, to clear that item up?

A. Yes, I believe the record is very clear on that item.

Mr. Gorman: If the Examiner please, I offer Exhibit No. 149 for the record at this time.

Trial Examiner: Any objection?

(No response.)

Trial Examiner: There being no objection to the reception of the computation marked for identification as [fol. 6520] Exhibit No. 149, it will be received in evidence by the corresponding number.

* * * * * * * * *

(Exhibits Nos. 145, 146, 147 and 148 Were Received in Evidence.)

* * * * * * * * *

[fol. 6521] By Mr. Gorman:

Q. Mr. Watkins, referring back to a subject which you have previously testified concerning, a reexamination of your testimony particularly at Pages 6209 and 6210, which concern the subject of unamortized debt discount and expense and certain adjustments which have been made to that account, you have indicated that all of the remaining amount in Account No. 140 covering unamortized debt discount and expense has been charged to earned surplus.

Were you in your answers referring only to that portion of Account No. 140 applicable to refunded issues or were you also referring to that portion applicable to presently outstanding issues?

Mr. Wheat: Do you have it before you?

The Witness: I do not have this before me but the whole bag of tricks has been disposed of.

Mr. Wheat: What do you mean by that?

The Witness: All of the unamortized debt discount and expense, either with respect to the refunded issues or with respect to the refunding issues, if you please, if we are thinking now of February 3, 1941, with the adjustments previously referred to in the testimony.

By Mr. Gorman:

[fol. 6522] Q. Now, at Pages 6208 and 6209 of the transcript, it seems that the substance of your answers was that the amounts of $517,772.53 and $304,108.96 representing amounts equivalent to savings and income and excess profits taxes were credited to Account 140, unamortized debit discount and expense, was that correct?

A. There was a total of slightly more than $822,000 credited to such accounts. The two figures you mention were a segregation of that total because there were two accounts involved.

My remembrance is that one had to do with call premium and one had to do with debt discount and expense.

Q. Yes, but those were both credited to Account No. 140?

A. Prior to the charging of the residue in the account to surplus.

Q. Yes. Were offsetting charges to these credits entered in Account 507, taxes, or were the amounts charged to some other account?

A. They were, as the record will show, charged to Account 507.1.

Q. Account 507.1 is, of course, your subdivision of Account 507 as shown in the Uniform System of Accounts for natural gas companies as issued by the Federal Power Commission, is it not?

[fol. 6523] A. It is really a new account which we have raised for the express purpose of receiving these charges. Our title, if I remember correctly, is "Charges in lieu of Federal income taxes and charges in lieu of Federal excess profits taxes."

Q. Yes.

A. That entire transaction was a part of previous proceedings. As a matter of fact, if you will recall, the witness read into the record, in response to your request, two journal entries giving effect to these transfers and what-

ever information you may want with respect to them, I believe is already present.

Q. Of course, your Account 507.1 is your subdivision, is it not, of F. P. C. Account 507?

A. The witness stated that when the entry was first placed in the record; stated that just a few moments ago and reiterates the fact that Accounts 507.1 are Panhandle Eastern Pipe Line Company's accounts created for this specific purpose.

My impression is that the Power Commission's Classification of Accounts permits that procedure.

Q. So that the answer then is "yes"?

A. Three or four times, "yes".

Q. Once was satisfactory.

Mr. Watkins, did you receive a letter signed by the [fol. 6524] Secretary of the Federal Power Commission dated October 29, 1941?

A. I did.

Q. And did that letter—

A. (Interposing) That letter was addressed to Panhandle Eastern Pipe Line Company for my attention as Secretary-Controller.

Q. But you did, in fact, receive such letter?

A. Yes, I have so stated.

Q. Yes. Did that letter in Paragraph 7 on Page 2 thereof request you to furnish—

"A statement to the effect that Account 507, Taxes, for the year 1941 will not include a charge (either directly or through Account 228, taxes, accrued) equal in amount to the estimated saving, if any, in 1941 Federal and State income taxes resulting from deductions to be made for income tax purposes, arising from the financial transactions. In this connection your attention is directed to Interpretation Case No. G-52, issued by National Association of Railroad and Utilities Commissioners, which reads as follows:

"'The tax account (507), should include only provision for actual taxes and the account should not be increased by the amount which would have been paid had the refunding transaction not occurred. In other words, there

was an actual saving in taxes and this saving should be [fol. 6525] reflected in the income statement because it is a fact. It believed, too, that the text of Account 507 does not permit the accounting practice resorted to by the utilities in the illustration cited' ".

Now, are we to understand that your charge to Account 507.1 is contrary to the indicated procedure to be followed in this statement of Paragraph 7 of the letter of October 29, 1941, which I have just read?

A. Mr. Gorman, if you will pardon me, I think we are shooting buckshot at canary birds here. This has been the treatment the witness has described which has been discussed informally with the Power Commissions' Chief of the Bureau of Accounts, Statistics and whatever is a part of his title and, as far as this witness knows, there is no disagreement as to the treatment.

Now, if the thing that is bothering you is the fact that we used Account 507 as a means of raising the new account and you fear that we are going to put out some statements to the public or otherwise characterizing these items as taxes, may I please remove that fear without any hesitancy, because if you will observe the income account consolidated which is made a part of Registration Statement No. 3-4919 at Page S-7, it will be noticed that there is shown there two items under the general heading "Charges in lieu of", and we then follow that by the two amounts applicable as of [fol. 6526] September 30 equivalent to the Federal income or excess profits taxes that would have to be paid had we not had the benefit of such savings.

Q. And those figures to which you have just made reference as reflected in the column headed, "Nine months ended September 30, 1941," are, first, charges in lieu of Federal income taxes—$100,000; and, secondly, charges in lieu of Federal excess profits taxes—$487,000?

A. That is correct.

Q. And did you also mention other items—provisions for income and excess profits taxes?

My recollection of your answer is rather incomplete.

A. That was the $487,000 amount.

Q. And those were the two items to which you made reference a few moments ago? A. They were.

Mr. Culton: And they are explained on Note D, Page S-8?

The Witness: Yes, sir.

[fol. 6527] By Mr. Gorman:

Q. Are we to understand your books will be closed out on the basis of the entries which you have heretofore discussed and explained, including the entry to your Account 507.1? A. That is correct.

Q. Is it your understanding that the conference with the officials of the Power Commission which I have more or less forced upon you to disclose—

A. (Interposing) Not more or less, sir, I think you have been entirely responsible for it.

Q. I will accept that responsibility for it.

A. And, if you please, let's avoid any further refer-

[fol. 6528] ence to it if we may.

Q. Very well.

The reason I am asking is whether or not you were advised in any respect differently from the advice contained in Paragraph 7 of the letter of October 29, 1941?

A. If I was what?

Q. If you were advised to make entries or that you would be permitted to make entries which would be considered favorably—

A. (Interposing) By the letter?

Q. (Continuing) No, advised otherwise than the provisions of this letter.

In other words, to my mind, it would seem to indicate that your charges to Account 507.1, are not in conformity with the suggestions offered in Paragraph 7 of the letter of October 29, 1941, which I have read.

Do you consider that they do conform to such a suggestion?

A. Well, I do not know that I do or I do not.

Here is the situation with respect to the debt discount and expense and its disposition:

We have been conscious all this year of the fact that balance sheet accounts, Instruction No. 6-E of the Commission's Uniform System of Accounts for natural gas companies, placed certain requirements upon us with respect to the continued amortization of the debt expense [fol. 6529] with respect to the refunded issues sometime within the current accounting period.

We had also been conscious of the fact that sometime during the year, it was possible we would find it necessary to create other issues of securities which might give rise to further debt discount and expense.

We were not at all anxious to come to the Commission with a form of application covering the previous situation and then be right back in again within a few months with another application so we, therefore, withheld any such application and much to this witness' surprise when, during his first appearance, he made a statement in the record that had the general tenor that presumed we might be in with an application, forthwith we received the letter concerning which we have been discussing.

Subsequent to that time, we gave further consideration to the debt discount and expense and at a meeting of the Board of Directors, the action described in the record a day or so was taken.

We know of no reason why the treatment we have given to these particular items is not in conformity with standard accounting practices consistently followed, and do not believe it is in disagreement with the Commission's view.

Q. And that is without regard to the provisions of [fol. 6530] Paragraph 7 of the letter of the Commission of October 29, 1941, for I believe you previously stated you did not know whether or not your entries were or were not in conformity with that suggestion?

A. There is no fancy footwork undertaken here. They have all been open and above board. It is in the record in its fullest extent.

The results seemingly harm no one. What more can I say?

Q. And in so far as you know and in so far as your entries with respect to the books and records are concerned, is a concluded matter?

A. I think it may well be left that way.

. . . . . .

[fol. 6534] PAUL B. COFFMAN, a witness, having been previously sworn, resumed the stand and testified further as follows:

Direct Examination (Continued)

By Mr. Wheat:

Q. Mr. Coffman, since the time when you appeared and began your direct testimony in this matter, have you prepared certain data largely in compliance with certain suggestions and queries of the Trial Examiner during your direct testimony?

A. Yes, I have.

Q. I show you a document consisting of four pages headed on the first page, "Financial Data on Common Stock Issues of Electric and Gas Utilities Years 1935, 1936, 1937, 1938, 1939 and 1940" and ask you whether that is one of the documents [your] prepared in this connection? A. Yes, sir, it is.

. . . . . .

(Exhibit No. 150 was marked for identification.)

[fol. 6535] Q. Mr. Coffman, have you also prepared a document consisting of nine sheets, the first of which is headed, "Earnings-Price Ratios of Common Stocks in Various Divisions of the Utility Business? A. Yes, sir.

Q. And was this prepared in the same connection that I previously mentioned? A. Yes, it was.

. . . . . .

(Exhibit No. 151 was marked for identification.)

By Mr. Wheat:

Q. Mr. Coffman, have you also prepared a series of tabulations consisting of four sheets, headed on the first sheet, "Panhandle Eastern Pipe Line Company—Estimate of Federal Income and Excess Profits Taxes, Apply-

ing Rates Levied in the Revenue Act of 1941 to Net Income for the Year Ended June 30, 1941"?

A. Yes, sir.

Q. Was that prepared in the same connection?

A. Yes, it was.

. . . . . .

[fol. 6536] (Exhibit No. 152 was marked for identification.)

By Mr. Wheat:

Q. Mr. Coffman, does the data contained in the exhibits for identification Nos. 150, 151 and 152 comprise the extent of the general data which you prepared in connection with the Examiner's suggestions during your direct testimony? A. Yes, it does.

. . . . . .

[fol. 6537] By Mr. Littman:

Q. Mr. Coffman, do you have a copy of your Exhibit No. 65 before you?

[fol. 6538] [Q.] Yes, sir.

Q. Will you please refer to Chart No. 37 of that exhibit, which is entitled, "Dollars Needed Annually by Panhandle Eastern to Provide Service to Customers, a Fair Return to Investors and Restore Invested Capital When Gas Reserves are Exhausted Based on Present Capital Structure."

Is my understanding correct that your term, "Total Dollars Needed" as it appears at the bottom of the extreme left-hand side of your Chart No. 37 is synonymous with the term, "Total Operating Revenues" as that term is ordinarily used in an income statement?

A. I would say "Total operating gross revenues", yes.

Q. Is my understanding correct that your terms "Operations and maintenance", "Taxes" and "Return of Capital when gas reserves are exhausted", collectively comprise what is ordinarily termed "Total operating revenue deductions" as used in an income statement?

A. That would be correct, with this further explanation, so there won't be any misunderstanding, that those would be the deductions from gross which would arrive

at the figure that we call "Net available for interest charges, dividends and corporate purposes."

In other words, it is all deductions taken out prior to charges for capital

Q. And that is ordinarily called "Operating revenue [fol. 6539] deductions" in an income statement, is it not?

A. Well, of course, those terms—

Q. (Interposing) Of a public utility?

A. Generally speaking, that is correct; yes.

Q. And these comprise all of the deductions which you take into account for purposes of this study?

* * * * * * * * *

The Witness: Those varying figures are explained in the preceding charts and, for the purpose of building the total that I call the "total dollars needed" as shown on this Chart No. 37, they were all the figures finally accumulated but they were not the only ones that were considered as shown in some of the prior exhibits—

Mr. Wheat: (Interposing) You mean prior charts in this exhibit?

The Witness: (Continuing) Prior charts in this exhibit because of certain changes that were made and certain considerations were made as I went along in my approach to this problem.

I will answer your question "yes", subject to the things that are shown in the preceding charts in this exhibit.

By Mr. Littman:

Q. Your answer would be "yes", if I were to confine my question to Chart No. 37?

[fol. 6540] A. No, not exactly, because, as I say, there were other considerations made along the line which in certain cases cause a change in figures for what I call the projected amount as against what was the actual figure for the twelve months ended June 30.

Q. Aren't all of these figures projected figures that are shown in Chart No. 37?

A. They are the accumulation of all of those figures shown in the preceding charts and I want to make sure

that a person [understand] that when they are talking about No. 37 because, after all, it is merely the summary chart which takes into consideration all of the various things that I have shown in the preceding charts in this exhibit.

Q. Chart No. 37 summarizes the conclusions reached by you from the various underlying data which is shown in the preceding charts, is that correct?

A. That is correct, yes, sir.

Q. And in order that I may be certain that I understand Chart No. 37; I wanted to ask whether these amounts shown on Chart 37 and called, "Operations and maintenance", "Taxes", "Return of capital when gas reserves are exhausted" collectively and in total comprise all of the deductions from operating revenue in arriving at the "dollars needed annually by Panhandle Eastern to provide service to customers, a fair return to investors and to re- [fol. 6541] store invested capital when gas reserves are exhausted?"

A. Yes, that is correct.

Q. So that the total of these deductions is what is commonly referred to in an income statement as "Total operating revenue deductions", is that correct?

A. That is correct.

Q. Is my [understand] also correct, Mr. Coffman, that your term "Current capital requirements" as used in Chart No. 37 is synonymous with the term "Net operating revenue" as that term is ordinarily used in an income statement?

A. That is correct. It is the net operating revenue figure prior to interest charges, dividends and such amounts as might be carried to surplus.

Q. Mr. Coffman, I would like to have you refer to Schedule 1 of Exhibit 49, which is the income statement, per books, presented by Panhandle Eastern in this proceeding by its Controller, Mr. Watkins.

Trial Examiner: The Trial Examiner will hand the witness his copy of that exhibit.

(A document was handed the witness.)

Mr. Wheat: Mr. Coffman, you will note that is an income statement covering quite a longer period of time.

The Witness: Yes.

By Mr. Lipman:

Q. I refer you to this schedule and I will ask whether [fol. 6542] your term "Total dollars needed" is synonymous with the term "Total operating revenues" which is shown in Line 7 of Schedule 1 of Exhibit 49?

A. You are referring now to the gross figure?

Q. I am referring to the term which appears in Line 7, Mr. Coffman, "Total operating revenue"?

A. That is correct.

Q. And am I also correct in understanding that the sum of your "Operations and maintenance", "Taxes", and "Return of capital when gas reserves are exhausted" shown in Chart 37 are synonymous with the term "Total operating revenue deductions" which is shown in Line 21 of Schedule 1 of Exhibit 49?

A. Yes, that is correct.

Q. Am I also correct in understanding that the term "Current capital requirements" as it is used in your Chart No. 37, is synonymous with the term "Net operating revenue", as it is used in Schedule 1 of Exhibit 49 in Line 22?

A. Yes.

Q. Now, your written testimony in the text which accompanies Chart No. 37 in the last paragraph reads as follows:

"As shown in the accompanying chart based on the present capital structure, the Panhandle Eastern Pipe Line [fol. 6543] Company would require a total of $15,529,855 annually to provide service to customers, a fair return to investors and restore invested capital when gas reserves are exhausted".

Is that correct?

A. That is correct.

Q. Which figure, in your Chart No. 37, represents the "fair return to investors"?

A. The figures that are used there in Chart No. 37 would be contained in the last column which totals $5,064,821 and the details of those various items in that column would be explained in the preceding charts as to fair return.

In other words, I merely want to make clear that the specific fair return which I am talking about is not shown, percentage-wise, as you note in that column but the total figure which I show there has been explained in the preceding charts.

. . . . . .

Q. But am I correct in understanding that the amount of $5,064,821 which appears in Chart No. 37 represents the fair return to investors based on the present capital structure?

[fol. 6544] A. That is correct.

Q. And, of course, the details as to your method and manner in arriving at that amount are shown in preceding charts, is that correct?

A. The preceding charts and the tables supporting the individual charts, yes. I mean all of the detailed figures are there, too.

Q. Was the amount of $5,064,821 shown in the cross-hatch bar in Chart No. 37 a fair return to investors of Panhandle Eastern for the year ended June 30, 1941?

A. All the figures that were used to arrive at that result and calculation were based upon the current trends in the capital markets and, therefore, I would say it represented a fair return, if you consider that at the present, that is, in 1941, not this year, Panhandle Eastern would have been required or had it been necessary for them to finance again securities in the market because the figure which I used to arrive at that dollar amount was based upon an investor's appraisal of what investors required if they would make an investment in a particular risk.

I would say that it represented very definitely a fair return to them in 1941.

Q. For the year ended June 30, 1941?

A. That is right.

Q. In other words, is my understanding of your answer [fol. 6545] correct that any amount of net operating revenue earned by Panhandle Eastern during the year ended June 30, 1941, in excess of this amount of $5,064,821 was in excess of a fair return, in your opinion?

A. For the particular period in question, which is 1941, because of conditions in the capital market at the time,

my statement is that at least the total figure shown in the last column in Chart No. 37, $5,064,821 is required and, for that particular time, to me that is the irreducible minimum which the management of this company must have.

Now, whether or not if they receive more dollars that is beyond a fair rate of return, I would not say. I mean there may be more dollars than that there but I say that the irreducible minimum they must have is the figure shown.

That, to my way of thinking, is not saying that if they received more dollars that that is necessarily more than a fair rate of return.

Q. Mr. Coffman, you have referred to this figure of $5,064,821 as a "fair return to investors".

Now, is that or is that not a "fair return to investors"?

A. I say that that is the amount and I think you will find in my statements throughout the written matter in the exhibit I have made mention of it also as an irreducible minimum. I say that that is the amount of cash that [fol. 6546] the company must have per annum if they are going to continue to maintain a position whereby, if they need additional capital, investors in the public market will be willing to have the financing forthcoming. It is a fair return.

At the same time, if they receive more money, I presume that could be a fair return also, to answer your question.

Q. It would be a fair return in so far as the investor is concerned if he received more than $5,064,821?

A. No, it would merely mean if there was more than that, if the investor can be satisfied under the present coverage and is willing thereby to [investmen] further in this company, then if the amount is larger than what I say, I presume he would be equally willing to invest.

On the other hand, I contend that if the amount falls below this, the investor would be very reluctant, if not hestitate entirely, to finance or supply money for financing should this company need it.

Q. I gather from your answer, Mr. Coffman, that any amount in excess of $5,064,821 would be an equally "fair return to investors"?

A. I merely say that it gives the investor more protection and I believe it is true that, so far as investors are concerned, they naturally want the capital they put in any concern sufficiently covered by earnings so that their capi-
[fol. 6547] tal investment is fairly protected.

If they believe they are making an investment or if they think a particular investment they are contemplating is not so protected, they are not going to invest any money at the rates I have used. They will require something higher because they think the risk is greater.

Q. Could you answer my question yes or no, Mr. Coffman?

Will you please read the preceding question and see if you can answer that question yes or no. You have already made an explanation but I wonder if you could give me a direct answer to my question.

(Whereupon, the pending question was read by the reporter.)

The Witness: I should say it might be.

By Mr. Littman:

Q. Would it be?

A. Well, if they feel that they are protected with what they have, if there was something more, I should feel that was also satisfactory to them.

Q. How would you feel about it?

A. I would feel just as I have stated to you. I believe this to be an irreducible minimum requirement. If I could get that or more, I would be willing to invest my money in the particular enterprise, if I had money available for investment.

[fol. 6548] Q. Well, suppose Panhandle Eastern were to earn in the year ended June 30, 1942, the sum of, let us say, $5,564,821 instead of the $5,064,821 which latter figure you have called "a fair return to investors."

Would the amount of $5,564,821 be a fair return to investors?

A. Well, I do not know because the study that I have made here was predicated upon conditions as they existed in 1941 at the time I made the study and, at that time, the relationship of earnings of various companies to the prices of their securities, which is what I call this "Investor's Appraisal of the Risk of Capital", were [maintaning] a particular relationship.

Now, as we know, the *prices of* securities have been altered since that time because of Pearl Harbor and a number of incidents which have caused the prices to go down so I would say I would make the same kind of study that I have already made, finding out what the relationships were and if the result came out the same for 1942 that it did at the date of this study, why, then the excess of $500,000 you are mentioning is just so much additional protection.

Q. And you would consider, under those circumstances, that the additional amount still represents a fair return?

A. Well, I am not saying that, because I made a par- [fol. 6549] ticular study, and arrived at a particular figure under particular conditions at a particular time, and I say that is the amount you must have to attract capital.

Now, if you get more, how much easier it will be to attract capital and so on, I do not know. I make that point because of the fact, if a company has bonds outstanding, for example, one method of arriving at the risk involved in that particular security is to consider, among other things, fixed charges times earnings.

Now, if a bond, for example, has a coverage of 1, 1½ times as against a bond that has a coverage of 3 or 4 times, in our language, we say the quality rating of those two securities is different and they will sell on a different yield basis so that definitely would work into this figure and I cannot say, if you keep pyramiding the $5,064,821 so as the coverage on the senior securities becomes greater and great, the quality classification on those particular securities becomes better and better with the result that investors, looking at such securities in the market, would see their quality rating improve and their yield basis would decline.

Taking that decline into consideration on the figures used to make up this particular resultant figure would have a bearing and change the amount.

Q. And would reduce the current capital requirement? [fol. 6550] A. It would reduce the requirement because it would make it easier, presumably, other things being equal, to sell that particular class of [esecurity] to the general public.

Q. Now, this term of yours of "a fair return to investors" does not seem to have any upper limit, does it, Mr. Coffman?

A. Well, I think that apparently we are talking about different things. As I see it, I was asked to make a study as of a given time, which I did and took all the facts which I thought were pertinent into consideration prior and up to that time.

Now, this figure of $5,064,821 is the figure which I say is necessary based upon those facts.

If you go on to 1942 or any other period you would like to mention and the facts and conditions have changed, as I say, I would like to take a fresh look and see, so that, in specific answer to your question, I would say that my answer is "no", that I am not saying there no upper limit to this at all.

I am sticking to the figure that I have here as being the best of my judgment to ascertain such a figure based on the facts and considerations at the time.

Q. Well, if you have an upper limit, I would appreciate it if you would state the amount.

A. I do not see how you can talk about limits at all, [fol. 6551] Mr. Littman, because I am not making a study where I am prescribing limits. I am merely saying, from the facts based upon the particular theory which I believe to be sound and which I am using, that the company must have this particular annual dollar return to maintain the service to the customers and maintain its credit position.

Q. Now, you used a moment ago the term "necessary" in describing and in characterizing this amount of $5,064,821, did you not?

A. Yes, and I further said that the total amount is, in my opinion, an irreducible minimum to render this service and maintain credit.

Q. Would you say that any amount in excess of $5,064,821 was not necessary for the purpose of satisfying the current capital requirements of Panhandle Eastern upon all of the assumptions that you have assumed for the basis of your study as it is summarized in Chart No. 37?

A. Well, to be sure that we are still talking about the same thing, if all the conditions under which you make your statement were identical with all the conditions that I studied here and made calculations upon, I say, in my opinion, that the Panhandle Eastern Pipe Line Company could maintain its service adequately to the customers and maintain its credit position if it needed additional financing and I say no more.

[fol. 6552] Q. Do you mean that Panhandle Eastern could do that with the $5,064,821?

A. If all the conditions were identical with what I considered here.

Q. And any amount in excess of that would not be necessary for that purpose?

A. I do not see that it would, although if they could get it, they would be just that much better off as the management of the company.

I mean, there would be additional amounts to surplus that, in my opinion, would just make the company that much more secure but they would not have to have it, in my opinion, to maintain the service and to maintain their credit to the public.

Q. And it would not, of course, then be necessary to have the additional—

A. (Interposing) It would not be an unsound managerial condition, if they did have it.

Q. Of course, from Panhandle Eastern's standpoint, it would be well to have more; speaking in the terms that any man in business wants to make as much as he can?

A. Well, or to state it differently, I think it is good, sound business policy for any management to, if they can, have a certain amount filtering through after all charges and expenses to surplus to build up just a good, what you

[fol. 6553] might call margin of safety for contingencies and so on, but if they do not have it year in and year out and can get this necessary income, all right, but if they did have it, it would be just so much additional margin of safety.

Q. Now, in all of this discussion, Mr. Coffman, you have not mentioned the public. We have been, thus far, looking at this amount purely from the standpoint of the investor, have we not, in our discussion?

A. Well, no. I thought I had mentioned the public in these last answers I have given you. I say that at least there are two very definitely interested parties here, the public who is in receipt of the service being rendered by this company on the one hand, and the investors on the other, who are, at present, having money invested in the firm and who, from time to time, may be asked to put in more money, so I thought I had definitely mentioned the public and certainly these figures take that into consideration for the various deductions which you referred to a little while ago are deductions necessary to maintain this service and to render adequate service to the public.

Q. Now, Mr. Coffman, we are, at the moment, presupposing adequate allowances for operations and maintenance and taxes and amortization and we are confining, for [fol. 6554] the moment, our discussion of this $5,064,821 which you have labeled a "fair return to investors".

Now, confining ourselves to just that and assuming that Panhandle Eastern were to earn more than the $5,064,821 under the conditions which you have assumed, from the public's point of view, would it not be true that the excess would represent something in excess of a fair return and something in excess of that which is necessary to Panhandle Eastern for its earned capital requirements, isn't that correct?

A. I would say that as long as conditions are identical or the relative relations of these figures remain the same, that any amount in excess of the $5,064,821 would be available, either if the management or the Commission would allow it, for adequate or additional margin of safety or, if they felt it was not necessary, it could be passed along in the form of a reduction in the charge to customers for service.

Q. Then your answer to my question is "yes"?

A. Well, I was not so sure I understood your question thoroughly, so I would like to stick by my own answer if I can.

Mr. Littman: Suppose we have the question read again and ask you to see if you cannot answer that question yes or no.

[fol. 6555] (Whereupon, the question indicated was read by the reporter.)

Mr. Littman: Perhaps I should use the term "rate payer" rather than the "public."

The Witness: Mr. Littman, I do not want to appear to be talking overmuch or dodging your question, but there is a certain phase of that question which I still do not think is perfectly clear.

By Mr. Littman:

Q. What disturbs you, maybe I can clear it up?

A. You say we presuppose adequate tax allowance and so forth which is perfectly all right except for one thing. I want to make it clear, in my theory as I have applied it throughout, that I am talking about the conditions as I have found them at the time and I am not presupposing, at the moment, that this reserve and that is sufficient because I contend that if conditions change so that the capital markets, among other things, have altered to the point where you can not finance on the same basis that we were talking about here, then I would not want to give my figure until I had taken those new conditions in to make a study so I prefer to stick to my answer, if you [done] mind, because I want to be sure that I am getting across the particular type of approach that I thought I was actually doing.

[fol. 6556] In other words, I am not saying here that $5,064,000 from here on out for Panhandle Eastern is a perfectly adequate or irreducible minimum. I am not saying anything like that whatsoever.

What I am saying is that if conditions should be identical with the conditions at the time I made this study, then I say $5,064,821 looks—

Q. (Interposing) Under those very conditions—

Mr. Wheat: (Interposing) Wait a minute. He did not finish his answer.

The Witness: (Continuing)—looks like a fair amount so that the company could maintain its service to the public and, at the same time, maintain its credit position, yes.

By Mr. Littman:

Q. Now, under those conditions which you have just assumed, if Panhandle Eastern were to earn in excess of $5,064,821, would such excess represent an excessive return from the rate payers' point of view?

A. Well, in that case, depending on how you define "excess", it is more than I think the company needed at the particular time under the particular conditions to maintain the service and its credit position and I would say then it was for the Commission to determine whether or not that excess was sufficient to warrant some reduc-
[fol. 6557] tion in rates or something else.

In other words, I can conceive of the point where even though my figure, which is an irreducible minimum, is more than met that the Commission might well figure that the overage could well be accumulated in surplus as a margin of safety.

Q. Well, now, does this amount of $5,064,821 which you have called a "fair return to investors" in Chart No. 37 include surplus accruals which are adequate, in your opinion?

A. Yes. That is the total amount that is necessary prior to interest charges and the various requirements of the other forms of capital that are presently outstanding in the capital structure of the company.

Q. Does this $5,064,821 which appears in Chart No. 37 represent, in your opinion and under the conditions which you have assumed, a fair return as defined by the United States Supreme Court in the Bluefield case?

Mr. Culton: You aren't reading Mr. Justice Brandeis' definition of fair return, are you?

Mr. Littman: I am using Mr. Coffman's quotations which are shown in his exhibit.

Mr. Culton: I thought when you referred to maximum return you probably had in mind Justice Brandeis' suggestion that there is some leeway in between minimum and maximum.

[fol. 6558] Mr. Littman: I think my question is clear. If this witness does not understand it, I will try to make it clear.

The Witness: Can you give me the reference page, please. What is that page number?

Mr. Wheat: Page 3 of your statement.

By Mr. Littman:

Q. Page 3 of your Exhibit 65 contains a quotation from the Bluefield Water Works and Improvement Company versus Public Service Commission of West Virginia Case.

A. Well, Mr. Littman, my answer to that, I think, is very definitely "yes",—I mean I have just taken time to read it again and I thought it was at the time and I still do think we are following that very closely.

Q. In other words, $5,064,821 represents, in your opinion, a fair return within the meaning of that term as used in the Bluefield Case?

A. And under the conditions existing under the study.

Q. Now, we have from time to time been referring to certain conditions which you [asssumed], in arriving at the figures shown in Chart No. 37.

I should like to know what period of time is contemplated by the fair return shown in Chart No. 37.

Mr. Wheat: You mean whether those figures are stated on an annual basis?

[fol. 6559] Mr. Littman: No.

. . . . . .

By Mr. Littman:

Q. Do you understand the question, Mr. Coffman?

A. Yes, but there again I am going to answer the question and if you don't think I answer it directly, you can correct me.

As you know in the calculations that I made, there were certain estimates made in regard to taxes, an assumption of a change in capital structure in regard to the preferred stock and so forth.

I think there were only three, as a matter of fact, an estimated increase in the raw materials and wages, an [fol. 6560] increase in taxes and the change in the preferred stock, as I recall it. If I am wrong, the study will show.

Q. Chart No. 37, if I may refresh your recollection, does not contemplate a change in capital structure.

A. Then the estimate I made for the change in raw material prices and wages and the change in the taxes which supplement statement—

Q. (Interposing) And the change in the amortization allowance.

A. Yes, correct. Those items made, as I have mentioned, the only changes from the 1941 actual statements as will be shown in my report so that I am not contemplating any period of time for the $5,064,821 for the reason that I have given before.

I still come back to this matter, assuming the conditions which I took into consideration in this study and I am not saying that from here on out for four years or five years or for any other period, that this figure would be the figure at all.

I am saying that so long as these conditions maintain what they are, this is the best judgment that I have in regard to the question and certainly, under present conditions as they are existing, I would not be talking in terms of two, three, four or five years.

I do not think any other analysis would [—] just on the [fol. 6561] basis of what external conditions are doing to all of us. I mean who knows what is going to happen next month or next year or two years hence?

Q. Mr. Coffman, would you say that this figure and these figures shown in Chart No. 37 would hold good for at least a year after June 30, 1941?

A. Well, at the time I would make any such study, I would make it up hoping that the condition would last as

long as the company but the very purpose of my particular theory, if it has any soundness to it at all, is to give some method whereby currently, from time to time, you can make a check on these matters as against the old method, where, as I saw it, it was a rather laborious task to figure a rate base which took months and months of engineering work and then a rate on the other hand and thereby get some combination which would stay for quite a period.

I am trying to develop a theory, if I can, by which it would be very simple to check conditions from time to time to see what actually would be fair at the particular time and I thought I had really got on to that in this study and the approach that I made.

Q. Well, coming back to my specific question with respect to a one-year period, you would not say that these figures would hold good for even one year in the future, would you?

[fol. 6562] A. I would start out with these figures hoping they would hold good for quite a while but, being well aware of the fact if conditions changed materially, it would be very simple to make this study all over again in view of the changes and see what the situation was.

Q. Six months or more have elapsed since June 30, 1941, which was the end period of your actual figures. Would you say that these figures hold good for the six months that have elapsed?

We are looking back in retrospect.

A. I think they are holding fairly well and yet, among other things, there are two material changes that have taken place, not referring to this company particularly but taking companies, generally, most of them have shown further increases in earnings.

That is particularly true of industrial companies as the quarterly statements have come out since June have shown higher earnings.

On the other hand, taking the capital markets as we know and particularly after the Pearl Harbor situation, prices of securities have gone down so here we have two fundamental factors that are most important in any such consideration as this, higher earnings and lower prices.

Ordinarily, that would not make sense to any individual but the fact is, it is a fact. You can read the statements [fol. 6563] every day and see that there is no question about it.

Q. Is your answer to my question "yes"?

A. I say that, generally speaking, I think the figure has held but if I were to make this study right today, it might be a few dollars different.

Q. You would not expect it to be much different if you did make a new study today?

A. I do not think, dollar-wise, it would be a great deal of difference, but some difference.

Q. Perhaps, if I stated to you, Mr. Coffman, the reason for my inquiry in this connection you might be in a better position to answer my question.

I would like to know to what practical use these dollar figures may be put by this Commission? I fear that unless the Commission knows the period of time for which these figures may be used in the future, that these figures may be of little practical value to the Commission.

I, therefore, want you to fully explain your position with respect to the time element inherent and implicit in the figures shown in Chart No. 37.

A. Exactly. Well, I think that does help me quite a bit.

If you will give me just a few minutes to tell you why I used this particular type of approach, I think probably we would both be getting together.

[fol. 6564] Over a good many years in my position in making studies on public utilities, of one kind or another, we have made specialized studies, investors' appraisal of risks and so on, in various phases of rate of return cases.

During the course of that experience, I have had occasion many times to look over reports of others, general approaches that were used, and I have read a good many cases on the subject.

It impressed me as I read these various reports and the cases that the methods that had been commonly used to that date included an elaborate study and investigation, on the one hand, usually from an engineering point of view to determine a rate base.

This, at least, supplies figures to the Commission which would give you something on that angle of the problem. Then, on the other hand, a report of another group, usually economists or people qualified to make the study to make their best determination of a rate, as such.

It seemed to me to leave certain gaps open that well could be fortified and I have been for several years undertaking to discover something that might fit in the middle of all this so if a person said in their opinion the rate is 6, 7 or 8 percent and somebody said the rate base was [fol. 6565] $100,000,000,000 or whatever it was, the multiplication of those two figures, as I understand it, was to give you a fair rate of return, dollar amount.

A good many times, as we know, it did, and a good many times, as we know, it did not.

What I have tried to do is to slip in between those two things, if I can express it that way, and get a method from an economic point of view which would assist in arriving at a dollar figure which, in any one's best judgment, would have to be had to maintain the service adequately to the public and maintain the company's credit position, and I think the purpose of this figure is to do that very thing, so that if, for example, under the old method, as I term it, a multiplication of a rate, so determined by a rate base, let us say as it worked out gave us $6,500,000 under these conditions and I make my study just as I have done and come out with $5,064,000, I say the Commission, in this figure, has a very good one to check the result of those other studies and that was the whole purpose of this particular approach as I used it.

Now, this figure, I say, will hold up to a reasonable extent the same as a determined rate of 6; 6½ or 7 times $100,000,000,000. will stand up and no longer because the reason your other rate changed was because conditions changed and the only reason this will change is because [fol. 6566] conditions changed so that is my explanation of this particular approach.

Q. Is your approach a substitute or a check of the old or, may I say, the classical method heretofore used in rate making?

A. Though appearing egotistical, if I can make the statement, I think this comes a little closer to fitting actual conditions in the world we are living in today than the old, classical approach does.

I won't say it is a substitute but I think it ought to be a part of the over-all consideration, I mean throw this in the hopper with the rest and it may be a very good double check.

Q. Coming back to the time element, I take it from your answers that you are unable to state at this time how far in the future this figure of $5,964,821 which you have called a "fair return to investors" may be projected?

A. Well, avoiding answering your question in terms of months or years, I think this figure will hold up as long as a figure you determine from your old classical approach will hold up and no longer, because the only reason that I know that the results of the old classical theory went bad was because conditions went bad.

The same thing is true of this and no more. I do not see why this figure would not hold up as long as your other [fol. 6567] figure holds up.

Q. Then you cannot state, in days or months or years, can you?

A. No, I say as long as conditions remain relatively as they were here, this figure holds.

Q. How long do you think we may expect conditions to remain as they are, inasmuch as we must make a reasonable [forecase] in the future?

A. Well, of course, on all operations of any kind for any industry for any company, you have got to go ahead operating, assuming that you will be able to meet conditions.

At the present time, I do not see how anyone can figure that they can see much more than six months or a year ahead because the defense program is going to lead us to points that probably none of us suspect and make all kinds of changes and even though that is true, it does not negate, it seems to me, this study at all.

It is just one of those things under which a man has to operate. It makes the operations a little more difficult

and the figuring a little more difficult but we have to go on living just the same.

Q. Well, if we are going to put this study of yours to any practical use, Mr. Coffman, I assume from what you have said that we must make a new study similar to that [fol. 6568] which you have made throughout to get a new answer before acting on the matter in the question of rates in this proceeding, is that correct?

A. No, that is not correct, Mr. Littman, because I just got through saying this figure will hold up as long as a figure you get from your classical procedure will hold up.

If you say I should make another study in six months following my procedure, then I say you should make a study in six months following the classical procedure.

Q. Then this approach is no different from the classical method—

A. (Interposing) So far as the time element and being useful is concerned, not at all.

Q. Now, if I correctly understand this new theory of yours and it is a new theory, isn't it, Mr. Coffman?

A. I do not believe it is a new theory, Mr. Littman. Actually, I think I have been following the Bluefield Case and United Railway versus West and the Solar Electric Case and so on. If there is anything new about it, I think it is merely trying to reduce the thing to tangible form instead of just talking, and I tried to put the thing down so a person could see it in figures and charts.

Q. Then this study of yours is not new?

A. In its present presentation, I have never seen it [fol. 6569] set up in this form but, so far as the actual theory is concerned, I think I have just made a literal interpretation of those law cases I mentioned.

Q. Well, this approach is different from any heretofore used by any other witness, to your knowledge, in a rate proceeding, is it not?

A. From the standpoint of making it all in one collective parcel, I think perhaps that is true. From the standpoint of using a continuous graphic and statistical story is concerned, I think it is true, but so far as the various elements that have been taken into consideration, to the best of my ability, they are just the same elements, as I remember the Bluefield Water Case.

I do not think I took in any more or left out any.

Q. I was not talking about the elements that you claim you considered and which elements others have considered. I am talking about the approach, the method used to arrive at the results.

A. And the form of presentation?

Q. That is right.

A. Yes. I have never seen anything like this before, no.

Q. It is your own idea? A. That is right.

Q. And as you have heretofore testified, you do not [fol. 6570] arrive at a rate of return?

A. No, sir, I arrive at the dollars needed, as I say, to maintain the service to the public and the credit position.

Q. And those dollars remain the same regardless of the rate base that may be adopted by the Commission?

A. Yes, I think so, because you have here a property, a management operating the property. It takes so much for wages, materials, operating expenses and so on.

You must have enough dollars, then, to cover all of those items so that the service will be good to the public and also so you will have something left over for capital to meet the necessary capital requirements.

Q. And do I correctly understand that, in your opinion, Panhandle Eastern Pipe Line Company and its wholly owned subsidiary, Illinois Natural Gas Company, must have, as an irreducible minimum, annual gross revenue of $15,459,545, assuming that the present preferred stock is refinanced, or $15,520,855, assuming no change in the present capital structure, such sums to be available to meet operating expenses, taxes, current capital requirements and provide a reserve to restore invested capital after the gas reserves of the company are exhausted?

A. Yes, sir, so long as conditions remain relatively as they were at the time I made the study.

[fol. 6571] Q. And your ultimate conclusions in this regard are summarized in graphic form in Charts 36 and 37 of Exhibit 65, is that correct?

A. Yes, sir, that is correct.

Q. Now, in arriving at your conclusions as to the so-called "irreducible minimum of annual gross revenue", you made no examination of the books and records of the company, did you?

A. No, sir. In this particular case, I used the published annual reports of the company which were in our files.

Q. And you made no examination of the property itself? A. No, sir.

Q. You are not an engineer? A. No, sir.

Q. You are not a geologist? A. No, sir.

Q. You obtained your information, as you just stated, from the annual reports of Panhandle Eastern Pipe Line Company and the other companies with which it was compared and other public sources, such as records from the Bureau of Mines, Standard Corporation Records, and Financial and Commercial Chronicle, is that correct?

A. That is correct, yes, sir.

[fol. 6572] Q. Now, you undertook no investigation of the original cost or the value of the property itself?

A. No, sir.

Q. Nor have you related your estimate of dollars of gross revenue required to any value of the property claimed for rate making purposes, have you? A. No, sir.

Q. Now, Mr. Coffman, if this new method which you suggest is correct and proper, if the amount of gross revenue can be correctly and accurately determined by your method, then it would not be necessary to determine any rate base at all, would it?

A. It may very definitely be necessary from the standpoint of wanting to keep track of the figure and see what is going on so far as the invested capital of the company is concerned, but the figure that I have gotten is merely one which can be related to these other figures as a matter of checking other approaches.

I am not content to say "use this and none other", but I am perfectly willing to say this should be used along with others to keep the thinking straight.

Q. But you arrived at your "dollars needed annually by Panhandle Eastern to provide service to customers, a fair return to investors and restore invested capital when gas reserves are exhausted", without having first determined a rate base, is that correct?

[fol. 6573] A. Yes, but that does not mean that it was ignored altogether, Mr. Littman, as you know, because in the figures in operating expense you do have maintenance

figures, you have depletion and depreciation figures and so on which, after all, are related to the investment.

As we all know, gas reserves at one time for a company for example, can be estimated to last 75 years. When a person takes a new look, it may be 25 years.

In this particular case, we took what seemed to be a reasonable average of 25 years based upon fact that were available but we did not determine that upon an engineering or geological study.

Q. You do say you had a rate base in mind all the while?

A. I say in this case since I took the figures on depreciation and [depletion], except for the change that I have mentioned in regard to the gas reserves, putting them on a 25-year basis, those figures are related to the rate base.

I did not have to relate it because I did not audit the books nor make a depreciation study. I assumed that the figures published in the annual reports which are certified by reputable public accountants was somewhere within the realm of reason and I took those figures but, at [fol. 6574] the same time, depreciation is tied in with the tangible property, as you know.

Q. But you did not use a rate base in making your determination of the fair return, did you?

A. No, except that, as I say, in these deductions that you were referring to a little while ago, there are certain figures which are related to a base and those, of course, are used in the calculations for income here.

Q. And what is that base to which you have just referred?

A. In this particular case, they were the book figures as shown in the published annual reports.

Q. The investment—

A. (Interposing) As shown in the annual reports.

Q. In other words, you relied exclusively upon the investment in the property as reflected by the company's books, is that right?

A. No, I did not rely heavily but, in so far as a figure for depreciation or maintenance is concerned, those figures were taken from the annual reports of the company and

the reason that that source was used rather than company figures was that, so far as the investing public is concerned, they have only the annual published reports of the company from which to get information.

They cannot go to the company books so I wanted to [fol 6575] place myself in exactly the same position they were in.

Q. You were interested primarily in the investment in the property as reflected by the property accounts of the company?

A. I would not say that I was interested primarily in that because the whole business is wrapped up in one package. I do not see how you can separate it. When you talk about operating expenses, I do not see how you can separate them when there is service to the public.

When there are expenses, then you obviously are considering the public and, after all, of the total amount of the $15,000,000 I am talking about, three-quarters of it is wrapped up in service to the public.

There is only one-third of it that is wrapped up with the investing public, as a matter of fact, less than one-third, so I do not see how you say I lean heavily on the investing public and pay no attention to the consuming public.

Q. Am I correct in understanding that under the method that you used, you can arrive at the total dollars needed and so forth as used by you—

A. (Interposing) May I have that question read?

Q. I have not finished the question. Suppose I start over again and I will read the whole title.

Am I correct in understanding that under your method, it is possible to arrive at the "dollars needed annually by [fol. 6576] Panhandle Eastern to provide service to customers, a fair return to investors and restore invested capital when gas reserves are exhausted", without having first determined a rate base for rate-making purposes?

A. I think that is very definitely possible, yes.

Q. It is true under your method, is it not?

A. That is right.

Q. And if your method is correct and proper, you can determine the amounts of deductions from revenue, to wit,

the operation and maintenance expenses, the taxes and the return of capital when gas reserves are exhausted without an examination of the company's books?

A. I think so very definitely because I just cannot conceive that any company in this country today, whose books are certified by a reputable firm of public accountants, has anything in its published annual reports that is at variance or at substantial variance with the facts and, so far as the individual deductions are concerned, much of it is for various items that are in the nature of wages, payments for materials and so on and for which you definitely know, from the amounts paid out, what the sums are.

I do not see why you have to audit the books. They have already got a firm of accountants out there doing it and they have certified their statements. I do not know what good it would do for me to go all over that.

[fol. 6577] Q. You do not see any point to an examination of the books by the Commission for the purpose of ascertaining the propriety of the claimed expenses for operation?

A. Well, that is a different question, Mr. Littman. If the Commission has any question about the propriety of any items or the way any accounts were conducted, of course it would be the only thing to do, to examine the books.

In my particular case, obviously, that was not my assignment and I took the published annual reports which were certified by reputable public accountants as being reasonably close to facts but, if the Commission has any question about any of the figures, the only way I know to get it is to go to the company and get into the books.

Q. Mr. Coffman, you have a whole rate case, this entire rate case, within the confines of the first and last pages of your Exhibit 65, have you not? A. That is correct.

. . . . . .

[fol. 6578] Q. Mr. Coffman, I take it from your previous answers that you consider the method which you used to arrive at the dollars needed annually by Panhandle Eastern to provide service to customers, a fair return to invest-

ors and restores invested capital when gas reserves are exhausted was a fair, proper, equitable and correct method?

A. Yes. I go further than that, Mr. Littman, and say that it is really an [indispensible] part of such a study.

From an economic point of view I feel that a rate study without this is considerably inadequate.

Q. And you think that the use of the methods which you have employed which are set forth in Exhibit 65 can give the correct answer to the question of how many dollars are needed annually by Panhandle Eastern to provide service to customers, a fair return to investors and restore invested capital when gas reserves are exhausted?

A. Yes and, further, I say that without such study any other result that you get is still faulty for a lack of such considerations as I have made.

• • • • • • • •

[fol. 6579] A. I said that I had used, so far as the company was concerned and so far as companies with which this company were compared, most of those figures coming from annual reports come from certified statements.

Q. Well, now, will you refer us to the statement which you used for the company's figures for the year ended June 30, 1941?

A. On the table for Chart No. 13—that is at the end there, there is no page number on that—is presented a table captioned, "Panhandle Eastern Pipe Line Company, Consolidated Statement of Profit and Loss for the 12 Months Ended June 30, 1941", and the footnote there is from the company's report of June 30, 1941.

Q. Was that an audited report?

A. That particular statement may not have been audited because it was not an annual report, but my statement to you was that the figures came from annual reports.

If I used an interim figure, there is no annual report for that. I am not inconsistent in what I say.

Q. I wanted to be clear on the subject. A. Yes.

Q. You were not endeavoring to say that you used audited reports throughout but that wherever the interim figures were used those were not audited figures?

A. Those would not be the published annual reports, [fol. 6580] but I would like to enlarge my answer to point

out that I have considered, as you know, a number of years, full years, in comparisons here and those were from the annual reports in most cases and the interim statements are comparatively few in number.

Trial Examiner: May I suggest that you make careful reference to your exhibit numbers in your references? The last one I assume was to Exhibit 65.

The Witness: The last one was to Exhibit 65, yes.

By Mr. Littman:

Q. Well, now, Mr. Coffman, if your method is correct and fair and is the proper way of determining the required amount of gross revenue for rate making purposes, then we are simply wasting our time in this hearing going through the process of determining a rate base and determining the sums to be allowed as operating revenue deductions, are we not?

A. Well, of course, if I answer you "yes", Mr. Littman, it is a pretty strong statement and one that is so strong as that; it seems to me, should have some explanation.

I say this: That so far as I know the cases to date, anyway, have been predicated upon the old classical approach and if there have been inconsistencies or erroneous results gained therefrom; which there have, it seem to me, which accounts for the various cases now before the Com- [fol. 6581] mission, I should say that at this point perhaps it would be helpful to look at this kind of an approach.

I do not see how one can determine the final result without doing it. For example, to turn the answer around, if you will tell me whatever rate base the Commission has determined to set, I have no trouble, as you know, from my figures in determining what the rate should be.

In other words, if my figure is the best judgment that can be made on this particular thing of $5,064,824, if I know the base, it is a simple arithmetical calculation to find out whether that is 6, 7, or 8 or some fraction in between or lower.

Q. But, Mr. Coffman, assuming that your method is 100 percent correct and proper and fair, then there would be no need for the Commission to do anything but to accept your estimate of minimum gross revenue required for

Panhandle Eastern Pipe Line Company and adjourn these hearings without the necessity of determining a rate base and investigating the propriety of the various expenses claimed. Is that correct?

A. No, that is only partially correct. Let us put it this way: If the Commission had satisfied itself, to use your language, as to the propriety of the individual accounts in the company's books and after such investigation had [fol. 6582] found that those figures were proper throughout, then my answer is "yes, I think this is the answer" and it would continue to be the answer except if in your investigation you found this account or that account improper as to some of its contents.

Otherwise, I say this is the figure.

Q. In other words, your study is subject to check with respect to the accuracy as to the amounts of deductions from revenue which are assumed by you in your exhibit?

A. Well, let's use this phrase, it is so in so far as the deduction is applied to the Property Account.

In other words, if the Commission would study the Property Account and find that the figures upon the books or later contained in the annual report were definitely about as accurate as you could get and the calculation for depreciation based thereon was right, then my figure stands.

Q. Then, original cost or prudent investment would be accurate from your point of view, would it not?

A. Well, I would say that both factors have to be considered very definitely. The original cost, presumably, has been accumulated on the books. Also, for a period of time of the company's operations there have been additions to surplus which are, also, a part of the accumulation of earned surplus.

The prudent investment theory, so far as I see, I con- [fol. 6583] sider when I talk about the capital markets, because there I am trying to ascertain what people reasonably, under the facts, feel they could pay for a particular security that was issued, which is, after all, representing the capital behind all these assets. I think they both have to be considered.

Q. Well, are you sponsoring the prudent investment theory by this method?

A. I am sponsoring my theory and nothing else, Mr. Littman. That is about the way I would like to put it. I did not make an original cost study but I did make this study and so far I am willing to defend it.

Q. If the company's accounts, as shown on the books, property accounts reflect no water, then those accounts would reflect the original cost, would they not?

A. No, there is a qualification on that statement from an accounting point of view. There are certain items, as you know, in the construction of any property or plant wherein there may be a question at a given time as to whether you will capitalize the item or whether you will charge it to operating expense, and there may be some place along in any company where certain items were capitalized and certain were not.

If a policy had been followed throughout which in its inception was believed to be sound and henceforth had been [fol. 6584] followed consistently, I would say yes, but if there had been places along the line where at one time certain things had been capitalized and other times where they had been charged to expense, I would say it might be worth an investigation to see.

Q. With those exceptions which you have named and which are, for the most part, minor, your answer to my question would be yes? A. Yes, that is correct.

Q. Well, are we together on this: That under this method that you have presented in Exhibit 65 you determine the amounts of dollars needed annually without the use of a rate base?

A. Well, I do not think that is a fair way to put a question for this reason: A rate base, after all, is the sum total of dollars that go into the property and upon that certain [deductible] items such as depreciation, depletion and maintenance relate to that base and yet those items are not balance sheet items but they are operating statement items.

To the extent that those items are included as deductions, it seems to me that you cannot say "with no relation to a base"; you have to qualify it, at least to say to those de-

ductions that were made upon the Property Account, property, as I use it here, taken from the statements.

[fol. 6585] Q. With those exceptions that you have named, there is no rate base utilized?

A. That is right and, as I say, other than those exceptions I do not need one. If you will tell me what the base is, I will tell you the rate.

Q. And to the extent that you have utilized a rate base, as you have just described it, you have utilized the investment in the property?

A. The investment in the property as recorded in the annual reports of the company.

Q. Yes. Is that right? A. Yes.

Q. In your opinion do those reports reflect something very close to actual legitimate investment in the property?

A. Well, so far as I know they do, Mr. Littman, but as I say my answer is not predicated upon an audit or engineering investigation. I have made the assumption that, the reports having been audited, the figures were reliable and I have so accepted them.

Q. In order that there be no misunderstanding on this score, Mr. Coffman, am I correct in understanding that we are agreed that if in these proceedings it should be established that any of the figures upon which you relied for "operations and maintenance", "taxes" and provision for [fol. 6586] amortization are shown to be less than the amounts which you show in Chart No. 37, then the amounts would have to be reduced accordingly, would they not?

A. Yes, if by an investigation that you make you find any variation, of course, it will make a change.

Q. And that would, of course, reduce your "Total Dollars Needed" accordingly?

A. If you change one variable, you change them all.

Q. So your answer to my question is "yes"?

A. That is right.

Q. A moment ago I used the term "amortization". I was referring to the figure of $2,541,034 shown in Chart 37 of Exhibit 65 which is labeled "Return of Capital When Gas Reserves are Exhausted".

Did you so understand me?

A. Yes, I did.

* * * * * * * *

[fol. 6587] By Mr. Littman:

Q. Now, you show on this chart that $2,541,034 is required annually to return the invested capital to the investors when the gas reserves are exhausted. Is that correct?

A. That is correct.

Q. What is the amount that was charged for this purpose by the company in the year ended June 30, 1941?

A. The amount was $2,316,560, as shown on Chart No. 31 of Exhibit 65.

Q. In other words, your provision for amortization is $224,474 more per year than the amount which Panhandle Eastern Pipe Line Company charged on its books for depreciation and amortization for the year ended June 30, 1941. Is that correct?

The Witness: Will you read that statement, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: The figure should be $234,474. I think you said, $224,000. It is $234,474.

By Mr. Littman:

Q. Mr. Coffman, if you will look at Chart 37, you will note that your figure is for "Return of Capital when Gas Reserves are Exhausted", $2,541,034.

A. That may be a typographical error. Let me look at the table supporting that figure.

[fol. 6588] Your figure is correct. That is $224,474 and the figure on Chart No. 31 is a typographical error and should be stated as $2,541,034.

Mr. Wheat: Mr. Examiner, may that correction be made, that typographical error?

The Witness: It is the supporting figure, Mr. Examiner, on Chart No. 31, that is a typographical error of $10,000.

Trial Examiner: The correction may be made in the copies of this Exhibit 65.

By Mr. Littman:

Q. Am I clear in understanding that your provision for depreciation, depletion and amortization is $224,474 more

per year than that which Panhandle Eastern charged for those purposes for the year ended June 30, 1941?

A. Yes, that is correct.

Q. Now, will you please state how you arrived at this figure of $2,541,034 for depreciation, depletion and amortization?

A. That figure is explained in the statement opposite Chart No. 31 in Exhibit 65 wherein I state in the second paragraph:

I made no actual survey of the properties nor did I question the adequacy or inadequacy of the annual provision for depreciation, depletion and amortization, however, in order to determine the dollar amount that would be necessary to return capital to investors when the company's [fol. 6589] reserves are exhausted I adopted the assumption that the company's reserves would last for an additional 25 years as indicated by Ralph E. Davis in Registration Statement No. 2-4579, filed November 18, 1940, and computed by a straight line method an annual provision necessary to return $63,775,839 of invested capital over such period.

Mr. Wheat: Pardon me, Mr. Littman. I believe that the witness ought to recalculate that amount.

We have been trying to calculate it and I do not believe that there is that error that he just mentioned. I think we ought to be sure as we go along. I think this is a mere matter of arithmetic.

By Mr. Littman:

Q. Mr. Coffman, perhaps this would be helpful, suppose I tell you my understanding of the figures and then you tell me whether I am correct or not. A. Yes.

Q. In arriving at the figure of $2,551,034 shown in your Chart No. 31 you used as the invested capital the sum of $63,775,839. A. Yes.

Q. And obtained the amount of dollars for amortization by dividing 25 years into the sum of $63,775,839. Is that right? A. That is right.

[fol. 6590] Q. Now, is it correct to say that your $63,775,839 represents the invested capital based upon your proposed changed capital structure?

Mr. Wheat: May I suggest, Mr. Littman, that the witness look at Chart No. 36 as well as Chart No. 37 in connection with Chart No. 31 and, I think, if he then will divide his figures, he will find that the correction heretofore made should not have been made in Chart No. 31.

The Witness: Yes, that is correct. On Chart No. 36 the assumption is made that there is a refinancing of the preferred stock.

By Mr. Littman:

Q. Yes.

A. And on that figure the item captioned "Return of Capital When Gas Reserves are Exhausted" is $2,551,034.

Q. Now, am I also correct—

Mr. Wheat: (Interposing) Pardon me, I think the witness still had a part of his explanation to finish and there is another figure on the text in reference to Chart No. 31 that he ought to explain at the same time.

The Witness: To continue, the figure on Chart No. 37 of Exhibit 65 is calculated on the basis of the present capital structure without refinancing the preferred stock, so that the item "Return of Capital When Gas Reserves are Exhausted" is correctly stated in the amount of $2,541,034, [fol. 6591] so that the statement that you make about the overage of one figure against the other would apply if you were talking about Chart No. 36 and my figure, as I originally gave it, would apply if you are talking about Chart No. 37.

Mr. Wheat: In that connection, I wonder, Mr. Coffman, whether you hadn't better check the figure in the text with reference to Chart No. 31 so that we will be sure that we have the correct figure.

The Witness: Yes, sir.

Well, there the figure is stated in the last full paragraph in the fourth line from the bottom, that the estimate of $2,511,034 as the annual amount necessary to restore to investors when the reserves are exhausted should be $2,551,034 as shown in the specific Chart No. 31.

Mr. Wheat: May that correction be made, Mr. Examiner?

Trial Examiner: Those corrections should be made in the exhibit.

. . . . . .

By Mr. Littman:

Q. Well now, am I correct in understanding that you arrived at your sum of $2,541,034 shown in Chart 37 and called there "Return of Capital When Gas Reserves are Exhausted" simply by the dividing 25 years into the sum of $63,525,839 of invested capital?

[fol. 6592] A. Yes, sir.

Q. Now, will you please turn to Chart 26 and state whether that chart shows the invested capital figure of $63,525,839 which you used for purposes of arriving at the amount of amortization? A. Yes, that is the figure.

Q. Now, this $63,525,839 figure which you used for your amortization basis is simply the total of all of the outstanding bonds, preferred stock, common stock and surplus, is it not, as of June 30, 1941?

A. Yes, what we have termed the "Invested Capital" as of June 30, 1941.

Q. Well, what amount of earned surplus is included in that $63,000,000-odd figure?

A. Well, I cannot give you the breakdown figure. I have the table which supports Chart No. 26 shown at the end of the Exhibit No. 65, but there the figure is grouped.

Mr. Wheat: I have here the report from which the witness obtained that group figure from which he can obtain the breakdown which is not shown on this chart, if you would like to have him do that.

Mr. Littman: It is perfectly satisfactory for the witness to make reference to any working papers to refresh his recollection.

(A document was handed the witness.)

[fol. 6593] Mr. Culton: The source of it, Mr. Littman, is shown at the bottom of the table, Chart No. 26, from which he made his computation.

Mr. Littman: I am quite certain that the same figure can be obtained from Exhibit 48, Page 2.

Mr. Wheat: I feel sure that is correct.

Do you have that figure now, Mr. Coffman?

The Witness: Yes, I have it.

Mr. Wheat: What is it?

The Witness: $9,074,122, which is calculated by taking from the condensed consolidated balance sheet as of June 30, 1941, unaudited, of the Panhandle Eastern Pipe Line Company and its subsidiary company's common stock in the amount of 807,367 shares issued and shown on that balance sheet as $20,184,175, subtracting the latter amount of dollars from the total figure, $29,258,295, which shows the $9,074,122.

In other words, I have eliminated the common stock figure at its book figure.

By Mr. Littman:

Q. The surplus shown on Page 2 of Exhibit 48 in Line 42 as of June 30, 1941, is $9,074,120.08.

A. That is correct. I said $122, it is $120, that is correct.

Q. Now, in your opinion, can the amount of depreciation, depletion and amortization be accurately and correctly determined simply by dividing the total invested capital by a given number of years?

[fol. 6594]

A. Well, so far as I know, Mr. Littman, that is the way it has always been determined. So far as your statement is concerned, it is dividing one figure by another.

Now, as to whether you divide by 25 or 30 or some other figure, that depends upon the most competent person's judgment who does the job to tell you what the years are.

In this particular case I have assumed that Mr. Ralph E. Davis was one of the leading engineers in the country on this particular situation and I would accept his judgment as being about as good as any I knew.

I mean, after all, it is not just as if you have picked a figure out of the air. There was a thorough survey made and probably as important a statement as you can find, namely, a Registration Statement, and if that was his best judgment of a thorough and adequate study, I do not know any other figure to use for division.

Q. Well, is it your opinion that the proper way for determining the amounts to be allowed for depreciation, amortization and depletion is by dividing the total invested capital represented by the total of the outstanding securities and surplus by a given number of years?

A. Well, of course, talking about invested capital on [fol. 6595] that basis is about the same as talking in terms of a fixed property and equipment, and on that basis I do not see why, if the basic figure is accurate to begin with, the calculation would not be as reasonable an approximation or as accurate an approximation as one can make.

Q. But so far as you are concerned, the proper method is to divide the invested capital, as you have done in your Exhibit 65, by a given number of years.

A. That is one acceptable way. If you are questioning me now on various methods, there are other methods, but the straight line method is one acceptable way that has been used over the years.

Q. You consider the method which you have used as the most accurate one?

A. I think to date that it is as accurate as any other method that has been devised.

I, further, will go on and say that where the method has been used on that base it hasn't changed to some other in the course of the company's history.

Q. Do you think your method is the straight line method?

A. Well, ordinarily, I believe the phrase "straight line method" is applied where you will divide a base figure by a number of years and come out with the same exact amount per annum for the estimated length of life, yes.

[fol. 6596] Q. And the method that you have used is what you would call a straight line method?

A. Defining it as I do where, in terms of depreciation and so on, a straight line method is a procedure wherein you take the same amount at each year, that is it.

Q. Now, I believe you stated that you used 25 years in making this calculation because of a statement that had been made by Mr. Ralph E. Davis in connection with Registration Statement No. 2-4579 filed November 18, 1940, with the Securities and Exchange Commission. Is that right?

A. Yes, sir.

Q. Now, I believe the statement of Mr. Davis, upon which you relied, also appearrs in your Exhibit 65 in one of the early unnumbered pages of your exhibit which contains some text under the heading of "Synopsis of History and Development of Company" and under a subheading called "Property—Gas Reserves".

I believe it is the second unnumbered sheet of that text. Do you find the statement?

A. Yes, I have it.

Q. And the statement as shown there reads as follows:

"The combined gas supply controlled by your company in the Amarillo and Hugoton fields is, in our judgment, adequate to supply its present markets and any reasonably anticipated increase in the gas requirements of said markets for a period of more than 25 years."

[fol. 6597] Is that correct?

A. That is correct.

Q. Why did you use 25 years rather than a period of more than 25 years?

A. Well, because of the fact that you had to have a specific number of years in order to get an annual charge.

Since Mr. Davis had made that statement in terms of those years, I took that figure as being the one which apparently he felt could be a possible determination of exhaustion of reserves and since he mentioned no other figure I had no other figure to use.

Q. Certainly he indicated that the period was going to extend beyond 25 years, did he not?

A. Well, it may, I do not know whether it will extend one or five or what and because of the fact that he, himself, said 25, I stuck with his figure on the theory that he knew pretty much what he was talking about.

Q. Well, so far as you know, it may extend another 25 years, is that correct?

A. Well, it might but I have an idea that if he thought it would he would have said 50 years or more.

Q. Well, the purpose for which Mr. Davis' statement was presented would have something to do with that, would it not?

[fol. 6598] A. I do not quite know what you know. If he has made an engineering and geological survey, ascertaining to the best of his knowledge and belief what is the capacity of the reserves and their length of life, I presume it would not make much difference as to the nature of the study.

If he made the same kind of study, regardless of purpose he would get the same kind of answer if conditions had not changed.

Q. You made no further investigation of the matter of gas reserves other than to take the minimum period set forth in the Davis statement, is that correct?

A. We made no other study than exactly what is shown here, that is correct, and accepted the 25-year period as the basis of calculation.

Q. Are you aware of the fact that Mr. Davis has on occasion testified before the Securities and Exchange Commission that the life of these fields might extend as long as 50 years?

A. I do not believe that I have seen any such statements, no.

Q. Have you heard of any such statements? A. No.

Q. Would it make any difference to you if he had so testified?

[fol. 6599] A. Well, if to the best of his knowledge and belief he can give some specific years other than what I have here used, I would use that figure.

Q. You would revise your estimate?

A. Yes, if I had any better figures.

Q. You, of course, are not vouching for the accuracy of this 25-year estimate? I really should not call it a 25-year estimate. You are not vouching for the accuracy of the 25-year figure, are you?

A. I am using that figure and citing the source of it as the only figure that I had for the particular purpose since I had not made a detailed study myself, as I am not competent to make such survey.

Q. Mr. Coffman, isn't it true that, as has been the experience of the oil industry, estimates of natural gas reserves have increased as gas production has expanded?

A. Well, yes, the estimates have been increased. There have been new fields from time to time discovered and

there have been new methods of drilling, deep-well drilling and so forth which have in some cases given a larger supply, but, on the other hand, it is equally true that in places like Pennsylvania some years ago when they had gas there they were making unusually large estimates and suddenly the wells went dry and many investors lost large sums of money, so that it is one of those things, I believe, where [fol. 6600] you cannot reduce to a fixity at all because it is not known.

Q. Well, is the statement a correct one which I just made, to-wit, that, as has been the experience of the oil industry, estimates of natural gas reserves have increased as natural gas production has expanded?

A. Yes, I think that is very true, but I would want to qualify, again, the statement that even though there are those estimates we, also, know that reserves will exhaust.

Q. Mr. Coffman, is it correct to say that the question of over-all reserves need be given little weight for most companies in appraising the value of their securities?

A. Well, my feeling on that, Mr. Littman, is this:

The reserves of any natural resource have to be given weight, but in the last analysis those reserves are worth no more than the product can be converted to a tangible product and sold at a price on the market.

What that price will be remains to be seen. For instance, I know as an investment analyst that for many years oil companies have not been the most profitable companies and yet they have had hundreds of millions of barrels of crude oil in the ground.

The reason for that is that when they converted the crude oil to refined oil and gasoline and tried to sell it to [fol. 6601] the customer in the market, they wound up with prices that caused losses instead of profits.

The same thing goes for natural gas, so that the reserves in terms of M.c.f. is one thing, reserves of gas in terms of M.c.f. times a price is something else again.

Q. Well then, is the statement correct that I made a moment ago, that the question of over-all reserves need be given little weight for most companies in appraising the value of their securities?

A. It has to be considered very definitely and we do consider it, but in the last analysis in an appraisal of securities, it comes down in the investor's mind to whether or not the company earns or loses money. You cannot find many investors that are willing to invest in securities, even though a company has large reserves, if they cannot be convinced that such reserves can be pulled out of the ground and sold to the using or consuming public at a profit.

Q. Well, you still have not answered my question, whether the statement that I made is correct. Is it or is it not correct?

A. Well, the statement, to answer you directly, is what I have just given you, what we consider, but you say, "more or less" and I refuse to answer the question because I do not think it can be done that way without the explanation I have given you.

[fol. 6602] Q. If I would ask you the question this way, to answer true or false to this question, namely, the question of over-all reserves need be given little weight for most companies in appraising the value of their securities, would you say it is true or false?

A. Well, I would say that it was false if you wanted it on that basis.

Q. Isn't it a fact, Mr. Coffman, that Standard and Poor's, of which you are a Director and officer, has predicted a conservatively estimated life of at least an additional 40 years for the gas reserves of this country?

A. Well, I do not know the specific document to which you refer, but we have from time to time passed comments upon the life of reserves, yes.

Q. You do not recall the matter to which I just referred?

A. I do not know the particular statement because we are producing hundreds of bulletins, as you know, and there are statements from time to time in various of those.

I would not want to say that I remember the particular statement that you are talking about.

Q. Well, does your company, Standard and Poor's publish a document called, "Industries' Surveys, Utilities, Electric, Gas and Traction, Basic Survey of the Electric, Gas and Traction Industries"?

[fol. 6603] A. Yes, we produce that.

Q. What is the purpose of this survey?

A. Well, the purpose of that survey, the particular one you are referring to is classified as "basic", which means that we write that particular sheet once a year in which we try to summarize all the more available statistics on the industries that you mentioned, namely, natural gas, electric and so on, utilities for such use as can be made by the investing public or anyone that might be interested in such study.

Q. Well, do you [intent] this to be published as reliable information and, also, advice for the investors, is that correct?

A. Well, we believe, as we qualify there in our qualifying note some place on the bottom of the last page, I think it is, it to be reliable. We do not guarantee any of it because it comes from various and sundry sources, press releases and some field investigation on our part, annual reports, interim reports and so forth, so it is no better than the source, in other words, from which we took it.

Q. Well, the note to which you have referred reads as follows, "The factual information contained herein has been derived from sources which are believed to be accurate but is not guaranteed. Opinions and forecasts are based upon careful analysis but are, also, not guaranteed [fol. 6604] and are subject to change without notice."

Is that the statement to which you just referred?

A. That is the statement to which I just referred, yes.

Q. Well, with that qualification, do you believe what is written in these industry surveys, published by Standard and Poor's?

A. Yes, that is as good information as we have.

Q. Now, there really is not any essential difference, is there, between the sources of the data upon which your company as the publisher of the "Industry Surveys" relies and that upon which you have relied in this proceeding for the purposes of your study which is contained in Exhibit 65? Is that right?

A. Yes, there is one fundamental difference, because here, as I have stated, we have gone back in every case to the original published annual report or whatever it was, confining it to the Panhandle Eastern Pipe Line Company.

That is a broad case covering every single company and industry mentioned in there and is not confined to one given thing at all. The result is that when we do it on this basis we get an exhibit of whatever the number of pages are here, whereas you are covering three different industries with about a hundred or so odd companies in 10 or 12 [fol. 6605] pages. That is one way to look at the difference.

Q. Well, I am going to read from Page U-1 16, Standard and Poor's "Industry Surveys" issue of May 14, 1941.

This page has the heading, "Survey of the Gas and Traction Industries, Natural Gas". Then there appears another heading called "Reserves", and, also, a heading called "Estimates Increased".

This statement reads, "As has been the experience of the oil industry, estimates of natural gas reserves have increased as gas production has expanded."

Now, you have already stated that you agree with that statement.

A. That is correct.

Q. "The latest authoritative estimates of natural gas reserves in this country are around 100 trillion cubic feet distributed between the individual fields as follows:—"

Then, there appears a small tabulation in which the figures are headed, "Estimated Reserves, Trillion Cubic Feet", "Texas Panhandle and Oklahoma, 22.2, Kansas 18.0, California, 34.3, Gulf Coast and Louisiana 16.2, and Appalachian 7.0, Rocky Mountain 2.2, North Central 0.1, Total 100.0.

"On the basis of present consumption these estimates (which will doubtless prove conservative) would indicate a life of at least 40 years for the gas reserves. Thus, the question of over-all reserves need be given little weight [fol. 6606] in appraising the value of their securities."

Now, did you rely upon any of this information and data which I have read in arriving at your estimate of the 25 years as your period of amortization?

A. No, I did not and I do not think that has any bearing on this whatsoever. I would just eliminate that from consideration.

I say that for this reason: That in that particular case we are talking generally about an over-all industry and those estimates there come from here, there and you, from no individual, but they are just a figure that someone put out to shoot at.

In this particular case we concentrated on the Panhandle Eastern Pipe Line Company and we were trying to get references in every specific instance that applied to this company, and none other, where we were talking about the company and that is the reason we referred to Ralph E. Davis' statement in the Registration Statement mentioned because he, there, was not talking about the Amarillo and California and so on territories, he was talking about the Panhandle Eastern Pipe Line Company and that is what we are talking about.

What you find in there, what you have read, has nothing to do with this company, so I say eliminate it.

Q. You fail to see any significance or any relation [fol. 6607] I should say, between statements which I read and the problem of determining the period of amortization for Panhandle Eastern Pipe Line Company. Is that right?

A. Where we have good figures, by a reputable man, on this company I say that those figures should be relied upon rather than general statements in regard to the overall industry, such as you read from the service my company produces.

Q. Well do you know whether the Davis' estimate is based wholly upon the present reserves controlled by Panhandle Eastern Pipe Line Company and its vendors?

A. I was under the impression that the statements that he made there were such as to give him a reliable basis upon which to make a statement as to about the term of years Panhandle Eastern could see, so far as their own reserves were concerned.

Q. But you do not know, I take it from your answer, whether Mr. Davis based his estimate wholly upon present

reserves controlled by Panhandle Eastern and its vendors or not?

A. I am not sure on that point.

* * * * * * * * *

[fol. 6608] By Mr. Littman:

Q. Would it make any difference to you if you knew that Mr. Davis had based his estimate of "more than 25 years" wholly upon the reserves controlled by Panhandle Eastern and its vendors and had excluded from consideration the additional reserves which are available to [fol. 6609] that company, particularly in the Hugoton Field?

A. Well, Mr. Littman, on the basis of your statement I think we have to segregate two things. We have, first, as I understand it, the company which owns certain acreage and upon which estimates have been made as to M. c. f.'s that are available under the group.

Then, they are situated in a territory where there are many other hundreds of thousands of acres in which there are reserves which at some time might be tapped if their own reserves go out, but to get at these other reserves they must do one of two things, either buy the acreage and carry it until they need it or else at the time their own reserve exhaust make some arrangement whereby they can buy their necessary gas requirements from someone else, but which in one case will give you a much higher capital investment.

If you buy or if the best you can do is to lease or pay for M. c. f. as you take it, additional operating expenses to buy the commodity will result.

I mean it is not as if suddenly, if the estimates are accurate, you can pick up so many more M. c. f. without any additional capital expenditure.

Q. Well, without intending any criticism of the company's method of operation, it is a fact, is it not, that there is available to Panhandle Eastern additional re- [fol. 6610] serves which may very well extend its life far beyond the 25-year period which you used? Is that correct?

A. Very definitely there are those acres and that available M. c. f.'s but the company cannot bring that into its

invested capital picture until it either lays out a large sum of money to buy the acreage or else contracts by lease to take over the acreage.

In any case your invested capital is going up by the amount of those items.

Q. Would your same answer apply with respect to the amortization of your main pipe line?

A. Well, in the case of the pipe line it seems to me that you have got a different situation. Where you are talking about the pipe line, you are talking about a mental situation and not a particular natural resource in the ground.

I do not quite get that comparison.

Q. You are dealing with dollars that have been invested in the main pipe line?

A. That is correct.

Q. Which, incidentally, makes up the larger portion of [you] invested capital?

A. That is correct.

Q. Is that right?

A. That is right.

[fol. 6611] Q. Now, if the life of these fields is going to extend beyond 25 years, you certainly would use a term larger than 25 years for purposes of determining amortization of the pipe line, would you not?

A. Well, that depends upon the circumstances. After all, where you build a pipe line and issue bonds, you have certain other calculations to make.

Q. Well, let's assume, in order that we may determine your method of procedure, that the life of the Hugoton Field was 50 years.

What figure would you use for amortization purposes in this case?

A. Well, that is partly determined, as I say, by the way the pipe line was financed. If the pipe line was financed by bonds, you have to have provisions in your bonds as to how the pipe line will be amortized and there is relationship of that to the gas supply and that depends partly on how the conditions are worked out at the time.

Q. In other words, if I correctly understand you, it is the provisions in the bonds that govern the period of amortization?

A. Well, not altogether. What I am trying to point out is that you have reserves on the one hand to consider, you have the pipe line as a different thing to consider and you are going to finance the pipe line.

[fol. 6612] Now, that takes money and this company got it from the public. Now, it depends upon conditions at the time the money is secured from the public as to what kind of provisions you have to put into the particular security to get the market to supply these funds.

Now, if the market at the particular time is such that the reserves seem adequate and you can see a full life for the pipe line, they will try to work out the amortization on that basis, but if they cannot they will make such adjustment in there as will give such added additional protection to bondholders as that given group of monied people, so to speak, require in order to put their funds in to finance the pipe line.

Those things are delicate matters that have to be worked out. They are not straight arithmetical matters, nor can a man sit down and tell you the answer right now.

There are many angles to that thing that have to be figured out and it is not a simple mathematical calculation.

Q. Well, yours is a very simple mathematical calculation in Exhibit 65, is it not?

A. Certainly, but I am not starting a new company here nor is the Panhandle Eastern. The company is in existence, the facts are all known.

Q. Do you claim any real accuracy for this figure of $2,541,034 for "Return of Capital When Gas Reserves are Exhausted"?

[fol. 6613] A. Let's put it this way: I stand 100 percent on that figure until someone produces an engineering estimate which proves conclusively that it is wrong.

Q. I would like to understand your reasoning in arriving at this figure. I am asking you to assume that the

gas reserves of the fields in which Panhandle Eastern is operating are going to last 30 years instead of 25 years.

What term would you then use for purposes of determining the proper amortization allowance?

A. Mr. Littman, I thought I had answered that by saying that if Ralph E. Davis or some other reputable engineer had stated some other figure than 25 as directly applied against the Panhandle Eastern, under my method I would have applied that figure.

Now, because of the fact that Ralph E. Davis said 25 years, I took it. He said, "25 years or more", but the fact that he said "25" indicated to me that he thought there was a possibility it might be fully exhausted by then, it was a possibility.

If that is the case, I think there is every argument for using that figure. If he had thought 50, he would have said 50 or more or 30; he did not say that.

Q. And for purposes of this study you were not interested in whether there were other gas reserves available [fol. 6614] than those reserves which Panhandle Eastern presently owned and controlled?

A. Mr. Littman, I know there are other gas reserves. I have been all through this territory, not making a survey, but I have traveled through the country and know something about its layout and so on.

My statement is that although these other acreages are available with their various estimated reserves, when the time comes that they are needed before Panhandle Eastern can have access to them their acquisition is going to cost this company more money.

Now, I say either they will go out and buy the acreage, in which case their invested capital goes up so you have more to amortize and you may come out with exactly the figure of $2,500,000 although you are talking of $125,000,000 invested capital instead of $60,000,000 or some other figure, or, if they do not go out and buy the acreage, they then must go out and lease it, in which case they have charges against operation for leases to acreage they are not now using which will cause their cost to go up.

Now, you cannot, it seems to me, talk in terms of those things and still be talking in terms of $63,000,000, because the $63,000,000 is no longer your base.

Q. Well, are you assuming that Panhandle Eastern is going to cease its exploration of gas after June 30, 1941, [fol. 6615] and stop leasing new acreage?

A. No, but by the same token I see no reason for the management to go out and take on another 100,000 or 500,000 acres with whatever the estimated M. c. f.'s are if they do not need the gas right now.

Why should they pay the additional cost of carrying all that acreage if they do not need it, unless they are fearful that next year or the year after their own reserves will be gone and they must tie this up before someone else gets that same acreage?

The only point I am trying to make is, Mr. Littman, that you cannot go out—all these acreages are around and the M. c. f. is there—and get it and still have $63,000,000 on the books.

You are going to have $63,000,000 plus.

Well, you tell me the figure and the years and I will divide that total and I do not know whether I get $2,300,000, $2,500,000 or what.

Q. Well, Mr. Coffman, if your advice is followed, the company is going to have $2,541,000 each year, a large portion of which is intended for the purpose of replenishing its wasting assets, is that correct?

A. That is correct.

Q. What does it intend to do with that money?

A. It eventually, when the time comes, whether it is [fol. 6616] that money or some that they have segregated for refinancing, will go out and buy such additional acreage as is necessary.

Q. And to the extent that $2,500,000 is returned each year under your method—well, of course, the property is depreciating to that extent each year, is it not?

A. It is being exhausted to that extent.

Q. It is being exhausted to that extent?

A. Yes.

Q. And this amount measures approximately the amount of that exhaustion, does it not?

A. As we have used it, it does.

Q. And so your rate base or your base of invested capital need not change at all through the years, need it?

A. Well, no, that is just absolutely not true.

Q. What is wrong with it?

A. This is wrong with it: The company, as I see it, is not static at one point and does not remain that way for 25 years, let us say, nor say, "Well, we have washed ourselves up, let's start over".

They are maintaining the property day in and day out as we go, price levels are changing, everything else is changing, they go over and buy some new acreage they are wanting to deal on.

They may take a few thousand acres and so on it goes day in and day out. It is not a question of where you have [fol. 6617] a situation there and we say, "Go for 25 years, if it is exhausted we will start clean and fresh". This thing goes on hour by hour during the working day.

Q. I think I understand your theory now, Mr. Coffman. Your amortization term is based, according to your theory, upon the amount of reserves presently controlled by a given company and not upon the life of the fields in which that company operates. Is that correct?

A. The amount of the acreage that is controlled by the company and the actual reserves is the only investment that that company has.

Q. The answer to my question is, yes that is your theory?

A. That is exactly right. I do not believe it can be otherwise. That is the investment of the company. I would like to amplify that answer on this score, again, to repeat myself, that you have, as you go on expanding your reserves although they are there, to make further investments and those investments may cost you more or cost you less and I do not think anybody can dodge that issue.

[fol. 6622] PAUL B. COFFMAN a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

By Mr. Littman:

Q. Mr. Coffman, at the close of the last session, we had been discussing your allowance for an annual provision to return capital to investors when gas reserves are exhausted which is shown in Chart No. 31 of Exhibit No. 65, and I believe you testified that the sum of $2,551,034 shown in Chart No. 31 as "Projected" annual amount, was obtained by dividing 25 years into the invested capital in the amount of $63,775,839, is that correct?

A. Yes, sir.

Q. And is my understanding correct that the $63,775,839 represents the total of the outstanding securities, to-wit, bonds, preferred stock, common stock and surplus as [fol. 6623] of June 30, 1941, under your assumption of refinancing?

A. Yes, that is correct, or as shown in Chart No. 27 of Exhibit 65.

Q. Before going to the next question, I would like to make certain my understanding is correct that this annual provision of $2,551,034 which you term "dollars needed annually by Panhandle to return capital to investors when gas reserves are exhausted", is for the purpose of covering the annual depreciation, depletion and amortization allowances?

A. That is generally correct. It is the amount annually that would be necessary to fully compensate capital for the amount invested in the estimated length of life which, in this case, was taken as 25 years.

Q. Well, you intended it to cover all three items which I named, to-wit, depreciation, depletion and amortization?

A. That is correct.

Q. When did Panhandle Eastern Pipe Line Company first [connence] its operations?

A. Well, as I recall, it actually commenced operations in the early part of 1934. The company was originally formed in 1932.

Q. I hand you a copy of Exhibit 49, which is the com- [fol. 6624] pany's income statement per books as presented

in these proceedings by Mr. Watkins, and ask you to refer to that for the purpose of refreshing your recollection on the subject.

A. Well, from this Exhibit 49 on Schedule I, it is indicated that there were revenues as of December 31, 1932, covering the period April 1 to December 31, of that year.

Q. That indicates, does it not, the company was operating at least for a time in 1932?

A. That is right. It was formed in 1932, but when you said "operating", I interpreted that to mean when it really got under way as a pipe-line company and I believe it was in 1934 that it really began to function.

Q. Panhandle Eastern Pipe Line Company was incorporated sometime prior to 1934?

A. I think I can give you the exact dates on that question.

Q. I believe you show that in your exhibit?

A. The company was incorporated in 1929, December 23, as the Interstate Pipe Line Company and it adopted its present title on May 9, 1930.

Q. At any rate, it is your understanding that Panhandle Eastern Pipe Line Company did not commence operations as a pipe-line company until 1934?

A. No, that was not what I meant. It was organized [fol. 6625] at the date I have read but, actually, for a company which was transporting gas long distances on a profitable basis, the company really did not get under operation, as I remember it, that is, fully, until 1934 and it was not until they had the Detroit contract in 1937 that it went on to a large-scale basis.

Q. Mr. Coffman, I hand you a copy of Exhibit 52 which was presented in these proceedings by Mr. Watkins, which shows the gas plant of Panhandle Eastern Pipe Line Company and subsidiary companies for the years 1930 through June 30, 1941.

What is shown on that exhibit to have been the amount of gas plant as carried on the books of the company in 1930?

A. A total of $44,432,256.86.

Q. What is the total for 1931?

A. $56,414,134.

Q. That indicates, does it not, that Panhandle Eastern Pipe Line Company had a substantial investment in gas plant in those early years, is that correct?

A. Yes, that is correct, but when I said "operations", I was looking at it more from the income standpoint and from the study we have made here when we started tabulating the facts in 1934.

Q. Mr. Coffman, when I used the term "operations", I had reference to that term as it is used in the Com-
[fol. 6626] mission's Uniform System of Accounts.

Now, there is not any question about the fact that Panhandle Eastern had commenced operations within the meaning of the Uniform System of Accounts as early as 1931, is that correct?

A. No, that is correct.

Q. Now, as of what date do you commence amortization of the total invested capital as reflected in Chart No. 31 of Exhibit 65?

A. You are referring now to the $2,551,034?

Q. Yes, sir.

A. In that particular case, the calculations that were made were to determine the annual amount of deduction that would be taken from gross operations and that figure is merely the annual charge, irrespective of what time it was taken.

I mean the annual rate, after all, so far as the operating statement is concerned, has nothing to do with the number of years that you are talking about, once you have discovered what the particular figure is.

Q. You use a period of 25 years, do you not?

A. I use that merely for the purpose of determining the $2,551,034 and then when I proceeded to make up the projected figure which is shown in Chart 37, that was the amount that was used as the deduction from gross revenue
[fol. 6627], for a return of the exhausted capital.

Q. But your 25-year period commences as of June 30, 1941, does it not?

A. Because it was based upon $63,775,839, which was the amount at that time under the assumption that I made.

Q. In other words, your term of years commences, as applied by you, to run from June 30, 1941, and your base to which you apply your years, which is the total invested capital as represented by the outstanding securities is also as of June 30, 1941, is that correct?

A. That is correct.

Q. Well, if you were making this study as of June 30, 1942, what would you do in respect to making your determination of annual provision for returning capital to investors when gas reserves were exhausted?

A. Well, I will answer that in two parts:

So far as the method is concerned, I would do exactly the same thing.

So far as the figures are concerned, I would want to review the situation. If I discovered that 25 years continued to appear to be the proper and most reasonable estimate to use, then I would use 25 years against the then-invested capital of the [of the] firm.

If it were different than the $63,775,839, I would take into consideration that portion, but it must be clearly [fol. 6628] understood that in the $2,551,034, there have been past accumulations, obviously, for the prior years in which the firm operated because, obviously, you begin to amortize from the time you have any exhaustible reserves which are actually exhausting as you proceed to operate, so that the $2,551,034 is not an entirely new figure.

It is merely a sum total of figures that you have gotten as the conditions within the business have changed from year to year.

In other words, as you add on more reserves and exhaust more reserves, naturally the figure changes, but a great portion of the $2,551,034 was already taken into consideration.

Q. And I understand you to say that you would, in making this study as of June 30, 1942, first do the same thing that you did here, namely, take the outstanding total invested capital as represented by the outstanding securities and surplus and divide by how many years?

A. I said 25 if that was still the best estimate that was available.

Q. You would still use 25 in 1942?

A. Well, no, there is where I apparently do not make myself clear.

I am saying that if from one year to another conditions in the business have changed so that you have added addi-
[fol. 6629] tional invested capital, that portion has to be amortized. Obviously, already in the $2,551,034, you have considered the capital that was existent up to June 30, 1941.

You have already established a rate on that so you continue to apply it and the annual rate for that portion will remain the same but, for the additional capital that was added between June 30, 1941, and June 30, 1942, you will make a study of that to see what the amortization rate is.

Q. Do I understand you would or you would not use the same method in 1942 that you used in your Chart No. 31?

A. Yes, I am using the same method but not necessarily the same figures for all of it because, if the total capital is changed, obviously, there is a new factor to be considered.

Q. Assuming there were no new estimates of gas reserves and no capital additions, how would you compute the allowance as of June 30, 1942?

A. If there had been no changes at all since I had started out with a straight line annual deduction of $2,551,034, there would be a deduction for $2,551,034 as of June 30, 1942.

Q. Now, in other words, it would be 24 years divided into the invested capital figure?

A. The net invested capital figure.

[fol. 6630] Q. That is, another way of stating what I understand you to say, is that you would deduct from the net investment figure the $2,551,034 which had been allowed for the year ended June 30, 1942.

You would deduct that from the gross investment figure and you would then divide the balance by 24, would you not?

A. From the property standpoint, yes, that is what it amounts to.

Q. You just stated that would be the way to do it from the property standpoint. What would be the way to do it from the standpoint of invested capital?

A. I do not recall stating at the time of the direct testimony, but there are two ways that one can calculate invested capital.

You can take the net property plus the intangibles and working capital, or you can take invested capital. In this particular case, I took the invested capital because, using the annual reports, it seemed to be a simpler way to proceed; so when you are talking about exhausting the property, you, as referred to in the language used as depreciation, depletion and so forth, apply that against property as such, and not against capital because, after all, as you take these deductions, the charge which you make is first converted into cash and from there is then converted into other assets as you continue as a going business and that [fol. 6631] continues on as long as the firm continues to exist.

Q. Are you or are you not claiming that the method followed by you is the correct method for rate-making purposes?

A. I say it is one very good method for rate-making purposes, absolutely. I do not want to be misunderstood on that.

Q. And you say it is proper and correct to do it in the way you suggest?

A. Yes, as a method.

Q. Well now, let us say that you are making this study, as of June 30, 1942. Assuming that the estimate of gas reserves which you used and adopted from Mr. Ralph E. Davis' study was the same, how would you go about making your allowance?

The Witness: Would you read that back, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: On that, if all factors remained identical, as I say, I have already, as of the date of this study which is a year preceding the date you are assuming, established an annual rate of $2,551,034, and having elected to take

a straight line deduction, that amount for that identical capital will remain the same for 25 years unless, in the meanwhile, new conditions developed where it would be indicated that the relationship of the figures changed and [fol. 6632] you would have to make a change in your accounting.

In other words, for example, suppose that we, after the tenth year, let us say in 1950, found that the reserves were all gone on this particular amount that was included in the $63,000,000.

Obviously, the accounting method would have to be changed at that point and adjustments to surplus made and so forth, to take into account that fact but, assuming the conditions are identical from which I start and assuming that year after year these reserves go on in the ratio of 1:25, then the amount is $2,551,034 for that amount of capital in the business as of June 30, 1941.

Q. Under the assumption which you just made, the investors will have received $2551,034 for the preceding year, is that correct?

A. Well, it really isn't that simple, Mr. Littman, because, as I have just tried to indicate, when you have a going concern, if you make deductions of $2,551,034, you do not take that out and pass it right back to the original people that invested the original capital, as you know.

The deduction, as I say, for all practical purposes goes through the cash account. That cash is reinvested in the business to keep it a going business.

Part of that cash may be for new equipment, new booster stations, new gas reserves, leases or acreage and so forth, [fol. 6633] so that no, they have not got it back directly.

All that has been done is to allow for it to keep this property going to cover the capital they originally had but, in any event, the investors who put money in this business certainly want to be assured that there will be sufficient assets there in some form to cover the amount of their original investment in what seemed to be the reasonable estimated life of the property when they first made the investment.

Q. Well, let me ask you this: Would it be proper, in making this study as of June 30, 1942, to do what you have done here, namely, to divide the total outstanding securities and surplus, meaning invested capital, by the remaining life, according to Mr. Davis' study and as interpreted by you of 24 years as of that date?

A. Well, apparently I am unable to get across to you a distinction that has to be made.

Q. You will help me a lot if you will state whether that is what you would do in June 30, 1942.

A. The only way that I can say that it is, is to say that, if every single condition and factor remained identical with June 30, 1941, I will say "yes", but that is an impossible situation or at least I think so.

Q. All right. You would then, under the conditions which you have described, divide the $63,775,839 of in-
[fol. 6634] vested capital by 24, is that correct?

A. No, that is not correct, because you have just already, in the first year, taken out $2,551,034, and you have said that the length of life is 25 years.

You are taking one-twenty fifth out of each year, so the second year you certainly could not divide the original amount of invested capital by 24 and get the same result.

Q. So you would deduct the $2,551,034 from the $63,775,839 in June 30, 1942, before you make your division?

A. That is correct.

Q. By the 24 years?

A. That is correct, but that still leaves the question wide open because it is not that kind of a situation and never could be unless you had a straight liquidating firm.

Q. I presume your answer would be the same with respect to the next succeeding year, being 1943, and you would then make the deduction of 2 times the $2,551,034 for the two years, is that correct?

A. That is correct.

Q. And then you would divide the balance by the remaining 23 years?

A. Yes, still qualifying such answer by the statement that assuming all conditions remain 100 percent identical throughout.

[fol. 6635] Q. And if you got down to the very last year of the purported life of this property, that is, down to

the 24th year, you would have only $2,551,034 left to be amortized in one installment, is that right?

A. If all conditions remained identical, nothing had been added or taken away from the property, that would be correct.

Q. And it follows that after ten years have elapsed from June 30, 1941, you would deduct $25,551,000 from your $63,775,839 and divide that balance by the remaining 14 years, is that right?

A. That is correct but I qualify my answer again to say that the assumption that you are making just is not in accordance with any of the facts and cannot be with a going concern.

It is impossible, so I do not see that the point you have been making is pertinent to the particular analysis and the method of approach that I have used.

Q. Are the deductions which I have suggested in accordance with the theory of straight line depreciation?

A. They are in accordance with that, but you have set up conditions which cannot possibly exist, namely, that all these conditions must remain identical, one year to the next.

Q. Do you mean to say that the straight line theory [fol. 6636] cannot be applied?

A. No, I do not say that at all, not in the least.

Q. Well, you do not deny that in each succeeding year you have got to make a proper allowance for the diminution in the property as represented by the annual provision to take care of the wasting away and the amortization of the property, is that right?

A. Yes, I agree with that.

Q. Now, will you tell us where you have made such a deduction in your calculation which is reflected by Chart No. 31 for any depreciation which has accrued on this property down to June 30, 1941?

A. I am not sure that I understand the whole of your question but, as much as I understand of it, Mr. Littman, the answer is this:

It seems to me that your question applies principally to the balance sheet, as I understand it, in which I think you are driving at the point that there has been a re-

serve for depreciation and amortization built up on whatever the invested capital was from the April date in 1930 over to June 30, 1941.

Now, the balance sheet item is one part of the equation but from the standpoint of Chart No. 37 which we have been discussing and the annual deduction of the $2,551,034, that is, from an operating income and expense point [fol. 6637] of view, wherein I was trying to determine the amount of dollars necessary that the management would have to have to render adequate service to the public and maintain the credit and that amount of $2,551,034 has already been explained as to calculation and would be the amount that would continue to be deducted.

In other words, I still come back to my original explanation that whenever you deduct from operating expenses any items which are in the nature of a return of capital, you do not actually, in most instances anyway, return that capital directly to the investors.

What you do is have that amount automatically flow through the cash account to be reinvested in the business and it is continuously being reinvested in the business so long as you have a going concern.

If you arrive at any point where you are then becoming a liquidating concern, presumably with no new investments, you proceed to pay out as quickly as you can wind up the business.

Mr. Littman: I am going to ask that the question be read again.

(Whereupon the question indicated was read by the reporter as follows:

"Q. Now, will you tell us where you have made such a deduction in your calculation which is reflected by Chart No. 31 for any depreciation which has accrued on this pro- [fol. 6638] perty down to June 30, 1941?")

The Witness: Then I will have to ask you, if you can, to elaborate your question, as to what your meaning is. If I understand your question to mean one has a reserve for depreciation, amortization and so on set up upon the books, the answer is "yes."

If you further mean has that amount or should that amount be deducted from the gross property, the answer is "yes", but those two answers relate to balance sheet considerations only.

I was not, in Chart No. 37, talking about the balance sheet. I was talking purely about the profit and loss or operating statement. I think I have answered your question directly, as I understand it.

By Mr. Littman:

Q. Are you suggesting that the company's operating statement and balance sheet cannot be reconciled for rate-making purposes?

A. Not in the least. I do not see that I even raised that question.

Q. In my opinion, Mr. Coffman, you have not answered my question. I asked you to point out where, in your calculation of this $2,551,034, the annual amount which you claim is required to return capital to investors when gas reserves are exhausted, I asked you where, in that simple [fol. 6639] calculation, did you make any deduction for the depreciation that had been accrued in the preceding years for that same purpose?

A. And my answer to you is that you are talking about balance sheet consideration, whereas I, in Chart No. 37, am talking about profit and loss considerations and I cannot show you in Chart 37 because there you talk about one year and one year only at a time, so far as these figures are concerned and which is true of any profit and loss statement, as you know.

Q. I take it your answer to me is that you cannot do that, namely, you cannot show me where you made any deduction for the preceding year's depreciation, depletion and amortization?

A. My statement is for this particular calculation there are certain operating expenses necessary to render the service, that is, the service to the consuming public and maintain the credit position of the company.

Those are purely operating considerations which are usual and always expressed in a profit and loss statement and each of the items taken there were the best estimate of the annual amount that had to be set aside to maintain

this service and maintain the credit and you cannot find, in Chart 37, any accumulations of anything just the same as you cannot find, in any profit and loss statement that I [fol. 6640] ever saw, any accumulations except those shown for the twelve months or except as the statement varied in the twelve months.

A profit and loss statement is not to accumulate anything except the current charges accumulated in the twelve months period.

Q. You cannot tell me wherein you made the deduction?

A. None was made in Chart 37 because here we are talking about the annual allowance in the profit and loss statement since this particular profit and loss statement covered the particular period of a year.

Q. Now, Mr. Coffman, as you have indicated, it would not be proper to, ten years hence, divide the total invested capital, as represented by the outstanding securities and surplus, by the remaining purported life of 15 years, is that correct?

A. No, that is not correct because—maybe your intention is all right, but I do not think your question indicates it—because I have said and I repeat again that the only way your statement could be true is if all conditions and factors remained identical but that is impossible in a going business and all I am trying to do, Mr. Littman, is to indicate that as you go ahead and you subtract, deduct something for amortization of capital in one year, if you trace that through the operating statement in any profitable firm, it is converted to cash. That is the first step.

[fol. 6641] Then the cash is used for operating purposes in the firm to make new capital commitments, maintain the property and so forth, so that, day in and day out, this thing is changing so that at the end of ten years, you do not divide by 15 because you do not have the same amount.

It is impossible in a going concern. It is just absolutely impossible.

Q. Well, are you suggesting that this method of yours of simple division of the remaining years in the total invested capital is not the proper method from here out?

A. I have not said anything like that up to the present.

Q. Let's see if I can understand you now.

What you did here in this proceeding was to take the total outstanding invested capital as represented by the outstanding securities and simply divide by the remaining number of years. Is that right?

A. Divide by the estimated life at that time, yes.

Q. Now, would you do that same thing next year or would you not, if you were making a study for rate-making purposes?

A. I think I have answered that question once before in these terms: That if next year came to pass and the best estimate of the length of life that I could get at that time was 25 years, I should apply 25 years against any [fol. 6642] increments which had been added to the invested capital from June 30, 1941, to June 30, 1942, but for that particular amount of invested capital which had already been on the books and remained on the books, there would be no reason to change the rate unless I found that the 25-year engineering estimate which was made originally was seriously at fault and I say that in a going concern, you must divide those two things because day in and day out there is additional capital worth in this investment:

It was $44,000,000 one year and it was $55,000,000 the next and it is now up to $63,000,000. There are items being added all the time.

Q. And you would, next year, make a deduction of $2,551,034 under those conditions, is that right? Would you or would you not, under the conditions which you assumed of no change?

A. Just a moment. I would deduct the $2,551,034 as a deduction relating to the original $63,775,839 but, if from June 30, 1941, to June 30, 1942, there had been changes in the business so that the invested capital was then, let us say, $65,000,000 in round figures, that additional $2,000,000 which had gone into the business would be computed like we computed it originally, that is, so far as the method is concerned.

We take a look at that particular portion and if the best [fol. 6643] engineering estimates you could get were still 25 years, all right. I would start then and take one-twenty fifth but if in that one-year interval, engineering estimates indicated there had been a change so that it should be one-fifteenh or one-thirtieth, let us say, I would use that and I believe that is in keeping with sound accounting procedure.

Q. I would like to discuss with you for a moment the theory of straight line depreciation, Mr. Coffman. Have you applied the straight line method of depreciation here?

A. In this particular case, so far as the return of capital is concerned and so there won't be any confusion in phraseology, I think I understand accounting language but maybe I am wrong; but the phrase "straight line", whether applied to depreciation or anything else, as I understand it, means that you know the depreciable asset value at hand.

You make an estimate as to its length of life. You divide that value by that length of life and thereby get an annual deduction which is the same figure year after year for the estimated length of life.

That is called a straight line method. That is what I understand to be a straight line method.

Q. Now, assuming that a property commences operating with $35,000,000 of invested capital and it has a 35-year over-all life, am I correct in stating that when that property is 10 years old, it has a remaining life of 25 years [fol. 6644] and that under the straight line method, $10,000,000 will have been accumulated in its reserves?

A. That is correct.

Q. And when you come to the tenth year of the life of this property, you use what figure for purposes of making your division?

A. Well, Mr. Littman, it all depends. I could do one of two things and what is commonly done in all accounting practice that I know about is, you set up on your books an asset account originally which had $35,000,000 in it and, in order that you can keep track of that accurately throughout the 35 years, the $35,000,000 remains as a debit to that particular property account.

In the meanwhile, you take out the one-thirty fifth each year and put it in a reserve. For all practical purposes, that reserve is merely the credit side of the property account.

However, it is not shown that way. It is shown on the liability side usually of a statement or, more accurately stated, it is shown as a credit to a reserve account and that reserve, however you show it, whether you show it on the liability side or whether you show it as a deduction on the asset side makes no difference but, nevertheless, you take one-thirty fifth of that original amount until the original amount is exhausted.

[fol. 6645] Now, if you wish to call it net and make the deductions each year, then the number of years you go you will divide the net amount by one—whatever the number of years left to go is—although I have seen very few situations where anybody has handled their accounts that way.

Q. Well, Mr. Coffman, when the property is 10 years old, you certainly do not divide the original amount of $35,000,000 by the remaining life of 25 years, do you?

A. No, you established a rate when you started and if the rate proves to be accurate through the years, you continue to use it.

The only time you would ever change it is when a new engineering investigation would indicate that the original estimates are all wrong and then at that time surplus accounts are adjusted, reserve accounts are adjusted and a new rate is determined for the then net balance remaining in the asset account.

Q. Now, under my hypothetical case of a $35,000,000 invested capital at the beginning and an over-all life of 35 years and under the further assumption that the property is now 10 years old, you are still deducting $1,000,000 a year, is that right? Can you answer that, yes or no?

A. Thirty-five years, $35,000,000, $1,000,000 a year, that is right.

Q. Yes, and the balance of the property account, that [fol. 6646] is, the net investment as of that 10th year is $25,000,000, is that correct, under the calculation?

A. At the end of 10 years, $25,000,000 balance, that is correct.

Q. Would it or would it not be proper, Mr. Coffman, to divide the original amount of $35,000,000 in the 10th year by the remaining life of 25 years?

Can you tell me whether it would or would not be proper to do that?

A. You mean divide the original amount by the number of years then left to run?

Q. Yes.

A. No, it would not be proper.

Q. That is what you have done here, in effect, haven't you, Mr. Coffman?

A. No, not at all and I will take your own hypothetical situation and show you why, I think.

If you have $35,000,000 that you invested originally in a property, as I say that goes into a property account as a debit to some particular asset account.

At the end of 10 years, so far as that particular original $35,000,000 of property is concerned, if the rate of $1,000,000 per annum proved to be correct in each of those ten years, $10,000,000 has gone. It has been exhausted.

However, when you make a deduction in your operating [fol. 6647] statement for amortization or depreciation and such business is operating at a profit, you have a sales account, as you know, which gives you gross revenue.

From that you make deductions. You have a resulting profit. The gross revenue was an account receivable. The account receivable was paid in cash. The cash was invested in other various means of operation so that, as this firm went on, whereas you say they have only $25,000,000 left, it is very possible and most likely that by the flow of that cash, the $10,000,000 has been reinvested in the property so that there is still $35,000,000 worth of property in that business and not $25,000,000 and that belongs to the original owners and I contend that is 100 percent sound and is the way every business in this country is operated.

Q. What you are saying is that the company is, in reality, entitled to have amortized the net investment in

property used and useful in the public service, is that right, over the remaining years?

The Witness: Will you read that question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: I think, if I can state what I believe to be what you are getting at it will help me if I am correct in this understanding.

If you mean to say that the original investors in this [fol. 6648] property put in $35,000,000 and that when depreciation has exhausted the $35,000,000, irrespective of whether or not the items that went through the reserve are reinvested in the business, that the original investor no longer has any equity in the business, then my answer to you becomes very clear.

After all, the original capital was supplied by bonds. So far as I am concerned, that is a contract with the public. It was done by preferred stock which is also a contract with the investing public and the common stock and if those securities were sold to the public on a basis where it was not understood that, at the end of 20 years, they were to be paid off and everybody would be free and clear, I say that the theory does not hold unless it can be established in court that that is perfectly all right.

As I understand, most of these investments that are made the people put in the money with the understanding, except where it was a bond which said, "At the end of 50 years", or whatever the maturity date was, that they would be paid off, all of the other investment of the common stock and preferred stock and so forth was to stay invested and as the items go through reserve and are reinvested, that is exactly the contract that those people made.

Until it can be squared off that the preferred and common holders are paid and they are told, "Here is your [fol. 6649] money back or until you have the money back there is no investment", I do not think there is a leg to stand on.

The capital is still there. That is my contention and although you have a reserve, it was reinvested. It is a work-

ing asset in the business and a working capital in the business.

The people still wanted their interest. They wanted a common dividend or preferred dividend and they have received that but that was not a return of capital and the only place that would be true would be in sulphur companies where they have followed the accounting procedure of an exhaustible asset and they are told, "This dividend you are being paid, one part is return of capital and the other is by way of income" and if you have not stated that, it seems to me it has to be settled in the courts before you can start doing it.

Q. Are you assuming that every dollar of this depreciation reserve which has been accumulated by Panhandle Eastern Pipe Line Company has, in fact, been reinvested in the business?

O. It is all in the business right now, Mr. Littman.

Q. Some of it is in the bank, isn't it?

A. There is some cash in the bank but every business has to have cash in the bank to operate.

Q. Some cash—do you know how much cash there was [fol. 6650] as of June 30, 1941?

A. I think so. Yes, the company, as shown in the condensed consolidated balance sheet as of June 30, 1941, and this is the unaudited statement of Panhandle Eastern Pipe Line Company and its subsidiary company, had cash of $7,042,691.65 and special deposits of $1,489,127.23.

That, let us say, is a total of around, well, about $8,550,000 in round figures.

Q. Now, it is your testimony that the investor is entitled to have the amount of $8,500,000 of cash in the bank amortized, too? Can you answer that yes or no and then explain it, if you wish?

A. I will answer "yes" on this basis, absolutely. This cash is not as if it were a gold bar down in the basement of the Federal Reserve System which we can plant there and forget.

They have this amount of money but deductions are being made every day and additions are being made every day. For a firm that has an invested capital and doing ap-

proximately $15,000,000 of business, I say has to have this much cash.

Further than that, this company has mortgage bonds of one kind or another outstanding. That is merely a working asset.

Unless person or the Commission can show me that amount is excessive, I say absolutely it is a working asset [fol. 6651] and should be included in the figure.

Q. And an allowance should be made to amortize this $8,500,000 of cash in the bank over the remaining 25 years?

A. Because—

Q. (Interposing) Is it "yes, because"?

A. Yes, because it may be next week I am ready to put in a new pipe line or a new looping of the pipe line. It may be in a booster station.

Q. And it may be declared in dividends too, is that right?

A. All of the corporate assets which are liquid can be declared in dividends, if the management believes that the conditions of the firm are such that a dividend is warranted and the amount they select seems to be reasonable.

To put it the other way, the figures I have used for capital requirements is going to be even higher because the people do not invest their money to get no return.

If the Government wants to finance these utilities so that the public won't have to do this, that is another matter. That is something else again.

Q. Do you think that dividends should be amortized too?

A. I do not see what your question means. Dividends are a cash outgo and a company that has mortgage bonds outstanding of the amount that you have here, has preferred stock [outstandin] in the amount you have here [fol. 6652] and common stock, certainly if it wishes to maintain its credit to the public must conduct its operations that there will be something available by way of current earnings from time to time to meet the interest unless they want to default on their securities, to meet the dividends on their preferred stock unless they want to

go into arrearages and something for common and that is not an unusual corporate practice in any man's language.

Q. It is your testimony, I take it, that working capital must also be amortized over the purported life of the gas reserves?

A. I say that the amount of invested capital which is represented by money put in by investors or someone must be accounted for and, in order to maintain your credit position and to get it back, these various items must be taken into consideration.

Q. And then your answer to my question is "yes"?

A. On the invested capital, yes.

Q. And is your answer "yes" on the working capital, that it must also be amortized?

A. It is not in the invested capital, Mr. Littman. In invested capital never, to my knowledge, there is never included the sum total of working capital.

After all, it is current assets against current liabilities, [fol. 6653] whereas the invested capital is bonds, preferred stock and common stock plus surplus.

Q. Didn't the investor put up money for working capital as well as for the other property?

A. He did and originally it was accounted for, but as you go along and make earnings or make losses, those proportions are changed and you have to take that into consideration. It is not a status quo figure at all.

Q. Whatever working capital is included in the invested capital figure of $63,775,839 which you used, you have provided for amortization, have you not, to that extent?

A. To the extent that it is there, I think I can make a calculation to find out what it is, as a matter of fact.

Q. All right.

A. On the table for Chart No. 11, I show there the calculations related to your question, up through 1940 from 1934, and show the property, plant and equipment of $64,854,956 less the retirement, renewal, depreciation, amortization reserves of $9,189,501, giving the net property of $55,665,455 and then the intangibles which include the gas sales and purchase contracts of $2,051,434 and below, the net working capital which amounted to $2,205,097, giving the total invested capital of $59,921,986.

Now, to the extent that the net working capital is in-
[fol. 6654-55] volved, all right, but that is not the $8,000,-
000-odd you were talking about in cash.

[fol. 6656] Q. Well, what was the net working capital figure as of June 30, 1941? I think your table for chart No. 14 will show that.

A. The net working capital as of June 30, 1941, was $4,661,875.

Q. And you are amortizing, in your calculation, that amount of net working capital which you just named; is that correct?

A. Yes, I am, because I say that that is absolutely needed to keep the wheels turning in this business and maintain it as a going concern, and it represents active invested capital.

Q. And in addition to amortizing the amount of $4,-661,875 of working capital, you also require a return upon it, do you not?

A. What kind of a return? Do you mean a return of it?

Q. A return upon it. That is, you tell us how much money is required to raise securities to cover that amount as well as the other amounts in the property accounts.

A. Yes, I do, because although that may be liquid, Mr. Littman, it is just absolutely as essential to keep this business going as a booster station or the eight hundred or more miles of pipe line or the gas reserves down here. The gas reserves without the pipe line and without this par-
[fol. 6657] ticular margin of working capital couldn't function.

Q. Well, doesn't it strike you that $4,661,875 is a rather large amount of working capital for a company of this size?

A. Why, as of June 30, 1941, I wouldn't say so. At that time there were questions, for example, about further needs for looping the line, other expenditures that were going to have to be made, the question of the Michigan Gas Transmission system and so forth. It doesn't seem to me that that is anything out of line at all, included in current working capital requirements. Further than that, I point out that as all balance sheets show, they give you the figure as of a given moment of time. As of June 30, 1941, it might have been $4,661,875.

Q. Well, it was.

A. It was, and by July 15th, it might have been $1,500,000 or $6,500,000. In other words, it is a going concern. There are these debits and credits to the cash account, so you can't say that it is static.

Q. But your amortization figure is predicated upon the use of $4,661,875 of working capital; is it not?

A. It is based upon a total of $63,775,839.

Q. Which includes $4,661,875 of working capital?

A. That is correct. And I say that that is absolutely necessary, because that net working capital is just as indispensable as bricks and mortar to a booster station or a pipe in the pipe line or gas in the reserve.

[fol. 6658]

Q. Now, you claim that the company is entitled to earn a fair rate of return upon that amount of $4,661,875 of working capital and you have made such provision, have you not?

A. I say that they have to make a return on that basis in order to keep the wheels turning in this business and offer adequate service to the public and maintain their credit position, yes.

Q. Do you know Mr. Sperry, treasurer of Panhandle Eastern Pipe Line Company?

A. Yes.

Q. Have you ever discussed the subject of working capital with him?

A. No, I have not.

Q. You didn't ask him what he thought was the proper requirement for working capital for Panhandle Eastern Pipe Line Company, did you?

A. No; as I said originally, I took all of my figures directly from the published annual reports of the company with the exception of the June 30, 1941 statement which was published from an unaudited statement, because it was an interim statement.

[fol. 6659]

Q. How much weight do you attach to Mr. Sperry's opinion on the subject of the amount of working capital required by this company?

A. I would attach considerable weight to it. After all, Mr. Sperry is an operating official and knows the ins and outs of the business.

Q. If I were to advise you that Mr. Sperry has testified in these proceedings that the proper amount of work-

ing capital for purposes of these proceedings is $1,519,000, would you be willing to reduce your amortization allowance, would you want to make a revision of your estimate?

Mr. Culton: Just a minute. We object to that question because it is not in accordance with the facts.

Mr. Littman: What is wrong with it?

Mr. Culton: Because he testified that that was the minimum, the absolute minimum and you used the word "proper." That is the difference.

Mr. Littman: Well, that is the amount that he testified should be allowed in this proceeding.

Mr. Culton: No; he testified that that was the absolute minimum. He did not say it was the proper amount. That is my only criticism of it.

Mr. Littman: Of course, the record will speak for itself. Of course, you would like to get 20 million if you could get it. But he said that that was the amount that they required for their purpose, and in my judgment, [fol. 6660] which, of course, is not testimony in this case, that is plenty high.

By Mr. Littman:

Q. By the way, your testimony also has the term "irreducible" in it, doesn't it?

A. That is right.

Q. Well, your irreducible minimum is what, for working capital?

A. I don't know what that is. I say this: that the $15,520,855 based on the present capital structure as shown in chart 37 is the irreducible amount of operating revenue that the company must have, or $15,459,545 based upon the refinancing of preferred stock as shown in chart No. 36 is the irreducible minimum that the company must have and in either event so far as the credit position of this company is concerned, it must have for current capital requirements an irreducible minimum of $5,064,821 on the present capital structure basis or $4,993,511 based upon refinancing of preferred stock, and I have not made any statement as to detailed items other than that, but I have said that those were irreducible minimums.

Q. Well, of course, your $2,541,034 shown on chart No. 37 for return of capital when gas reserves are exhausted, is one of your "irreducible minimums"; is it not?

[fol. 6661] A. That is the invested capital of the figure which has been mentioned, $63,775,839.

Q. And it includes 1/25 of the four million odd dollar figure of working capital which you have used for purposes of this proceeding, does it not?

A. That is correct.

• • • • • • • •

By Mr. Littman:

Q. Mr. Coffman, does Panhandle Eastern Pipe Line Company provide for any amortization of working capital on its books?

The Witness: May I have that question read?

(The pending question, as recorded above, was read by the reporter.)

A. I don't know whether it does or not, Mr. Littman, because, as I have said to you, I haven't examined the company's books, I am just taking the annual reports.

By Mr. Littman:

Q. Do you know of any natural gas company that provides on its books for the amortization of working capital?

A. Well, not directly, but I think in regard to the pro- [fol. 6662] ceedings here it should be pointed out that, while I am talking of invested capital in terms of the various forms of securities outstanding and the surplus account, it so happens that a calculation of invested capital by the method of taking the net property and the net working capital and intangibles is about the same figure and that is the reason that I followed, in this particular case, the procedure that I did. If you will look at chart No. 10 in Exhibit 65, invested capital is there discussed as meaning net debt, preferred stock, common stock, and surplus. In 1940, in round figures, the amount was $59,400,000. On Chart No. 11, in Exhibit 65, we defined invested capital there as net property and net working capital, and intangibles which in 1940 was $59,900,000, so that it so happens in Panhandle Eastern Pipe Line Company that irrespective of how you define invested capital, you are

talking about the same sum of money, so that I think in answer to your immediate question about amortization of working capital, the answer I have already given in regard to the amortization as applied to the invested capital still holds good.

Q. My question was whether you knew of any natural gas company that made a provision on its books for the amortization of working capital. Now, what is your answer to that specific question?

A. None, directly.

[fol. 6663] Q. Do you know whether such a practice would be permitted by the Federal Power Commission under its uniform system of accounts?

A. I don't believe it would, that is directly on that particular item; no.

Q. Now, you stated at the last session that you had read a number of rate cases on subjects touching your study contained in Exhibit 65, did you not?

A. Yes, I did.

Q. Can you cite to me one rate case in which any rate making body or court has permitted the amortization by a natural gas company of its working capital?

A. Well, I say that in the Bluefield case, which is referred to in this study I have made, it states that: "The company is to be entitled to a return which will permit it to render and maintain a proper service to the consuming public, maintain its credit position, and have something above for a margin of safety.

No one of these cases or any other report that I have seen breaks the item down minutely to net working capital. They are all talking in terms of the invested capital or property that is necessary to produce this service and, also, the return that is necessary to have that property produce a service which will be adequate to serve the consuming public and, also, this return to maintain the credit [fol. 6664] position. In that connection must be taken net working capital because it is a part of the active invested capital used in the business.

Q. Well, I take it then that you can cite me no specific instance where any court specifically made any allowance in operating expenses for the amortization of working capital; is that correct?

A. Well, perhaps I interpret the language improperly, but in the Bluefield case, among other things, it says that "the return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate under efficient and economical management to maintain and support its credit position and enable it to raise the money necessary for the proper discharge of its public duties."

Well, so far as I am concerned, that is what they are talking about, among other things.

Q. Well, what you have just read to me defines return, does it not, which is equivalent to net operating revenue on an income statement? Is that correct?

A. Well, all the figures, as I have just discussed earlier this morning, that are included in the operating statement some place along the line are converted to cash and working capital. It is inevitable.

[fol. 6665] Q. Now, we are not talking about net operating revenue, we are speaking of operating revenue reductions among which is a provision which you make for amortization of working capital. Now, I am asking you whether you know of any Commission or Court that has ever allowed such an item in operating expenses of a natural gas utility?

A. Well, I think we are talking about different things, Mr. Littman. What I have been talking about right along is the invested capital in this business and a part of that is this net working capital, the sum total of all the capital that was put in has come through an issue of securities to the public. I first said that that working capital is not static but is used and being converted all the time, some to fixed form of capital, some to current capital, and some to things in any going business day in and day out and merely because they have cash today means nothing at all. They have to have some liquidity in order to operate the business and so far as I am concerned, that is absolutely as essential as to have the pipe line out here to deliver the gas.

Q. Now, will you answer my question, please, Mr. Coffman? I think it can be answered with a very simple yes or no.

Will you please read the question again?

(Last question read by the reporter.)

The Witness: I still stand by my answer. I think [fol. 6666] that as I interpret the language in the Bluefield case and what I have said is the only answer I can give you.

By Mr. Littman:

Q. Well, are you stating that in the Bluefield case which was a water case, that the Courts and Commisssion made an allowance for amortization of working capital?

A. I didn't say that. I quoted the Bluefield case and said that I interpreted the language to mean that they would allow for any such item where it was a part of invested capital.

Q. Well, that is the only case that you can cite on the subject?

A. No, that isn't true. I told you that I had looked at United States vs. West, Railway vs. West, and, also, the Solar Electric case, that those were the three that I had given the most attention to at the time of preparing this, and that I had read a summary of many other cases in the field. After all, I was not reading those cases from the standpoint that an attorney might read them, I was looking at them to see whether I could discover whether the Courts might have said some place along the line or enumerated the factors that should be credited in any such study. I thought I had found that and I think they are pretty well stated in the Bluefield case. That is the only reason I quoted it.

Q. Your understanding of the law is that net working [fol. 6667] capital should be amortized over the remaining life of the property. Is that your testimony?

A. No. I said that, as I have indicated, I think the invested capital in this case, net invested capital, should be amortized as I have defined, and, as a part of that, there was a net working capital item in the amount mentioned. In other words, I contended that if the invested capital in the business is so many dollars, then there must be an allowance for that to make or cover a return of the capital over the estimated life that has been made. Otherwise investors would not buy securities in this firm, therefore, the credit position could not be maintained so it could finance its new business.

Now, if you have working capital such that it can finance itself partly without going to the market, that is one way to do it, and it is one sound way to do it.

Q. Well, have you amortized in your calculation over the remaining 25 years the amount of four million odd dollars of working capital which you stated a few minutes ago?

A. I can't give you the specific amount, but it is included in the $63,000,000. There is a net working capital amount in the $63,775,839.

Q. Will you refer to your table for chart No. 14? In the eighth line of that table appears a sum of $4,661,875 [fol. 6668] which is labeled "Net Working Capital." Now, I am asking you whether or not your allowance of $2,551,034 to return capital to investors when gas reserves are exhausted, includes the amortization of that amount of net working capital? Now, can you answer that question or not? It either does or it does not. It seems to me that a question like that should be answerable yes or no.

A. Well, my answer still stands that it includes a portion, but the base figure that we we were using was $63,775,839. The reference that you make here is not directly to that figure. That is the reason I won't say yes or no.

Q. You cannot answer my question yes or no?

A. I say there is an allowance, but I won't say it was the $4,661,875. I do not have that specific dollar amount here.

Q. Well, would your allowance be very close to the $4,000,000 figure?

A. I think that would be true, yes.

Q. So that for all practical purposes, your amortization claim of $2,551,034 does contemplate the amortization of substantially the $4,661,875 of working capital?

A. Yes.

Q. Well, now, I take it, it is your estimony that that [fol. 6669] is an altogether necessary thing to be done?

A. You mean there as to both the amount and the method?

Q. I mean as to the necessity or need for amortizing that amount of working capital.

A. My contention is that that net working capital, as is shown in the statements from which I got the figures, so

long as it remains in the business it is necessarily a part of invested capital.

Now, if the management belied, in their opinion, that the working capital position was such that it was too large and could be reduced, there are several alternatives which they might have followed. They could have reduced the debt, paid a dividend or the like in each of which events the invested capital would have been reduced. Now, the fact that at the date we are talking about the management did not do such things but maintained this capital in the net working capital part of the company, I take it they believed as a matter of business policy that it was necessary. However, if the Commission or any other tribunal by its study should find that it was not necessary, then I would be willing to use such figure as might be determined, but that would have, still, no effect on the final item in my charts either No. 36 or No. 37, that is the amount that would be necessary, still, for this company [fol. 6670] to secure to maintain its credit position.

Q. In other words, you would stick by your final amount regardless of what the Commission would do with respect to cutting down this allowance of $4,661,000 for working capital; is that your testimony?

A. Well, to be sure that we are discussing exactly the same thing, you have referred here to chart No. 37 and I just want to be sure that we are talking about the same thing. I contend that the $5,064,821 which is captioned "Current Capital Requirements," regardless of whatever else the Commission may find about any of the preceding items included in Chart No. 37 will remain until conditions change. Now, if they change for the worse, it will be higher; if they change for the better, it will be lower. But so long as they remain the same, you can do whatever you please, as a Commission, with the preceding items, but I say the $5,064,821 is absolutely essential to maintain the credit position.

Q. And in the event the Commission were to reduce the three items shown in Chart No. 37 labeled "Operations and Maintenance," "Texas," and "Return of Capital when Gas Reserves are Exhausted," then the "Total

Dollars Needed," as shown by the extreme left-hand bar in your chart No. 37, would be correspondingly reduced; is that correct?

A. Yes. If a study made by the Commission should [fol. 6671] take any amount which I have used, based on annual report figures, and should prove to be improper, then, that necessarily would have a bearing upon the total amount.

Q. That is the gross revenue?

A. Gross revenue, but so far as the $5,064,821, captioned "Current Capital Requirements," is concerned, that will not be changed, because that figure was determined, not by what the company was doing, but by the capital markets. In other words, what was happening in the securities market.

Q. Yes. We are going to come to that figure a little later, Mr. Coffman, and we will have a rather full discussion of that item a little later. The thing that disturbs me somewhat is the fact that you label that Chart No. 37 "Dollars Needed Annually," and the total dollars to which you refer include these various items among which is the claim for amortization.

A. Yes.

Q. Now, that is why we are trying rather fully to develop these subjects.

Now, coming back to the subject of working capital, you understand that working capital is the amount of money which the company requires for the conduct of its business and for the purpose to which working capital will ordinarily apply, do you not?

[fol. 6672] A. Well, I understand working capital to be defined as the difference between the current liabilities and the current assets. That difference is called "Net working capital" and I say that net working capital is required to keep the wheels turning in any business. Now, the size of the working capital in the first instance is usually determined by management as they are going along and the Commission can review that and decide whether or not it is excessive or not large enough, but I, as I have said, relied upon the figures shown in the annual reports, took the figure as it was and said that that is a part of invested capital which was actually operating in the business.

[fol. 6673] Q. Now, is the definition of working capital which you gave a moment ago, to-wit, the difference between current assets and current liabilities, a proper definition, in your opinion, of working capital for rate-making purposes?

A. Why, I would say that is was, generally.

Q. Now, in your opinion, this $4,661,000 of net working capital is necessary. Is that right?

A. I said that at the date of issuance of the statement there was that much shown. It is within the province of the management to determine as they are operating a business whether or not they need more or less.

They have several possibilities. If it is more, they can pay off debt or pay a dividend, in either of which cases they reduce invested capital. The fact that the money remained in the business and had not been so used, in my opinion, indicated that the management felt that it was necessary and if it can be proved otherwise, then, we will determine what the new figure is and use that figure, but for the moment I used the figure so shown for the reasons given.

Q. Now, assuming that the company actually needs and requires this amount of $4,661,000 for working capital in the conduct of its business and will require that amount throughout the life of the business, when the day arrives [fol. 6674] on which the company is going to wind up its business 25 years hence, according to your prediction, the company will still have this $4,661,000, will it not?

A. Well there, again, I make the same contention that I made earlier this morning, that this $4,000,000 is not like a gold bar in the basement of the Federal Reserve Building.

It is being turned around day in and day out, so that the $4,000,000 you have today has long since been buried in fixed assets and you may wind up with another $4,000,000 or something, but you have not had that $4,000,000 throughout all the time.

It has been in and out and is being used in the business.

Q. Yes. That is precisely the purpose of working capital, isn't it, to be used in a business?

A. Exactly.

Q. Well, I am assuming all of those things, Mr. Coffman, for purposes of my question but notwithstanding the use of this amount of $4,000,000 from time to time throughout the life of the business, when the day of death of the business arrives and the company is liquidated, the $4,661,000 will then be available and on hand for distribution, will it not?

A. Well, I certainly would not want to say that. I will give you this situation to define my answer: As this com- [fol. 6675] pany goes on, I can easily see questions of higher costs arising, more difficulties of securing gas and they get to a poin' where instead of showing a large profit there will be a smaller one.

It is easily conceivable to see where the company may not wind up with this given amount at all. A good many companies in Pennsylvania wound up some years ago, you know, leaving $6,000 and $7,000 or millions of dollars, taking them as a group, in bonds that were not paid off.

Q. Mr. Coffman, I am assuming that your advice is taken and that everything is going to go along very lovely right down to the last day and your advice is followed and down on the last day they have made adequate provisions for all the things that you have made.

Now, on that last day the $4,661,000 of working capital which was on hand on June 30, 1941, will still be on hand on the last day. Isn't that correct?

A. It will be then available if they have suffered no losses [of] if there is nothing else that has happened to wipe it out.

Q. All right. In addition to that you are going to have another $4,661,000 on hand because you have made an allowance for amortization of that amount over the remaining life of the property. Isn't that correct?

A. Well, it seems to me that that was included. If you [fol. 6676] agree, to begin with, that invested capital is entitled to a return and the $4,000,000 was a part of invested capital, I see no difference between a return on that, if it is actually needed to run the business, and the amount that you have exhausted in your reserves, your plant, your pipe line, and so on.

Q. Well, you are beginning to inject a third item. I thought that I could point out to you that under your method the investors will not only have their original investment in working capital of $4,661,000 on the last day of the life of the business, but will also have another $4,661,000 brought about by reason of your amortization allowance.

Now, what is this additional item that you are speaking about? Are you proposing that a third allowance be made?

A. Well, I do not know of that, if I did. I do not know where you got that impression.

Q. Well, do you think it fair for rate-making purposes that the investor be given a provision for the amortization of working capital, so that at the end of the life of the business he not only will have his original investment in working capital, but, also, another similar amount?

Does not that strike you as being a fallacious method?

A. Well, it seems to me, of course, under your question, if everything works like clockwork from beginning to [fol. 6677] end and there were no hazards involved in the business at all, I could see it, but where there are hazards in the business it seems to me that there necessarily must be some net amount to provide for those contingencies and I do not think that that is unreasonable.

As a matter of fact, I do not know how a business could operate otherwise and a provision, therefore, will have to be made for it.

Q. Is there any depreciation suffered on working capital?

A. On cash working capital there is not, but all of this working capital that you are talking about, in the first place, is not cash and, in the second place, as the business goes on it is being invested in various forms of capital from fixed to semi-fixed which definitely have problems connected thereto, so I cannot say at the end of a certain amount of time that the amount will be one item or another.

Twenty-five years is a long time to be taking into consideration, obviously, and it is a long time for an investor to take a risk with his capital.

Q. But your theory presupposes that this entire $4,661,000 working capital is going to be used up in the next 25 years, by reason of the exhaustion of the gas supply. Is that correct?

[fol. 6678] A. It is included, that portion of it is included in invested capital and by dividing the sum total by 25, in this particular case, at the end of the time you have presumed to recover or at least cover that investment.

Q. Well, are you expecting the entire amount of $4,661,000 of working capital to have been consumed in the business at the end of the 25-year period?

A. Well, it may well be. I do not know what the actual working out will be in 25 years. I say, if you want to take it the other way around, you are operating a business to render a service to the public.

The pipe line and all the necessary equipment that goes with it, plus the reserves, standing alone, cannot render a service to anybody. It is just idle equipment.

Now, if to put that idle equipment to work it is necessary to have some working assets to make the business wheels go round, then it is just as essential in the business and the customer must allow for it as much as any other part of the business.

Q. Now, assuming, Mr. Coffman, that at the end of the life of this business, 25 years hence, the company has on hand its working capital of $4,661,000, which is the same amount which it had on hand, according to your [testimoney], on June 30, 1941, would you say that it would be proper to return to the investors an additional amount of [fol. 6679] $4,661,000 by the medium of amortization allowances?

A. Well, the purpose of the amortization is to cover the invested capital in the business. Now, if that is accomplished just to the dollar, all right. If there is any over, well then, that merely indicates, it seems to me, the vicissitudes of the business wherein you could not calculate to the penny and there are just as many chances, it seems to me, before you wind up the business that you won't have enough to go around as that you will have $4,000,000 something over.

You are always assuming, it seems to me, a wind-up of the business where we have all the $63,000,000 in the till so we tell everyone to come around and get their money.

I never knew any business yet that wound up that way. It has always been the other way, I come around and ask the people to take 50 cents on the dollar or 25 cents on the dollar or something else.

Q. Well, you are assuming that there is not going to be any money left in the working capital till at the end of the business unless provision for amortization is made. Is not that your assumption?

A. I think we are talking in circles, Mr. Littman. You are trying to say, as I understand it, that this is a 100 percent static proposition.

You can start today and 25 years hence you wind up, and [fol. 6680] I am saying that that cannot be considered in a going concern, so as you go on there are these hazards coming in, a higher charge to get gas and a number of other things, so that these factors have to be taken into consideration, and they will be as the years go on.

Q. Will you answer my specific question, please? I think it can be answered yes or no. It deals with your method.

Will you read the question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: Yes, that is correct, that is correct.

By Mr. Littman:

Q. Now, if it should happen that there is money left in the working capital till at the end of the 25-year period, your allowance would be a duplication to that extent, would it not?

Now, can you answer that yes or no?

A. To the extent that there is money over and above?

Q. Yes. A. Yes, to that extent, there would be.

Q. You understand by "over and above", I meant to the extent that there is any money left in the working capital accounts.

A. Starting with zero, anything above the zero amount from where we started of the $63,775,000—

[fol. 6681] Q. (Interposing). Would be duplicated?

A. That is right.

Q. You are a certified public accountant?

A. No, I am not. I have taught accounting for a number of years and collaborated on several books.

Q. But you are, of course, an accountant?

A. I think I understand the subject fairly well.

Q. Do you think any certified public accounting firm would certify an income statement which showed amortization of working capital in a gas utility?

A. I do not think they would, as such.

Q. Under what circumstances, would they?

A. Well, it seems to me that, here again, we are confusing the issue. You are talking about, I presume, an annual report or some other statement to be made to the public which contains a certification.

I do not see any reason in such statement to make any such amortization that you are talking about; therefore, I do not think it would be in, but, on the other hand, if you were making a study such as we are here and certain factors have to be considered, why, you will take those factors into consideration.

After all, a certified public accountant at a given [fol. 6682] moment of time is merely saying there are $4,661,000 to the penny in the bank and they counted it and know it to be such. They are not saying any more.

Q. Have you ever seen an income statement, certified or otherwise, that included an allowance for amortization of working capital?

A. Well, there again, it is the amortizations that you see appearing in various certified statements that are usually for a particular asset.

Q. Can you answer that question yes or no, to your best recollection?

The Witness: Would you read that question again?

(Whereupon, the pending question was read by the reporter.)

The Witness: No, not directly.

By Mr. Littman:

Q. Now, you have testified that the amount of $4,661,875 of working capital, which you used for purposes of your study as of June 30, 1941, was obtained simply by deducting the current liabilities from the current assets shown in the company's balance sheet. Is that correct?

A. Yes, as shown on the table for Chart No. 14 there is shown there the working capital of current assets, less current liabilities to compute the net working capital of $4,661,875.

Q. Now, that amount is more than $1,000,000 in excess [fol. 6683] of the total "Operations and Maintenance" expense which you show in your Chart No. 37 for the entire year. Is that correct?

A. Yes, that is right.

Q. Are you recommending that this Commission find any such figure for working capital as $4,661,875?

A. Well, I think I have clearly indicated my position on that by stating the sources from which I took the material.

Now, if the Commission, by investigation, finds some other amount which is stated to be proper, why then I would think that that was the amount to use but I have given the source of my data and have predicated my results on it.

Q. Well, are you or are you not, as an expert, recommending that amount of $4,661,875?

A. Well, I am recommending two things, I am recommending the method No. 1 and the amounts, No. 2, unless the Commission can find that the amounts are in error, in which case I still say that my method can be applied and I will take the corrected figure.

Q. You are standing by the $4,661,875, are you?

A. Yes, for the purposes of this study it is the only figure I have.

Q. And for purposes of rate making, is it good?

A. For the purposes of the results that I show in [fol. 6684] this study.

Mr. Wheat: Mr. Littman, when you say "rate making", do you mean for purposes of fixing a rate base or some other base?

Mr. Littman: Suppose I ask the witness that very question.

By Mr. Littman:

Q. Would you say that this amount of $4,661,875 of working capital would be a proper amount to include in a rate base for rate-making purposes?

A. In so far as it is actually included in the amount of invested capital, I say "yes".

Q. All right. Now, will you please turn to your table for Chart No. 11.

Now, you show the amount of net working capital for each of the years, 1934 through 1940, on this chart, do you not? A. Yes, I do.

Q. Those are the figures which appear about the center of the chart?

A. Well, yes, on the line captioned, "Net Working Capital".

Q. Yes. Now, in 1936, as shown by this table for Chart No. 11 of Exhibit 65, the net working capital is $413,082. Is that right?

[fol. 6685] A. That is correct.

Q. Now, will you please explain why, in your opinion, the company should have more than ten times that much working capital in 1941 as it had in 1936?

A. Well, I think the table helps support the answer to that.

In 1934 they had a deficit in working capital of $74,837 and in 1935 they had a deficit of $376,327. In 1937 they had a deficit of $1,394,366.

Now, that merely proves the contention that I have been trying to make, namely, that conditions vary from time to time and at a given moment there may be a certain amount of working capital.

There may be at another time a deficit in working capital and in order to continue to operate this business successfully you must have a net working capital balance.

Now, in 1937 I presume that part of that drain at the moment was in connection with something to do with the Detroit operations. If I recall correctly, that was the first

year in which they began to render full service to the City and it probably required quite a bit of current capital.

Meanwhile, of course, the company has enlarged. It really has become a full-fledged pipe-line company. In 1936, the year in which you are talking about, if my recol- [fol. 6686] lection is correct, was before they really were servicing the City of Detroit, at which time, as we know, the size of the business jumped considerably, so I do not quite see that the comparison of the figure for 1936 with the one for 1940 necessarily would prove anything.

Q. Well, suppose we compare the figure of 1940, $2,205,097.

A. That is right.

Q. Will you tell me why it is necessary to have twice as much working capital six months later?

A. Well, I should suppose, Mr. Littman, that it would be a fair answer to say that there is just as much reason, I should think, for the possibilities of that in view of the negotiations that are now on for Michigan Gas Transmission, which will further elaborate this company, as there would be to show that for 1936, let us say, that it was twice as great as 1935.

Mr. Littman: Will you please read back that answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. You expect part of this working capital to be used for the purpose of purchasing Michigan Gas Transmission Company?

A. No, not necessarily, but I would assume that if the Michigan Gas Transmission Company is acquired and con- [fol. 6687] solidated with the Panhandle Eastern Company naturally the consolidated situation is going to be much larger in total dollars and in volume of business and I should suppose, therefore, that it would require more net working capital.

Q. But you do not know?

A. I don't know what the amount will be, but that just seems to me to be good business judgment to expect that.

Q. As a matter of fact, you did not make any study to ascertain what amounts of working capital were actually

required by Panhandle Eastern Pipe Line Company for the next year?

A. No, that is correct, I took the figure as it was stated.

Q. Now, according to your method, if you had made this study as of the end of the year 1937, in which year the company had a negative working capital figure of $1,394,366, you would have found that negative amount as the required amount of working capital in that year?

A. No, because I am not talking in terms of working capital here at all, I am still talking in terms of total invested capital and the only way that I know that invested capital can be changed is in case you suffer an actual earnings loss or in case you pay off some of the capital, so I still, when I talk about the over-all picture, want to talk about the invested capital as a whole and not about a par-
[fol. 6688] ticular item that you may be referring to.

Q. But if you had used invested capital as you used it for purposes of this study, then in 1937 your invested capital amount would have reflected a negative net working capital of $1,394,366. Isn't that correct?

A. And if such item could have been—

Q. (Interposing) Did you say "yes"? I thought you nodded your head.

A. No, I said if in that year that amount of deficit in working capital you are talking about had meant a deduction in or a reduction in the total invested capital, I should have taken the invested capital for the amount as stated, which was $55,477,864 and that is the figure that I am using throughout.

It is the item appearing in the line captioned "Total Invested Capital for 1937".

Q. And that $55,477,864 reflects the net working capital figure in the negative amount of $1,394,366, does it not?

A. It reflects it and it would merely mean to me that if you found a situation like that carrying over a period of time, the company would then have to consider some additional financing to bolster its position, in which case invested capital would then go up.

[fol. 6689] By Mr. Littman:

Q. Mr. Coffman, I have prepared for purposes of simplifying and facilitating this cross-examination a very simple balance sheet, a copy of which I hand you.

Now, Mr. Coffman, this balance sheet which I have just handed you shows, on the asset side property of $33,000,000 and cash and Government bonds, $30,000,000, total assets of $63,000,000.

On the liability side, it shows invested capital of $63,000,000, a total of invested capital of $63,000,000.

Now, I am going to ask you to assume that this is the balance sheet of a natural-gas pipe-line utility as of June 30, 1940, and that there is a remaining life of gas reserves of that company as of that date of 25 years.

Assuming these conditions and assuming the accuracy of this balance sheet, under your method you would divide the 25 years into the total invested capital of $63,000,000 in [fol. 6690] order to obtain the annual provision for depreciation, depletion and amortization, is that correct?

A. Looking at it from the standpoint of the investor, that is correct.

Q. And that is the method you have followed, is that correct, namely, dividing the total invested capital by the remaining years of life?

A. That is the method I have used.

Q. I now hand you another balance sheet shown on a single sheet of paper purely for the purpose of facilitating this cross-examination.

This balance sheet is for the same company and is as of June 30, 1941, and this balance sheet shows, on the asset side, property of $33,000,000 and cash and Government bonds of $32,520,000, total assets of $65,520,000.

It shows on the liability side that reserves for depreciation, depletion and amortization are $2,520,000 and the invested capital is $63,000,000, making total liabilities of $65,520,000.

I want you to assume, Mr. Coffman, that conditions during the year ended June 30, 1941, have remained static with respect to capital additions.

A. You mean June 30, 1942?

Q. 1941. You see, my first balance sheet is as of June 30, 1940.

[fol. 6691] A. I see.

Q. I want you to assume that conditions remain static in so far as the property account is concerned and I want you to assume the conditions which I have just stated and I will ask you whether or not this balance sheet would correctly reflect those conditions as of June 30, 1941?

A. Well, with one exception, Mr. Littman, that obviously, from your balance sheet dated June 30, 1941, the company must have earned in the interval June 30, 1940—June 30, 1941, the sum of $2,520,000.

Every other condition remained static.

Q. Why do you say that the company must have earned $2,520,000?

A. Well, you have reserves here for $2,520,000, all of which you have assumed went to cash and stayed in cash and there is only one place that it could possibly have come from unless they sold more securities and your capital indicates they did not, so the only possible place it could have come from was earnings.

Otherwise, you would have had $63,000,000.

Q. Would not this balance sheet as of June 30, 1941, obtain if the company had not earned any money?

A. No, it could not possibly have obtained. It would be impossible. If it had not earned any money, you would have had $33,000,000 of property offset by $2,520,000 in [fol. 6692] reserves and your cash would have been $30,000,000.

Q. Assuming that the total operating revenue was $10,000,000 for purposes of illustration and assuming that the operating expenses together with the amortization allowance was $10,000,000 leaving a net operating income of zero, would not this balance sheet as of June 30, 1941, properly reflect the situation as of that date?

A. No, because there had been no way you could have increased the cash $2,520,000.

In other words, your assumption is that they received $10,000,000 in and they spent $10,000,000 out, so how could you have increased the cash $2,520,000?

Q. No, the illustration which I just gave assumed that they took $10,000,000 by way of gross revenue.

A. Yes.

Q. And that they paid out in cash, operating expenses of $7,500,000 and that they retained $2,520,000 for amortization, depletion and depreciation.

Wouldn't this balance sheet properly reflect the situation as of 6-30-41?

In other words, you would, under those conditions, have an increase in your assets of $2,520,000, is that correct, offset by a corresponding amount in the reserves?

A. I think some of those figures you have given me do not check, do they? If you had taken in $10,000,000 and [fol. 6693] you spent out $7,750,000—

Q. (Interposing) The operating expenses should be $7,480,000 to be exact. Those are cash operating expenses.

A. That would indicate that $2,520,000 of fixed property had been converted to cash so that now your property account would net stand at $31,480,000 and your cash would show $32,520,000, merely a conversion of a fixed asset to a current asset.

Q. Would that be true under the assumption that the company had operating revenues of $10,000,000 and cash operating expenses of $7,480,000 and had charged $2,520,000 to its reserves for depreciation, depletion and amortization, leaving a net operating income of zero?

A. I do not see how it could be otherwise. I mean, your own balance sheet shows it.

Q. You say this second balance sheet that I have handed you is incorrect and does not properly reflect the situation existing as of June 30, 1941?

A. The balance sheet as you show it, taking out a reserve of $2,520,000 correctly represents the situation as it stands at the present time.

Q. And that same situation would obtain as shown on this second balance sheet as of June 30, 1941, even if the company did earn some net operating income provided it paid that net operating income out in dividends before [fol. 6694] the end of the year, isn't that correct?

* * * * * * *

The Witness: I will answer "yes", with this further explanation to be sure we are talking about the same thing.

If the company earned any amount over and above the allowance for depreciation which you took and such amount, whatever it may have been, was to the dollar distributed, then this balance sheet still correctly reflects the condition.

By Mr. Littman:

Q. Yes.

Now, will you point out for us, by reference to this second balance sheet which speaks as of June 30, 1941, where, under your method, is any credit whatever given to the rate payers for the $2,520,000 paid during the year for depreciation, depletion and amortization and charged to those reserves?

A. Well, under this hypothetical balance sheet dated June 30, 1941, which you have presented, looking at it from the investor's point of view, there was set aside, representing exhaustion of an asset, $2,520,000 which, for all practical purposes, was conversion of a fixed asset to a current asset as fully represented in your item captioned, [fol. 6695] "Cash and Government Bonds."

However, so far as the investors were concerned, they had no return of that whatsoever so it is still invested in the business so that, at the present time, there is invested in the business the $63,000,000 plus $2,520,000 or a total of $65,520,000 which represents their total invested capital and until you would use a portion of the $2,520,000 to distribute to the investors, that cash is actually working and invested in the business and they would expect, naturally, leaving that cash in the business rather than taking it out, to be compensated for the use of that money.

Q. And under your method you would continue to reflect in the current rates charged to the rate payers a full return on the total invested capital, would you not?

A. I say to maintain the credit position of this company, if the investor leaves his money so that it is working in the business or at least, to put it the other way around, he does not get it to use personally himself, it is

just the same working there as it would if he received it and placed it elsewhere to work.

He wishes to have a return and whenever any company is privately financed and does not so return a fair amount on capital, you no longer maintain the credit position of this company. You no longer can finance by private means.

[fol. 6696] Q. So that your answer to my question specifically is "yes", with the explanation you have given?

A. Exactly, yes, sir.

Q. Now, your answer remains the same notwithstanding the fact that this balance sheet as of June 30, 1941, clearly shows that the company has $32,520,000 of cash and Government bonds on hand?

A. Well, of course, I think that assumption is fallacious and unreasonable but, taking it as an assumption, if the management retains the sum total of that cash and Government bonds in the business which, after all, belonged to the original investors who put the money in, they naturally will expect a return.

Now, if the management should feel or the Commission should feel or the security holders should feel that the amounts of cash and Government bonds being retained is not warranted and is an unreasonable amount, then they have the option, that is, the management, of distributing a portion or all of the cash and Government bonds to the security holders in which case, they have been paid off their capital; the invested capital of this company is less and we go to the new base but, so long as the security holders do not have any return of that invested capital and it is still working in the business, it handicaps him or deprives him of using his capital elsewhere where he could make a [fol. 6697] return and he demands a return upon it.

Q. Now, is it also your testimony that under your method no credit whatever is given to the rate payer for the $2,520,000 paid during that year for depreciation, amortization and depletion under the assumptions comprehended by these two balance sheets, is that correct?

A. So long as those items are not used to distribute to the security holders, yes.

Q. You realize, do you not, that we are undertaking to illustrate the straight line method of depreciation?

A. Well, I was not aware of that but I think what I have said to date would still answer.

Q. Your answers would still hold?

A. I think so.

Q. Do these balance sheets show a correct application of the straight line method of depreciation as you have used it?

A. In so far as you have assumed $63,000,000 of invested capital at the outset and have assumed 25 years of life, the $2,520,000 is one-twenty-fifth which is the first year's operation that we are assuming under that and if that method were followed with the same amount each year on that amount of invested capital, it does.

Q. I wanted you to state whether or not these illustrations which we have just gone through as evidenced by [fol. 6698] these two balance sheets is, in your opinion, a correct application of the straight line method of depreciation?

A. It is, based upon the assumption that there is no salvage value to be left at the end of time.

Q. You understand, Mr. Coffman, that by my questions I am not intimating that Commission counsel agrees necessarily that these balance sheets and the methods that you have described are a proper application of the straight line method of depreciation? I do not want you to understand that I am necessarily agreeing with this.

A. No, I understand but I still stick with my answer that, so far as accounting procedure is concerned, if you assume no salvage at the end of time and when I say "end of time", that is currently used in accounting terminology to mean the length of time estimated for these properties, this represents the straight line method.

Q. Have you made any investigation, Mr. Coffman, to ascertain whether this method of yours of determining the amount to be set aside annually for depreciation, depletion and amortization is in accordance with the Commission's Uniform System of Accounts?

A. No, I have not made that investigation. I am talking purely from the technical accounting point of view.

Q. And not having made the investigation, you are not prepared to say that your method is in accordance with [fol. 6699] the Commission's Uniform System of Accounts?

A. No, I am not prepared to say whether it is or not.

Q. Is your method in accordance with any accepted method of determination of amortization allowances as evidenced by certified statements?

A. Well, I do not know just what you are driving at there. After all, the subject of depreciation and amortization is a complicated one.

I say this, that in any particular piece of property where engineers can estimate the reasonable life of the property, that it is customary, in many instances, to take out an equal annual allowance until the orginal investment in that property is covered where you assume that there is no estimatable allowance for salvage at the date you originally considered the first investment.

Q. Now, you have testified heretofore that you placed great reliance upon certified statements of various corporations, is that correct?

A. That is correct.

Q. Now, would you give us the name of a natural gas utility whose statement you have examined, as certified, which utilizes this method of determining the amounts to be set aside annually for depreciation, depletion and amortization?

A. I do not believe that you could find any statement, [fol. 5700] Mr. Littman, which would tell you the method that was used. As a matter of fact, it will tell you that, in the depreciation and depletion was a certain amount.

In some of the registration statements where they define completely their depreciation policy, it may state it but it would not state it in most annual reports as certified, because it is not a common practice.

They merely tell you they have reviewed the books and the depreciation and depletion reserve allowances were in accordance with company practices and the amounts set aside were proper in their opinion.

Q. Can you cite us one natural gas utility that actually uses your method of determining the amounts to be set

aside annually for depreciation, depletion and amortization?

A. I do not believe I could at this time; no. I would have to review the various companies and discover that.

Q. Now, do you know whether Panhandle Eastern Pipe Line Company uses this method of yours in making its determination of the allowances for depreciation, depletion and amortization annually?

A. No, I do not know that because I did not refer to the books and in the annual reports, as I recall it, there was no statement except certain amounts were set aside.

Methods were not described.

[fol. 6701] Q. Do I correctly understand your testimony to be that the only time you deduct a reserve for depreciation, depletion and amortization to establish a base for rate making purposes is when the equivalent amount of the reserve has been paid out as a liquidating dividend?

The Witness: Would you please read that?

(Whereupon, the pending question was read by the reporter.)

The Witness: Mr. Littman, that question is confusing to me for this reason: I have tried to make it clear that in my approach I have been attempting to determine the dollars necessary to keep this business operating in an efficient manner from both the standpoint of the consuming public and the investing public, that is, maintaining the credit.

When you refer to the rate-making base, it confuses me because I do not quite tie that in. I mean, I am not talking the classical theory and when you say, "for rate-making purposes", I think you are.

I would like to be clear on that one point throughout. When I have been talking here, I have not been trying to distinguish between the classical theory and my own approach.

I have been talking about my approach altogether.

By Mr. Littman:

Q. Well, under your approach, it is correct to say that the only time you give any credit to the depreciation, depletion and amortization reserve is when the equivalent amount of that reserve has been paid out as a liquidating dividend?

[fol. 6702] A. Yes, I would say that is generally true, that until the cash has actually been paid out to the investor, it is still maintained in the business as a part of invested capital and the investor says, "If you want more capital from me, you must continue to maintain the credit and give me a return thereon."

Q. And that is your understanding of the correct application of the straight line method of depreciation?

A. I do not know as that has anything to do with the straight line method. You could call it a sinking fund method.

There are various methods of depreciation. There is one where you take out the identical amount each year. There is another where you say the assets are exhaustible and in the early years, you take out more and in the later years you take out less.

In other forms of business it is the reverse. You take out smaller amounts in the earlier years and more in the later years, so I do not see there is any connection between what I have just said between the straight line method or any other method.

Q. Did you investigate to ascertain the amount in the reserves of Panhandle Eastern Pipe Line Company for depreciation, depletion and amortization as of June 30, 1941?

[fol. 6703] The Witness: May I have that read, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: You are talking about the reserves for depreciation and so on. Yes, I was aware of that. It was in the balance sheet and the figures are shown here in my report, if you are talking about the dollar amount.

By Mr. Littman:

Q. Yes.

A. If you are talking about the number of M.c.f.'s, no, but if you are talking about the dollars, yes.

Q. The latter is correct. I am not now speaking of gas reserves.

A. Yes, that is right.

Q. You are aware of the fact, are you not, that as of that date the reserves for depreciation, depletion and amortization and of gas sales and purchase contracts totaled $11,747,170 as of June 30, 1941, is that correct?

Would it be more helpful if I handed you the balance sheet?

A. I have one here. I was seeing if I had it in a table so I could refer specifically to it.

Mr. Wheat: On the table for Chart No. 14 there is an item of retirement, renewal, depreciation and amortization reserves of some $10,000,000-odd.

Mr. Littman: Is that $10,135,000?

[fol. 6704] The Witness: Yes, that is it.

Mr. Wheat: Yes, $10,135,514.

Mr. Littman: Yes.

By Mr. Littman:

Q. Do you find that, Mr. Coffman?

A. Yes, I have that now.

Q. I will tell you how I got the additional amount in just a minute.

Now, that $10,135,513 is made up of reserves for depreciation of gas plant in an amount of $9,345,403; reserve for amortization and depletion of producing natural gas land and land rights of $403,389 and reserve for abandoned leases in the amount of $386,721, making a total for those three reserves of $10,135,513.

Do you find those figures, Mr. Coffman, as of June 30, 1941?

A. I do not have the sum of the individual items that you mentioned at the moment, but I do have the $10,135,

514—the figure you mentioned is $10,135,513, but there is 92 cents so we call it $10,135,514.

Mr. Culton: Was that the aggregate that you originally used?

Mr. Littman: No, I am now going to explain how I got the other amount.

By Mr. Littman:

[fol. 6705] Q. Those three items, I might state for the purpose of the record, were taken by me from Exhibit 48, Page 2, which is the balance sheet offered in these proceedings by Mr. Watkins and are shown from Lines 28 through 33 of that page.

Mr. Wheat: In column—

Mr. Littman: (Interposing) In Column M as of June 30, 1941.

By Mr. Littman:

Q. Now, that $10,135,514 jibes, does it not, with the one in your Exhibit 65?

A. Yes, it does.

Q. Now, to that I have added an item which appears in Exhibit 52, Page 2, Line 42, called, "Reserve for Amortization of Gas Sales and Purchase Contracts" in the amount stated as of June 30, 1941, of $1,611,657.

I hand you Exhibit 52, Mr. Coffman, so that you may see the item as it is set forth. A. Yes.

Q. And adding that figure of $1,611,657 to the amounts heretofore stated produces the total reserves as of June 30, 1941, of $11,747,170, is that correct, Mr. Coffman?

A. I did not get some of the detailed figures you read off but if they add up to that, I agree to the total.

Q. Well, at any rate, you have ignored these reserves [fol. 6706] in calculating your so-called "Dollars needed annually by Panhandle to return capital to investors when gas reserves are exhausted", have you not?

A. Yes, the total figure that I used as shown in the table for Chart No. 14 in Exhibit 65 was $10,135,514 which is the amount taken from the condensed consolidated balance sheet as at June 30, 1941, of Panhandle Eastern Pipe Line Company.

Q. My question is, have you ignored these reserves in calculating your so-called "dollars needed annually by Panhandle to return capital to investors when gas reserves are exhausted"?

I am now speaking of the reserves for depreciation, amortization and depletion accumulated by Panhandle Eastern as of June 30, 1941?

A. You cannot say that exactly, Mr. Littman, for this reason:

You will find in my exhibit, for example, on the table for Chart No. 10 where I have been trying to look at this thing from both angles, namely, the property on the one hand and the net working capital intangibles on the other hand, looking at it purely from the capital structure standpoint, you will see in table for Chart No. 10 where I have listed there the details of the capital structure for the individual years which, in all the cases, is a figure [fol. 6707] very closely approximating a calculation if you work out invested capital on the net property plus the net working capital figure and it was that invested capital figure that I used and when you pin me down to individual items, that is difficult for me to say because I talked in terms of the total invested capital as one lump sum and as represented by the securities outstanding in the hands of the public.

Q. Let us put it this way:

In calculating your so-called "dollars needed annually by Panhandle to return capital to investors when gas reserves are exhausted", you made no deduction of Panhandle Eastern's reserves for depletion, depreciation and amortization accumulated on its books to June 30, 1941?

A. I think we have. Your figure, I believe, if you work back and I am talking now from this statement captioned, "Condensed consolidated balance sheet as at June 30, 1941", there is an item captioned, "Less reserve for amortization of gas sales and purchase contracts—$1,611,657,-30 which was and is subtracted from a caption, "Intangibles representing gas sales and purchase contracts" and so forth of $3,475,221.97, leaving an amount net of $1,-

863,564.67, which is the amount that is shown in table to Chart No. 14 which is—

Mr. Wheat: (Interposing) Of Exhibit 65?

[fol. 6708] The Witness: Of Exhibit 65, which is added in to get the total invested capital which I am talking about. I believe that is the identical figure that you are talking about.

By Mr. Littman:

Q. Now, excluding from consideration the reserve for amortization of gas sales and purchase contracts and speaking now only of the $10,135,513 accumulated in Panhandle Eastern's reserves for depreciation, depletion and amortization, I am asking you whether or not it is a fact that you made no deduction of those reserves in calculating your so-called "Dollars needed annually by Panhandle to return capital to investors when gas reserves are exhausted"?

A. I think I did take them out by the amount I have just read to you.

In other words, you see what I did, in table to Chart No. 14, I hoped to segregate first, the $10,135,514 which relates to retirement, renewal, depreciation and amortization reserves.

Then later on down in the tabulation, I took the intangibles net which automatically, of course, excludes the reserve of $1,611,657.

Now, I could have done the same thing in that table as I did up above. In other words, I could have shown intangibles at $3,475,221.97.

[fol. 6709] I could have substracted the $1,611,657 to show the $1,863,564. Instead, I just showed the figure net.

Q. I just asked you to exclude from consideration this reserve for amortization of gas sales and purchase contracts of $1,611,657. A. Yes.

Q. And I asked you to discuss with me for a moment purely the $10,135,513 balance in the reserve for depreciation, depletion and amortization as of June 30, 1941.

A. Yes.

Q. Now, we are talking about the $10,000,000 figure, aren't we? A. All right.

Q. Now, I am asking you whether or not it is a fact that you ignored those reserves totaling $10,135,513 in calculating your so-called "Dollars needed annually by Panhandle to return capital to investors when gas reserves are exhausted"?

A. Whether I ignored it?

Q. Yes.

A. No, I do not think I ignored it because I had to get the total invested capital I am showing by deducting it.

Q. Well, is the invested capital figure that you used for purposes of determining the amortization allowance shown anywhere on table for Chart No. 14 in Exhibit 65?

[fol. 6710] A. Not specifically in that amount but the method whereby I arrived at the amount is very definitely shown there.

Q. Well, the method whereby you arrived at your total invested capital was simply this, to add the total amount of the outstanding bonds, preferred stock, common stock and surplus, is that correct?

A. That is correct.

Q. And that came to $63,000,000-odd, did it not?

A. That is correct. On the invested capital as shown on June 30, looking at Chart No. 26, that was $63,525,839.

Q. Yes, and you simply divided that by 25 years to get your annual allowance for depreciation, depletion and amortization?

A. That is correct, but I just want to be clear when you say I ignored looking at something, I have demonstrated I am aware that I took them into consideration.

For this particular calculation, I based it on one-twenty fifth of $63,525,839 on the assumption I just mentioned; on this particular assumption.

Q. Now Mr. Coffman, I will ask you to turn to your table for Chart No. 14 of Exhibit 65 and I will ask you this question:

If this Commission were to use the property as the [fol. 6711] amortization base, what figure on this chart should be divided by 25 if that is the correct remaining number of years of life?

A. That figure is shown in Chart No. 14 computing invested capital on the basis of net property and net working capital intangibles of $61,216,031.

Q. Now, your figure of $61,216,031. which you just read includes $4,661,875 of working capital, does it not, Mr. Coffman? A. Yes, that is correct.

Q. Now, assuming that the Commission were to adopt Mr. Sperry's estimate of working capital in the amount of $1,500,000, what would be the total invested capital indicated on that basis?

Mr. Wheat: May I ask, Mr. Littman, are you making that assumption in connection with the development of a rate base, that that is the amount to be allowed for working capital?

Mr. Littman: I am asking this witness to state what the company's net investment is in the property plus Mr. Sperry's working capital. That is what I wanted him—

Mr. Wheat: (Interposing) If his balance sheet had shown that instead of some other item?

Mr. Littman: That is right.

The Witness: The invested capital as of June 30, 1941, [fol. 6712] would have totaled $58,054,156 if it had been tabulated on the basis of net property, $54,690,591; net working capital, $1,500,000; and net intangibles of $1,863,565.

By Mr. Littman:

Q. Now, in order that we all may follow this testimony, I am going to ask that you refer to the Chart No. 14 of Exhibit 65. A. Yes.

Q. Now, there you show the net property to be $54,690,591? A. Yes, sir.

Q. Then you show the net working capital of $4,461,875 and then you show intangibles which includes gas sales and purchase contracts in the sum of $1,863,565. Is that correct? A. Yes, sir.

Q. A total invested capital as of June 30, 1941, based on net property accounts, intangibles and working capital of $61,216,031. Is that right? That is what your chart shows?

A. Yes, that is what the chart shows. That is correct.

Q. Now, Mr. Coffman, am I correct in understanding that all of this amount of $61,216,031, except the net working capital of $4,661,875, represents every dollar that the [fol. 6713] investors have invested, according to the books of the company, in the property of Panhandle Eastern Pipe Line Company as of June 30, 1941? Isn't that correct? I am not speaking of dollars, I am speaking of the amount invested in properties, both in fixed capital and intangibles. A. As shown on the books.

Q. Yes.

I thought there was a pending question—

A. (Interposing) No, I thought I had answered the question.

Mr. Littman: Will you read the answer?

(Whereupon, the answer indicated was read by the reporter.)

By Mr. Littman:

Q. The answer is "yes", as shown on the books?

A. That is right.

Q. And that amount, by pure arithmetic, is $56,554,156, is it not? I would like to make certain of this figure.

A. What is the component parts of this figure you are giving me?

Q. I am taking your total of invested capital shown on your Chart No. 14 of Exhibit 65 of $61,216,031 and I am deducting $4,661,875 of net working capital. A. Yes.

Q. And I get the amount of $56,554,156.

[fol. 6714] A. That is correct.

Q. Now, this amount of $56,554,156 represents all of the money that the investors have invested as of June 30, 1941, in the fixed property of Panhandle Eastern, is that right?

A. Looking at it from the asset side of the balance sheet, that is true, but I also look at it from the liability side of the balance sheet, so you also have to refer to my table which shows the amount of the various securities outstanding plus the surplus accounts.

Q. Well, Mr. Coffman, here is what I am trying to get and I think we will have no difficulty in agreeing:

If every dollar invested in the plant and property of Panhandle Eastern, as shown on its books, is found to

have been actually and legitimately invested in property used and useful in the public service, then this amount of $56,554,156 would correctly represent the actual cost, the actual original cost of the property as of June 30, 1941, would it not?

Mr. Culton: You do not mean that question. You do not mean original actual cost. You mean depreciated original actual cost, don't you?

The Witness; It is the net value of the property as of the date stated.

By Mr. Littman:

[fol. 6715] Q. Less depreciation reserves?

A. Yes, or the net value of the property as of this date.

Q. It would represent the net investment in the property as of June 30, 1941, is that right? A. That is right.

Q. Now, notwithstanding the fact that the $56,554,156 represents the net investment in the plant and property of Panhandle Eastern as shown on its books as of June 30, 1941, you are undertaking to amortize not that amount but you are undertaking to amortize something in excess of $63,000,000, are you not?

A. I am, on my calculation, amortizing the amount of $63,775,839 as shown in Chart No. 27, Exhibit No. 65.

Q. Now, will you state why, under any theory, this Commission should allow to be amortized any sum in excess of the net investment in the plant and property of Panhandle Eastern as of June 30, 1941, which was, as you have stated, $56,554,156?

A. Well, I thought I had explained that a couple of times, Mr. Littman, on this [bases]:

It is my opinion that if this company continues as a going concern and depreciates and amortizes its properties but such sums forthcoming from such bookkeeping transactions are retained in the business to keep it going [fol. 6716] and are, therefore, reinvested in some form of asset except that portion that remains in cash that, so far as the investors are concerned, their money is still working in this business and to maintain the credit position of this company, they must be allowed some return for that use of capital.

Now, whenever it comes to a point that this company ceases to grow, ceases to need any additional amounts of capital so that even your own hypothetical balance sheet tends to be true, namely, the only operation is one of converting fixed assets to cash and the management thereupon pays out such cash or current assets in the form of liquidating dividends, the invested capital will begin to come down.

There is no reason for the maintenance of the credit position any more because there is no need for new financing and you will get the result.

Q. Will you point out what property over and above the $56,554,156 is used and useful in the public service?

A. Well, as I said this morning, I can take your very figure here of $56,554,156 which allows you net property which is fixed plant and allows you intangibles which is also, for the most part, fixed plant or semi-fixed plant and I will ask you how the business can be operated by the management with no cash or working capital.

Q. All right. Let's add to that amount the $1,500,000 [fol. 6717] suggested by Mr. Sperry.

Now, will you point to any property other than which is represented by Mr. Sperry's $1,500,000 of working capital and this $56,554,156 which is the net investment in plant, will you point out anything that is used and useful in the public service that is not represented by those two amounts which I just read?

A. Well, I do not know as I can point it out directly but I can make this observation, that so far as I understand what you have said about Mr. Sperry, Mr. Sperry, I believe, must have been talking about a different thing than I am talking about.

He apparently was talking about a rate base. I, on the other hand, am looking at what the management needs to maintain the credit position and I continue to say and maintain that if the management retains the $4,661,875 in the business rather than distribute it to the people who put in the original capital, it is still invested capital from their standpoint and they will require a return on it or,

if you refuse to allow them one, they will refuse to finance this property any longer.

Q. Let us exclude, then, this item which seems to be disturbing you, of working capital. Let's put that aside and let's confine ourselves to physical and tangible property, per se.

[fol. 6718] A. Yes.

Q. Will you tell me what property is used and useful in the public service, both tangible and intangible, belonging to Panhandle Eastern Pipe Line Company which is not represented by the net investment of $56,554,156?

A. Mr. Littman, I would have to say if you take the extreme example, as I believe this is, you are taking away from the management all of the current assets, net current assets.

Q. I am talking about a natural-gas plant—

A. (Interposing) You are taking away everything but the plant, fixed property.

Q. I am talking about the fixed property.

A. Then I ask you how does the management continue to operate one hour after you have done it?

Q. All right. I will ask you to assume, then, the correctness of Mr. Sperry's figure, just assume it, assume he is right.

Assume his $1,500,000 of working capital is a correct estimate and is all that is needed.

A. All right.

Q. And I want you to state what more is this company entitled to have by way of a return than a return upon its net investment in physical and intangible property represented by the $56,554,156 plus the $1,500,000 working cap-

[fol. 6719] -ital of Mr. Sperry's?

A. I think the answer to that is simple, Mr. Littman. If the Commission says and determines, after thorough study, that $1,500,000 is absolutely all that is needed and the management thereupon agrees or abides by that decision, whether they agree or not, then the first step, No. 1, to take is to take the $3,000,000 which is the difference between the $4,600,000 and the $1,500,000 and immediately distribute it to the security holders so it will be taken

out of invested capital and put in their hands to do with as they please.

Now, if the management, in spite of the decision on the part of the Commission would say, "Of course, we will have to abide by the decision and talk in terms of $1,500,000 but, as a matter of business policy, we still say to run this business for public service and maintain credit, we must have $3,600,000", I, as an analyst, would have to make that deduction; but, so far as I am concerned, the logical move under such decision would be to distribute that $3,000,000 odd out of invested capital to security holders so it isn't in invested capital.

Q. There is nothing to prevent the company from doing that, is there?

A. Sure, there are many things. If they believe that the operations of the company are such they need it for [fol. 6720] working capital, that is the best reason I know of for not distributing it.

After all, they are the management and if they believe they need it so the business will be operated efficiently, I believe that is a perfect reason for not distributing it.

Q. And whatever amount the company happens to have on hand is, in your judgment, the correct amount they should have on hand?

A. No, indeed. I am not saying that.

Q. What analysis did you make to ascertain whether this $4,000,000 of working capital was actually and necessarily needed for that purpose in this business?

A. I am not saying; you are reading into me some words I am not saying.

I never said that it was necessary. I said it is there and if it proves to be there and necessary, it is a part of invested capital and, therefore, must be so considered.

I never said it was necessary but I have relied upon the figures on the basis that, to date, I have heard no one say that it was unnecessary or unreasonable.

Q. Well, but you used the term "dollars needed" and I take it that the word "needed" is synonymous with necessary. Am I right?

A. And so far as the investor is concerned and the [fol. 6721] $4,000,000 is in here, it is needed, every dollar of it.

Q. Whether it is needed or not—

A. (Interposing) Unless you pay it back, it is still needed. You cannot pay it back to people unless you do something about it.

They paid their money for bonds, preferred stock and common stock and they cannot have it taken away from them unless there is a lawsuit.

* * * * * * * * * * *

Q. Mr. Coffman, what do you expect Panhandle Eastern Pipe Line Company to do with this amount of $2,551,-034 which you are providing annually for depreciation, depletion and amortization?

A. Well, the company, as I have said, first receives that amount so long as it reports earnings in the form of cash and then through the cash account, it goes to other forms of assets as the management operates the business.

So long as the company continues to show growth, so long as the hazards continue to be in existence, so long as the company faces a condition whereby it may show [fol. 6722] increasing costs as it becomes a little more expensive to get gas, it will use the working capital to operate this firm as a going concern.

When it arrives at a point, however, where the accumulations are such that it is not necessary to spend these sums to keep this business operating at the same pace and working capital or cash begins to build up, I should then say possibly that the management would consider reducing its debt or calling its preferred stock and these would have to be done in the order mentioned, or paying a dividend on common stock, but until such time as they have such liquid position built up that they feel it unnecessary, that is, for all of it to be retained to operate the business efficiently, they will retain it in the business but when they arrive at that point, they will begin to reduce the outstand-

ing capital, pay off the bonds and thereby reduce the invested capital.

Q. And during the time such funds are actually used in the business, the rate payers receive no credit for the amounts provided for depreciation, depletion and amortization?

A. Well, I think that comes back to the basic condition, again, Mr. Littman, that this business was originally financed through the public with an understanding, so far as I know, that if the public invested money in the firm, [fol. 6723] the money was going to be efficiently handled, the company was going to be efficiently managed so that that investment would be secure and there would be a reasonable income thereon.

Otherwise, the investors would not have purchased these securities in the first place or otherwise financed this company.

So long as those securities remain outstanding and the capital has not been returned to the original investors, I do not see how it can be contended that the rate payer, that is, the consuming public or the consumers of this service can receive credit except as you, through efficiency, reduce costs and can pass that along to the customer and I still come back to my point if it is done any other way, it seems to me the matter will have to be taken to the Courts as to what the right of those original security holders is or was.

Otherwise, you are just confiscating capital. You are just telling them that you are going to take part of it away and, if you go on to an extreme example, you can see that no man can contend he has had a return of capital unless he is paid off.

If you take the extreme example here, for instance, of having rate reductions to the point where there are little earnings and you arrive at the point where the company is [fol. 6724] in liquidation and you convert the remaining property into the cash that you can get and pay bond holders off at 50 cents on the dollar and you allow nothing for preferred and nothing for common, it seems to me it is proved that the original investor does not get his capital

back, so who knows he is going to get it back until that time arrives?

Q. So the investor does not have his investment returned to him until he actually receives the cash in hand, is that right?

A. Absolutely, until he gets it and puts it back in his pocket or into his bank account, he just doesn't have it.

I mean, if I had the choice, for example, of having my money in the Panhandle Eastern without getting a return, as was the case for common stock here for quite a while in earlier years, or having it in my pocket to buy defense bonds or some other security, as I please, I would take the latter, any time.

Q. In other words, if the rate payer has paid the annual sum for depreciation, depletion and amortization to the corporation, the rate payer does not get any credit for such payment until the amount is actually distributed by the corporation to the individual investors, is that correct? Can you answer that yes or no?

A. Yes, so far as that particular item is concerned, [fol. 6725] but now you are talking about a very complicated situation as if it were a very simple one, but I will answer you, if every other thing remained the same except the charge for amortization and depreciation which amount was retained in the firm and not distributed in any form to the security holders, yes.

I do not see any reason why the consuming public should have any credit for that whatsoever.

Q. And that would be true even if this money paid by the rate payer for depreciation, depletion and amortization were placed in a safe deposit box by the corporation until the end of the life of the business and then distributed to the investors?

A. Well, that question, it seems to me, just cannot be borne out by the facts, Mr. Littman, because so far as I know and there certainly have been cases at point, I believe, although I cannot announce them, that if you continue to do that, there would be certainly some security holders who would immediately go to Court to ask the question, "Why is the management retaining such sums?"

I do not believe that condition could exist.

Q. Well, assuming that the condition did exist, under your concept of rate-making the rate payer would receive no credit until the investor had actually received the money at the end of the life of the property, is that right?

[fol. 6726] A. I say as long as the investor's money is retained in the business and he does not get it back, he expects a fair return thereon and security of principal included.

. . . . . .

Q. Now, if you will allow a return on an undepreciated rate base, isn't it only fair and proper that you allow a credit for interest accruals on this annual amount under a sinking fund arrangement?

A. Well, in so far as the sinking fund is built up and the bonds are called in automatically you reduce invested capital. When you accumulate a sinking fund, usually it works out that you buy in the bonds and, therefore, you reduce the invested capital.

[fol. 6727] Q. Now, Mr. Coffman, I wasn't referring to any particular sinking fund condition in bonds. I was referring to the sinking fund method of depreciation as distinguished from the straight line method of depreciation.

A. Well, now, we have got to get one thing straight, the terminology. I understand the sinking fund method of depreciation to be a method which is worked out, again, on an engineering basis as to what the proper charges are for allowance for depreciation and amortization. Now, if, when you charge that allowance against the operations in the operating statement, you at the same time establish on the assets side of the balance sheet an asset with cash and nothing else in it, which is building up, if that cash remains in such account and is not distributed in any form to the security holders, it is still a part of invested capital. On the other hand, if such fund is used to buy in securities, so that you lower your asset account and you, also, lower your invested capital on the other side, on the liability side, that is sound procedure. I merely say that, as long as that asset remains on the books it is still invested capital and the security holders will so contend.

Q. Well, as a rate-making formula, isn't it a fact, Mr. Coffman, that where a full return is allowed on an undepreciated rate base interest is credited on the annual ac- [fol. 6728] cruals to a sinking fund? Isn't that generally correct, as a rate-making formula?

A. Well, I would not want to answer as to that specifically. I would rather confine my answer directly to my approach and say that you have two people to consider, the investors, on the one hand, and the consuming public, on the other hand, and you cannot think of one or the other, you must think of both of them.

Q. Mr. Coffman, I was putting to you a very simple question that had to do with a rate-making formula. Now, we have heretofore discussed the straight-line method of depreciation. Now, I wanted to discuss with you, for a moment, the sinking-fund method of depreciation. Isn't it a fact that where a rate-making body fixes a rate base and does not deduct anything throughout the life of the property for depreciation, that in such event the Commissions invariably allow a credit for interest on the annual accruals for depreciation, depletion, and amortization? Isn't that correct?

A. Well, I think I will answer the question, I don't know. I have made no thorough investigation for this purpose on that. I think the best answer I could give to your question is, I don't know.

Q. Well, do you know what the sinking-fund method of depreciation is, Mr. Coffman?

A. Yes. A sinking-fund method of depreciation, as [fol. 6729] commonly used in accounting, is a method whereby, as you charge an allowance for depreciation, which is worked out on some engineering formula, you set up a fund as such to offset, if they complete the sinking-fund method.

If you are using just one portion of it, whereby you are trying to work out a schedule from an engineering standpoint as to the actual reduction per year through exhaustion or wear and tear, which may allow in the early years for more wear and tear or exhaustion and in the later years the reverse, that is the usual method as distinguished from the straight line. In other words, what they are trying to do there is to say that the amounts you charge at one period

are greater than the amounts you charge at another, whether it be the first years or the later years.

Q. Isn't it a fact that there is never an actual fund set up for that purpose, but that the fund is purely a theoretical device?

A. No, that isn't true, because I can go back in accounting and show you examples where depreciation funds in past have been set up very definitely. That is what I want to be sure you understand.

Q. You are not prepared to say whether an undepreciated rate base is used in connection with the sinking fund method of depreciation?

A. No, I have not made any particular investigation of [fol. 6730] that for this particular study.

Q. That is, you do not know whether it is or is not used?

A. That is right.

Q. Well, now, of course, if your annual allowances for depreciation, depletion, and amortization were determined by the use of a sinking-fund method, your annual accruals would, of course, be lower, would they not, than the amount which you have used of $2,551,000?

A. They might or might not. To answer your question, so far as my method of approach is concerned, if the sinking fund were to be used or had been used, I would then find out what the schedule from the engineering standpoint was that was operating at the time, and use such amounts. It would work no differently under my method of procedure than what I have done on what we have been terming the "straight-line method." The item might be different, but the over-all result on 25 years, if that is still the estimated engineering life, presumably, if the figures were accurate, would work out to the same point.

Q. You then think that the sinking-fund formula could be applied in connection with your annual allowances for depreciation?

A. Oh, I am sure it could.

Q. And the annual accruals would then be much smaller [fol. 6731] than the $2,551,000 which you have allowed, depending on the rate of interest used. Is that correct?

A. It would depend on the schedule that was worked out. As I say, on a sinking-fund basis you will work out

a schedule of depreciation for the estimated life, the same as you will work out the estimated length of life for a straight-line method, and you will build up a schedule accordingly.

Q. And the amount required annually would, of course, be less under any sinking-fund arrangement than that which you have determined under your theory of $2,551,034? Isn't that correct?

A. Well, that is correct technically, so far as the interest involved in the sinking fund is concerned, but practically, if the actual fund isn't established whereby you can invest the sum for the interest, it would make no difference, as I see it.

In other words, a bookkeeping entry merely to take interest on something that doesn't exist, even though you say it is a sinking fund, means nothing so far as my particular approach is concerned, because I am still, as I have shown here, talking about the over-all revenue that is needed by management to get at, finally, this amount of dollars that is needed to operate this plant efficiently, render service to the public, and get the last column that we have been referring to from time to time to maintain [fol. 6732] the credit of the corporation and the investment in the public's eyes.

Q. What would be improper about using a sinking-fund method for the purpose of determining the amounts required to be returned to the investors when the gas reserves are exhausted?

A. I did not say there was anything improper about it. It is one method that is actually used.

Q. And you would not claim that the use of such a method would be improper, would you?

A. No, not at all.

Q. For purposes of this proceeding?

A. For purposes of my study and my approach.

Q. Well, do you know, Mr. Coffman, what your annual claimed amount of $2,541,034 for depletion, depreciation, and amortization would be if the sinking-fund formula were to be applied for 25 years of remaining life at an interest rate of 6½ percent?

A. No, I do not know what the figure will be.

Q. Now, you could make such a calculation, could you not?

A. Yes, I can work it out; not here, I mean not in a short space of time, but I can easily work it out, yes.

Q. Well, if we gave you the sinking fund tables, the interest tables, you would not have any difficulty in working that out between now and tomorrow, would you?

[fol. 6733] A. No.

Q. Are you aware of the fact that this Commission in the Natural Gas Pipe Line Company of America proceeding used the 6½ percent sinking-fund formula? Did you know that?

Mr. Culton: Applied to what base?

The Witness: I do not recall specifically all the details, but I did read the general release on the Natural Gas Pipe Line Company.

By Mr. Littman:

Q. Did you know that in that proceeding the Commission found that an annual allowance of $1,557,852 would amortize $78,284,009 in 23 years, using a 6½ percent interest rate?

A. I do not recall those figures, no.

Q. Assuming the correctness of my reference to the Commission's opinion in the Natural Gas Pipe Line Company proceeding, why should it be necessary for you to require $2,551,034 per year for 25 years to amortize a fund of $63,775,839?

A. Well, I cannot, I believe, answer that question unless I have time to refresh my memory on that decision and see what the factors were that were involved and the specific amounts that were discussed. I have made this study, and on the basis that I have made it and the approach I have used and the figures I have used, all of which have been defined to this point, I say that the amount [fol. 6734] stated here is required until some portion is paid off to the security holders which will reduce the invested capital.

Q. Well, you have heretofore testified that if the Commission were to find an annual return for amortization, depreciation, and depletion in an amount less than $2,551,034, you would reduce your total dollars needed, accordingly. Isn't that correct?

A. I believe I said that if it were shown that the length of life of 25 years proved to be wrong, so that a new figure would be established, why, then I would adjust the accounts accordingly and go on, on whatever the basis was so determined.

Q. Do you have any opinion as to the correct interest rate to be used in this case if the sinking-fund method of amortization were used?

A. Well, at the moment I do not have a specific rate, but that can be determined. I have made a study which is shown as a part of this over-all exhibit entitled, "The Investors' Appraisal of the Risk of Capital", which I think closely approximates what the investing public is saying about this particular company and the type of risk it is as of the date we made the study. That should give you a close approximation.

Q. I take it from your answer that in your opinion the rate of interest to be used in connection with the sinking [fol. 6735] fund established for depreciation, depletion, and amortization should be the same as the rate of return fixed by the Commission. Is that correct?

A. Well, I think there you have to distinguish between two things. So far as the sinking fund is concerned, I would say that that still had some relationship to conditions that you actually can find in the financial markets at the time as well as what the Commission might find from the standpoint of rate of return, as I believe you are using it, to a property which renders a public service, that is talking about the consumer rate.

Q. Well, does that mean that the interest rate for the sinking fund might be higher than the rate of return allowed by the Commission on the rate base?

A. Well, that all depends on the factors taken into consideration. I would suppose that if the Commission determines a rate which is based upon all the facts to be considered, including the investor, that rate ought to approximate fairly closely the amount. On the other hand, if it follows a line of discussion that I understood you were making for a while, wherein you consider for the most part the customer and let the investing public go by the board, why, then I think there could still be some dispute about it.

Q. Can we not agree, generally, in principle that the interest rate to be used on accruals to a sinking fund for

[fol. 6736] depreciation, depletion, and amortization should closely approximate the rate of return fixed by the Commission on the rate base used by the Commission?

A. Well, I think my answer still is that if all the factors, the two most important ones, as I see it, are taken into consideration and given thorough weight, namely, the customer for the service, on the one hand, and the investing public, on the other hand, yes. If it does not, I still think there is some further study which would be warranted in trying to ascertain the figure. Now, whether they closely relate will depend upon the study. I do not believe I can answer any closer than that.

Q. In other words, your answer to my previous question would be "Yes" if the Commission were to adopt your suggested rate of return. Is that correct?

A. No, that would not be correct, because I have not given a rate here. I have talked about so many dollars.

Q. Well, if the Commission were to accept your method?

A. Well, then, if the Commission were to accept my method, I still have not arrived at a dollar amount, but if the Commission would tell me what the rate base is that they have determined and I use my method with the figures so shown for the moment, then I can tell what the rate is, but at the moment I cannot tell any rate because I do not know the base and until you tell me the base fixed by the [fol. 6737] Commission I cannot tell you any rate.

Q. I believe you stated a moment ago that you could tell me the interest rate which should be used for purposes of a sinking fund for the accumulation of the amounts required annually for depreciation, depletion, and amortization from an examination of the investors' appraisal of risk of capital.

A. No; what I said, I think, Mr. Littman, was that in connection with the study, I made, also, a study entitled "Investors' Appraisal of the Risks of Capital", which, I believe, could be used as a basis to help determine such a figure.

Q. Now, I refer you to your Exhibit No. 64, Appendix C, page 131, on which is shown for Panhandle Eastern Pipe Line Company the "Investors' Appraisal of Risks of Capital" as 9.10 percent. Is this the percentage figure which you had in mind?

A. No, not necessarily, because that figure there, as clearly indicated, is a figure calculated on what I would describe as the over-all capital. In other words, as you can see clearly from the exhibit you cite, it includes common stock, preferred stock, bonds and other long-term debt, and the over-all coverage there is 9.10 percent.

Now, obviously, you have an admixture of items in there ranging all the way from common stock, which might be rather speculative, to their present first mortgage bonds [fol. 6738] which are carrying a rate of 2.74 percent. I merely say that, from the basis of this study, if I were to pursue an investigation, I think that I could determine a rate. I am not saying that it is 9.10, because this includes all the capital of the company and there are different forms. If you can tell me upon what basis the sinking fund is to be constructed, why, that would assist in determining what rates seem to be applicable in view of the circumstances.

Q. Well, you are the expert here. Suppose you tell me what rate would be properly applicable to the sinking fund in the light of the knowledge which you have of investors' appraisal of risks of capital.

A. As an expert, I say I would want a little time to study that before I made an answer. This is a perfectly new problem to me and it is one that I do not believe any expert would be wise, upon his feet in a few seconds, to give an answer. As a matter of fact, I do not think he could, unless he made the specific study you mentioned, and I have not made such a study.

Q. Would you expect the amount to closely approximate the 9.10 percent figure shown on page 131 of Appendix C?

A. I really have not any idea, Mr. Littman. As I say, the rates go all the way from 2.74 for the bonds, as shown in my study, Exhibit No. 63, I believe it is.

Q. What is the over-all rate which you have applied to [fol. 6739] the invested capital to secure the $5,064,821 of "Current Capital Requirements", shown in your Chart No. 37?

A. Well, there are various rates.

Q. Well, isn't that rate shown in your table for Chart No. 26 as 7.99 percent?

A. Chart No. 26, is that right?

Q. Yes.

A. Well, what that chart shows there is that there are varying rates which I have discussed. There is the 2.74 percent for the bonds, the 8.45 percent for the preferred stock, and the 12 percent for the common.

Q. Now, if you will refer to your Chart No. 26.

A. That is what I am looking at.

Q. Yes. You show there the actual amount of bonds, preferred stock, and common stock, the latter including surplus outstanding, as of June 30, 1941, do you not?

A. Yes, I do.

Q. And in your table for that chart, to wit, Chart No. 26, you show the over-all "Yield Rate" applicable to the 7.99 percent?

A. That is correct.

Q. Now, that is the yield rate which you recommend be adopted by this Commission for application to the actual invested capital as of June 30, 1941. Isn't that correct?

A. No, that is not correct, because, as I have just [fol. 6740] finished stating, you have long-term debt in at least four classifications, preferred stock in at least two classifications, and the common stock including surplus. Each of those classifications takes a different rate.

Now, the way you get the 7.99 percent is to first consider each of the various classifications of the capital structure and then strike an average. Well, now, obviously, if you change the proportions from one to another, which will happen as you go along if you are calling in some bonds or building up a sinking fund for it, or if you refinance, as was the case beginning along in February 1941 by the company, I do not know just what that figure would be and I would want to make some calculations on it before I gave an answer.

Q. Well, why do you show this over-all rate of 7.99 percent in your table for Chart No. 26, if it does not mean anything and if it is not to be used for any purpose in these proceedings?

A. Well, it does have a meaning because it is based on each of the figures, but I am still telling you that, so far as the sinking fund is concerned, I want to know from you, if you are going to be technical about it, what kind of

capital you are talking about. After all, all the capital has to be amortized. That includes common stock. Now, if you are going to talk about that, it is going to be 12 percent, if the rates remain the same as they were as of June 30, 1941.

[fol. 6741] If it is going to be preferred stock, it is the figure shown there, 8.45 percent. If it is the bonds it is 2.74 percent and I say I would merely like to make an investigation before I give a particular answer, if you are going to work out a new schedule.

Q. In other words, you are certain that if you were to make a study of the problem of the proper interest rate to be applied for a sinking fund calculation for depreciation, amortization and depletion, your study would be predicated upon the same general principles as those reflected on your Chart No. 26 of Exhibit 65?

A. Well, rather than say predicated, I would say that I would certainly take into consideration all those factors.

Q. Now, if Panhandle Eastern Pipe Line Company had as of June 30, 1941, only common stock outstanding in place of preferred stock and bonds, then the rate would be necessarily 12 percent?

A. Well, there, again, as I say, you are changing two factors right off. The common stock in Panhandle Eastern at the present time is twice removed from the capital and I do not see how you can reason until you make a study on the basis of the assumption you make.

Q. Mr. Coffman, in computing your annual allowances for depreciation, depletion and amortization, which total [fol. 6742] $2,551,034 per year, have you allowed any credit for salvage?

A. In that particular figure I have allowed nothing for salvage because I could not find available in any figures any estimate for salvage.

I have worked these figures out at the moment on the assumption that there is no salvage.

Q. Well, you know that there is going to be considerable salvage, do you not, at the end of 25 years?

A. No, I do not know that at all. I am very much afraid it is going to work the other way around, that there won't be any salvage.

Q. In your judgment there is not going to be any salvage at the end of 25 years hence on all of the property of Panhandle Eastern?

A. To state the question a little differently, looking at it from the standpoint of the investor, the investor would not believe, in view of the facts that are available on this company today, taking as long-run a view point of 25 years, which certainly includes, that he can see any salvage left nor have I taken any; nor have I seen any engineering estimates which include them.

I believe it would be a hard package to sell the investor.

Q. You have not seen any engineering estimates that [fol. 6743] include an allowance for salvage?

A. In this firm, no, because I used the annual reports which are the only thing available to the stockholder. I did not see any facts there in regard to that, neither did the investor and I think he would be rather hard to sell on that idea.

Q. Did you inquire whether there were any exhibits offered in this proceeding which showed whether there would be any salvage?

A. No, and for the reason given, that I have taken these figures from the annual reports which are the only figures that are available to the prospective investor, as well as the present stockholder.

Q. Do you know of any certified public accountant that would certify a statement of this company without giving effect to salvage?

A. If he has given effect to it, we have included it because we used the certified statements and we took the various figures right off the books as you know; so if he did it, we did it and he did not do it, we did not do it.

Q. But you do not know what method had been used or has been followed by the company in determining their amounts of amortization, do you?

A. No, I did not make any investigation of that.

[fol. 6744] Q. I believe you stated in your direct testimony that your annual provision of $2,551,034 for depreciation, depletion and amortization includes maturity and sinking fund provisions.

. . . . . .

The Witness: That is right.

By Mr. Littman:

Q. How would your allowance be affected if the company had no outstanding debt?

A. Well, if the invested capital were represented solely by preferred stock presently outstanding but in larger proportions and common stock in larger proportions to take up the amount now represented by bonds, you would find the same amount of invested capital obviously as now stated upon the exhibits and one-twenty-fifth of that amount would be taken.

Q. In other words, your allowance would not be affected if the company had no outstanding debt. The [fol. 6745] allowance would still be $2,551,034, wouldn't it?

A. If that were invested capital, it still would be, yes, sir.

Q. In other words, I would like to know what effect did you give in arriving at your allowance of $2,551,034 to the maturity and sinking fund provisions of the present debt?

A. Well, in that particular connection the consideration was not made there. Where the consideration was made as to the sinking fund provisions and actually given weight was when the calculation was made as shown in Chart No. 37 to arrive at the figure of $5,064,821.

Mr. Littman: Will you please read that answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. But in your text accompanying Chart No. 31, you make a reference to "this amount" which, of course, refers to $2,551,034, do you not?

A. Well, that just means that we are working now at an amortization figure to retire the capital and I wanted to make clear that when I did that I considered all the various provisions.

I did not say there that I was giving a specific weight at that point. I merely say that the amount, of course, includes maturity and sinking fund provisions.

[fol. 6746] I am aware of the fact that they were required. I may have been rather faulty in my examination if I had not made such investigation.

Q. Well, are you stating that your maturity and sinking fund provisions are made in two places, first, in the amount of $2,551,034 and, secondly, in the amount which you just named, "Current Capital Requirements" in the amount of $5,064,821 shown in Chart No. 37?

A. No, I did not say that nor did I imply it.

Q. Well, would your provision of $2,551,034 be any different if the maturity provisions on present debt were longer or shorter?

A. Well, if the provisions were such that the bonds, the bond section of the capital structure were to mature in a much shorter life than the 25-year estimate, then there would have to be a segregation for that portion of capital, but your question originally asked me if there were no funded debt whatsoever outstanding, but, other forms of capital, was what I answered.

Namely, that you would still have the $63,775,839 and that has to be amortized if these assets are going to be exhausted in 25 years.

Q. Well, Mr. Coffman, I am at a loss to understand what the maturity and sinking fund provisions had to do with your calculation of this $2,551,034 shown in Chart [fol. 6747] No. 31, which latter figure was computed simply by dividing 25 years into the sum of $63,775,839 of invested capital.

A. Well, I think that that probably is fully explained in Chart No. 17 where I give the details to the funded debt, which is the only issue at point.

There the issues of the bond are so worked out to show the present schedule of debt retirement and to show the outstanding amount of debt through the years to the maturity date of the bonds.

Q. How did the information or data shown in Chart No. 17 affect the very simple calculation of dividing 25 years into $63,000,000-odd?

A. Well, they did not have any great material effect for the simple reason that so far as the length of capital was concerned and the maturity date of the bonds, they are about one and the same thing.

In other words, the bonds are not to mature until 1960 and the 25 years that we are talking about would be at

approximately the same time, so there is very little discrepancy.

Had you had the bonds, on the other hand, mature, let us say, in 10 years and the full invested capital going on for 25 years, which is the estimated length of life, then there would have been some additional consideration given. [fol. 6748] If so happens that the sinking fund will take care of the debt retirement as a separate part of the overall capital.

Q. Well, if your bonds mature in 20 years and you have provided for a 25-year life for purposes of amortization, depletion and depreciation,—isn't that correct?

A. That is correct.

Q. Now, what does the 20-year life have to do with this 25-year life that you actually used for purposes of Chart No. 31?

A. Well, I merely say that there are two observations to be made. In the first place, the debt so happens to expire only a short time prior to the estimated life as used in this study, so that per annum, it would not make much difference.

Actually, from the standpoint of debt retirement the schedules shown indicate how the outstanding debt will diminish as the years go by and the sinking fund on the bonds operates.

Q. Now, referring to Chart No. 17, isn't it a fact that the lower left-hand portion of this chart clearly shows that the schedule of outstanding debt indicates that your invested capital in the enterprise is going to decrease through the years steadily until 1960? Isn't that correct? [fol. 6749] A. What that indicates is that as the provisions of the bonds operate, a sinking fund will be built up, which sinking fund presumably will be used to buy in certain bonds.

As those bonds are purchased they will retire or reduce a part of the invested capital. If, meanwhile, the company continues to go on and need invested capital of $63,000,000 or more, that will be supplied either through earnings or new financing.

Part of that is already being accomplished at the present time as we know, that is, the company is contemplating new financing.

Q. Mr. Coffman, does your estimated annual provision of $2,551,034 to return capital when gas reserves are exhausted hold good for the year ended June 30, 1941?

The Witness: May I have the question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: I think is does, yes.

By Mr. Littman:

Q. Will you again turn to Chart No. 31? During that same period the company actually charged the amount of $2,316,560 for depreciation, depletion and amortization. Is that not correct?

A. That is correct, but when you are talking about this report you have to relate the figures that you are referring to, to their base and in that particular case [fol. 6750] where you are talking about the $2,551,034 you will see in the explanatory note that it is based on a return of capital $63,775,839 which was fully explained in Chart No. 27 and was based upon the assumption that the preferred stock would be eliminated and the company's capital structure thereafter would be bonds and common stock.

Q. Well, I thought you just said a minute ago that this estimate of $2,551,034 held good and was properly applicable to the year ended June 30, 1941.

Did you answer that question that way?

A. I answered the question incorrectly. I did not know that you were trying to trip me up because I thought in my study it was clear as to how the things had been based and if it is not clear I have just verified it by my answer.

Q. You understand this is your exhibit, Mr. Coffman. I don't doubt that you know more about this exhibit than I do, so I hope I am not going to be able to trip you up, but I would like to know now to what year this $2,551,034 applies.

You now say it does not hold good for the year ended June 30, 1941.

A. It is the amount, as I have explained before, that has been calculated upon the assumption made of a change in the capital structure and based upon the operations of the company with the adjustment in figures which I have [fol. 6751] already described this morning and on Saturday.

Q. Well, is this annual provision that you provide here one that hops around, jumps up and down from year to year, or is it something that can be used over a period of time? Now, which is it?

A. I think it very definitely can be used. If you make the assumption that the company will refinance its present stock by means of 50 percent in bonds sold at $3.25 percent and 50 percent of common stock sold at 12 percent, you will then have a total invested capital of $63,775,839 which is comprised of bonds and common stock.

If you then assume a length of life of 25 years to account for full exhaustion of the property and take one-twenty fifth of the amount you get $2,551,034.

The reason that it was assumed that there might well be considered for purposes of this study a change in the capital structure is because of an exhibit—of a chart which is contained in this Exhibit 65 which indicates that the company might well consider the revamping of its capital structure.

That chart which I referred to is Chart No. 25, wherein I compare various natural-gas pipe-line companies and to ascertain whether or not they have preferred stock outstanding.

Q. Well, now, under the present capital structure, you [fol. 6752] only have $10,000 less, do you not, namely, $2,541,034? Is that correct?

A. Yes, that is correct.

Q. Well, let's take that figure under the present capital structure, $2,541,034. A. Yes, sir.

Q. In order that we have no further quarrel about the amount. Now, was that the proper amount in your opinion for amortization, depletion and depreciation ap-

plicable to Panhandle Eastern Pipe Line Company for the year ended June 30, 1941?

Now, I think you can answer that yes or no, can you not?

A. If the 25-year length of life is correct, I answer "yes" and I base that on Ralph Davis' statement which I have referred to before.

Q. Now, is it your testimony that the company, itself, has understated its depreciation, depletion and amortization for the year ended June 30, 1941?

A. Well, so far as my study is concerned, using the sources I did, getting the best estimate that I could in regard to the length of life of the properties, the figure of $2,541,034, which is arrived at as already described, seemed the reasonable figure to use and in so far as it was in excess of the other, I am not prepared to say why the difference existed.

[fol. 6753] I merely am defending and describing why I arrived at the figure I got.

Q. In your opinion, then, the company did not set aside a sufficient provision for depreciation, depletion and amortization for the year ended June 30, 1941? Is that your testimony?

A. If the length of life proves to be 25 years, that is exactly my testimony, yes.

Q. And, according to your testimony, the company set aside in its reserves for depreciation, depletion and amortization $224,470 less than it should have set aside and provided for that purpose in the year ended June 30, 1941?

A. That is correct.

. . . . . .

[fol. 6756] Q. Mr. Coffman, will you please refer to Chart No. 37 of your Exhibit No. 65?

This chart shows, among other things, that in your opinion, Panhandle Eastern will require $3,516,000 annually for operations and maintenance expenses. Is that correct? A. That is correct.

Q. How much did the company actually expend, according to its income statement, for operations and maintenance for the year ended June 30, 1941?

A. $3,196,797.

Q. Chart No. 29 of Exhibit 65 shows the figure which you just named as "Actual 12 Months Ended June 30, 1941". Is that correct? A. Yes, sir.

Q. Now, you have added an arbitrary 10 percent or $319,679 to the company's claimed expenses for the "Projected" figure which is shown, again, in Chart No. 37. Is that correct?

[fol. 6757] A. Well, I have not that specific amount in mind. The figure that I used in Chart No. 37 of Exhibit 65 was $319,203 higher than the amount shown for the 12 months ended June 30, 1941.

Q. Now, you added this additional amount to the operations and maintenance expenses for the year ended June 30, 1941, in order to secure the amount for the future without making any study of the books and records or any examination of the detailed items of operations or maintenance expenses. Is that correct?

A. I did it without examining the books and based it upon an analysis of the trend of the company's affairs over a number of years as I could interpret them from the various published statements and, also, from a careful study of the trend of material prices and material costs and wage-rate trends that had been going up in an upward move for the last two or three years.

Q. But you did not make any study of the books and records in arriving at this 10 percent increase?

A. No, that is correct.

Q. That is, you started your computation on the assumption that every dollar claimed by the company was properly includable for rate-making purposes without making any investigation of the books and records?

A. You have added in there, again, "For rate-making [fol. 6758] purposes".

Confining the answer to the study that I made under the approach that I used, taking the figures from reliable statements which had been reviewed by public accountants, I believe that the figure was within reason.

Q. Well, the statement that you relied upon as the basis of adopting the amount claimed to have been actually expended by the company for maintenance and operations

for the year ended June 30, 1941, showed the details of these maintenance and operations expenses to what extent?

A. Well, it showed the figure as I have broken it down in the exhibit. In other words, the figure for operations, as such, was a total figure and the figure for maintenance was a single figure.

Q. In other words, you had no details before you from the statement that you examined showing the individual items included within the meaning of the terms "Maintenance" and "Operations"?

A. That is correct, but I did have a series of figures which gave me some idea of trends. For example, for the 12 months ended June 30, 1940, operations, taking the single figure, was $2,561,71[illegible]8.

The same figure for the 12 months ended June 30, 1941, was $2,902,352.57 and so on.

I have the various other figures available for the years, [fol. 6759] so that you could get some very good idea as to what the trend was on those items for the company and then, in addition, as I say, I was familiar with other statistics which gave a good idea of what wage rates were doing by way of trend, what material costs were doing and so forth.

Q. Now, I believe you stated that you examined statements that had been certified by a certified public accountant.

A. Generally, you mean?

Q. Yes. A. Yes, I have.

Q. You have had no such statement for the year ended June 30, 1941, did you, but had such a statement for the periods previous thereto ending with December 31, 1940. Is that correct?

A. That is correct.

Q. Now, is it your understanding that a certified public accountant passes upon the propriety of items of maintenance and operations from the point of view of rate making?

A. I do not think that the public accountant, unless he has the specific assignment, has that in mind, but he does have in mind accounting practice which is believed

to be sound and which is acceptable under present-day conditions to most regulatory bodies.

In other words, they are certainly not certifying to [fol. 6760] various practices which they believe to be unsound, although at the same time they are not making a rate study unless they have been retained to do it.

Q. Mr. Coffman, even if you had made an investigation of the detailed operations and maintenance expenses, would you feel qualified to express an informed judgment or opinion as to their propriety for rate-case purposes?

A. Well, there, again, Mr. Littman, I am making a study which I have explained, using an approach which I have explained. From the standpoint of this approach I would feel qualified to do exactly what you say.

Now, when you talk in terms of rate-making, again, I get confused because I do not know whether you are referring to the classical theory or some other formula, but if I can confine my statements to this approach, my answer is "yes".

Q. You feel competent to examine the detailed operating statement of a company and to express an informed opinion as to the amount of maintenance and expenses required by a company such as Panhandle Eastern Pipe Line Company for a given year?

A. I think on a thorough investigation and having such checks as are necessary with various executives of the company, I can form a pretty good opinion as to drawing a distinction between what would be legitimate [fol. 6761] charges to capital and what would be legitimate charges to income; as I am using this approach, yes.

To me that is not greatly different than any other analyses which we are doing on financial and operating statements or analyses of a company and we do hundreds of them throughout the year.

Q. Do you feel that you could express a qualified opinion in that regard with respect to the detailed operations expenses?

A. Upon thorough study I think for use in my approach that I could have a very good reliable answer, yes.

Q. I believe you have heretofore testified that you are not an engineer? A. That is correct.

Q. And you have not made such a detailed study in any event, have you? A. No, I have not.

Q. And you have never seen the property of Panhandle Eastern Pipe Line Company, have you?

A. I have seen parts of it. I have not been over the entire property, no.

Q. What part have you seen?

A. Well, I have seen certain parts of it when I have been to their Kansas City office, I have seen certain parts of their company when I was in the Texas area.

[fol. 6762] I was not working for this company, but when I was going through the particular area, I have seen various parts of the pipe line through some of the country that it has crossed.

Q. Did you ever see any of the pipe, did you ever make any examination of the pipe in the system? A. No.

Q. I take it that the property of Panhandle Eastern which you have seen was by a rather casual observation, was it not?

A. Yes, I was not making an investigation of it. You asked me if I had seen part of the property and my answer is yes, but I was making no study of it.

Q. And the part that you saw was a very small part of the whole, was it not?

A. Yes, a small portion of the whole.

Q. Of course, among the matters to be decided by this Commission by investigation is whether the amount claimed to have been expended heretofore by Panhandle Eastern Pipe Line Company for operations and maintenance are properly allowable for purposes of this proceeding.

A. I should suppose that were true.

Mr. Wheat: Mr. Littman, I am wondering whether you really meant what you said there, that amounts expended in the past were properly allowable.

[fol. 6763] You understand, I do not think you meant to lead the witness astray with respect to that but I suppose you had in mind amounts to be allowed in the future, did you not?

Mr. Littman: Yes, I had that in mind and I had particularly in mind the question of past expenditures to be used as a guide.

Mr. Wheat: As a criterion?

Mr. Littman: Yes, as a guide for the future.

Mr. Wheat: I so understand you, but I just wanted to draw that particular matter to your attention.

Mr. Littman: I think I might have made my question clearer.

By Mr. Littman:

Q. You had such an understanding, did you not, of my question? One of the things to be decided by this Commission, of course, is the proper amounts to be allowed in the future for maintenance and operations?

A. That is correct. I understood that.

Q. Of course, you understand that such an investigation involves a detailed study and examination of the various accounts and practices of the company in that regard? A. By the Commission?

Q Yes. A. Yes, I so understand.

Q. Now, is this increase of 10 percent for the pur-
[fol. 6764] pose of taking care of an increase in labor and materials incurred in maintenance and operations?

The Witness: May I have the question read?

(Whereupon, the pending question was read by the reporter.)

The Witness: I do not believe that question is clear to me, Mr. Littman.

By Mr. Littman:

Q. Well, what is the purpose of this 10 percent increase that you have allowed after June 30, 1941?

A. Well, the purpose of that was to register what we believe to be a fact in this country at the present time, that an emergency has changed conditions, other factors in the country, external conditions, economic conditions have changed so that we have been having increases in wage rates, shortening of hours, greater demands for materials, therefore, higher prices, and, of course, there are some scarcities.

Those factors, all of them, so far as the management is concerned, are going to have an influence on their cost of operations and maintenance.

I felt that in making an estimate of 10 percent I was making a very conservative one. If I had to make a study today, with the additional information that I have at hand, I should say it should be higher, so that the purpose was merely to register the economic conditions that [fol. 6765] are having a bearing on the cost of operating this business.

Q. Was this 10 percent increase based upon a study made by Standard and Poor's Company?

A. Not on a direct study. We are commenting upon these things [dails], as you know, in our various printed services and as conditions change we are changing our opinion. That is a part of our business.

Q. Well, did you assume that all labor and all things purchased by this $3,196,797 shown in Chart No. 29 and Exhibit 65 during the year ended June 30, 1941, would increase 10 percent?

A. I had a specific figure, as shown in the financial statement, covering the 12-month period ended June 30, 1941, which showed a total for operations and maintenance of $3,196,797.

In view of all the conditions, as we see them today, with rising trends of commodity prices, raw material prices, wages and so forth, I used a simple method of saying that certainly on the average these items would be at least 10 percent higher and, as I say, if I were making the study today I would say it was even higher than that.

Q. Well, you did predicate the increase primarily upon the proposition that in your opinion, first, the cost of labor would increase by 10 percent. Is that right?

A. It is correct.

[fol. 6766] Q. And, secondly, that the cost of materials would increase by 10 percent? A. That is correct.

Q. Will you enumerate the major items of maintenance and operations and the amounts of each for the year ended June 30, 1941?

A. I do not have that figure or those figures.

Q. You never did have them? A. That is correct.

Q. Well, can you state generally what is included among these operations and maintenance expenses, giving us the major items?

A. Well, the major items are already included in the two captions. The major items are wages and materials as far as my calculations are concerned.

If you can present me with the company's exhibit, with a detail statement, I can easily read them off. but I admit I did not have them to begin with nor did I use them.

Q. Well, here you have an item of operations in the amount of $2,902,353 for the year ended June 30, 1941.

Suppose you state what you consider to be the largest item of operations of Panhandle Eastern Pipe Line Company.

A. Well, I would not attempt, Mr. Littman, to enumerate those without looking at the statement, because, in the first place, for this study I did not use the details as [fol. 6767] I have already said.

Q. Well, how do you know the costs of operations are going to go up, if you do not know what elements are included within the meaning of the term "operations"?

A. Because, in so far as their materials and labor are involved, this company cannot be the one exception in the country that is going along without suffering the increases that everyone else is going to have to meet.

Further than that, I state, again, the answer that I [have] you wherein, without any major changes in the business, the operations charges as made on the company statement increased from $2,561,715 for the 12 months ended June 30, 1940, to $2,902,352 in the 12 months ended June 30, 1941.

That is about $400,000 of increase and they have not yet faced the largest increases that probably will be forthcoming from the emergency period.

Q. Well, suppose you name three or four large items of operations of this natural gas pipe-line company.

A. Well, I do not know to what detail they break down their various accounts.

Q. You do not need to give it to me by accounts. Just name a few items.

A. Well, for example, in their operations they are operating and maintaining the pipe line as such, they have stations all along the line with telephones and tele- [fol. 6768] graphs which they are maintaining.

They have men at various stations to report, they have other men to take care of valves and cut-offs, they have booster stations, they have men where the line has been looped, so there are repairs all along.

If they have an explosion, for instance, or a flood so that a part of their pipe is washed out, there are men there immediately to take care of that and so on.

Q. What percentage, would you say, of the total maintenance and operations cost for the year ended June 30, 1941, is embraced by the items which you just named?

A. I would not say until I see the figures.

Q. You would not have the slightest idea, would you, even if you did see the figure—

A. (Interposing) Yes.

Q. Well, I mean without seeing the figures. Would you have the slightest idea without seeing the figures?

A. I would not know now because I have not seen the figures.

Q. Well, you do not know from your own general knowledge what percentage of operations and maintenance is related to the items which you just named?

A. Stating it the other way around, for purposes of this study I did not have the detail figures, nor did I think that they were needed for my particular approach. [fol. 6769] Q. Well, the answer is you don't know?

A. I say I don't know and I don't need them for this approach, taking a view from the investor's standpoint.

Q. You do not know now and you never did know?

A. Of the detail figures, that is absolutely right.

Q. Well, not only of the detail figures, but of the percentage, generally, of operations and maintenance expenses which comprise the elements and items which you just named?

A. No, but I still say that I know that there was $350,000 of increase between two different 12-month periods

and that was reported to the stockholders who have an investment in this company.

They know, also, of the rising trend of prices and they are taking that very definitely into consideration. Assuming that someone doesn't come along and show that these figures are all improper or misstated, they presumably stand in totals.

Q. Will you read the revenue figures for those corresponding periods?

A. Yes. The total revenue figure, the gross revenue which is gas, gasoline and other, was $13,096,556 in round figures for the 12 months ended June 30, 1940, and $14,336,448 in the 12-month period ended June 30, 1941.

Q. And what is the difference between the revenue [fol. 6770] figures?

A. The difference in the total gross revenue figure is $1,239,892.

Q. Now, can you state what part of the increase between the two periods which you mentioned, that is the increase in maintenance and operations expenses, was occasioned by rising wages and materials costs and what part was brought about by the requirements for the purpose of securing this additional revenue?

A. No, I cannot state that figure.

Q. As a matter of fact, the operating costs per dollar of revenue have been going down, according to the figures that you just read. Isn't that correct?

A. That is per unit sold, yes.

Q. And those are figures upon which you relied in part to secure this 10 percent increase over the figures as of the year ended June 30, 1941?

A. Which months did I rely upon?

Q. Operations and maintenance expense figures for the preceding years.

A. Well, I relied upon the actual figures for operations and maintenance as shown in the various financial statements, yes.

Q. Now, what other items are included within the meaning of the term "Operations", as you have used it [fol. 6771] on this Chart No. 29 of Exhibit No. 65?

A. Well, as I say, Mr. Littman, I do not think I can go into much more detail unless I have the company's figures before me and read them off.

I did not use them for this study because I did not feel it was necessary. What I was doing, as I have explained previously, was looking at this from the investor's point of view who has only the various financial and operating statements that are published in order to form a judgment. That is exactly what I had to form a judgment.

Q. Well, do these operations include bond interest, for instance?

A. No, they do not include bond interest.

Q. Do they include rate-case expense.

A. I do not know.

Q. It might?

A. I would not say. I have not made a study, so why should I go on guessing with you?

Q. Well, if you do not know what is included in the meaning of the term "Operations", as you have used it on your Chart No. 29, I am at a loss to understand how you could determine that the amount was going to increase 10 percent after June 30, 1941.

Now, can you explain how you can arrive at such a conclusion without knowing any more about the details than [fol. 6772] that which you have told us?

A. Yes, I think it is very reasonable, to me, Mr. Littman, just as, right now, for example, I do not know and I don't suppose the company knows what the income, taxable income for this firm is going to be, but they know that the taxes, when they pay them, so far as rates [as] concerned, are going to be much higher than they are now.

Well, I know that about wages and materials and yet I do not know the individual items any more than I know what the taxable income is, but I know it is going to be higher, so do I know what the wages and materials are going to be higher and that the total on operations figures is going to be higher.

Q. We are going to take up the subject of taxes a little later, but confining ourselves for the moment to maintenance and operations expense, you cannot give us any further explanation than that which you have already given as to why you expect a 10 percent increase?

A. I think the Exhibit 65, Chart No. 29, states the situation exactly. There was a figure of $3,196,797 which was recorded for the 12 months ended June 30, 1941.

That is the figure that the various people who were interested and who received the published statement saw. That figure was increased; that total figure, broken down as to maintenance and operations, was increased by 10 [fol. 6773] percent because of a study and analysis that we make currently and day in and day out as to what is happening to wage rates and material cost and material prices.

Q. If I were to tell you, Mr. Coffman, that the operations expense shown in the amount of $2,902,353, included a single item of an amount in excess of $1,000,000, could you tell me what that item was?

A. Not at the moment.

Q. You would not have the slightest idea?

A. Not at the moment, because, as I have said, I did not study the breakdown, so I do not know how I can answer.

The figure I had before me was the only figure that was available to the investing public.

Q. Well, that is not quite so, is it, Mr. Coffman? The stockholder has a right to examine the books and records of the company, hasn't he, at reasonable hours?

A. Well, on occasions, there is usually a certain time set but for all practical matters he does not have the chance to have access to the books, because people just cannot take trips to Kansas City and spend two days poring over the books.

Q. Well, they can write to the Federal Power Commission, can't they, concerning the subject matter filed as public record in their annual reports?

[fol. 6774] A. They can do that.

Q. Well, the information is available to them if they want to go and get it, isn't that right?

A. Or part of it, anyway, if not all of it.

Q. Well, all this information about the detail items of maintenance and operations expense was available to you if you had wanted to get it. Isn't that correct?

A. I could have gotten a good portion of it, but the time which I had to spend on this study would not permit the number of weeks it would have taken.

Q. Well, let me be clear about one thing. Is it your testimony that all things purchased by the amount of $2,902,353 of "Operations" expense for the year ended June 30, 1941, will increase 10 percent by reason of materials and wage costs increases?

A. Are you referring to the matter generally or are you confining it as applied to Panhandle Eastern?

Q. I am speaking of Panhandle Eastern and particularly of the figure shown in the Chart No. 29.

A. Well, what I am saying on that, then, is that the operations and maintenance charges, in my opinion, can reasonably be expected to be 10 percent higher for the coming 12 months than they were in the last.

Q. Do you mean per unit of sales or in the aggregate?

A. I am talking altogether in terms of aggregate dol- [fol. 6775] lars as shown on the chart.

Q. Regardless of the amount of revenues expected to be derived?

A. Revenues haven't anything to do with this particular item, as such. If you do more business or if you service more communities, the likelihood is that there will be more operations and maintenance, naturally, but so far as this individual item is concerned right now, that is a separate division.

Q. In other words, this increase of 10 percent which you show in your Chart No. 29 of Exhibit 65 does not include anything for increased business, for maintenance and operations to take care of increased business, but simply reflects a 10 percent rise in materials and labor costs?

A. No, it takes in other factors, also. I refer again to the figures that I used as an illustration on operations. [Betwen] the 12 months ended June 30, 1940 and the 12 months ended June 30, 1941, as I just answered you, during those two periods there was an increase in gross revenue and more business done. At the same time, as I have shown, there was some $400,000-odd increase in operations expense alone.

That was approximately a 20-percent increase.

[fol. 6776] Q. Well, then, this increase of 10 percent is going to take care of the increased business requirements for the year ended June 30, 1942?

A. Will you read the question?

Trial Examiner: Read the question.

(The pending question, as above recorded, was read by the reporter.)

The Witness: I would say that most of it is related to the increase that can be expected from the price trends and wage trends and that if there is any over that can be attributed to increase in business, but so far as your question is concerned, I did not there make a break down as between how much is increased business and how much is attributable to rise in wage rates and material cost.

Mr. Wheat: I am sorry, I didn't hear that last part. Did you say you did not make a break down?

The Witness: I said that I did not segregate. I didn't use that word. But I am saying that I did not segregate in the increase of the difference between $3,196,797 and $3,516,000, the amount that would be for 10 percent increase in wages, 10 percent increase in material costs and other factors. In other words, looking at the over all amount, I said that 10 percent was a reasonable expectancy as an increase when compared with the actual 12 months ended June 30, 1941.

[fol. 6777] By Mr. Littman:

Q. For how far into the future after June 30, 1941?

A. I have already explained so long as there is no major change in conditions.

Q. Well, that might hold good for one day, then, might it not?

A. Well, it might hold good for one year, but so far as the approach is concerned, it will hold good just as long as the classical theory of forming a rate basis and the rate of return will hold good.

Q. Well, now, seven months have elapsed since June 30, 1941, will this amount which you set for the Chart 29 in the amount of $3,516,000 for operations and maintenance hold good for these past seven months?

A. I don't know. I haven't seen the statement as of December 31, 1941, so I can't say. I haven't made the comparison, but it would not be a difficult thing to do.

Q. Well, Mr. Coffman, you based your increase and your determination of the entire projected amount upon your general knowledge. Now, why can't you apply your general knowledge of conditions to the item of maintenance and operation and look back over seven months and tell us whether your prediction was proper in the light of what has transpired?

[fol. 6778] A. Well, so far, generally, as the economic conditions are concerned with material costs and wage rates, I think that they have more than been borne out. I think they have been higher on the average than 10 percent. And as I say, if I were to make this study today exactly on the same basis I made it some seven or eight months ago, or whatever time it was, I would make the allowance higher than 10 percent in view of my general knowledge as it is today.

Q. Now, you can't tell us what proportion of this investment of $319,000 in maintenance and operation expenses is strictly attributable to increases in the cost of materials and labor and that which is attributable to increased business, can you?

A. No. And I would go further, Mr. Littman, and say that in my approach I was trying to get some method which would be comparatively simple and, unless some figure as reported can be stated to be wrong, that there might come from this a quick method to get at some rates available for the purpose of this proceeding. Now, if I am going to have to follow on an approach which will become as laborious and as costly as used to determine reproduction cost new and the others substituted yesterday that were originally made on the old classical theory, then it seems to me that you handicap the whole approach.

Q. Well, does the determination of the amount of op- [fol. 6779] erations expenses have anything to do with reproduction cost. A. Operations and expenses?

Q. Operation expenses.

What does the reproduction cost there have to do with operations expenses?

A. I wasn't saying anything about that, Mr. Littman, so far as my approach was concerned. I was merely citing by comparison the difficulties that you get into if you carry all of these studies to such minute detail that it takes the better part of a year or longer to complete them and the cost is run into tremendous sums of money. For my purpose, I was trying to find some method which appeared to me to be reasonable, wherein you could get some figures for this purpose. Now, if the Commission makes an investigation and finds that one of these figures is improper, I would be perfectly willing to take the proper figure, but until that is straightened, I have nothing else to accept than the figures that are reported to the public.

Q. Plus 10 percent.

A. Well, I made that allowance because of the reasons I have already given, yes.

Q. Now, you have indicated that most of this 10 percent is for the increase in wages and material costs rather than increases in the amount of labor and the amount of material. Is that correct?

[fol. 6780] A. I don't recall that I said any such thing.

Q. Well, what is the fact?

A. I said that what I had was a figure of $3,196,797 and in studying the external conditions, knowing the general trends and so on, it seemed reasonable to me that a figure would increase at least by 10 percent, so I multiplied such figure by 10 percent and added on the additional amount to get the figure. That is the fact and there is no other explanation to it.

Q. Can you state the amount of wages paid by the company in the year ended June 30, 1941?

A. Well, I have really answered that, haven't I? I have told you I have no break down, so how can I tell you what the wages are that are involved in this?

Q. Did you assume that the cost of gas purchased by Panhandle Eastern Pipe Line Company from its vendors was going to increase per unit after June 30, 1941?

A. You are talking now purely about the purchase price?

Q. Yes.

A. Well, in so far as they had contractual arrangements with their various vendors, it certainly wouldn't change until the contract so stipulated. If they had to

make some new contracts, that portion of the gas might cost them a little more. They don't just go out and buy [fol. 6781] that without some contractual arrangement, of course.

Q. Do you know how much of it is contracted for and how much of it is not contracted for?

A. No, I didn't make a detailed study of that.

Q. Do you know anything about the terms of the gas contracts?

A. No, I did not review those.

Q. Well, without knowing something about the contracts and the dates when they expire and the conditions under which Panhandle Eastern Pipe Lines purchases its gas, you can't tell whether the cost per M.c.f. of gas purchased is going to increase after June 30, 1941, or is going to remain the same or is going to be less, can you?

A. As to the specific amount, no, but you are working in a variable time element which I do not think is to be involved. In no case throughout the approach am I saying that this study will last any longer than any other approach. If conditions change or contractual arrangements change, a new set of factors must be considered. I say we make the study and I shall proceed to do it. If a change is to occur in any major factor, then, obviously, a new study would be necessary.

Q. Well, omit the time element from my question and answer as of the day, June 30, 1941.

A. Is that an additional question?

[fol. 6782] Mr. Wheat: Have you completed your question?

Mr. Littman: Perhaps I better reframe it in the light of the witness' answer to my previous question.

By Mr. Littman:

Q. You say that you cannot state what period of time into the future after June 30, 1941, your "projected" figures of operations and maintenance shown in Chart No. 29 of Exhibit 65 will go? Can you?

A. Well, I didn't say exactly that. I said that these figures would hold good if they were found to be proper figures, that is, for what they represent if they are found to be proper they will hold until there are any major

changes in any of the important factors relating to this approach. At that time it would be necessary to reappraise the situation and come to new conclusions and I don't see that that is any different than would be the case under the classical approach. I mean if a major factor changed there, you either have to make a new study or find that the results are no longer in keeping with the original opinion.

Q. Well, has any major change occurred since June 30, 1941, that would change your 10 percent increase?

A. As I say, the trends are continuing to go up and if they continue on, further allowances will have to be made. [fol. 6783] If the management doesn't make them, they are going to be stuck with them just the same as anyone else.

Q. I am talking about the seven months that had expired June 30, 1941.

A. Generally, prices have gone up and wages have gone up more than 10 percent, yes.

Q. Then you want to change this projected figure and increase it some more?

A. Not at this point. I have made the approach and at the moment, I stick with it, but I say this, that if the trends continue to go up, further allowances are going to have to be made because they are actually going to have to be met.

Q. So far, down to date, you stick by your projected estimate of $3,516,000 as the "dollars needed by Panhandle Eastern Pipe Line Company for operations and maintenance"?

A. That is right, and I will stick with that until such time as a reappraisal of all these factors indicates that 10 percent is not sufficient, that you will have to have more and other allowances for increases will have to be made in the other figures I have used, yes.

Q. I take it from your testimony, Mr. Coffman, that in order to make an estimate of operations and maintenance expenses for the future, you don't have to know anything about the amount of sales or the amount of pur- [fol. 6784] chases or the amount of materials or the detailed accounts in order to make a proper estimate?

A. Why I haven't said that, and I haven't implied that.

Q. All right, let's go through these. Can you tell us what the sales of Panhandle Eastern are going to be on and after June 30, 1941, as estimated by you or as estimated by anyone else?

A. I have got the figure right in the exhibit here, what the gross revenue is going to have to be on the basis of calculations I have made. So long as the conditions generally exist under which I made this study, I still say that those figures are the reasonable figures, based upon this approach.

Q. Is the amount of $15,920,855, which is shown in your chart No. 37, as "Total Dollars Needed", the amount of revenue which you expect Panhandle Eastern to have in the future?

A. I say that under conditions which existed at the time this study was made, allowing for increases that are specifically stated in the various amounts, allowing for what will be necessary in the way of current capital requirements executed on the basis as clearly stated in this report, that this company would have to have gross revenues of $15,459,545.

[fol. 6785] Q. How many M. c. f.'s are contemplated by that figure?

A. I don't know. I haven't worked it out on a unit basis.

Q. Well, what I would like to know is how many units you expect to sell and how many units you considered would be sold in arriving at this estimate. Without this number of units, Mr. Coffman, you appreciate that it would be practically impossible to put this exhibit to any use.

A. There is another angle, also, that has to be considered besides that, it seems to me, Mr. Littman.

Q. Well, suppose you answer my question first and then we will talk about the other angle that you want to talk about.

A. That is exactly what I am going to do, if you will permit me. If you will make the assumption that as of today the M. c. f.'s being sold were to remain static, but because of external trends the various costs for operations, maintenance, and taxes and so forth, which I have enumerated, arrived or reached the figures which I have, even though there had been no increase in M. c. f.'s, I would still say that the company under those conditions I

have just outlined, had to have $15,459,545; so that what you have to have is not only the M. c. f.'s, but you have to have the trend of the times and the cost of doing business. I think that, if you will take the example I have given, [fol. 6786] answers your question.

I have said here that these estimates which I have made were reasonable and when you accumulate those various items, you arrive at $15,459,545.

Q. Well, do you assume that the number of M. c. f.'s sold by Panhandle Eastern will remain static?

A. I don't think they will, no. I think this is still a growing industry and I think this particular company is a growing company.

Q. And you think that the sales are going to increase?

A. I think they will.

Q. Now, am I correct in understanding, then, that this amount of operations and maintenance of $3,516,000 shown in Chart No. 29, is the amount which would be required in order to produce the $15,520,855 of revenue shown in Chart No. 37?

A. I don't know whether I get your question correctly, but so far as the relationship of $3,516,000 for operations and maintenance, as I have projected the figure, is concerned in comparison with the $15,549,545, obviously, they are related because the $3,516,000 is a part of an accumulated total to arrive at the larger figure.

Q. Well, you say they are related, but you don't tell us how they are related. Will or will not Panhandle Eastern Pipe Line Company be required, according to your [fol. 6787] estimate, to spend $3,516,000 in maintenance and operations expenses in order to receive $15,520,855 of revenue? That is Chart 37.

A. Under the study that I have made and the approach used, that is the amount that I believe reasonable under the conditions mentioned for operations and maintenance, yes.

Q. So that your study contemplates, as shown in Chart No. 27, a horizontal 10 percent increase in wages and materials costs required to produce that revenue after June 30, 1941; is that right?

A. I believe I have answered that by the explanation that I gave originally. I merely—

Q. (Interposing) Can't you answer that yes or no?

A. (Continuing) —I increased. I don't know what you mean by "horizontal." The $3,196,797 which was the actual figure, was increased by 10 percent to arrive at $3,516,000. There can't be any other explanation to it, that is it.

Q. Take it or leave it, that is it, that is all there is to it?

A. That is exactly how I got my figure so far as the $3,516,000 is concerned, that is the only explanation I can give you.

Q. Suppose you had estimated the increase to be 20 [fol. 6788] percent by mistake. How would we know or how could we ascertain that you had made a mistake from the explanation that you have made?

A. Well, I would presume that with the experience that the Commission has they must know whether a figure, in the first place, looks reasonable or unreasonable. In addition to that, I had assumed the Commission was making rather elaborate studies as to all these items and arriving at a conclusion as to whether the figure was proper, whether the accounting for the figure had been proper and so forth.

Q. It looks like we are going to have to go through the figures by the classical method, after all, in order to test whether your very general estimate of an additional 10 percent is right or wrong. Is that correct?

A. Well, that isn't the way my mind works. It may be true, but I don't believe it.

Q. Well, in order to check whether you are right or not, what do we have to do?

A. Well, so far as the operations and maintenance are concerned, if you want to find out whether that is right, that is just one set, one group of accounts that are included in those classified cases. They can be analyzed.

Q. Yes, but how about this 10 percent increase that you applied?

[fol. 6789] A. Well, economists and all people interested in what is happening to the economic factors in the country study the trends. I should suppose that the Commission is doing the same thing, as well as studying the records of the company. I am sure you must be.

Q. Doesn't your 10 percent increase apply to all of the items of operations and maintenance?

A. Well, the 10 percent is applied against the total figure, Mr. Littman, and how can I break it down in detail more than I can tell you the individual items when I tell you I didn't have them to work on? It seems to me I get no place answering your questions, because I have to give you the same answer. I have already admitted it a half dozen times. I don't have the details now, I didn't when I made the study, and I can't make them up here.

Q. Well, did you or did you not reflect an increase in the unit cost of gas purchased from vendors in your estimate of operations for the projected period? Can you answer that question or not? You either did or you didn't, you know.

A. Well, no, your question still isn't fair, because you are pinning me down to one item. I didn't have any of the individual items, so I will answer your question as specifically as I can by saying that if such item were in the amount of $3,916,797, and I increased that over all [fol. 6790] figure by 10 percent, in so far as another figure is in there, you could multiply each of the items by 10 percent to get the total or not. But I didn't do it that way; I took one total figure and increased it by 10 percent.

Q. The thing we would like to know is how you did do it. A. Well, I just got through telling you.

Q. And what it contemplates. Does or does not your study contemplate an increase in unit cost of gas purchased, assuming that the cost of gas purchased is in here, and which you don't know, incidently? Assuming that it is in there, will you answer my question, please?

A. I will answer your question as I did before. The $3,196,797 was increased by 10 percent to arrive at my figure and I do not have any break down of details or any individual figures to which I applied individual percentages. I say that it is a reasonable expectation, with conditions as they were when I made this study, that this particular item would increase 10 percent.

Q. Now, I want you to assume that all of this operations expense of $2,902,353 represents gas purchased from vendors. Under that assumption would you have applied a 10 percent increase to it?

A. I wouldn't have applied a 10 percent increase if there had been no wages and materials, because, as I [fol. 6791] have told you, wages and materials increases

were part of the explanation of getting the 10 percent. Now, if there were no wages or materials involved at all, there wouldn't be any 10 percent. If there were any additional contracts for gas written, I could get some idea of an increase in that, I would take it into consideration, if I had those detailed facts.

Q. Now, you have to have those detailed facts, don't you, before you could do anything with such a figure?

A. No, I don't have to, because I have already done this and I have it right here and I didn't have any of them.

Q. Now, assuming that $2,000,000 of this operations expense, which totals $2,902,000, were gas purchased expenses, what would you do in those circumstances? Would you still apply a 10 percent increase to get your projected figure or wouldn't it make any difference?

A. To the extent that there was no labor and materials involved in the particular item, there would be an adjustment for that amount. But taking the figure your over all—

Q. (Interposing) How would you adjust it?

A. Well, depending upon what facts I could get, but I say that individual figures, for example, in a total, one you might increase by one figure and another figure by another, [fol. 6792] and if you come out with an average, it would be 10 percent; just as I have studied yield rates on securities, bonds are 2.74, preferred stock 8.45 and common stocks 12. If you average that, you get 7.99. Well, this 10 percent—

Q. (Interposing) We will come to that.

A. I am just using that as an illustration to come to this, so that when you get through you get a 10 percent over all increase. That is the method that was used here.

Q. Well, assuming that there was one million dollars worth of gas purchased expenses, and I am speaking now of amounts paid to gas vendors by Panhandle Eastern included in this $2,902,353 figure of operations for the year ended June 30, 1941, what would you do in that event?

A. I don't know, Mr. Litman. I come right back to my original answer. I increased a sum total figure of $3,196,797 by 10 percent.

Q. Now, how do you know that is right without knowing how much labor is in here and how much gas purchased is in here?

A. I don't really know that it is right, but it was my very best judgment under all the factors I considered and made at the time, just the same as anyone else uses his judgment on everything that he is working with. I don't know. Time will prove whether it is right or not.

[fol. 6793] Q. But your judgment is not any better than what you know about these things, Mr. Coffman. Now, you told me a minute ago that you would want to know how much gas is included in here and that you would want to make adjustments accordingly, is that right?

A. I say, if I had all of those figures, it is like every other study in that it would be just that much more material to work with.

Q. And so much better an estimate?

A. It might be, but, after I got through, I might come out with 10 percent.

Q. You would be lucky if you did, wouldn't you?

A. No, I do not think I would be too lucky, no.

Q. Do you know whether any delay rental expenses are included in the amount of $2,902,353 of operations?

A. No, I do not.

Q. It is a fact, is it not, Mr. Coffman, as you know in your Exhibit 65, that the operating ratio of this company has declined consistently through the years.

Do you recall the chart where you show that conclusion? I believe it is Chart No. 8 of Exhibit 65?

A. Yes, Chart No. 8. The operating ratio of Panhandle, before taxes, has shown a general decline from 1934 through 1937.

During 1937 there was an increase and then, beginning [fol. 6794] in 1938, it started to decline again. After taxes, however, the operating ratio showed a decline until 1937 and, since that time, has shown a rather marked increase.

Q. And the operating ratio, as indicated by your Chart No. 8 for Panhandle Eastern Pipe Line Company, is substantially below that of the average of other pipe-line companies, is that correct?

A. Yes, that is correct.

Q. And do I correctly understand you to mean by the term "Operating Ratio", the relationship between revenues and expenses?

A. Yes, sir.

Q. That is the percent of gross revenue consumed by operating expenses. Is that a correct definition?

A. That is correct.

* * * * * * * *

By Mr. Littman:

Q. Will you turn to Chart No. 10 of Exhibit 65. On this chart you show in graphic form, the "Percent earned on invested capital of Panhandle based upon capital structure".

[fol. 6795] Will you state the percent earned by Panhandle Eastern on its invested capital as defined in this chart for each of the years 1937 to 1940, inclusive?

A. As shown in table for Chart No. 10, Exhibit 65, the percent earned on invested capital for each of the years 1934-1940, both inclusive, are as follows:

2.24 percent; 3.50 percent; 6.05 percent; 8.78 percent; 7.77 percent; 9.57 percent; 9.62 percent; and the average for those years was 7.11 percent.

Q. Now, will you please turn to Chart No. 11 of Exhibit 65 entitled, "Percent earned on invested capital of Panhandle based upon net property, intangibles and working capital."

Will you state the percent earned by Panhandle Eastern on its invested capital, as defined in this chart, for each of the years 1937 to 1940, inclusive?

A. In table for Chart No. 11 in Exhibit 65, the percent earned on invested capital for the years 1937-1940, both inclusive, were as follows:

8.76 percent; 7.75 percent; 9.49 percent; and 9.54 percent.

Q. What is your opinion as to the reasonableness of the percents earned by Panhandle Eastern on its invested capital which you have just read into the record for each of the years 1939 and 1940?

[fol. 6796] A. Mr. Littman, you cannot consider it, looking at it from the over-all investor's point of view, for any individual year.

To answer your question, I would have to look over a period of years to satisfy myself that, over such years, the

average that you might get would be satisfactory to the investor and I would have to have such figures in order to determine whether or not the figures in the few years you mention were in line with the general average, higher or lower, because, after all, the invested capital was in the company for many years and would continue to be and the investor watches that, not as of a given year, but tries to ascertain how he will fare over the length of life of that investment.

Q. Well, what would you say about the percent earned on invested capital by Panhandle Eastern in 1939 and 1940 in the light of the data which you have for the previous years as shown in your charts Nos. 10 and 11 of Exhibit 65?

A. Well, as the table mentioned shows in the early years, because this company was just then getting underway, so to speak, it was a comparatively new company and its earnings were not large in comparison to invested capital.

The return was very small.

Now, if the investors had thought that making such investments in this company, the return was going to continue on those low levels, I do not believe they could ever have [fol. 6797] been encouraged to make the original investment. They did feel, however, that although there was a period of waiting, perhaps later on, when the corporation got settled in some degree of maturity, its earnings might be better, in which case they would make up in the later years some of the lower returns that they had to suffer in the earlier years and they will look at it on the basis of the average over all to see whether or not, in their opinion, it proved to be a sound investment.

Q. My specific question related to the percent earned on invested capital of Panhandle Eastern in the year 1939 and in the year 1940, which was very close to 9.5 percent in each of those years. Do you think that was reasonable?

A. In view of the past history, I do, Mr. Littman, for the reasons I have just given. The average for the period 1934-1940, both inclusive, as shown in this particular table, is 7.11 percent and, in another connection, with the figures I have already recited, the investor's appraisal of the risk of capital at the same time this study was made varied all

the way from 2.74 percent on down to 12 percent on common stock.

This takes the invested capital as a whole. If you take in the other study, the invested capital as a whole, the figure as we already have it in this record is 7.99 so that it seems to me one must conclude that the two years you [fol. 6798] mention where the figures are 9.5, approximately, for 1939 and 1940 had to be such in order to bring up the average to what would appear to be a reasonable figure so that, so far as those figures are concerned, I do not believe they are unreasonable.

Now, if you should continue a period of years in which they should remain at that same level, when the over-all investor's appraisal of the risk of capital was running 7.99, I would then review the facts but, until such time as you find such average, I say the figures here are not unreasonable.

Q. You mean the figure of 9.5 percent, approximately, earned on invested capital of Panhandle Eastern in the years 1939 and 1940, is, in your opinion, reasonable?

A. That was not quite my answer, Mr. Littman; I said you had to consider a period of years because that is the way the investor looks at the situation.

He is perfectly willing to make an investment in an enterprise knowing there might be a period of waiting for some return but he would not make any investment at all unless he felt at some point along the line the company would settle down on an earnings basis whereby the original investor would begin to get a return.

Now, in the period mentioned, 1934-1940, both inclusive the average percent earned on invested capital as shown [fol. 6799] in table for Chart No. 11 of Exhibit 65 is 7.11 and at the time this study was being made, our study of the investor's appraisal of the risk of capital showed that to sell securities of this general type in the market, the investor required 7.99 percent.

Therefore, I say that, taking a look at the years generally from the investor's point of view, the 9.5 percent approximately, for 1939 and 1940 was not unreasonable because those were necessary to bring the average up to

about what the investor said he would require if he was to finance this particular property.

Q. Is what you have just said true of an investor who first invested some money in this enterprise in 1940? What does he have to make up?

A. Well, the capital is already in the business. The exchange of shares from one stockholder to another has nothing to do with the company.

In other words, whatever gain or loss there is [there] to be considered is made up between the two parties.

Q. In other words, if I were to buy a share of stock in Panhandle Eastern today, you think I would be entitled to require an over-all return of 9.57 percent in order to make up what my vendor of that stock had not earned in the previous years?

A. I say that if you buy a share of stock in this firm [fol. 6800] as of today or as of the date of this study, rather, confining it to stock, our study indicates that you would have to sell that stock on the basis of a 12 percent return and that is based on actual transactions of similar securities in the market as of the date of this study.

Q. Well, of course, here we are speaking of an overall return.

A. The over-all return, as of the same date, was 7.99. You might call it 8 percent in round figures.

Q. Suppose I were to buy, today, bonds, preferred stock and common stock in the precise proportions which would equal this 9½ percent earned on invested capital.

Do you think that I, as a new investor in Panhandle Eastern, would have any right to expect to recover and make up for lesser earnings in earlier years on invested capital?

A. According to my study of the investor's appraisal of the risk of capital, the demand at the date of this study was an over-all 8 percent.

However, your particular illustration points out one very small part of total, namely, shares that you might buy from me or from someone else. There is the further consideration that many of these investors who originally

put money into this situation put it in as an investment. They did not go into it as a speculation.

Therefore, they are not buying and selling these shares [fol. 6801] currently or, for that matter, frequently. They are holding it or retaining it for the purpose that they originally made it so that you have to draw a distinction between what you as an investor might do and what the great majority of the people are doing who put the money originally in it and those people are holding on because they still think, as the situation goes on, that the average of 7.11 will approach 8 percent.

Q. Isn't [you] study, contained in Exhibit 65, predicated upon the proposition that the entire invested capital in Panhandle Eastern is going to be floated on the market as of June 30, 1941, and isn't your capital requirement figure predicated upon the cost of raising that amount of capital?

A. It is predicated upon the basis that as of the date of this study with this company going to need financing, it would have to pay at the over-all rate mentioned.

Q. Now, does that presupposition take into account that these securities are going to be floated on the open market to whomsoever wants to buy them?

A. Well, if the company is to be and continues to be privately financed, that is, publicly financed, I presume that is where the money will come from, the general investor.

Q. Now, that might give you an entirely new set of [fol. 6802] security holders of Panhandle Eastern on this theoretical assumption, might it not?

A. If you brought out a new issue, you might get some old ones, you might get some new ones or they might all be new. I do not know.

You will naturally be trying to tap that capital market where the capital is available and where the investor believes that this is an attractive investment at the price you are attempting to sell it.

Q. Do you think, under those circumstances, that the new investors would have any right to expect or would reasonably expect to recoup past deficiencies in earnings on invested capital?

A. As I say, our study indicates that for an over-all picture, the rate is approximately 8 percent at the time this study was being made.

Q. Eight percent on what? I do not get that 8 percent.

A. Eight percent as the investor's appraisal of the risk of capital. That is the 2.74 for bonds, the 8.45 percent for preferred stocks and the 12 percent for common stock and then working it out for the over-all capital, the rate was 7.99.

That figure has already been mentioned in these hearings, calling it 8 percent in round figures.

Q. If I may interrupt to explain something for the pur- [fol. 6803] pose of the record? A. Yes.

Q. This 7.99 percent, or 8 percent that you have just mentioned is a percent of earnings related to market value of the total outstanding securities, is that right?

A. That is the percent that the prospective investor says he now wants if he is going to put a dollar into this business.

In other words, that is his appraisal of the risk of this business at the time of the study. However, as I tried to point out, the great majority of original investors in this business made their commitment by way of an investment.

That is, with the idea of buying these securities and holding them in contrast to buying them and selling them. Now, if any one or more of those original investors elect, for one reason or another, to sell their securities and they sell to another individual at a price, they naturally will sell at whatever price they can make the sale.

If that involves a loss to them in comparison with what they think they should have had over the period, that is perfectly all right. They took that loss at that time and were willing to do so or they would not have sold.

For the rest of the investors in the company, they are still holding on with the idea that, on the average, when [fol. 6804] this company goes enough years, instead of having 7.11 percent, they will approach this 8 percent or until conditions so changed that we are not talking in

terms of 8 percent but some other, but as I have shown in this particular investigation as of this date, they were definitely talking of 8 percent over-all.

Q. Now, the fact remains, does it not, Mr. Coffman, that in 1940 Panhandle Eastern earned on its invested capital 9.62 percent, according to Chart No. 10 and 9.54 percent, according to Chart No. 11?

A. That is correct, yes, sir.

Q. And you say that the investor's appraisal of risk, according to your testimony, is 8 percent or slightly below 8 percent?

In other words, Panhandle Eastern Pipe Line Company actually earned something in excess of 1½ percent above what you have termed the investor's own appraisal of the risk, is that right?

A. That is correct, with this added explanation:

That, as the two tables you refer to clearly show and continuing to look at this picture from the investor's point of view; although the figures for percents earned on invested capital were 9.5, approximately, in 1939 and 1940, the investor looks back to earlier years, such as 1934, '35 or '36, where he finds that the return percent earned on [fol. 6805] invested capital was 2.30 percent, 3.50 percent and 6.05 percent which merely indicates a fact that I have been trying to mention all along, that conditions change from time to time. Sometimes conditions are better, sometimes they are worse.

The investor is not going to be unduly excited about any one year so long as he has confidence in the firm. The percent earned may be a little higher one year, lower the other, but he says that if, on the average over a period of years, this matter works out, he is perfectly willing to continue to refinance or newly finance this company whenever they need capital.

Q. Now, is it your opinion that if the return in the early years was low, that it should be compensated for by a higher rate in later years to make up for it?

A. It is my contention—

Q. (Interposing) Can you answer that yes or no, first?

The Witness: Will you read that question?

(Whereupon, the pending question was read by the reporter.)

The Witness: Yes. I say that with this explanation:

That investors will not finance this company unless they are going to see a fair average over the years. Now, to make my answer very specific, if this company has shown, over the years, because of unfortunate results, or some [fol. 6806] other condition a percent earned on invested capital for a number of years of 2.30, as it did show in 1934, I do not think any investors would be willing to put a nickel in this business today.

In other words, the company would not have maintained its credit position and it would be impossible to finance the company.

Now, the reason people have been willing to stay in this company as investors is because they knew the company was new in these early years. They hoped, as it settled down, got more service to the public, that it would begin to earn money, which it did, and when the rate approaches 8 percent, on the average, they would say they were willing to continue to finance this company.

Q. Did you make any investigation, Mr. Coffman, to determine the fundamental and underlying reasons why the return earned on invested capital of Panhandle Eastern was what you term "low" in the early years?

A. I think I know generally why it was. I made no particular investigation because, in this particular situation, an investor merely looks at the result.

You can have all of the reasons you please but the fact remains that the earnings on invested capital was 2.30, that is a fact which you cannot explain so far as the investor is concerned and he would not continue to finance [fol. 6807] the investment unless you can show him the conditions are to be changed favorably.

Q. You are not interested so much in the reasons as you are in the fact the investor did experience what you call "low returns" in the early years and wants to make them up in later years?

A. I say that the investor puts the money in with the idea that he, first, was getting security of principal and an assurance of a reasonable return on that principal and a good many of the securities which he purchases actually are in the nature of a contract to that effect and anything short of that involves some difficulty unless the investor's property is just going to be confiscated, just taken away from him.

Q. Mr. Coffman, do your rate of return figures reflected in Charts No. 36 and No. 37 which produce the dollars called "current capital requirements" for each of those charts reflect the element which you have just discussed, to wit, the element of making up for low returns in the past?

The Witness: Would you read that question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: I think the two—

By Mr. Littman:

Q. (Interposing) Can you answer that yes or no, first, [fol. 6808] [Mr.] Coffman, and then make your explanation?

A. No. The answer is no as you put the question because, in Charts Nos. 36 and 37, the item which involves the matter of the investor is contained in the two columns, one each on Chart No. 36 and the other on Chart 37 captioned, "Current capital requirements", and there those figures are based upon the principles we have already discussed, namely, the rate of 2.74 for bonds, 8.45 for preferred stock and 12 percent for common stock or the 7.99 percent on the over-all basis.

Q. You then have not fixed rates which will compensate the investor for these past low returns, have you?

A. The—

Q. (Interposing) Have you or have you not? May I have an answer?

A. Yes, certainly I have because I am stating here that, on the average, the investor says he will be content with 8 percent and if the company can approach that over a period of time, conditions remaining about as they were at the date of this study, he says he is perfectly willing to finance this company. Now, the average over the past

years, as a fact, have been 7.11. It is true that they have been increasing.

Q. If the rates earned by a given company in recent years are considered high by its investors, then, to follow [fol. 6809] your theory, the investor should expect lower rates of return in the future years to compensate for the past high rates, isn't that correct?

The Witness: Would you read that question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: I still answer as I have been in accordance with my study.

By Mr. Littman:

Q. I have not asked you this question before, Mr. Coffman. I mean to say you have not answered it before. I have not even approached this new thought yet.

A. I thought this was a question. Didn't you just ask a question?

Q. I just asked this question but you are telling me you have already explained it. This is an entirely new thing.

A. No, so far as I am concerned, it is not, Mr. Littman. What I was just about to say is that when the investor looks at a given situation, he is not talking about the particular year because he knows because of business cycles and other conditions, some years are good and some are bad.

He will not be disturbed one way or another so long as, on the average, he finds he can get this particular rate he believes to be reasonable. So that a few years may be high. [fol. 6810] He knows that there will be some other years low, because history, from the beginning of time, proves that.

If he can get 8 percent on the average he is not unduly disturbed. Now, if a few years are low, he expects other years to be high to offset it. If a few years have been high, he knows, by the same token, that a few years will be low which will offset it. He is not disturbed either way on that if, on the average, he can get this figure.

Q. What, in your opinion, is the highest percent that one might reasonably expect Panhandle Eastern to earn on its invested capital in the years 1939 and 1940?

A. So far as the investors are concerned, the percents they did earn were in line because if the investors said that an average of 8 percent was the risk, then the average for these preceding years, as a whole, showing only 7.11 percent, were still not giving him on the average what he believed he required.

Q. Well, Mr. Coffman, I take it from your answer that, in your opinion, the investors of Panhandle Eastern Pipe Line Company had a right to reasonably expect Panhandle Eastern, to earn on its invested capital in 1939 and in 1940 the amounts which it did earn, approximately 9½ percent? Can you answer that yes or no?

A. No, I cannot answer it yes or no because I do not [fol. 6811] know about some of the words. I would like to state this: You say, "their right" to do something. Well, "right", to me, for the most part, is a matter of law. "What your rights are."

I say that the investor said that if he were to put money in this business, he would require, over a period, a return of 8 percent or he did not want to put his money in this business. Somebody else could, but he did not want to.

That is the matter of what he requires. I am not talking about right. I believe those are matters of law, for the most part.

Q. Let me put it this way, that, in your opinion, the investors of Panhandle Eastern might reasonably have expected Panhandle Eastern to earn on its invested capital in 1939 and 1940 the return of 9.5 percent which was, in fact, earned?

A. In view of the history of the company to this date, I think they could reasonably have expected that condition, yes.

Q. Now, Mr. Coffman, did you testify before a Special Master in the United States District Court for the District of Delaware in a suit in which David Young III, was plaintiff and Columbia Gas and Oil Company was one of the defendants?

[fol. 6812] A. Yes, I did.

Q. Can you state approximately when you testified in that proceeding?

A. I am not certain. As I recall it, that was along in the fall, I would say, of 1939, fall or winter of 1939.

Q. Mr. Coffman, I will read a question which appears on Page 3434 of the transcript of that proceeding. Before reading that, I will hand you a copy of the Defendant's Exhibit No. 33 in that proceeding.

Mr. Wheat: Can you identify the proceeding for the record? Would you like to, Mr. Littman, more closely?

Mr. Littman: Well, it is the proceeding which is referred to in Exhibit 145 on Page 12 in the middle of the paragraph: David Young III, Plaintiff, commenced an action in the United States District Court for the District of Delaware against Columbia Gas and Columbia Oil as Defendants.

That is the proceeding, is it not?

The Witness: Yes, that is right.

By Mr. Littman:

Q. I hand you a copy of Defendant's Exhibit No. 33 for purposes of assisting you to follow the testimony and refresh your recollection. But first, am I correct in understanding that you prepared Defendant's Exhibit No. 33, the photostatic copy of which I have just handed you, sub-[fol. 6813] ject to your check of details?

A. I do not remember the number but this material I prepared.

Q. Yes.

Now, I will read from Page 3434 of a copy of the transcript:

"Q. What significance, if any, do you attach to the right-hand column in which these percents on invested capital are set forth and to the tabulation which you have submitted to it and which is to be inserted in your book of exhibits in connection with Chart No. 16?

"A. The Panhandle Eastern Pipe Line Company is a public service company subject to regulation, and I made the tabulation in the right-hand part of the chart showing return on invested capital and, operating from the past

history during the years 1934 through 1938, what the company had averaged in earnings in terms of return on invested capital, and I found that the 1938 total income figure indicated a return slightly under 8 percent. The 1937 figure was slightly in excess of 8½ percent and my projected figure, depending upon which calculation you use for invested capital, was 8.34 percent if you talk of invested capital in terms of funded debt, preferred stock and common stock and surplus, and 8.41 percent if you describe invested capital on the basis of the property account.'

[fol. 6814] "I made that tabulation merely to familiarize myself with the comparison of the projected earnings with past experience on the one hand, and considerations of reasonable return on invested capital on the other, and it seemed to me from experience in rate cases, and more particularly a recent experience of the Natural Gas Pipe Line Company of America that the amount of projected income was about as high a return on invested capital as one might reasonably expect. Anything higher than that, it would seem to me, would be an invitation for some investigation or trouble of some kind or other with the various Commissions."

Now, did you make that answer to that question in the proceeding to which we have just referred, Mr. Coffman?

A. Well, if the record says that is what I said, I admit I said it.

Q. What about your recollection? Is that your best recollection of what you said?

A. Generally, I think so. I mean if you are reading correctly, why, I accept it that I did say it.

Q. Well, subject to your check. You may, of course, make any correction to this that you may find but this is your recollection at this time of what you said?

A. That sounds substantially correct but I mean just technically, I say if it is as you read it, I said it.

Q. What was the projected figure that you were re-[fol. 6815] ferring to in the answer that I quoted from your testimony?

A. You said Exhibit 16, was that right, or Chart 16, I mean.

Q. Chart 16 of Defendant's Exhibit 33. What I want, Mr. Coffman, is the projected income figure to which you referred in that answer which I read from your testimony in the Young III case?

A. The projected total income figure was $4,715,000.

Q. I meant to have you state the projected figure in percent. It was 8.34 percent, was it not?

A. If the net operating income is based on the percentage of capital account, the figure "percent earned on invested capital" was 8.34 percent and if the net operating income was based on "percentage of invested capital", the figure was 8.41 percent.

Q. I so understood your testimony. However, the projected figure of 8.34 percent earned on invested capital will appear in the next succeeding few questions and answers of your testimony.

Now, I will continue reading without any interruption from the transcript. Nothing appears between these questions or answers, Mr. Coffman.

By the way, what I have read occurred on direct examination, did it not, or don't you recall?

[fol. 6816] A. I do not recall, Mr. Littman.

Q. Mr. Payer was one of the attorneys that cross-examined you, was he not?

A. That is correct, yes.

Q. He came into the record at this one point, to clear up something.

"Mr. Payer: When you said 'amount of return', what amount did you have in mind?

"The Witness: You mean return on invested capital?

"Mr. Payer: Yes.

"The Witness: I did not have any particular figure in mind. It just seemed to me that if it got much above 8 percent for a period of time that such percentage return on invested capital might be an invitation for investigation.

"Q. Now, that projected figure of net income before charges other than depreciation and depletion and those that go to operating expenses, is less than the actual income

before charges for the 12 months ended September 30, 1939, is it not?

"A. Would you repeat that?

"(Last question repeated as reporter.)

"A. I believe that the statement that shows the 12 months' figures ending September 30, 1939, are somewhat higher than the projected figure which I show in this chart, No. 16.

[fol. 6817] "Q. Now then, do you justify the use of a projected income figure lower than the actual income before charges during the most recent period for which figures are available?

"A. As I think I said the other day in connection with part of my testimony, I am not attempting in this study to project the income for the next year, which, as a matter of fact, would be the full year 1939. What I am attempting to do in this study is project the income which a willing buyer could reasonably expect on the average after a reasonable period of time, and I do not believe that a willing buyer could reasonably expect to find peak earnings year after year. In other words, there will be some good years and some bad years, and I felt that my projected figure here was a reasonable average over a reasonable number of years in the future.

"Q. In arriving at that conclusion, what consideration, if any did you give to the rate of return on your projected earnings as related to the rate of return in 1937, or the rate of return on the current income for the 12 months ending September 30, 1939?

"A. I took into consideration all the information that was available in regard to total income for the preceding period, covering 1934 through 1938, both in terms of aggregate dollars and return on investment.

[fol. 6818] "So far as the September 30th figures were concerned, this part of my study had been completed before they were available. Actually when they came to my attention, I noted that the figures, as I recall it, for the 12 months ended September 30, 1939, showed something in excess of 9½ percent return on investment, and, therefore, I did not go back and revise my figure because I felt that over a reasonable period in the future such return

on the investment would be above the line of what was considered reasonable in view of cases on the subject, more especially the recent case on the Natural Gas Pipe Line Company of America, which is a very comparable Pipe Line Company."

Now, to the best of your recollection, did you make those answers to those questions in the proceeding of David Young III as Plaintiff, versus Columbia Gas and Oil?

A. Yes, as my recollection goes and if it has been read as it is in the record, I admit having said that.

Q. Mr. Coffman, what other cases or proceedings have you testified in beside the Young case and, of course, the instant case and the Hope case, the latter case having been heard by this Commission?

A. Before this Commission, you said?

Q. I was merely stating that the Hope case had been tried before this Commission.

A. Yes.

[fol. 6819] Q. And I want you to exclude that from the list of cases in which you have testified.

A. In regard to matters similar to this, you mean, or in any matters? I mean do you want the whole list of items where I testified or just in regard to public utilities or what?

Q. Not knowing much about the facts, I do not know whether to ask for all or just those which are rate matters or not. Can you give us an idea how many cases you have testified in first so that we can know?

A. Before this Commission, for example, I have testified in the last two years in the Colorado Interstate case, the East Ohio Gas Company case, in addition to the Hope which you mentioned and excluded.

I have testified in the David Young suit. I testified in a suit, the full name of which I cannot give you, but it was against the General Motors Corporation regarding their management bonus plan.

There have been a fair number, Mr. Littman. I could go on and enumerate some more. I testified before the Board of Tax Appeals and before the Civil Aeronautics Authority.

Q. What other Commissions?

A. The Treasury Department, the Internal Revenue Department in cases involving tax questions before they were taken to the Board, if they were taken there.

[fol. 6820] Q. What other rate cases have you testified in?

A. The only rate cases I have testified in are the ones I enumerated: Hope, Colorado Interstate, East Ohio, Panhandle Eastern and the Pennsylvania Power and Light Company.

Q. Now, the Pennsylvania Power and Light Company proceeding was had before the Pennsylvania Commission, was it not?

A. That is correct, yes, sir.

Q. You do not have any recollection of any others at this time?

A. Involving rates?

Q. Yes.

A. I believe that is all of them.

Q. Well, if you recall any others later, you will advise us, will you not?

A. I can check that up this noon, I think.

Q. Have you been cross-examined on your testimony given before the Pennsylvania Commission in the Pennsylvania Power and Light Company case?

A. Yes, I was cross-examined and relieved with the understanding I might be recalled but, to date, I have not been.

Q. When did you complete your cross-examination before that Commission?

[fol. 6821] A. Well, it was at the same time the direct testimony was given. I do not recall now just what date that was. It has been some three months, I think, two or three months ago.

Q. I see. We were specifically inquiring whether you had been recalled since that first day or two that you testified there?

A. No.

Q. Will you please turn to Chart No. 14 of Exhibit 65. Yesterday, we were discussing the subject of invested capital of Panhandle Eastern Pipe Line Company as of June 30, 1941.

I asked you to substitute for the net working capital figure shown on this chart of $4,661,875 the amount of working capital estimated by Mr. Sperry in the amount of $1,500,000.

Do you remember that?

A. Yes, I do.

Q. Now, the invested capital computed in that manner amounted to $58,054,161, did it not? That is, rounded out, to $58,054,000?

A. Yes.

Q. That will be close enough for our purposes.

Now, in this chart, you show the percent earned on invested capital, that is, on Chart No. 14, which is determined [fol. 6822] by relating the net operating income before and after taxes to the total amount of invested capital of $61,216,031, is that correct?

A. Yes, sir.

Q. And the amount that you show is 9½ percent earned on invested capital before taxes, I mean—

A. (Interposing) That is based on the 1940 rates.

Q. Based on the 1940 tax rates?

A. That is right.

Q. And 7.86 percent based on the 1941 tax rates?

A. 7.86 percent, yes, sir.

Q. Now, this 7.86 figure was determined by applying the 1941 tax rate to the entire year ended June 30, 1941. Is that correct?

A. Yes, that is correct, the 12-months' figure.

Q. In other words, you did not apply—I want to be perfectly clear about this—you did not apply the 1940 tax rate to the last six months of 1940 and the 1941 tax rate to the first six months of 1941, did you, in arriving at this 7.86 percent?

A. No. The purpose of this study was to get a better idea of what the effect of the increasing tax rates were going to have on the business so I kept a static figure.

In other words, if they earned $5,814,000 which was a known fact, at the 1940 rates, the tax was so much. Using [fol. 6823] that same figure as a constant, if the 1941 rates had been in effect, then the net operating income would have been approximately $1,000,000 less.

In other words, I merely wanted to show what the effect of the increased tax rate was going to have upon this company's net operating income.

* * * * * * * * * *

[fol. 6824] PAUL B. COFFMAN resumed the stand, and having been previously duly sworn, testified further as follows:

Cross-Examination (Resumed)

By Mr. Littman:

Q. Mr. Coffman, I requested you to make a calculation over the noon recess in connection with Chart No. 14 of Exhibit 65. Have you made the calculation?

A. Yes.

Q. Will you please state what it shows?

A. Adjusting Chart No. 14, Exhibit 65, so that the total invested capital as of June 30, 1941, would be composed of net property of $54,690,591, intangibles net of $1,863,565 and allowing your assumed figure for net working capital of $1,500,000 gives a total assumed invested capital of $58,054,156. Using that figure as a base and making the same calculations, to-wit, that I have actually made on Chart 14, the percent earned on the $58,054,156 before making an adjustment for the 1940 tax rates would be 10.02 percent and after making adjustment would be 8.29 percent in contrast to the 9.50 percent and the 7.86 percent [fol. 6825] shown in the Chart, respectively.

Mr. Wheat: Will you give me those figures again please?

The Witness: 10.02 percent.

Mr. Wheat: Thanks.

By Mr. Littman:

Q. Yesterday I requested you to make a calculation for the purpose of determining what your annual provision for depletion and amortization of $2,551,034 would be if computed on a 6½ percent sinking fund basis instead of the straight line basis. Have you made that calculation?

A. Yes, sir, I have.

Q. And what would it amount to?

A. It would be at 6 and ½ percent for 25 years life annual payment of $1,083,008.21.

Q. Is my understanding correct that the amortization base used in connection with the figure of $1,083,008, the invested capital figure of $63,775,839, which is shown in Chart 27 of Exhibit 65?

A. Yes, sir.

Q. Will you please refer to Chart No. 37 Exhibit 65? You have testified that the amount of $5,064,821 shown on this chart as "Current Capital Requirements" represented a fair return to investors of Panhandle Eastern for the year 1940, have you not?

[fol. 6826] A. I don't believe I said that, no. What I said was that the $5,064,821 was the amount required in order to maintain the credit position of this company that is required by the investors.

Q. Well, isn't that the amount to which you refer in the caption of Chart No. 37 as "A Fair Return to Investors"?

A. Yes, that is the amount, all of which is attributable to the investors' equity in this business or their investment, if you want to particularize.

Q. In other words, if I correctly understand you, this amount of $5,064,821 represents in your opinion a fair return to the investors of Panhandle Eastern Pipe Line Company, as of June 30, 1941; is that right?

A. Well, it is a little more than that. I not only say that it is a fair return, I say that in the conditions existent in the capital markets at the time of the study that that is what they required; not only that it is fair, I say that they required it. I merely want to make my point clear that I am going that far. I am not just saying it is fair, but I am going beyond that.

Q. Well, you are merely emphasizing the use of your term "fair return", are you not?

A. Well, maybe you understand the language one way and I understand it another. I am trying to point out throughout the study that if the investors are to be kept [fol. 6827] in a position where they are willing to invest money in this business, the returns which I use to arrive at this figure of $5,064,821 have to be met under the conditions then existent or the capital is not forth coming to this business, at least from the public.

Q. Well, at any rate, it is the $5,064,821 figure, to which you are now referring?

A. That is correct.

Q. My understanding of your testimony was that this amount, if earned by Panhandle Eastern Pipe Line Company in the year 1941, would have constituted a "fair return to investors" for that year.

A. I am saying more than that, Mr. Littman. I don't recall that I ever said for 1941 at all. If I did, it is in the record, but I don't believe I said it. What I said was—

Q. (Interposing) For 1940.

A. Well, or for 1940. What I said was that that amount of earnings would have to be made so long as conditions in the capital market remained as they were at that time. Now, that may be for 1940, it may be for 1941, it may be for a shorter time or for a longer time. I would have to make the study to find out. As of that time, that is what the capital market said.

Q. As of what time?

[fol. 6828] A. As of the time I made the study.

Q. When was that?

A. It was in the late summer, let us say, of 1941.

Q. Do you know whether the current capital requirements for the year 1940 would have been higher or lower than that shown in Chart No. 37?

A. No, I don't believe I can give you that figure.

Q. Well, I didn't ask you for any particular figure. I wanted you to state whether, in your opinion the amount of "current capital requirements" for the year 1940 would have been smaller or larger than that shown in your Chart No. 37.

A. I don't know; I don't have that particular analysis here.

Q. Did you make such an analysis?

A. No.

Q. Will you please refer to Chart No. 36? I am not sure that you show the "Current Capital Requirements" which is referred to in the caption of that chart as "A Fair Return to Investors," in the amount of $4,993,511, do you?

A. Yes, sir.

Q. Am I correct in understanding your testimony to be that that figure was, also, predicated upon market con-

ditions as they existed as of the date when you made this study?

A. Yes, with the added qualification that the entire [fol. 6829] calculation was based upon refinancing the preferred stock.

Q. I so understand.

A. Yes.

Q. And your caption of Chart No. 36 so indicates, does it not?

A. Yes.

Q. Would you say that this sum of $4,993,511 would be applicable to the year 1940 or don't you know?

A. I don't know, I confine this figure to the date of this study, that is the best I can do on that.

Q. And you can not state from your understanding of general market conditions whether it would be higher or lower?

A. We, speaking very generally, taking securities as a whole, I would say that in 1940 the likelihood was that the amount required percentagewise, not dollarwise, because I can't give you that without computing it, would have been somewhat lower than in 1941. When I say "percentagewise," I am now referring to that 2.74 for bonds, the 8.40 for preferred and 12 percent for common stock.

Q. At any rate, may we agree generally on this, that you, from your general knowledge of conditions as they existed in 1940, would not expect the current capital requirements of $4,993,511, shown in your Chart No. 37, to be materially different, either up or down?

A. I wouldn't suppose it would be materially different, [fol. 6830] but I couldn't be exact, obviously, until I could make the calculations on a comparable basis.

Q. I don't remember whether your exhibit shows the net operating revenues of Panhandle Eastern Pipe Line Company for the year ended 1940. I know that Exhibit No. 49 will show that, but if you—

A. December 31, 1940?

Q. Yes.

A. Table for Chart No. 9, Exhibit 65, shows the net operating income figure for the year 1940, in the amount of $5,714,218.

Mr. Littman: Will you please read the last answer?

(The last answer, as above recorded, was read by the reporter.)

By Mr. Littman:

Q. Now, it is a fact, is it not, Mr. Coffman, that the Panhandle Eastern Pipe Line Company earned, in the year 1940, $649,397 more than the amount of $5,964,821 shown in your Chart No. 37 of Exhibit 65 which you call "A Fair Return to Investors," is that correct?

A. It is higher by $649,397.

Q. Now, by what amount does the net operating revenue of Panhandle Eastern Pipe Line Company for the year 1940 exceed the amount of $4,993,511 shown in your Chart No. 36, as "A Fair Return to Investors"?

[fol. 6831] A. It exceeds it by $720,707.

Q. Now, Mr. Coffman, will you please state what amount of operating revenue would be required to produce this amount of $720,707 which you just named in the year 1940?

The Witness: Would you read that question, please?

(The pending question, as above recorded, was read by the reporter.)

By Mr. Littman:

Q. I have in mind, Mr. Coffman, that, due to the taxes, gross revenue considerably in excess of $720,707 would be required to produce that much of net operating income.

A. I don't believe I can answer that question, Mr. Littman.

Q. Am I correct in understanding that it would require a sum very greatly in excess of $720,707 by way of gross revenue to produce that much net operating revenue? Isn't that correct?

A. Well, I am frankly a little confused on that question for the reason that I should suppose that the only figure you could use would be the figure for the full year 1940, in which this amount that we are discussing is already included, and the total gross revenue on that amounted to $13,536,453. That already includes this item you are talking about, so when you ask how much more will it take, [fol. 6832] I don't know what you mean.

Q. Well, now, let me get at it this way: if this Commission, for example, were to want to cut rates so as to reflect a cut in Panhandle Eastern's net operating revenue for the year 1940 in the amount of $720,000, by how much would the Commission have to cut the gross revenue in order to effectuate a cut in net operating revenue of $720,000? Have I made myself clear?

A. Yes, I think I understand your question. Well, if you will assume that all of the operating expenses and other deductions, except, of course, the tax item which varies with the amount of earnings, were to remain the same, then you would merely take off the $720,707 directly from gross.

Q. Well, of course, you are begging my question, I believe, because these operating revenue deductions that you state you want to assume will remain the same and include all the taxes. Isn't that correct?

A. They include an allowance for taxes, yes.

Q. Now, assuming that all the revenue, the operating revenue deductions remained the same except the taxes, and assuming that you are going to calculate in such manner as to reflect the reduction in taxes occasioned by reason of a cut in rates, which will bring about a reduction of $720 in net operating revenue, can you state, approximately, what cut would be made in gross revenues to pro- [fol. 6833] duce this result?

A. I couldn't state that without making a [calculation,] because as you know it is intricate. I mean you have several variables, and all problems which have several variables, one depending on the others, are difficult to calculate.

Q. In other words, you could make the calculation, but it is a rather intricate and involved task, is it not?

A. That is right.

Q. But you do know that the amount of reduction in gross revenue, that is in rates themselves, would be considerably in excess of the $720,000 of net operating revenue. You know that, don't you, in view of the 1940 tax situation?

A. I will say this: it would make a difference, whether it is substantial or not, I wouldn't want to say until I have the figure and then I can make a direct comparison.

Q. Don't you know, offhand, Mr. Coffman, even without making the calculation, that the cut in gross revenue would be at least double the $720,000?

A. No, I wouldn't say that, not by a long way, no, indeed, no. Mathematically, I don't think that will work out.

Q. At any rate, one familiar with the tax laws of 1940, could readily make the calculation, if he had sufficient time within which to do it, could he not?

[fol. 6834] A. Yes, he could make a very reasonable approximation.

Q. Yes. Will you please refer to your Chart No. 28 of Exhibit 65?

Mr. Wheat: Which one?

Mr. Littman: 28.

By Mr. Littman:

Q. Now, this chart is headed "Over-all Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure." Now, this so-called ideal capital structure consists of 40 percent bonds and 60 percent common stock. Is that correct?

A. That is correct.

Q. Will you define the term "ideal" as you have used it in this Chart?

A. Well, I mean by that that from a study of various pipe line companies, as illustrated in a preceding chart in this exhibit, the number of which I will have in a minute, Chart No. 25, I found that preferred stock in a natural gas pipe line company was uncommon, of the various natural gas pipe line companies shown there in, El Paso Natural Gas is the only one, excluding the Panhandle Eastern, that has any preferred stock outstanding and that in a much smaller percentage than Panhandle Eastern. I therefore thought that it would be wise for me to make a calculation on a basis wherein no preferred stock would be outstand-

[fol. 6835] ing. Then next considering in the nature of a risk which is involved in a natural gas pipe line company, the question arose as to what percent such company might well carry in senior securities and what percent would be carried by equity. It seemed to me that it probably would be in the relationship of 40 percent bonds and 60 percent common stock and merely title that "The Ideal

Relationship" as being about the happy balance for those kinds of securities.

Q. Now, when you use the term "ideal" I presume you mean that this capital structure shown on Chart No. 28 would be ideal from the point of view of the investors.

A. And from the standpoint of the company, yes.

Q. How about from the point of view of the rate payer? Is it also ideal for him?

A. I think it is ideal for him so long as conditions remain what they are and it is impossible to get any better rates in the investors market than you can secure by this combination. After all, the customer may wish certain things, but if to get the services you have to sell securities to the investing public, you have to take them into consideration, also, so what is good for the two is good for each.

Q. Now, the cost of capital shown on Chart No. 28, Exhibit 65, is 3 percent for the bonds and 12 percent for the common stock, making a total over-all cost of 8.40 percent. Is that correct?

[fol. 6836] A. Yes, that is correct.

Q. And that is on your so-called ideal basis?

A. Yes, sir.

Q. Will you please turn to Chart No. 27, which shows a capital structure which assumes the refinancing of preferred stock by means of 50 percent bonds and 50 percent common stock, and will you please state what over-all cost of capital to Panhandle Eastern is indicated by this chart?

A. Before I answer that, may I be sure that this question states what the exhibit shows? In regard to that refinancing, it is not 50 percent in bonds and 50 percent in preferred stock; the situation is one where the preferred stock that is retired will be taken care of 50 percent in bonds and 50 percent in common stock, so that it wouldn't necessarily mean that the outstanding bonds and common stock were 50 percent each. I just want to be sure that we are talking about the same thing.

Q. Yes, I am referring to Chart No. 27, which assumes the refinancing as there shown and stated.

A. Yes. Well, then, the amount of earnings required would be $5,006,338.

Q. And what is the percentage over-all cost of capital to Panhandle Eastern on that basis?

A. I believe the percentage is shown in your table for [fol. 6837] this Chart No. 27.

A. The over-all rate is 7.85 percent.

Q. Yes.

Now, will you please turn to Chart No. 26, which shows the present capital structure of Panhandle Eastern Pipe Line Company, and will you please state what over-all cost of capital to Panhandle Eastern Pipe Line Company, under the present capital structure, is indicated by this chart in percents?

A. The amount is $5,077,648.

Q. What is the percent? I think your table for this chart shows the percent.

A. The over-all percent, as shown in table for chart No. 26, Exhibit 65, is 7.99 percent.

Q. Well, now, Mr. Coffman, we have this figure of 7.99 percent as the over-all cost of capital under the present capital structure, as shown by Chart No. 26, and we have 7.85 percent as the over-all capital under the refinancing assumptions set forth in Chart No. 27, and we have the 8.40 percent set forth by you in Chart No. 28 as the "Ideal Capital Structure." Now, will you state what is so ideal about this capital structure that appears to be the highest of the three in cost of capital to Panhandle Eastern Pipe Line Company?

The Witness: Would you read that question, please?

[fol. 6838] (The pending question, as above recorded, was read by the reporter.)

The Witness: If I get your question correctly, the figures don't work that way. The over-all percent, based upon the capital structure, as of June 30, 1941, was 7.99 percent or $5,077,648 and the figure on the assumption of a refinancing of the preferred stock was 7.85 percent, or $5,006,338.

Well, now, the percent as well as the dollars that you secure in the tabulations are lower for the assumption that there will be a refinancing of the preferred stock than is the case if you take the present capital structure. If I understood your question, they worked just in the reverse of what you were asking.

Q. Yes, but you haven't mentioned in your answer anything about this so-called ideal capital structure on page 28 which is the highest of the three in cost of capital. What do you say about that one?

A. Well, so far as the percent there shown is concerned, it is true it is 8.40, that is combining the 3 percent on a 40 percent debt basis and the 12 percent return on a 60 percent common stock basis, and that is just the way the mathematics worked out, that is just arithmetic, the fact that it comes out 8.40, it is just 8.40.

Q. What is "ideal" about a capital structure that [fol. 6839] costs more to Panhandle Eastern than the other two which are not "ideal"?

A. Well, I don't want to discuss the merits of the word "ideal" and if that is bothersome, it can be left out of the discussion. What I am saying is that in an analysis of various pipe line companies I discovered that there was only one besides Panhandle Eastern that had any preferred stock outstanding. Now, I take it that the reason for that must have been that a preferred stock in a natural gas pipe line company over the years has not been particularly attractive to the investors or more companies would probably have sold preferred stock. So if you then come down to the option of having bonds and common stock, the question is: about what proportion this type of business risk would stand. So far as I could see, in my best judgment, anything larger than a 40 percent amount in bonds just wouldn't be easily carried. You might have a lower amount but in any event a 40-60 arrangement was about as far as you could go in bonded debt and attract investors to the security.

Q. After you eliminate the preferred stock from Panhandle Eastern's present capital structure by this "ideal" method you then get a higher cost than is presently incurred by Panhandle Eastern, do you not?

A. You get 8.40 percent in contrast with the 7.99 percent or the 7.85 percent.

[fol. 6840] Q. Now, will you explain how you conclude that this ideal capital structure is advantageous to Panhandle Eastern and the public and the investors and the consumers?

A. Well, in this particular case, as the actual figure works out, I don't think it is as advantageous as the 7.99 or the 7.85.

Q. You mean your ideal capital structure is not as advantageous as the two you mentioned?

A. Well, I think, I believe the Securities and Exchange Commission has also talked about 40-60 in times past. This idea doesn't altogether originate from my own analysis, but has been made by statements by other commissions.

Q. We are going to discuss the policies of the Securities and Exchange Commission in these regards a little later, but from a standpoint of cost to Panhandle Eastern Pipe Lines Company, it appears, does it not, that your ideal capital structure is the most expensive of the three?

A. That is correct.

Q. Mr. Coffman, you have no doubt, have you, that the cost of capital to Panhandle Eastern Pipe Line Company after the presently contemplated financing is completed, under which Panhandle Eastern acquires Michigan Gas Transmission Corporation, will be substantially less than the 8.40 percent shown in your Chart No. 28 or the 7.85 [fol. 6841] percent reflected by your Chart No. 27 or the 7.99 percent reflected by your Chart No. 26?

A. Well, I am unable to answer that, Mr. Littman, because there is an entirely new group of figures to be carried and I wouldn't know, really, what the percentage was likely to be until I put the figures together and worked them out.

Q. You have not made any study in that connection?

A. No, sir.

Q. How much more in dollars would your so-called ideal capital structure cost Panhandle Eastern Pipe Line Company annually than under the plan shown in Chart No. 27, which assumes the refinancing of preferred stock?

A. That would be approximately $350,832.

Q. Now, the ultimate effect on the rates paid by the rate payer, that is, the ultimate cost to the rate payer of this additional $350,767, would be three or four times that much, would it not, before taxes?

A. Well, there, again, I can't make that statement, Mr. Littman, I don't know.

Q. Well, assuming the correctness of my three times figure for taxes, this ideal capital structure would cost a rate payer a million dollars more per year, would it not, than if the structure were used which is shown by you on Chart No. 27?

[fol. 6842] A. I don't know what amount of dollars it would make, nor I couldn't tell until I had actually made some calculations to ascertain the fact.

Q. Well, if gross revenues were reduced one million dollars in 1941, how much of a reduction would this company suffer in net operating income?

A. I can't answer that, because you still have a tax question in there. I don't know what it would be.

Q. Well, now, let's see for a moment whether we can't get some approximation of what the amount would be. In 1941 you have Federal excess profits taxes of 60 percent in one bracket, have you not, in the highest bracket?

A. Which exhibit are you looking at?

Q. Well, I just started to look at your Exhibit 152.

A. Yes.

Q. Am I right in stating that under the 1941 Revenue Act, $600,000 out of each $1,000,000 in the high bracket would be taken for excess profits taxes?

A. When you are juggling revenue on the one hand and dealing with tax rates on the other, it isn't that simple. I wouldn't—I just can't answer that question without making some calculations. It would be a wild guess and would mean nothing in the record.

Q. Let's assume that we have one million dollars of revenue way up at the top, the cream, and it is in the [fol. 6843] high bracket, that is, the 60 percent excess profits tax bracket. A. Yes.

Q. Now, $600,000 of that goes to the Federal Government for excess profits tax, does it not, under the 1941 Revenue Act; isn't that right?

A. If it is in the 60 percent bracket, it goes, yes.

Q. Incidentally, Panhandle Eastern Pipe Line Company is in that 60 percent excess profits tax bracket, is it not?

A. Well, it may be at the present time, yes.

Q. Well, your exhibit shows that, does it not, your Exhibit 152 shows that?

A. Yes, on part of the remaining income there is a 60 percent tax.

Q. When a rate reduction of one million dollars is made, for example, it comes right off the top, does it not, and right out of the top bracket; isn't that correct?

A. Well, as you reduce the net taxable income, you will go from one bracket to the next lower. You can describe

it any way you please; you just go from a higher bracket to the next bracket beneath.

Q. Now, we have the $600,000 that would come off for excess profits taxes out of this one million dollars of revenue which falls in the highest bracket. Now, another $124,000 would come off, would it not for normal surtaxes? [fol. 6844] A. Approximately.

Q. So that a rate cut of one million dollars of revenue in that bracket would reduce the company's net operating revenue by only $276,000, would it not?

A. Well, I haven't made those calculations. I don't know what the dollars are. I don't know whether your calculation of $276,000 is correct or not.

Q. Well, I just added the $600,000 of Federal excess profits taxes to the $124,000 of normal income tax and surtaxes and deducted the $724,000 from the one million dollars to get a reduction in net income of $276,000. Now, what is wrong with my calculation?

A. Well, as I say, whenever you, in any calculations, are dealing with variables; so far as I am concerned, as an analyst, I prefer to work all the items out to be sure I am right.

Q. I am going to ask you to—will you please refer to Exhibit 152? On the first page of that Exhibit about the center of that page under the heading "Taxes Computed at Rates Levied in the Revenue Act of 1941," you have an item "Taxes at 60 Percent on Remaining $2,708,000," have you not? A. There is such a figure.

Q. Now, that indicates that Panhandle Eastern Pipe Line Company is in that very dignified 60 percent bracket, [fol. 6845] at least to the extent of $2,708,000; isn't that right?

A. For this calculation, that is the figure we use, that is right.

Q. And you add an additional 10 percent on top of that in one of your tables in Exhibit 65, don't you?

Well, let's pass that for the moment. Will you compute for me the amount of reduction in net operating revenue to Panhandle Eastern Pipe Line Company that would result if this company were to cut its rates one million dollars?

Of course, that one million dollars would fall within that 60 percent bracket. Now, if this calculation takes time, why, I—

A. I wouldn't want to make that while I am sitting here.

Q. I see. It is perfectly all right for you to make the calculation by tomorrow.

A. May I be sure that I have the assumption? I am to assume that rates to customers are to be so reduced that there will be a million dollars less gross under this calculation; is that a fair statement?

Q. Of gross revenue. A. Of gross revenue?

Q. Yes, and assume that the million dollars of gross would fall within this 60 percent tax bracket. That is a [fol. 6846] correct assumption, isn't it? That is a fact, isn't it?

A. As I say, if you are in one tax bracket and the revenue goes down so that you slide into the next bracket, you don't slide up, you slide down.

Q. Well, you aren't going to slide down below the 60 percent bracket if you are only going to take one million dollars off the top, are you?

A. I don't know whether that is true or not.

Q. Well, your Exhibit 152 shows that you have $2,708,000. in that 60 percent bracket. You would have to slip a lot further down the line than one million dollars to get below the 60 percent, wouldn't you?

A. That may be true, Mr. Littman, and after I have made the analysis, if it is true, I will be the first to state it, but I would rather make the calculations first, if you don't mind.

Q. Very well. I wanted to make certain that you knew what I had in mind rather than to have you come back with a figure that is not the one we want.

A. I understand your assumption.

Q. Also assume, Mr. Coffman, for purposes of this calculation, that all other operating revenue reductions except Federal taxes remain the same.

Mr. Wheat: Do you want this on the basis of the [fol. 6847] 1941 Act?

Mr. Littman: Yes.

By Mr. Littman:

Q. Will you please refer to Chart No. 19 of Exhibit 65? Now, in this chart you [shown] earnings price ratios of natural gas pipe line common stock for the years 1937 to 1940, inclusive, for five natural gas pipe line companies as shown in the Chart; is that correct? A. Yes, sir.

Q. Now, in order that we may have no misunderstanding as we go along, will you please define the term "Earnings—Price Ratios"?

A. Well, the basic figures for Chart No. 19 of Exhibit 65, are shown in the table for Chart No. 19 and an earnings price ratio is the relationship as here used of the average of the high and low prices for the securities of the companies therein discussed with the earnings per share. In other words, it is the average of the high and low price for a security of 1937 and the earnings per share for 1937 and the ratio shown is secured by dividing the earnings figure for the given year by the average of the high and low price for the same year, so that you arrive at the percentages which are shown at the top of the columns in that chart.

Q. Now, these earnings to which you have referred [fol. 6848] are not the earnings that were, in fact, distributed?

A. No. When I say "earnings" I am talking about the full earnings that were made. I am not talking about dividends or that portion of earnings which was distributed. It is the full amount of the net earnings that were reported that were available per share.

Q. Now, in the next chart, that is, Chart No. 20, you show the current earnings price ratio of these five pipe line companies, including Panhandle Eastern, for the calendar year ended December 31, 1940, except for Panhandle Eastern which is for the twelve months period ended June 30, 1941, related to the average market price between January 1 and August 31, 1941; is that a correct statement of what this chart purports to show?

A. Generally speaking, you are right, but as I understood your statement, not all of these earnings per share figures were shown for the year ended December 31, 1940, as I understood you to say. As you see, they are clearly marked, the Interstate Natural and Memphis Natural cover the year 12-31-40. El Paso and Southern and Panhandle are for the years ended June 30, 1941. Except for that

correction, what you have stated is what I have shown in Chart No. 20 in Exhibit 65.

Q. I am sorry, I didn't intend to mislead you on those dates. They are clearly shown.

Now, are these the only four pipe line companies that [fol. 6849] you consider to be comparable to the Panhandle Eastern Company?

A. These pipe line companies that I have here shown are the only pipe line companies that I believe to be comparable and upon which there is adequate data available to make tabulations in regard to investors' appraisal of the risks of capital.

Q. Now, what do you mean by the latter part of your answer?

A. Well, I mean that in calculations I have made and used in this study, I have attempted to ascertain what investors felt was required for them to make an investment. Well, in order to make such study, it was necessary for me to find available information on the different securities each company had outstanding in the hands of the public so there would be figures available as to the market prices and so on, otherwise, I did not have one basic figure that was necessary to calculate an earnings price ratio.

Q. Now, where did you draw the line with respect to a company whose common stock was not sufficiently distributed in the hands of the public, so as to warrant a proper analysis of earnings—price ratios?

A. No, I didn't quite say that. I say if any of the securities are in the hands of the public so that you can get a reliable market quotation on the security, I will use it, [fol. 6850] but in any cases, for example, where either an entire bond issue or all of the preferred stock or all of the common stock is owned by some holding company so that there were no quotations of the bond on the market, then I lacked one fundamental factor to make this calculation and that company was eliminated, but if I could find reliable market quotations, then I include all of the companies. In so far as I know, taking my three exhibits here, I have included all such companies.

Q. Is it your opinion that the market quotations on Panhandle Eastern's common stock are reliable for purposes of making a determination of earnings—price ratios?

A. Well, it is the only guide that you have for a share of stock transferring hands from one person to another. I don't know what else [hou] can use other than that. The United States Treasury, so far as I can see from experience I have had with them, contend that it is a very reliable guide to fair value.

Q. Well, now, first, I would like to have you specifically answer my question as to whether or not you consider the market quotations on Panhandle Eastern's common stock a reliable basis for a determination of earnings—price ratios.

A. So far as the investor is concerned, I say it is the only guide to the particular value that you have at the [fol. 6851] time. In other words, if a buyer of a security puts in a bid for the stock and finally secures it at a price so that there is a stock transaction, that price for that share is apparently its value, so far as those two people are concerned. That is what I used.

Q. I am not talking about the mind of the investor. I am talking about the reliability of the available market data on Panhandle Eastern's common stock for the purpose of determining current earnings—price ratio.

A. Well, earnings—price ratios involve two factors, earnings per share and the stock price, and that is all earnings price ratio means, so I don't see how I can answer it.

Q. Perhaps, I can make myself more clear by asking you what percent of Panhandle Eastern's common stock is in the hands of the public.

A. I don't remember offhand.

Q. Don't you show it in one of your exhibits? Suppose I refer you to your Exhibit No. 64, Appendix B, page 8. Doesn't that show the data?

A. Appendix B, page 8, of Exhibit 64, shows a schedule of the distribution of the stock as prepared by Mr. Knapp of the Federal Power Commission for the Hope Natural Gas hearings, and that indicates that there were $12,017,544 of bonds and notes in the hands of the public—

[fol. 6852] Q. (Interposing) And 1,589,150 shares of stock, common stock outstanding.

Q. What was that, again?

A. $1,589,150. I think I said "shares." It is dollars.

. . . . . .

Q. Mr. Coffman, doesn't your page 8 of Appendix B of Exhibit 64 show that less than 8 percent of Panhandle Eastern's common stock is in the hands of the public?

A. Yes, it indicates that there is about 7.8 percent of the common stock in the hands of the public.

Q. The balance is owned by affiliated companies?

A. Yes, sir.

Q. And what affiliated companies are those?

A. Well, the Panhandle Eastern Pipe Line Company securities are owned [parly] by Missouri-Kansas Pipe Line Company and the Columbia Gasoline Corporation, a subsidiary of the Columbia Gas and Electric Corporation.

Q. Isn't that company the Columbia Oil and Gasoline Corporation? A. Yes, that is what I meant to say.

. . . . . .

[fol. 6853] By Mr. Littman:

Q. Can you state the proportion of ownership by those two companies of the common stock?

A. I don't believe I can state exactly, but as I recall there are some shares in the hands of the Trustee. I believe, as I recall the percentage, that something like 48 percent is owned by the Missouri-Kansas Pipe Line Company and the rest that is outstanding is held by the Columbia Oil and Gasoline Corporation and the shares that are being held by Gano Dunn, the Trustee,—I would have to look it up to get the exact percentages. I think that is generally close.

Q. So that less than 8 percent of the outstanding common stock of Panhandle Eastern Pipe Line Company is in the hands of the public and is traded on the market; is that right? A. That is correct.

Q. Now, what about the preferred stock? None of that is in the hands of the public?

A. None of that is in the hands of the public.

Q. All of that stock is beneficially owned by Columbia Oil and Gasoline Corporation; is that correct?

A. Yes, sir, that is correct.

Q. Now, referring again to this approximately 8 percent of common stock that is in the hands of the public, isn't it a fact that only a small fraction of that 8 percent [fol. 6854] is actually traded—

A. I don't believe I can answer that question, Mr. Littman.

[fol. 6855] Q. Do you have any data that will show how many shares of Panhandle Eastern Pipe Line Company were actually traded in the market within recent years or over a given period?

A. I do not recall that I have such figures in this exhibit.

Q. Maybe you do not have them in your exhibits but have you any such data in your working papers?

A. No, I do not recall having tabulated the trading. I recorded only the prices.

Q. Did you make any investigation of the amount of trading of Panhandle Eastern's common stock?

A. No, for this study I did not, because it was not necessary. All I needed was two factors, the earnings per share on the one hand and the price quotation on the other and those were the two which were used to make the calculations of the ratio.

Q. Isn't it important to ascertain those facts in order to know whether the amount of trading is sufficient upon which to make a proper analysis of the current earnings price ratio?

A. No, I do not think so. In determining the investor's appraisal of the risk of capital, you secure that by using the price quotations and if there are any shares traded so that a price is recorded in a reputable exchange, there can [fol. 6856] be no dispute about that particular price.

Q. Well, is Panhandle Eastern's common stock traded on any stock exchange?

A. It is traded between a present owner and a prospective purchaser so that there are quotations. It does not make any difference which exchange or whether it is over-the-counter so long as there is an actual transaction and a quotation.

Q. Well, the trading on the market of Panhandle Eastern's common stock is rather thin, isn't it?

A. There again, that is a relative thing. If you were comparing, for instance, the trading in Panhandle Eastern with the trading in General Motor's common stock, I would say it was relatively thin, yes, sir.

Q. If Panhandle Eastern's stock in the hands of the public represented less than 5 percent of the total out

standing common stock, you would not consider it reliable at all, would you?

A. I still say that a quotation is a quotation. I do not care whether it represents one share or whether it represents 100,000 shares. It is still a quotation.

It is a price established at an arm's-length transaction, so far as I am concerned.

Q. Would you consider the earnings price ratio of Panhandle Eastern reliable even if less than 5 percent of [fol. 6857] its shares were outstanding in the hands of the public and traded?

A. I say that a price quotation is a quotation and it is the only guide you have, regardless of the number of shares traded or as to what the investors who were involved in that particular transaction think about the price and it is the only price available which I could use to calculate an earnings price ratio and I have done no different here than Mr. Knapp did in his own exhibit.

I merely followed his own procedure.

Mr. Wheat: To whom are you referring when you mention Mr. Knapp?

The Witness: Mr. Knapp was formerly with the Federal Power Commission and introduced some testimony in the Hope Natural Gas Company case on behalf of the Federal Power Commission.

As a matter of fact, the list and exhibit referred to, Exhibit B, was taken directly from his own exhibit.

By Mr. Littman:

Q. Well, are you relying upon Mr. Knapp's testimony for the purpose of determining the amount of dollar return required by Panhandle Eastern Pipe Line Company?

A. No, not directly, but the exhibit which is Exhibit B to which you referred a short time ago as to the outstanding securities and how they were held, was all taken [fol. 6858] from his exhibit.

Q. I am not now questioning you concerning the accuracy of the statistics shown in Appendix B, Page 8, but I am asking what reliance can be placed upon an earnings

price ratio which reflects the trading on the market of a fraction of 8 percent of common stock of a company that is in the hands of the public.

That is the matter that I wanted to discuss with you.

A. Yes, and my answer is just exactly what I have given you, namely, that there are transactions in this stock upon which there are prices and I used those prices irrespective of whether one share or 100,000 shares were traded.

If there was a reliable price quotation, I used it. Otherwise, I could not have made the calculation.

Q. And you considered the price quotation reliable for Panhandle Eastern Pipe Line Company, notwithstanding the fact that only 8 percent of its common stock is in the hands of the public and only a fraction thereof is traded?

A. Yes, it was the only guide there was on the subject available.

Q. I know it was the only guide. There isn't any question about that. That was the only data available but I am asking you what you think about those data for the purposes to which you put those data?

[fol. 6859] A. I still say if a stock changes hands at $21.75 a share, whether it be one share or more, that is the price for that transaction and that transaction is reliable.

Q. Reliable for the purposes of working out an earnings price ratio for purposes of this proceeding?

A. I think so.

Q. Isn't it a fact, Mr. Coffman, that you actually made numerous eliminations of companies whose common stocks were outstanding in the hands of the public to an extent less than 5 percent in working out the earnings price ratios in your Exhibit 63?

Did you or did you not? You can answer that yes or no.

A. No, I am sorry, I cannot answer it that way, Mr. Littman. I did not take any arbitrary percentage. What I had in mind was to ascertain whether the great bulk of invested capital represented by different securities did have quotations which I could secure.

Now, if there was any block of the capital which was entirely held by some affiliated or holding company so that I could get no quotation, I eliminated it.

It may figure out to be 5 percent, I do not know. The original elimination was based upon whether I could get the securities or not, I mean the quotations.

Q. Didn't you draw the line at 5 percent for purposes of Exhibit 63?

[fol. 6860] A. It may work out that way but I did not start out with the idea of 5 percent, as such. It was only after I had made considerable tabulations to see what I could find as being available for calculations.

Q. Let me refer you to Page 11 of Exhibit 63, Mr. Coffman.

Now, on that page, you discuss your analysis of data on electric utility operating companies and you state that eliminations were made from the complete list of 40 telephone, electric and gas companies for various reasons and then you state that you eliminated "companies whose common stocks were outstanding in the hands of the public to an extent less than 5 percent."

Isn't that correct?

A. Yes, and that is correct only as applied to Section 3, Page 11 of this Exhibit 63 which applies to electric utility operating companies.

Q. Why did you eliminate from this list of electric utility operating companies those companies whose common stocks were outstanding in the hands of the public to an extent less than 5 percent?

A. Because of that particular classification, by eliminating those items, all the other important companies were still left in the tabulation so the ones that happened to be eliminated were immaterial, so far as the results were [fol. 6861] concerned.

There was no purpose in going on with that additional work.

Q. How do you know whether or not they were immaterial? Did you make a calculation to see what the results would be?

A. No, but having a familiarity with the companies, I felt pretty sure, after an examination of the ones that were left, I felt I had a pretty good representation of that particular class of utility company.

Q. Then you consider the data with respect to all of the companies that you eliminated because of the fact that there were outstanding in the hands of the public common stock to an extent less than 5 percent—then you eliminated these companies notwithstanding the fact that their earnings price ratios were just as reliable as the other companies which have more than 5 percent of their common stock in the hands of the public?

A. No, that is not quite correct. I think we are talking about two different things.

In this exhibit to which you have referred, it is specifically stated that we are talking about electric operating utility companies and nothing else and that situation applied to that list.

All the companies were studied and those with 5 percent [fol. 6862] or less than 5 percent were eliminated and I felt that the resulting items and companies which were left were absolutely representative of that particular class of public utility company.

Q. And those that were eliminated for that reason were just as reliable?

A. You could have put the figure in but it would not have changed the result a fraction.

Q. You do not know that, do you, without having first made the calculation?

A. I do not know that for certain but knowing the natures of the companies and so on against those actually included in the list, I think I have a pretty reasonable generalization.

Q. Now, you show in Charts Nos. 19 and 20, the earnings price ratios of common stocks of the Interstate Natural Gas Company, do you not? A. Yes, I do.

Q. That is a rather small company, is it not?

A. Well, in comparison to some of the others, yes.

Q. What is the amount of securities outstanding of that company as shown in your Exhibit 64?

On Page 3, Appendix B, of Exhibit 64, there is outstanding common stock of the Interstate Natural Gas Company as of December 31, 1940, $6,529,530 of which $1,893,564 is in the hands of the public and the remainder is in [fol. 6863] the hands of affiliates.

Q. Now, Panhandle Eastern, as of the same date, had $54,451,000 of securities outstanding in the hands of the public, is that correct?

A. That is including all forms, bonds, notes, preferred and common, $54,451,719.

Q. We are now comparing the sizes of [thse] companies as represented by their total outstanding securities? A. Yes.

Q. Now, when you compare Interstate Natural Gas Company, you are comparing a $6,500,000 company, as far as outstanding securities are concerned, with a company having $54,500,000, approximately, is that right?

A. Yes, that is correct, but I would like to amplify my answer by stating that so far as the investor is concerned, size is not a predominant factor in his mind. He is interested in the potential earning capacity of the company and if a small company has greater potentiality in that respect than [an] larger company, other things being equal, he would prefer the small company as against the larger so that so far as the investor's appraisal of the risk of capital is concerned, it makes no difference to the investors.

Q. Of course, I may have another purpose in mind in asking you these questions as will later be revealed.

[fol. 6864] A. All right.

Q. Now, Memphis Natural Gas Company also appears in Chart No. 20 and that is another small company, is it not, which has only $4,993,000-odd of securities outstanding, is that right?

A. Yes. On Page 4 of Appendix B of Exhibit 64, it is shown that the Memphis Natural Gas Company has total securities outstanding in the amount of $4,993,400 of which $2,381,678 are in the hands of the public.

Q. You also show in Chart No. 20 the current earnings price ratios for Southern Natural Gas Company. That company has been in financial difficulties, has it not?

A. It was a few years ago, yes.

Q. Is it still in financial difficulties?

A. I do not believe so.

Q. You are not sure about that?

A. I do not think it is in financial difficulties, as I understand your term. Today it is beginning to show earnings and it is picking up in its business.

I would not say it was in financial difficulties.

Q. It was recently a bankrupt company, was it not?

A. Well, it depends on what you mean by "recent". As I recall—

Q. (Interposing) Suppose you give me the date.

A. As I recall it—I am not certain of the date—but as [fol. 6865] I recall, it was sometime in 1936. I would want to check that, but in terms of recent, it was not last year or the year before, as I remember it.

Q. Are the investors in that company seeking to make up today the losses which they experienced in the past, as you indicated was the thing that was in the mind of the investor?

A. Well, I think you are talking about something different there. I do not remember now the refinancing plan that was laid out but whatever the plan was in the reorganization it presumably took account at that time of those items and the losses were stricken at the time of the plan.

Q. In other words, the investors wrote them off when the company went through the wringer, so to speak?

A. That is right—he did not write them off. He was forced to write them off.

Q. Now, that company has around $30,500,000 of securities outstanding in the hands of the public, does it not?

A. Yes, it has total securities outstanding of $30,473,304.

Q. Now, will you please turn to Chart No. 22 of Exhibit 65.

In this chart you show, by the green bar at the extreme left side, that the average of the pipe line companies was [fol. 6866] 12.99 percent with respect to earnings price ratio based on 1941 market prices. Is that correct?

A. Yes, sir.

Q. Now, what companies have you averaged to secure this figure of 12.99 percent—by the way, this 12.99 percent relates only to common stock, does it not?

A. That represents the various companies that are shown in, or is based upon the various companies shown in the preceding exhibit.

That is the chart that we just referred to as to the pipe line companies considered.

Q. Including Panhandle Eastern?

A. No, not including that because that is the basis for comparison.

Mr. Wheat: Do you want to check on that?

The Witness: I will check on Panhandle Eastern.

Mr. Littman: I was under the impression that Panhandle Eastern was included.

The Witness: I say I will check that and see. My recollection was the other way around. I will have to make some calculations, I think, to check that but I can report back to you, Mr. Littman.

Mr. Wheat: Just a second, I think we can give you that figure.

Mr. Littman: I check it to be the average of the five [fol. 6867] companies, including Panhandle Eastern Pipe Line Company.

That is, it includes the following companies: El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Southern Natural Gas Company and Panhandle Eastern Pipe Line Company.

The Witness: Yes, that is correct.

By Mr. Littman:

Q. Now, this 12.99 percent shown on Chart No. 22 as the average earnings price ratio of those five pipe-line companies based on 1941 market prices is a straight mathematical average, is it not? A. Yes, it is.

Q. Do you think that is a proper kind of average to use when you have companies having the varying amounts of securities outstanding as you have heretofore testified?

A. I think it is reasonably accurate because there are some difficulties involved in working it out any other way where you have variations as to the class of security you have outstanding.

That is, some companies having only common stock, others having common, preferred and bonds and others having just common and bonds.

Q. We are just talking about common stocks of these companies, are we not?

A. That is correct and, therefore, the earnings price [fol. 6868] ratio that you get on these is representative of their particular division for each company.

Q. You think it is proper to simply add the five ratios and divide by five to get the proper figure?

A. I do because you make a computation and the only way you can make such a computation as this is on the basis of the earnings per share and when you get earnings per share, then you talk in terms of price per share and that gives you the percentage relationship.

Q. Now, when you do that, you are giving just as much weight to Memphis Natural Gas Company, having a 15.10 earnings price ratio and having only $4,993,400 securities as you give to Panhandle Eastern Pipe Line Company, which has $54,451,000 of securities outstanding?

A. That is correct and the reason for that is the one I have already given, that the investor, after all, looking over the entire field of investments that is available to him, compares the earnings per share against the price and it makes no difference whether it is large or small.

Q. Mr. Coffman, do you believe that the straight mathematical average of all these companies, giving each one equal weight, is the proper way of getting the average of the earnings price ratios of those companies?

A. Yes, the [earnins] price ratios for the common stock, [fol. 6869] yes, sir.

Q. Now, will you look at your Exhibit No. 63 and tell me whether you used the mathematical average in determining your average earnings price ratios or whether you used the weighted average?

A. Before we go on, Mr. Littman, we might as well understand we are talking about two different things. This present exhibit to which you are referring is covering over-all capital which includes bonds, preferred stocks, and common stocks.

When you do that, it is possible to make and use a weighted average and I used it; but when you talk in terms of common stock, you have some difficulties because there you are trying first to ascertain the percent of earnings that are available for the common shares only, where there is senior capital outstanding, and it is a little difficult to do so when—

Q. (Interposing) What is difficult about it?

A. The amount of earnings that are finally available are dependent upon how many senior charges are ahead of it and if the company has nothing but common stock outstanding, all of the earnings go to common; but another company, if you have interest charges and preferred dividends and something on common, other types of securities that are paid first, you have to make allowances for those items.

[fol. 6870] In other words, you have to break your earnings figure down per bond, per preferred stock, per common. That is the reason you come out with a per-share earning.

Q. You could weight them, according to outstanding stock, couldn't you?

A. Well, I still say that where you have some companies that have all common and others that have other types of capital outstanding, it works out as accurately to talk in terms of per share.

Q. You show on Chart 22, by a yellow bar, the "Actual public financing based on price to seller" for the Northern Natural Gas Company at a cost of 11.35 percent, is that correct? A. Yes, sir.

Q. Now, that 11.35 percent is not comparable to the 11.53 percent shown immediately to the left for Panhandle Eastern Pipe Line Company and the 12.99 percent shown by the green bar as average of pipe-line companies, is it?

A. That shows the net amount and, in my opinion, is the most and best pragmatic test of what you have got as to what the market actually said about a common stock and natural-gas pipe-line common stock in September, 1941—

Q. (Interposing) That is not my question—

A. I am answering your question.

Q. That is not my question at all, sir. In order to save [fol. 6871] time, I hope you won't mind my breaking in.

What I am getting at is the two bars at the extreme left represent the yield price to the public, do they not?

A. They represent the yield price to the investor that holds the stock right now.

Q. And the yellow bar represents the price to the Northern Natural Gas Company, that is, to the seller, does it not?

A. That is correct, based on the price to the seller.

Q. Now, in that regard, these three bars are not altogether strictly comparable, are they, because two are the yield price to the investors and the one, namely, the Northern Natural, is the yield price to the seller?

A. They are not entirely comparable on that basis.

Q. That is what I mean.

A. But the point is, the purpose of the exhibit was not to contend that. The purpose of the exhibit was to show exactly what the investors said in regard to investments of this kind regardless of which way you take it.

Q. I understand that but I wanted to make the record clear on that before proceeding with a more full discussion of these other matters.

Now, the percent for Northern Natural Gas Company comparable to the 11.53 shown in this Chart No. 22 for Panhandle Eastern Pipe Line Company and to the 12.99 percent shown as "Average of pipe-line companies" is [fol. 6872] shown on Chart No. 21, is it not?

A. That is correct.

Q. And what is the comparable figure?

A. Before adjusted to reflect the effect of the tax, as clearly indicated there, it is 11.72 percent; 10.38 percent after the tax.

You are taking the after-the-tax figure. The 10.38 percent is the comparable figure with the 11.35 percent.

Mr. Littman: Will you please read back that last answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. Well, the 10.38 percent figure for Northern Natural Gas Company would be comparable to the 11.53 percent figure and 12.99 percent figure shown in Chart 22?

A. That is correct.

Q. Now, your average pipe line companies in Chart No. 22 showing the figure to be 12.99 percent, does not include the Northern Natural Gas Company, does it?

A. No, it does not.

Q. Why not?

A. Because at that particular time, this financing was not done and these shares were not in the hands of the public.

Northern Natural common stock was not held by the pub-
[fol. 6873] lic until this issue on September 10 and the study I made was completed before that.

There was not anything available.

Q. Well, you have been using Northern Natural Gas Company data which was available for purposes of this exhibit.

A. Yes, and that is easily explainable. To have gone back and recalculated everything I had done would have cost a lot of money and there was no purpose in it when, after the study was completed, a few additions showing that alone would very definitely show what was happening.

In other words, after I completed the study, I could not go back and re-do the whole thing unless somebody was willing to pay the cost for that work and wait a considerable period of time for it and I was not willing to do it for my health.

Q. The only purpose that it would have shown would be to reduce the average of pipe line companies substantially below 12.99 percent.

It certainly would have done that, would it not?

A. Well, there would then be six companies instead of five and 10.38 divided by that, it would be less than one-half of one percent difference. I have not made the calculation but it would not have made any more difference than that, which I do not call substantial.

[fol. 6874] Q. One-half of one percent in earnings price ratios is a rather substantial amount of dollars, is it not?

A. Well, yes, it will be a fair amount in dollars, but, after all, the word "substantial" can mean different things. I just want to be clear that if it were one percent or one and one-half, that would be more substantial.

Q. And because of the tax situation, it becomes substantially greater when speaking in terms of gross revenue,

isn't that correct? That is the same question we discussed earlier this afternoon.

A. I am sorry, I do not quite see the application of the earnings ratio, here, to the gross revenue, for the moment. What is your point?

Q. You do not understand my question?

A. I do not quite see the connection that you are now raising to the earnings. I fail to follow you, in other words, from the earnings price ratio, for the moment, to the increased earnings.

Q. Well, earnings price ratio, if applied to the invested capital, will produce a given amount of dollars, will it not?

A. That is correct, but I did not do that in this case, as you will recall.

Q. I am just leading up to an explanation of my question.

[fol. 6875] Now, when you get those dollars, those dollars represent the net operating revenue to the company, do they not, or return to the company or profit or whatever you choose to call it?

A. Well, if you mean that additional amounts of money in the firm will give you a higher earnings so that you will have a higher earnings price ratio, then the dollars are already there but I get the ratio I am talking about, that is the result, not the cause, and, consequently, I do not follow your line of reasoning for the moment.

I did not multiply anything to get a gross revenue figure by earnings price ratio so I am unable to follow your line of questioning.

Q. If you cannot follow it, I do not think we had better pursue it. I think the record is quite clear.

You used 12 percent as the cost of common stock to Panhandle Eastern, didn't you?

A. That is correct.

Q. You based that upon the price earnings ratio?

A. I based that upon what the investor says he will require to finance the company.

Q. On earnings price ratios? A. Yes, that is correct.

Q. Now, state whether or not your 12 percent figure [fol. 6876] is predicated in any way upon the average of

the pipeline companies' figure of 12.99 percent which is shown in Chart No. 22, Exhibit 65?

A. The 12 percent is a judgment figure based upon this preceding study which shows these various items.

Q. All right.

Now, I would like to have you state how you arrived at this 12 percent, give us the process that you went through to get at this 12 percent cost of common stock to Panhandle Eastern?

A. I based it upon the considerations which are in support of Chart No. 22 in Exhibit 65 wherein, after a study, I observed that the earnings price ratios of the pipe line companies which have been enumerated, the average was 12.99 percent, practically 13 percent.

Q. That is a different kind of a figure, isn't it, than the 12 percent that you finally adopted? That 12.99 percent represents the cost to the public?

A. And that is what the 12 percent represents. I am saying that the 12 percent to finance in common stock, Panhandle Eastern requires that type of earnings price ratio. You have to have those earnings to support it.

Q. In other words, the 12 percent figure shown on the extreme right part of Chart No. 22 represents the cost to the public?

[fol. 6877] A. To the investing public, that is correct.

Q. Aren't you confused, Mr. Coffman? That column is headed, "Estimated for new financing", Panhandle Eastern Pipe Line Company. A. Yes.

Q. Isn't that the cost to Panhandle Eastern Pipe Line Company, 12 percent on the common stock?

A. I am saying and using 12 percent on the common stock right through.

That is, the 12 percent is used as a part of the $5,064,821 we have been talking about.

Q. The 12 percent could not be both the price to the investors and the price to the Panhandle Eastern Pipe Line Company, could it?

A. I am saying that so far as the company is concerned, if it were to finance again, the investors will require that ratio in order to be interested sufficiently to put up the money needed if common stock is the medium

of capital to be used, that is, the type of securities to be used.

Q. The investors would require what ratio?

A. The 12 percent.

In other words, if the Panhandle Eastern is to go to the public, they are going to have to see an earnings price ratio of 12 percent if, under the conditions at the date of this [fol. 6878] study, the public would or could be interested in supplying the money on a common stock basis.

Q. If the earnings on the equity capital was 12 percent, as you appear to recommend, what would you expect the dividends to be, in percent?

A. I do not know what the dividends would be because, after all, there are a number of items that have to be considered as a matter of managerial policy as to what will be done in regards to distributing earnings.

The mere fact that any company earns so much money on its common is no guarantee whatsoever that you will get any or a large part of it.

Q. Mr. Coffman, you were explaining how you arrived at this 12 percent and what it represented.

Now, I interrupted you for purposes of clarification. Will you continue with your explanation?

* * * * * * * *

A. The right-hand column captioned "Panhandle Eastern Pipe Line Company", relating to common stock at 12 percent, is a judgment figure based upon the earnings price ratios of various pipe-line companies upon the actual earnings price ratio of Panhandle Eastern Pipe Line Company [fol. 6879] and upon the best test, it seems to me, because it is more recent, of the Northern Natural Gas Company to arrive at a figure and the 12 percent is not an average or an arithmetical figure but it is a judgment figure wherein I felt that I had discovered very clearly that investors in the market were telling the various natural gas pipe line companies that they, as investors, were not interested in buying common stocks in natural gas pipe line companies unless they could see a ratio of about 12 percent.

I had 12.99 percent on the average; 11.53 percent on Panhandle, as such; 11.35 percent for Northern and I selected 12 as being within reason.

. . . . . .

Q. Tell me how you got up to 12 percent for Panhandle Eastern Pipe Line Company from the 11.35 percent shown on Chart No. 22 for the Northern Natural Gas Company?

. . . . . .

A. Northern Natural Gas Company, excuse me, had, before the financing at the date of June 30, 1941, when [fol. 6880] Appendix B on Page 6 was prepared for my Exhibit 64, only two types of securities outstanding, bonds and common stock.

In the case of Panhandle Eastern, there were bonds, preferred stock and common stock so that I felt some allowance had to be made for the fact that there were two classes of senior capital preceding the common as against Northern Natural and all investors purchasing securities usually give weight to those considerations because the more senior charges you have prior to the stock you hold, obviously, the more hazard you have as to what out of the total earnings, you may be able to participate in and, therefore, exercising my judgment, based upon that knowledge, I selected 12 percent, giving some weight to the average of 12.99 and also giving some weight to Northern Natural but taking into consideration that the capital structures were different as between the companies and 12 percent was, in my judgment, the reasonable figure.

Q. Now, is this 12 percent figure which is shown on Chart No. 22 for Panhandle Eastern Pipe Line Company strictly comparable to the 12.99 percent figure shown in that chart as "average of pipe line companies"?

A. Yes, I think it is on the same basis.

Q. That is, that is the return required by the public?

A. Yes, if they see that, I think they would be willing [fol. 6881] to invest in this kind of common stock.

Q. And is the 12 percent shown on Chart No. 22 for Panhandle Eastern Pipe Line Company comparable to the 11.53 percent shown on Chart No. 22 for Panhandle Eastern Pipe Line Company? A. As to type, yes.

Q. They both represent the amounts required by the public? A. That is correct.

Q. Why do you expect investors to require 12 percent for the new financing of Panhandle Eastern Pipe Line Company when your own data show that the present earnings price ratio on Panhandle Eastern Pipe Line Companys stock is 11.53?

A. Well, because on the present basis with the bonds, preferred stocks and common outstanding, you have one relationship.

If there is to be new financing and weight is given to the possibility of eliminating the preferred stock, it then changes the relationship of both the bonds and the common stock and some allowance had to be made for that and our experience and my experience in this business of advising investors over a period of time indicated that some allowances would have to be made.

I know investors well enough to know that they make [fol. 6882] calculations of that type or make considerations of that type.

Q. Isn't this 12 percent figure shown in Chart No. 22 occasioned by reason of the use of your ideal capital structure which we have heretofore discussed?

A. No, it had nothing to do with that, as a matter of fact.

What you get in the ideal capital structure is merely a statement which the Commissions have used from time to time that a 40-percent bond classification and a 60-percent common stock classification would seem to be a rather appropriate capital structure and I merely applied the percent already found in this exhibit that you are talking about, namely, 12 percent and I applied it so 60 percent of 12 and 40 percent of 3 gives you 8.4.

Q. Now, you used the 12 percent in order to finance 60 percent of the capital structure by common stock as shown by your Chart No. 28, isn't that correct?

A. I applied the 12 percent, that is correct.

Q. Now, then, that is why you applied the 12 percent, is it not?

A. No. You get right to the question of what balance shall you have between bonds and preferred stock. Well,

the Securities and Exchange Commission has used, on several occasions, 40 and 60, saying if more equity capital [fol. 6883] is going to be put in the business, 40 and 60 would seem to be reasonable and 40 and 60 give you the two figures you have there.

The rates having been determined by a different process, that is, studying the actual markets, you find 12 percent for the common and, allowing for the increase in bonds that would take place there, it comes to 3 percent cost on the bonds and applying 3 percent by 40 and 60 percent by 12, you get 8.40.

In other words, the result of that study comes by a determination already made. This determination is not predicated upon what you are reading at all.

Q. Now, Mr. Coffman, the present holders of the common stock of Panhandle Eastern Pipe Line Company are only requiring 11.53 percent earnings on that common stock, according to your Chart No. 22, isn't that correct?

A. That is correct.

Q. Now, if that means anything, why do you expect the investor to require something more than that, namely, 12 percent?

A. Because, as I have tried to indicate, you have a certain relationship of common stock, preferred stock and bonds today.

If, in the future, further common stock is used for financing, that relationship will thereby change and I exer- [fol. 6884] cised my judgment as to what effect that change in capital structure by way of number of shares outstanding would be having on the common stock earnings price ratio required by investors.

Q. But, Mr. Coffman, if you will turn to your Chart No. 26, you will see that you are applying the 12 percent to the present amount of outstanding common stock.

A. That is correct.

Q. And to the present capital structure, isn't that right? A. That is correct.

Q. Now, the fact is that Panhandle Eastern's common stock holders are apparently content to get 11.53 percent

by way of earnings on their common stock, according to your Chart No. 22?

A. That is true as of the date the figure was calculated.

Q. And in Chart No. 26, you use the same capital structure as now exists and you want to make an allowance of 12 percent.

Now, assuming no change in capital structure, how do you justify a figure of 12 percent?

A. Well, I justify it on the basis that I had to calculate throughout for purposes of ascertaining the actual capital requirements, that is, the earnings to meet the capital re- [fol. 6885] quirements, what the figures would be and I accepted a judgment figure there for the common stock which I believe, on the average under those conditions, would be required.

Q. You mean it is your judgment that the average required is going to be something in excess of what is presently required?

A. So long as the trend at that time continued, yes. I think that has already been borne out, as a matter of fact, in the market today.

I do not have the figures but I could produce them on a number of these and I think they show them very clearly.

Q. And that is, you say, purely a judgment figure?

A. That is correct, it is a judgment figure based on the facts studied.

Q. And we have no way of checking the accuracy of that judgment figure by reference to working papers, have we?

A. Yes, you have everything here that I had. That is, in regard to the various calculations made on those five companies and the consideration given to Northern Natural Gas Company and so forth.

In other words, I have not withheld anything here at all. Everything I had to work with you have got.

Q. Now, Mr. Coffman, you show by your Chart No. 21 [fol. 6886] that the common stock holders of Northern Natural Gas Company are content with earnings, after taxes, of 10.38 percent on their common stock, isn't that correct? A. That is correct.

Q. Now, you jump from 10.38 percent to 12 percent by the exercise of your judgment, do you not, for Panhandle Eastern?

A. Not at all. I look at the five companies which show 12.99 percent. That is not a judgment figure. That is pure arithmetic.

Q. That includes Panhandle Eastern doesn't it?

A. Yes; it includes it.

Q. That is pure arithmetic, adding the five and dividing by five?

A. That is correct and the actual at the time of 11.53 for Panhandle Eastern based upon the 1941 market prices and the Northern Natural Gas Company experience, making allowances for the difference in the capital structure between the Panhandle Eastern Company and the Northern Natural and considering the trend at the time.

Q. Now, Northern Natural Gas Company experience is 10.38 percent, is it not?

A. Yes, and its setup is different than Panhandle Eastern's. Its capital setup is different.

Q. Panhandle Eastern Pipe Line Company's figure is [fol. 6887] 12 percent which is strictly comparable with the 10.38 percent, is that right? A. Yes, that is correct.

Q. What are some of the risks of capital that are appraised by the investor?

A. They are numerous. In the first place, the investor, to the best of his ability, tries to secure some idea as to what he thinks the trend of business is going to be like over a reasonable time in the future.

Today, he is wondering what influence the armament and the emergency program is going to have upon business. He is trying to appraise the facts as they become available as to how the war is really turning.

He never fails to take into consideration what the Commissions are doing by way of cutting rates and what influence that might have upon the security of his investments.

He is worrying very definitely about what the Treasury is doing by way of increasing the tax rates and taking more earnings away to finance the present emergency period.

There are, I suppose, just hundreds of different things. To generalize and summarize the thing, the investor, to the best of his ability, is trying to consider all the economic factors that have a bearing upon the security of his investment and a reasonable return thereon, including all [fol. 6888] the things mentioned and a good many others I could mention if you would like.

He looks at the management, for example, and tries to ascertain whether they are efficient or not efficient and whether or not the company is keeping abreast of the times with its service and so forth.

Q. Those things which you mentioned all tend to increase the present earnings price ratio, is that right?

A. At the present time, that is the way it is actually working, as indicated by the trend of market prices.

In other words, today, as we all know, the earnings of many companies are going higher while the prices of common stock are going lower and that is not judgment. That is a matter of fact.

Q. Now, those risks include the possibility of higher taxes, of course, do they not? A. That is correct.

Q. Do they include the possibility of increased expenses?

A. The investor is trying to make an appraisal of that, too, yes.

Q. Do they include the possibility that your theory of rate making will not be adopted by this Commission?

A. I do not know as any investor knows about that, do they?

[fol. 6889] Q. Do they include the possibility of a rate reduction?

A. Well, the investors at the present know that there is a hearing being conducted in regard to this company and, naturally, if they think there is a possibility that some action may be taken by the Commission which will reduce the rates, they will try to appraise the effect of that as best they can and if it is going to jeopardize their position, the presumption is the price of their stocks and bonds will go off.

That can be demonstrated in numerous cases, I think.

Q. And those risks also include, of course, the possibility of other Governmental activities made necessary by the national war program? A. Yes, sir.

Q. Do those risks of capital which are appraised by the investors also include the possibility of a change in earnings?

A. Well, from our experience in advising investors, usually the first two questions that a prospective investor will ask you, or even a man that is already an investor in a particular stock, is what we think the company is going to earn and what do we think it is going to pay.

Mr. Lee: Pardon me. Do you ever advise the prospective investor that if the company's rate is cut, the company [fol. 6890] will sell more gas and make more money? Have you ever advised them that?

The Witness: We point out in cases where they have had increases in output with decreased rates, that that is a fact.

You will find that throughout our services. We have no hesitation in stating that. Wherever it is a fact, we admit it.

Mr. Lee: And the imminence of a cut in the rate does not always lead the investors to be discouraged as you indicated a minute ago. It may be a great benefit to the investors, isn't that right?

The Witness: That all depends on the facts. I can show you in Brooklyn Union, for instance, that is not a fact. It has not protected the investors there by a long shot.

Mr. Lee: That may be an isolated case but, in general, isn't it true that where the public utility service rate is cut —I do not mean a cut that involves a confiscation—but a cut that still has a good earning, results in increased volumes of sales and results in increased earnings, isn't that generally true?

The Witness: Where a company has a growth factor and there are possibilities of further expansion and it is evident there are further possibilities of growth and where [fol. 6891] a reduced rate will, within a reasonable time,

stimulate further usage so that the earnings will be there, the investors try to appraise that also.

They do the best they can with their own knowledge and the facts they have before them and we try to do the same thing.

Mr. Lee: The point I am trying to get at, without any equivocation, is from your knowledge as an expert advisor to prospective investors, you know, don't you, that the cut in public utility rates has stimulated the volume in business and resulted in increased earnings and is a benefit?

The Witness: I can state without equivocation it has been true in the past but it can be demonstrated now, because of changed conditions, that decreases in rates in many utility companies, although it can be absorbed by gross revenue, it is not being absorbed in net revenue.

That can be demonstrated mathematically.

Mr. Lee: But it has been, as I say, in the past, and you will concede that, won't you?

The Witness: Yes, that is true and we have made such admissions in our services.

Mr. Lee: Pardon me for breaking in, Mr. Littman.

By Mr. Littman:

Q. Now, in spite of all of these risks that are appraised [fol. 6892] by the investors which I enumerated and which might seriously reduce or impair earnings, is it your opinion that the investor expects the earnings price ratios to remain stable in the future?

A. Not at all. I have not said that any place throughout.

Q. What do you say about it?

A. I just repeat what I have said about it. As long as conditions remain about as they were at the time of this study, I would say that the result I have stated is a very close approximation to the fact.

Now, if there is a material change in one or more important factors, then I would want to take a fresh look and that is the statement I have made throughout this testimony.

Mr. Lee: Pardon me. Just one more question.

You made a statement that there had been increased earnings but, nevertheless, the common stock sold at a reduced price.

The Witness: I say at the present time, generally, in the market, that is, taking common stocks as a class, that while earnings are advancing or are larger, the common stock prices, as we know, have been going to lower levels.

Mr. Lee: What is the reason for that?

[fol. 6893] The Witness: There are several reasons.

In the first place, although the company is making larger earnings, the investor in common stock can see more and more clearly that the Government is going to take a larger and larger share to finance the war.

Mr. Wheat: Pardon me, when you said, "the company", you were not then referring to Panhandle Eastern, particularly, but just in general?

The Witness: No, I am talking about any company that has a common stock outstanding and the prospective investors or the actual common stockholder today has tabulations before him giving effect to the new tax rates and then perhaps making some estimate beyond that as to what they are likely to go to in view of the statements made by Mr. Morgenthau that 6 percent or 7 percent would be the top allowance and President's Roosevelt's statement to the effect that he does not want to see war profits in this war as against the last one, and so forth, and to the best of their ability, they are trying to evaluate those things and they can see pretty clearly, without knowing the exact amount, that although there may be $6.00 of earnings a share there, by the time the company gets through meeting all of its obligations, including the higher taxes, there will be little or nothing available for distribution.

After all, that means to the common-stockholder that [fol. 6894] his principal is less secure.

Secondly, his principal is likely not to get any return, so he is not so interested and the consequence is he is just as happy to be out of the stock as to be in it and the price

keeps going off. It is a seller's market rather than a buyer's market.

By Mr. Littman:

Q. What happens to the stock when the investor begins to worry about all of these things you mentioned?

A. If he worries enough so that there are more people attempting to sell than there are buying, the price goes off.

Q. The price goes down and the earnings price ratio goes up?

A. That is correct.

Q. And that is simply because the investor knows that next year he is going to have to take a cut in his earnings price ratio, is that right?

A. No, the reason for that is that he knows that someplace along, if his interpretation of the facts is correct, the earnings available for distribution will be less and, therefore, it is a question of whether he wishes to hold them until the storm blows over or whether he gets out.

In any event, if he will do any new financing, he will [fol. 6895] have to do it on that basis. Otherwise, the people would be holding their common stock.

Q. In other words, he is, in his own mind, discounting his present earnings price ratio by what he expects to occur in the future, is that right?

A. He is giving some weight to that because it is his money, obviously, and he is trying to protect it.

Q. Well, assuming that brewery stocks were on the market at the time when prohibition was imminent, what effect would the imminence of prohibition against the sale of spiritous brews have upon the price of the common stock of that brewery?

A. Well, it would have a very disastrous effect.

Q. Tell me what would happen to the earnings price ratios?

A. The earnings at that given time would be the same, obviously.

Q. The same as what?

A. The same as they were. I mean if you are talking about June of 1940 and to that date there were so many earnings per share but by December everyone knew the

Act was going to pass and there would be no more, there would be a big rush to buy brew, so the earnings would be tremendous but, nevertheless, the price would go off because the man wants to get his capital out of the hands [fol. 6896] of that particular outfit before it goes broke.

In other words, he wants to save his money. He earned it and he worked hard to get it and he wants to keep it.

Q. So the price earnings ratio would go way up?

A. Temporarily and then they would go to pot.

Q. They would go to pot?

A. That is right.

Q. And that is simply because the investor knows that next year he is not going to be able to make any earnings?

A. Not only that but he may not even get his capital back if he does not get it back now and that is what he is worried about in all of these companies.

Q. Now, if an investor in a natural-gas pipe-line company's stock was fearful that within the next six months there would be a cut in rates, what effect would that have upon the earnings price ratio?

A. Well, to come back to the other gentleman's question, if the investors thought that the imminence of a rate reduction or actually knew that a rate reduction was to take place but, at the same time, knowing the company, believed it had a growth factor—to make my answer simple—if he believed that the growth factor would supply additional earnings net to offset the loss of earnings by virtue of the rate cut so that he was, for all practical [fol. 6897] purposes at status quo, not at a given moment of time but at a reasonable period of time, he wouldn't be disturbed.

Q. I am asking you to assume that the investor was satisfied in his own mind that a rate cut was imminent within six months.

What effect would that have upon the earnings price ratios?

A. Well, the answer I have just given answers that question.

Now, if you wish me to go on and assume that that rate cut is actually going to cut net earnings and he knows that equally well—may I make that assumption?

Q. Yes, he knows that.

A. Then the likelihood is that he will say that he is not as sure about the safety of his principal in that security in that company as he was before and the price will go off.

Q. Therefore, he will want, for instance, 12 percent, let us take that as an example?

A. As against something lower before.

Q. And he wants that 12 percent because he knows that six months hence it is not going to be 12 percent any more, it is going to be something less than 12 percent, isn't that correct?

[fol. 6898] A. He is fearful of that and he is fearful that his principal is no longer secure.

Q. I am asking you to assume that he knows that.

A. My answer is the same. He knows that. The price is going off, because it is becoming a riskier business from the standpoint of his investment and he requires more in the way of return to accept that risk.

Q. Now, he requires more for his rate of return?

A. Or so long as the conditions existent now remain.

Q. And he is perfectly content to take the 12 percent today, knowing that it will be, let us say, 10 percent or 8 percent by reason of a rate reduction six months hence, isn't that correct?

A. He is still talking in terms of the average. That is, what he can sell over a period.

Q. And the answer to my question is "yes"?

A. With the statement that it covers a period of time on the basis of what I have said before.

Q. Now, the investor who knows that increased taxes will have the effect of cutting down his earnings six months hence goes into the venture at 12 percent knowing and being content with something less six months hence, isn't that correct, by reason of the cut in taxes?

A. He will go in if 12 percent is the figure. It takes [fol. 6899] that much to invite his capital, yes.

Q. And six months hence he will, in all probability, be receiving something less than 12 percent by reason of these various risks that are in his mind, isn't that correct?

A. No, you cannot say that directly because there, you see, you are again complicating two factors.

If the earnings are going down and he is fearful the price will go down, now, the relationship of how the two decline will determine whether it is 12, 13, 11 or 15. I do not know.

Q. But every risk in the mind of the investor causes the present earnings price ratio to go up, doesn't it?

A. If it is converted to selling the stock, it will be driving the price down.

Q. And the reason for that is simply because the investor is discounting for the future, is that right?

A. Yes, he has to safeguard his capital, yes, absolutely.

Q. So the investor who is demanding, let us say, 12 percent today may, in all probability, be doing that simply because he knows that he will receive something less in the future and is perfectly satisfied to receive that lesser amount in the future?

A. If he believes that the risk, as he appraises it, is, [fol. 6900] to the best of his judgment compensated by a 12 percent ratio, yes.

* * * * * * * *

[fol. 6903] PAUL B. COFFMAN a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

By Mr. Littman:

Q. Mr. Coffman, at the close of yesterday's session, we were discussing the matter of the investor's appraisal of risks as indicated by the earnings-price ratios.

Have current prices of utility common stocks been influenced by a notion that original cost may be substituted for reproduction cost in the rate-making process?

A. Mr. Littman, I do not know as I could say whether the price had been influenced or not. I think, from my observations, that this much is true:

Investors and prospective investors as well as investment advisory firms naturally have been following the trend and, in so far as work which has been done before Commissions and this Commission is concerned and dis-

cussions regarding original cost and cost of reproduction new, I presume it has been a part of their thinking but, whether or not to this date that has been conveyed tangibly to any change in price, I do not believe I could pass upon, [fol. 6904] that. I do not know. I know they are aware of it but whether or not it has had an effect upon price, I cannot say.

Q. In your opinion, Mr. Coffman, would an investor who is considering the relative merits of common stocks take into consideration prospective changes in the earning power of the various corporations whose securities are under consideration?

A. Yes, he would.

Q. Is it a fact that investors are more interested in prospective earnings than in past earnings?

A. Yes, I would say that is true and if I may explain more fully, when a security changes hands the present owner has already had the benefit of the earning power in so far as the share he holds is concerned.

The prospective purchaser, on the other hand, has no benefit as to what has happened. He is looking forward as to what he will and how he will benefit after he purchases the security.

Q. So we may agree that investors are primarily interested in prospective earnings?

A. Generally, that is true.

Q. I read from the Standard Outlook for Security Markets, issue of April 8, 1940, published by the firm of which you are a Vice President, namely, Standard and Poor's, as follows:

[fol. 6905] "A high yield is not of itself an indication that a stock is attractive. It may signify that the dividend is vulnerable—the dividend payments are not being covered by earnings or that earnings' prospects do not promise continued coverage for any length of time."

Do you agree with that statement?

The Witness: May I have that re-read, please?

(Whereupon, the portion indicated was read by the reporter.)

The Witness: In the first place, the excerpt that you have just read from our service is now talking about a yield as against earnings-price ratios that we have been talking about.

I want to make that point clear so that what I say will be directed to a yield, as such, and not a price-earnings ratio.

Q. You are now referring to a dividend?

A. That is what is being referred to there. When we talk about a yield in that particular publication, as it is used, we are referring to a yield and on that basis, I would say that the statement you have quoted [in] generally correct.

Q. Do you disagree with it ~~in any particular~~?

A. No, I say it is generally correct. We could be more definitive if we wanted to go on but, as far as it goes, it [fol. 6906] is an accurate statement.

Q. Would this statement also be applicable, in principle, to earnings-price ratios?

A. It would generally apply to this extent that, as an earnings-price ratio goes up, there is at least an indication that investors believe that the risk of the particular business has increased or, to use the term that is used there, it is somewhat more vulnerable, referring, of course, there to dividends.

Q. In other words, a high earnings-price ratio would not, of itself, be an indication that a stock is attractive?

A. Not necessarily. You would have to make an analysis to ascertain that fact.

Q. In other words, it is true that a high earnings-price ratio is not, of itself, an indication that a stock is attractive?

A. That is correct.

Q. And is it also true that a high earnings-price ratio may signify that the earnings' prospects will not continue at the same level for any length of time, to paraphrase the statement?

A. It may well indicate that.

Q. In your opinion, would an outlook for decreased future earnings tend to increase or decrease current [fol. 6907] earnings-price ratios?

A. Well, if you are talking about a single company for the moment as against an over-all group and the earnings-price ratio were to go up because the earnings' prospect looked more dismal, I would say the [the] earnings-price ratio changed because of the possibilities of that change in earnings, that adverse prospective change in earnings.

Q. Would that be true in the case of a natural-gas pipeline utility that was facing a rate reduction?

A. It could be true.

Q. It would be true, wouldn't it?

A. Not necessarily.

Q. All other things being equal and giving weight to that element alone, it would be true, would it not?

A. Well, it might, only temporarily, Mr. Littman. The reason I qualify myself is because of an answer I believe I gave yesterday on the same subject, namely, that if you have a natural-gas pipe-line company or, for that matter, any other company which shows a high growth factor wherein it can be demonstrated or reasonably assumed that a reduction of rates may well stimulate business so that the aggregate number of dollars coming in remains the same or a little larger so that the net income is about maintained, there would only be, I should say, a temporary reduction in the earnings-price ratio.

[fol. 6908] I merely want to point out it is not as simple a thing as you state. There are growth factors to be considered and other factors, all of which will be weighed to the best of the investor's ability.

Q. Your statement would indicate that a rate reduction, in an investor's opinion, can only be made up by future increased business?

A. Yes, if you eliminate that factor and say that the rate reduction coming through is to make a permanent impairment in earnings, then I think the earnings-price ratio would likely register that by showing an increase.

Q. And that is the very thing that an investor is fearful of when a rate investigation is commenced, isn't that correct?

A. Yes, especially if he has got a wide interest, he will begin to pay pretty close attention to see how the situation is going on the score that the money is still

his and it is his option whether he would rather have it there or place it elsewhere and he tries to find out that factor by weighing the relative risks.

In other words, a man that has earned and saved capital and has it invested is always looking at the security of it, as [wells] as the return.

Q. In other words, the investor is rather sensitive on the subject of the imminence of a cut in his earnings when [fol. 6909] an investigation of the rates of a particular utility is launched, isn't that correct?

A. Well, you say "sensitive." That is a little hard to use. I would say that he is very definitely appraising these things with the sole purpose of trying to ascertain whether or not his capital will be preserved.

I do not know that he is any more sensitive to a rate investigation, let us say, than he might have been to the Pearl Harbor episode and the fact we were going to be short on rubber, tin and a few other things from the Far East as it might have affected a rubber company, let us say, and he is sensitive to that, too.

Q. Assuming that this investor knows that gross revenues are going to increase through normal growth in the future and if there were no rate reduction imminent, what effect would that have on the earnings-price ratio?

A. Well, say all other things being equal, it would tend to lower the earnings-price ratio as in comparison to the preceding illustration [your] gave.

Q. Now, if we inject in that situation the imminence of a rate reduction that would, of course, raise the current price ratio, would it not?

A. It would tend to do that because that is an added risk, absolutely. There is more hazard.

Q. If an investor believes that prospective earnings [fol. 6910] will be lower than current earnings, would that fact tend to raise or lower the market price of common stocks?

A. Well, if the prospects were that the earnings would be less, it would tend, other things being equal, to lower the price.

Q. And in that manner, of course, increase the current earnings-price ratio?

A. Based upon the then present earnings, yes.

Q. Have you anywhere in your study shown the prospective earnings of natural-gas pipe-line utilities which you used as a basis of comparison with Panhandle Eastern Pipe Line Company?

A. No, I do not have such figures in this exhibit but, as you know, from time to time in our various printed services, we are making estimates on numerous companies, at least those that are more interesting to the investor.

Q. Has your company, Standard and Poor's, made a survey of Panhandle Eastern Pipe Line Company?

A. Well, it depends on what you mean by "a survey." If you mean, do we comment on the company and its securities, yes, we do.

Q. You referred to such a survey in your testimony in the David Young III case, did you not?

A. No, I did not. Mr. Payer did and had some short written letter in which there were general comments about [fol. 6911] the historical background and so on. I never saw the document myself.

Q. You do know of such a survey, do you not?

A. I do, from the fact that Mr. Payer said he had one in his hand and read from it, although he would not give it to me to look at.

I assumed he was not lying but actually did have such document and was putting it in the record, according to its caption.

Q. You have never studied that survey?

A. No. At the time the case came about, I did not even know of its existence.

Q. Have you studied it since that time?

A. I have studied one particular section which was the particular part that Mr. Payer was referring to, yes.

Q. Will you be so kind as to let me have a copy of that survey and any recent or more recent surveys of Panhandle Eastern Pipe Line Company that have been published by your company?

A. I am sorry, I could not do it on that particular one because I was never able to find a copy of the thing in our files.

It is not a printed document. It was never published. It was not one of our publications.

You see, some analyst in our shop was approached by [fol. 6912] some man from the outside with some figures and the gentleman at that time said he wished we would take the figures, as analysts, and see how we would put them together. That is what he did. They were not our figures and we did not know the use to which they were to be put. It was just a letter—

Q. (Interposing) A letter addressed by whom to whom?

A. By this analyst. As a matter of fact, I do not think it actually carried a signature. I cannot say. I did not see the whole thing but I searched high and low in our files to get a copy so I could see it myself, since Mr. Payer would not let me have his copy and he did not, as you know, put that in as a matter of record. He refrained very diligently from doing that.

I could not get a copy. There is no copy in our files and the people who did the job are apparently no longer with us and I never could find out what the thing was all about.

Q. For purposes of identification in the record, Mr. Payer was one of the attorneys for the plaintiff?

A. That is correct.

Q. David Young III?

A. David Young III, that is correct.

However, on the rest of your question, any publications that we have covering Panhandle Eastern Pipe Line Company, I would be very happy to send you; but that was not [fol. 6913] a printed document.

[It] it was, I could very easily get a copy or a photostat copy.

Q. Assume, Mr. Coffman, that the earnings-price ratio of a particular common stock, based on earnings for the latest available fiscal year is 11.53 percent and assume further that the investor is aware of or has been advised of the following:

First, that an increased cost of operating and maintenance amounting to at least 10 percent of such cost was likely to be incurred in the future;

Assume secondly, that some increase in State, local and miscellaneous Federal taxes is expected;

Assume thirdly, that Federal income and excess profits taxes based on the 1941 tax rate would be more than $1,000,000 greater than on the 1940 tax rates;

Assume fourthly, that the management of the company expects a still further increase in Federal taxes in 1942 of 10 percent;

Assume fifthly, that the depreciation, depletion and amortization allowance made by the company during the last fiscal year is inadequate, in the opinion of one of the company's experts, to return the invested capital when the reserves are exhausted;

Assume sixthly, that the Federal Power Commission was [fol. 6914] currently holding hearings to determine whether the rates of the company are reasonable or unreasonable and, if found unreasonably high, would in all likelihood reduce such rates.

Now, assuming these six items which I have named, if the investor knew or had been advised of these circumstances, could he reasonably expect that an earnings-price ratio of 11.53 percent would be maintained on the common stock during the succeeding year?

A. I would not think so.

Q. You would not think so?

A. No, but, as I have stated in my testimony right along, he is not looking at it for a single moment of time or a single year.

He is talking about over the average. In other words, he did not buy his investment today to liquidate it next month or next year. He bought the investment to let it stay put.

If it averages out over the years, he will feel he has fared all right and the principal was safe and the income on it reasonable.

Q. Under the conditions that I have assumed, would the investor expect the 11.53 percent earnings-price ratio to obtain throughout the year 1942?

A. That would all depend on conditions at the time. If all the conditions were adverse at the time, the given mo-

[fol. 6915] ment of time you are speaking of, then I would say that throughout the remaining months we would not expect it to be maintained because the price might be sliding off gradually.

If there were other factors which would tend to offset part of that it might, for the most part, be maintained, but over a period of time, with these assumptions you have made, it would not be.

Q. I am talking about the year 1942 when I asked you this last question.

A. Conditions existing as we know them to be right now at this time, January 28, 1942, making the assumptions that you have asked me to make and viewing the external conditions as I view them, which also have a part to play in this price, I would not suppose that it would be reasonable to expect the earnings-price ratio to remain at 11.3.

I think for the moment it might be higher.

Q. 11.53 is the figure.

A. I am sorry, 11.53. I should suppose it might be higher. Later, as the rate reduction goes into effect, if it proves to be an actuality and the taxes get higher so the earnings are lower, then the ratio will tend to go down.

How much, will depend upon the relationship of decline between the price, on the one hand, and the decline or [fol 6916] earnings on the other.

Q. You mean the earnings-price ratios might, under these circumstances, go down to 6 percent, might they not, in 1942?

A. It is hard to know how low they will go. If it gets too low, you would not have any investors in the business at all.

Q. But it will go lower and it will go considerably lower, will it not?

A. When the earnings drop off materially, the price will also drop. Now, where that will rest, as I say, depends upon the relationship of the decline between the two and I think it is well to point out in this connection that you are really talking about two confusing things.

In the first place, you are talking about a present earning against a prospective eventuality. The earnings today,

for example, we will say, are $3 a share. The prospect may be $2 but, so far as this year's earnings are concerned, upon which you compute the ratio, you use $3 until the next annual or quarterly or semiannual statement comes out when you can get a new look.

Q. Is what you have given as your last answer the same in substance and does it comport with the testimony which you gave in the David Young suit?

A. I have not read the David Young suit in a couple [fol. 6917] of years, 1939, or whenever it was, but it is consistent with the part of the David Young suit which you read, very definitely.

Q. It is consistent with your—

A. (Interposing) I say it is consistent with the David Young suit, that part of my testimony in the David Young suit which you read. Beyond that, as I say, my memory is not fresh on it but I think it must be the same because I do not believe I have changed my opinion from that time to this in regard to reaction of investors to changes in price and earnings.

Q. You have at least changed your opinion on the worth of market quotations since you testified in the David Young suit?

Mr. Wheat: Is that a question or a statement?

Mr. Littman: It is a question.

The Witness: I do not know that I have.

By Mr. Littman:

Q. You do not think you have?

A. No, I do not think I have.

Q. Did you rely on market prices of stocks in the David Young suit in connection with your testimony on Panhandle Eastern's common stock?

A. No, I did not in that case because there the question was one of trying to determine the fair value.

[fol. 6918] In this particular case, I think I have only said or have solely said that I used price quotations in every instance where they were available because they were the only guide available at the time as to what two independent parties thought about the price of that security.

Q. Do you recall testifying in the David Young suit that the market quotations of Panhandle Eastern's com-

mon stock were wholly unreliable for purposes of relating earnings, dividends and for use in—withdraw that—.

It is a fact, is it not, that you disregarded the market quotations of Panhandle Eastern's stock in your testimony in the David Young suit, is that correct?

A. In regard to the particular security?

Q. In regard to the common stock.

A. Yes, that is correct.

Q. Why did you disregard those market quotations in the David Young suit on the common stock of Panhandle Eastern?

A. Because, in that particular case, the question was one of determining fair value for all the stock and, therefore, I used an earnings-evaluation method to determine it, which I believe to be one sound method and that is in no case in conflict with anything I have said here whatsoever.

Q. Coming back to the question of earnings-price [fol. 6919] ratios, Mr. Coffman, I want you to assume the following:

First, that the investor had been advised that Panhandle Eastern Pipe Line Company had been held to be a subsidiary of a large holding company by the Securities and Exchange Commission after contesting such a finding;

Secondly, that the company was involved in long and costly litigation;

Thirdly, that it was being prosecuted in an anti-trust case;

Fourthly—

Mr. Culton: (Interposing) Panhandle Eastern was being prosecuted in such a case?

Mr. Littman: I am asking him to assume that a company was being prosecuted in an anti-trust case.

Fourthly, that rate hearings were being held before the Federal Power Commission;

Fifthly, that the company had been named in integration proceedings against its holding company by the Securities and Exchange Commission.

"Now, what influence would these matters have upon the current-price ratio of that company?

. . . . . .

[fol. 6920] The Witness: All other factors remaining the same and taking into account these five items, the five hypothetical assumptions that you have asked me to make, it would be likely that the investor would, to the best of his judgment, attempt to ascertain what the likelihood of the outcome of some of these hearings and suits would be and, to the extent that he thought there might be some action taken in one connection or another with these five items, the price of the security would tend to decline, in which case the earnings-price ratio would go up, based upon the then-present earnings.

. . . . . .

[fol. 6921] By Mr. Littman:

Q. Now, where you use the earnings-price ratio of this hypothetical company concerning which I have asked you a number of questions here and a moment ago, I think I asked you to make six assumptions first and then five.

We have eliminated one, making 10 in all. If you were using the earnings-price ratios of this particular corporation as a guide for the determination of the current cost of capital, of course, your guide would be very likely to give you a higher rate of return or dollar return for the present than is clearly indicated by the future, isn't that correct?

A. All other things being equal, that would tend to be true for the period about which you are talking.

I do not mean by "period" a future period. I am talking about the time you are talking about when you have those earnings available and these particular conditions only. I [fol. 6922] do not mean to be misinterpreted by saying "period" that you are interpreting that, that it means a period of years. There is no such thought in my mind.

Q. Well, of course the earnings-price ratio is taken as of the present. You are assuming that, aren't you?

A. Both factors of the earnings-price ratio are being taken as of the present, the earnings which you have available as reported on the last available financial statement—

Q. (Interposing). Yes, you are assuming that—

A. (Continuing) Yes, and the price quotation at the time.

In our particular study, as you know, to avoid any odd day in the market, we used average prices over a period of months so that if one day in the market happened to be out of line, it would not distort in any way the calculations.

Q. Yes. Well, assuming that the earnings-price ratio was calculated as of the period for which you calculated your earnings-price ratios for the year 1941 and assuming these ten conditions which I have asked you to assume, I am now asking you whether a rate of return or a dollar figure of return based upon the earnings-price ratio which results from these ten ominous factors would be too high to be used in the future, all things being equal?

[fol. 6923] A. That is inconsistent on its face, isn't it? If all things remain the same, it seems to me—

Q. (Interposing) All other things remain the same.

A. In other words, all external conditions and everything else remain the same except the ten points—

Q. (Interposing) Except the ten assumptions, that is right.

A. Well, in so far as the prospective investors or the actual investors in the security gave weight to these ten factors and the price of the security declined, there would result, all other things remaining equal, a higher earnings-price ratio.

Now, if you took that amount, that rate that you get to determine the dollars which you are talking about, which, as I interpret it, to get down to Exhibit 65, Chart 37, is the $5,064,821, it would be higher but the point is that as of the time the study was made and so long as these conditions are as they are, I contend that the investor will require that earnings-price ratio before he will be willing to increase his capital in the business.

If you eliminate any of the hazards, the business becomes more certain, his capital becomes more secure, more certain, the earnings price ratio will change. The market has changed and investors will look at it differently.

Q. Now, Mr. Coffman, the first six assumptions which [fol. 6924] I asked you to make all appear in your Exhibit No. 65, do they not?

A. Well, No. 1, increase in operations and maintenance —10 percent, that is correct. Some increase in taxes is correct.

Q. Now, are you talking about State, local—

A. (Interposing) State, local and municipal, taxes. Federal taxes, more than $1,000,000—well that, I do not recall the specific figure, but that is approximately correct as shown in Exhibit 65, chart—

Q. (Interposing) Table for chart No. 30?

A. As shown in Chart No. 30.

Tax, more than a million dollars larger, all right. It is about $1,000,000,—well, I cannot make that.

Taking all taxes together, if you will, for the moment, it is more than $1,300,000. That includes the State, local and miscellaneous and the Federal income and excess profits.

Q. That would take care of the fourth assumption that I made, that is, an additional 10 percent increase in Federal taxes for 1942, as shown by your Chart No. 30 of Exhibit 65, isn't that correct?

A. I am apparently getting a little mixed up with you. I thought that your second item was some increase in taxes which was State, local and miscellaneous and three was Federal taxes, more than a million dollars; and fourth [fol. 6925] was management expects larger taxes. I did not know you had put any particular percent or otherwise on a dollar figure.

Q. I assumed that was the percent that you show in Chart No. 30—

A. (Interposing) Yes, all right.

Q. (Continuing) Which is called, "Allows further 10 percent increase in Federal taxes."

A. All right.

Q. How about the fifth assumption, that the depreciation, depletion and amortization allowance taken by the company during the last fiscal year is inadequate?

A. Yes, we show a difference on that, the figure I used being higher.

Q. And the sixth assumption is, of course, correct. We are holding the hearing to determine the reasonableness of rates.

A. Yes.

Q. So those six assumptions are in accord with your Exhibit 65, are they not?

A. That is correct.

Q. How about the last four assumptions? You know, do you not, that Panhandle Eastern has been held to be a subsidiary of Columbia Gas & Electric Corporation, do you not?

A. Yes, sir.

. . . . . .

[fol. 6926] By Mr. Littman:

Q. Are you familiar with the litigation involved in Panhandle Eastern?

A. Yes, I am—the David Young suit, you mean?

Q. Yes. A. Yes, I am familiar with it.

Let me be sure. You were not asking me if I thought Panhandle Eastern was a part of that suit. You asked me if I was familiar with the David Young suit, is that correct?

Q. Yes.

A. I am familiar with that suit, without saying whether Panhandle Eastern or anyone else was mixed up in it.

Q. Exhibit No. 145 sets forth a number of suits—

Mr. Wheat: (Interposing) For the witness' benefit, you might identify what the exhibit is, Mr. Littman.

[fol. 6927] Mr. Littman: I was just going to hand it to him, Mr. Wheat.

Mr. Culton: On Page 12, it shows Columbia Oil and Columbia Gas as defendants.

By Mr. Littman:

Q. This Exhibit No. 145 is the Panhandle Eastern Pipe Line Company compiled Registration Statement covering issues of $10,000,000 first mortgage and first lien, 3 percent bonds, Series C, due January 1, 1962, and 150,000 shares of (blank) percent cumulative preferred stock filed with the S. E. C. on December 24, 1941, and called "Registration Statement No. 2-4919."]

Now, this document sets forth certain litigation in which Panhandle Eastern has been involved or, at least, which touch upon the issuance of securities by Panhandle Eastern. Otherwise, I assume that would not be mentioned in that statement.

From your knowledge of the company, Mr. Coffman, are you disagreeing with the statement that Panhandle Eastern Pipe Line Company has been involved in long and costly litigation or is that a correct characterization?

A. Well, it is a little hard for me to answer that, Mr. Littman, because when you say "long and costly", in the first place, I do not know what the costs were.

I know that there was the David Young suit, all right. [fol. 6928] As a matter of fact, I do not know just how many months that took or what else followed it. I am not in a position to state. I will say I know about that suit, but when you say "long and costly litigation", I have not anything to go on at the moment.

Q. Well, what about the next assumption?

A. That is the present rate hearings that are being held, that is the same as No. 6 above; and the next item which is now No. 4, the company had been mentioned in integration proceedings, that is true.

Q. Then the only one of these ten assumptions that you are not personally certain about is the one in which I had you assume that the company had been involved in long and costly litigation, so I will just ask you to eliminate that one.

The nine other factors, of course, would tend to increase the earnings price ratio beyond that which would have been otherwise shown in the absence of those items?

A. Yes, at the time you are making this particular calculation, that is, and that is prior to any of these taking actual effect.

Q. And the earnings price ratio which reflected these elements, as well as the other elements extant at the time was 11.53 percent for Panhandle Eastern, is that correct? [fol. 6929] A. That is correct.

Q. That is the 1941 percent?

A. Yes—well, to make it specific, using the earnings figure stated in my exhibit and the price of the security shown, yes.

Q. And you are now referring to your Chart No. 22, to be certain about it? A. Yes, that is right.

Trial Examiner: Mr. Coffman, leaving the hypothetical questions for a moment—

Mr. Littman: (Interposing) By the way, I might state at the moment, Mr. Examiner, I have just asked the witness whether all of these hypothetical matters are facts and, with one exception, he has stated they were.

Trial Examiner: And have been reflected in the ratios discussed?

Mr. Littman: Yes.

Trial Examiner: And he has said they are.

Mr. Littman: That is right, I am sorry to have interrupted you.

Trial Examiner: Eliminating the various hypothetical aspects which you have been discussing you, of course, are closely familiar with the various appropriation acts of the Congress since your study was originally prepared?

The Witness: Yes, I am aware of them. You are referring [fol. 6930] now to those matters particularly related to budget?

Trial Examiner: The obligations of the Nation.

The Witness: Yes, that is correct.

Trial Examiner: Are you able to state what the prospective national debt will be at the end of 1943?

The Witness: Well, I believe the most recent estimates that have been made would indicate that the national debt at that time will be in the neighborhood of one hundred and fifty billion dollars.

Trial Examiner: Your exhibit relating to the effect of the Act of 1941 on taxation of the Panhandle Eastern Company, numbered for identification as 152, contains a quotation from the New York Times in which the Secretary of the Treasury is quoted as predicting the necessity of a

100 percent tax on corporate gains over 6 percent at some time in the near future.

The Witness: Yes, sir.

Trial Examiner: It is, of course, proper to assume that whatever tax legislation may become necessary to maintain the credit of the Government will apply to all enterprises alike?

The Witness: Yes, it would seem to me that it would.

Trial Examiner: In view of these economic considerations, do you feel that the data, the factors and the financial history reflected in your Exhibits 63, 64 and 65, may [fol. 6931] still be accepted with confidence in appraising the demands of future private investors?

I mean in the immediate future, in the future of the next five years.

The Witness: Well, Mr. Crosby, I thought I had, throughout my testimony, made it clear that the statistical data that I have presented in these three exhibits, Nos. 63, 64 and 65 would hold good and be of use so long as the conditions surrounding the date of this study held reasonably the same.

Now, if because of the emergency or some other event the conditions would change radically so that these data would be altered radically, then I would want to review the entire situation and refresh or freshen my point of view and it might be that those changes in data would very definitely lead to a change in the final result.

If they did, I should follow this same procedure to arrive at that result. In other words, as new facts come to bear, I would very definitely wish to look at them and I think the Commission does too and I would do that to the best of my ability.

Trial Examiner: Have not facts just referred to now become realities, with the exception of the ascertainment of the exact method and rate of taxation?

The Witness: If I understand you correctly, what you [fol. 6932] mean there is—

Trial Examiner: (Interposing) The size of the national debt.

The Witness: Yes.

Trial Examiner: The necessities which we all recognize to maintain the credit of the Government, the inevitable effect of these conditions upon all private investors; must we not accept these things as the realities of today and are we deluding ourselves when we continue to rely upon the data which heretofore has proven more or less accurate and reliable?

The Witness: I do not believe that is true, Mr. Crosby. Without question, there will be many changes but, nevertheless, private investors still exist and will be relied upon from time to time, as they are apparently, to buy various kinds of securities or to finance various kinds of enterprises so that you find today people buying Defense Bonds, as well as buying other securities.

Part are to finance the war and part to finance business, and that will continue, I should think, unless the emergency becomes so serious that all such matters as that will have to be stopped.

Assuming that the latter does not happen and that we go on as we have been but taking cognizance of these economic changes, there will arrive a point where the rela- [fol. 6933] tionship of earnings and security prices will be such that the investor, to the best of his judgment, will say that he has pretty much discounted about all of this adverse situation that he can see.

Now, it may be, for example, that the market has arrived at that point now. I think it is rather to be noted that after Pearl Harbor which, I think to most of us was most unexpected, the market held itself pretty well.

There was a decline but it did not become panicky and yet the Securities and Exchange Commission, I believe, at that time was ready to close the Stock Exchange at a moment's notice if it got unruly, which would indicate to me that investors at that time had felt they were pretty well right in discounting these things that were going to happen and one did happen, even though we had not ex-

pected that particular one, but it did not shock them or jar them too much, so I believe you arrive at the point here where you pretty well successfully discount these matters and, at that point, it begins to stabilize.

Trial Examiner: When will that point be reached, in your opinion? Of course, I am not anticipating that you can give a date but what must occur before it can be reached?

The Witness: Well, I would suppose that so far as our war activity was concerned, we would have to wait until [fol. 6934] it became pretty definitely established in people's minds that we were at that date caught up with this war situation so that we, at least, had an even balance of power and were enjoying, from time to time, one or two notable victories as against being caught in a tragic situation like Pearl Harbor and having oil tankers sunk at random off the Atlantic Coast.

Whether we will be prepared to accomplish that by 1943, I do not know although I believe President Roosevelt and some other high Government officials have indicated they believe that our preparedness would be such in 1943 that we would be able to cope with practically any situation.

If that happens in 1943, I would say that is about the date people then would begin to get a little more confident and would be a little more reassured and we would begin to turn our thoughts to ultimate victory even though it were sometime after 1943 and I will say this, Mr. Crosby, I think an analysis of what has gone on in many years in the New York Stock Exchange will indicate that investors as a group have been pretty good in discounting what was going to happen.

I think an analysis of the market will show that very clearly over the years. Very seldom have they been wrong, even as to depressions and return of prosperity, added regulation and so forth.

[fol. 6935] In the Street they usually describe it by that old saying that "fifty million Frenchmen can't be wrong", and I think there is something in it.

[fol. 6936] Trial Examiner: Back of these questions was the basic wonderment whether the old data have been so

seriously disturbed that your present predictions were made with less confidence than they would have been, for instance, at the time you prepared these reports and studies.

A. Well, it is true that more disturbing things have happened to this date than had happened at the date of preparing the report but, as I say, from, well, let us say, from Munich the market has been anticipating something. We didn't know just when it was going to come, but the market pretty definitely had been saying that sooner or later we were going to get into the war and prices have gradually been declining, slowly but surely, anticipating that hazard. Now, as I say, whether or not it has arrived at a level where practically any bad news is discounted so that there would be only the most fractional change in prices, I don't know, but we arrive, as you go in this decline, at a point where practically all the risks have been discounted and then from there on it depends upon the news on the favorable side to begin to lift it up.

Trial Examiner: Is it proper to infer from your inclusion of Mr. Morgenthau's statement in your exhibit marked for identification Exhibit 152 that among these things the market has anticipated is a sharp and vigorous limitation of all the profits of private investors?

[fol. 6937] The Witness: Well, of course, it is a little difficult to say. My impression of what the investor, the general investor has done to date is that he has pretty much thought that there are going to be higher taxes, but he has felt that it would be quite a while before we got down to Mr. Morgenthau's idea, so that the only purpose of my putting that statement in was to show that that is the kind of evidence that the investor is getting from time to time in the press and from other places, the various letters that are sent out discussing these matters and although the investor may not agree that we are ever going to go to quite that limit, at least not in the next year or so, it does indicate that the Secretary of the Treasury feels that we have got to have more money to finance this emergency.

Trial Examiner: Mr. Coffman, is it not an inevitable consequence of our present economic condition as a nation, as a government?

The Witness: That we come to a limitation of 6 percent?

Trial Examiner: That we come to such a low limitation of profits. In other words, it will affect the confiscation of earnings above a fixed moderate maximum in some form and by some means.

The Witness: It may well be, but in working out taxes there is a happy balance as to how far you can go to get [fol. 6938] maximum revenue. In other words, you take various kinds of companies that are earning money, if they are permitted, under the various Government contracts that are let, an opportunity to make money, so there will be taxable income, it may be that there is a point there where there would be a larger aggregate tax collection than if we squeeze so much out that even if you took all the earnings there wouldn't be as much left, because, after all, the earnings that are being taxable, whenever you get into an emergency like this, for all practical purposes, is a loan on future capital. In other words, the way you let the defense contracts out is because you are going to sell Liberty Bonds, and so on, to finance those present contracts which, in turn, show earnings which you tax, so that the debt that is outstanding, presumably, will have to be paid off sometime, or if the emergency is so great that we find it can never be paid off, that is where you get then not only a confiscation of earnings but you get an absolute confiscation of capital and it may well come to that, but I don't know, and I don't think people in this country think so, I mean investors have not gone that far.

(Thereupon a short recess was had.)

By Mr. Littman:

Q. In response to the Trial Examiner's inquiries, you spoke of the market having anticipated the war and that [fol. 6939] when the war came it came as no particular shock. Now, isn't it a fact that the market has also been anticipating these elements which I have asked you to assume and which you have stated were correct assumptions with respect to the investors' appraisal of risks?

A. Yes, I think the investors have been, also, discounting these factors that you mention.

Q. So that if and when a rate reduction comes, that won't be much of a shock to them, either, will it, inasmuch as they have been and are now anticipating and discounting that possibility?

A. Yes, I would say that to the extent that the investors in regulated companies have already discounted these eventualities, there will be less shock shown than if they had not discounted anything at all, yes.

Q. In your Exhibit 152 you show on the last page a statement made by the Secretary of the Treasury, Mr. Morgenthau, which is copied from the New York Times, is that correct?

A. Yes, that is correct.

Q. Now, in the first paragraph of that statement, there is a reference to corporations' profits over 6 percent on "invested capital". Can you define the term "invested capital" as it is used by Secretary Morgenthau in this statement?

[fol. 6940] A. I am not sure that that phrase "invested capital" has been fully defined. I say that for this reason: Corporations now having to file an excess profits tax return along with their regular income tax return have been given the option to date of whether they will compute their credit on the basis of average earnings as defined in the 1941 Act or beginning in the second Revenue Act of 1940, as a matter of fact, or whether they will compute their credit on the basis of invested capital. Now, I believe it is true that some companies who have not established an invested capital base which was accurate or a good approximation of what the Government had in mind under the Act, have been trying to rehabilitate their accounts to establish an invested capital account. In those cases there have been a number of changes because certain corporations over a period of years, for example, were formed by consolidation of companies and at the time of consolidation prices were paid for the securities or assets of the company which involved a payment for good will, as one example. The companies, subsequent to the date of the consolidation or merger, followed a practice which has been considered sound in accounting circles of writing off the good will. Some have done it in one operation, others have

done it in piecemeal fashion, but nevertheless a good will figure, which was actually bought and paid for in cash or [fol. 6941] property, let us say for $10,000,000, has been eliminated from the books by writing it down to one dollar. Those companies, to establish their invested capital base under the Act, have had to rehabilitate their accounts in order to re-establish that invested capital figure.

Q. Which account are you speaking of now?

A. The second Revenue Act of 1940 which was the first, if I recall correctly, to provide for the excess profits part of the tax law.

Q. Well, the Act that I am speaking of is the one that Mr. Morgenthau refers to in his statement dated September 24th in the New York Times, as it appears in your Exhibit 152. Can you define what he means by that term?

A. Well, he means there, as I understand it, the capital that is actually invested in the business as represented by securities but allowing for only 50 percent of any debt outstanding.

Q. What do you mean by the latter part of your statement?

A. I mean when you compute your tax credit at the present time, you are only allowed 50 percent of your bonded and funded debt and other debt to be taken into consideration. I believe I am correct in stating that. I haven't read it for a while, but I think I am right in that. [fol. 6942] Q. Well, have you ever seen Mr. Morgenthau's definition of invested capital as he uses it for purposes of this statement made by him?

A. Not his statement, but if you are including his statement to be that which comes out in the regulations, the regulations at the present time define invested capital and in that calculation they allow only 50 percent of the debt for purposes of computing this credit under the invested capital credit.

Q. Do you know whether Mr. Morgenthau's definition of invested capital is the same as your definition of invested capital as you have used that term in your Exhibit No. 65?

A. I believe generally that with the qualifications of 50 percent of debt there won't be much difference.

Q. You are not altogether certain about that, because you don't know. You would want to check it?

A. I would want to check it, but I think it would closely approximate the figure.

Q. Not having read or seen Mr. Morgenthau's definition of invested capital as he uses it in this statement which appears in Exhibit 152, you are not prepared to state whether it is the same as your term "invested capital" as you have used it in Exhibit 65?

A. I would like to refresh my mind, but I say that [fol. 6943] my recollection is sufficiently good to say that there is not any substantial variance, any substantial variation in the two.

Q. You have not adjusted the earnings-price ratios which you used in order to take into account and to give effect to these numerous risks which we discussed a few minutes ago that the investor has taken into account; is that correct?

A. No, that isn't correct, Mr. Littman. I have very definitely taken them into consideration because, if it is true, which I believe it is, that investors have been cognizant of these various items and appraising them to the best of their ability, I have already said that that is registered in the price of the security, therefore, when I used the price of the security as one factor in calculating an earnings-price ratio, automatically I am giving effect to those items.

Q. Well, of course, the price of the security has already discounted all of these dire consequences, isn't that correct?

A. No, I don't think I said that at all. I said that the investor was discounting and will continue to do so, so long as he has not yet established in his own mind the exact, ultimate act, whatever it may be.

Q. Let's be specific about it. Turn to Chart No. 22 [fol. 6944] of Exhibit 65. There you show the earnings-price ratio of the Panhandle Eastern Pipe Line Company as 11.53 percent for the last 1941 period; is that correct?

A. That is correct.

Q. And it is that 11.53 percent earnings-price ratio, based on 1941 market prices, for Panhandle Eastern Pipe Line Company that has taken into account all of the numerous elements that we have discussed earlier today?

A. That is correct, but when I said that I didn't say nor mean to imply that that meant the investor had

jumped to the ultimate result and appraised it all. I said that as these conditions were occurring he was reappraising the situation. I didn't say that he had jumped to the final result, otherwise the price might have dropped from whatever it was, 36:50 to 5. Investors are perfectly willing to bide time where the eventuality is not a dead certainty, so that there will be a gradual evolutionary process. It isn't done in a single day or week or month.

Q. Mr. Coffman, I thought we had been all through this before and understood each other perfectly. I am afraid we will have to go back over it again. Tell me whether or not this 11.53 percent earnings-price ratio of Panhandle Eastern Pipe Line Company common stock shown in Chart No. 22 reflects the investors' fear that there will be [fol. 6945] an increased cost in operations and maintenance in the succeeding year. Does it or doesn't it?

A. It does.

Q. Now, shall I go through all these elements again or are your prepared to say that this 11.53 percent reflects all these various elements?

A. No, you don't have to do that. I still say that my statement is 100 percent accurate, my answer to you is 100 percent accurate. You did not nor did the investor conclude at the time he was making these appraisals, that is, day in and day out, as he transacted shares in the market, that the final result, for instance, of the rate case, the final result of costly litigation, the final result of increased taxation and so forth, he did not go through that and crystallize the ultimate eventuality, because he is in no better position to do that than anyone else; it is not possible, so what he does is make such allowance as he can at the time, so the 11.53 includes those items but not the final eventuality on all of them, because he doesn't know, he is just trying to approach it gradually as history is made day in and day out.

Q. Don't you know, as an expert in this field, Mr. Coffman, that the investor actually exaggerates elements such as those which you discussed this morning, the imminence of rate cuts, the imminence of higher taxes and so forth? [fol. 6946] Isn't that correct?

A. Why, I don't believe he exaggerates those things, Mr. Littman, no; in some isolated case you might find that he had over shot the mark, that he thought that it was

going to be worse than it really was, but when you talk about the market as a whole, I think it is about as good a barometer for a solid estimate as any you can find.

Q. Then, it is your testimony that the investor does not exaggerate the fears and risks?

A. My testimony is exactly this: I don't know as I could phrase it any better, that taking investors as a whole and on the average, I do not believe they tend to exaggerate. I think they hit the market pretty closely. In isolated or individual cases they may over-shoot the mark, but taking the market as a whole, which I was attempting to do in getting the investors' appraisal of risks, I think it is a very close approximation, weighing the factors, as they come up, to be considered.

Q. Well, if the investor makes a close appraisal, how much has he discounted in this 11.53 percent for the increase in taxes?

A. Well, there, again, I have to tell you that I can't give you a specific amount on each item; I don't know, but any individual that is working on any problem will take a group of figures and he will talk in terms of average ex- [fol. 6947] pectancy of so much and the over-all figure may be pretty close to the final result.

Q. But you know that this 11.53 percent reflects the investor's knowledge that taxes are going to increase next year?

A. That is right, so far as he has discounted that particular item to the date that this ratio was calculated at 11.53 percent.

Q. And that 11.53 percent includes the discount by the investor for all the other fears and risks which we have discussed this morning?

A. In so far as he has discounted them to that date.

Q. Your answer is: yes, in so far as he has discounted it to that date?

A. That is correct.

Q. Do you agree with this statement, which I read from page 473 of the "Outlook for the Securities Market" dated October 13, 1931, published by Standard and Poor's Corporation: "Conjecture along these lines is presumably among the reasons for the further easing of stock prices last week. It is the habit of speculative markets to prepare for the worst, but it is no easy matter to tell in ad-

vance at what level the unfavorable contingencies will be discounted or over-discounted. The market, clearly, is allowing for many unfavorable events which may not come [fol. 6948] to pass." Do you agree with that statement?

A. I think that is a correct statement, yes.

Q. Now, when you came to make an estimate of the cost of common stock money to Panhandle Eastern Pipe Line Company for your projected period of June 30, 1941, you raised the figure from 11.53 percent, as shown on your chart No. 22, to 12 percent; isn't that right?

A. That is correct.

Q. Why did you go even higher than the indicated earnings-price ratios which took into account all of these various hazards and risks that we have discussed earlier today?

A. I did it because in studying the various factors, which are shown graphically on Chart 22 of Exhibit 65, and supporting data, it seemed to me that it was clearly indicated that a figure of 12 percent, which I said was a judgment figure, closely approximated for this study the risk of this enterprise as it would be appraised by investors when it came to additional financing and that was based on the fact that the average of the pipe line companies was practically or was actually 12.99 percent, to use the figures shown in the chart mentioned. The comparison with Northern Natural, which was a later development, and the actual common stock figure, earnings-price ratio was 11.53 at that time.

[fol. 6949] Q. Well, the earnings-price ratio for Northern Natural was 10.38 percent, as shown by your Chart No. 21, and you used 12 percent for Panhandle Eastern? Why?

A. I explained that, I think, to you yesterday, Mr. Littman. I said that I had taken into consideration the difference in the capital structure of this company against Northern Natural Gas Company which would definitely be taken into consideration by the investors along with the other factors which are considered already in the exhibit.

Q. Well, is it your testimony that the investors today would require 12 percent earnings, would expect a 12 percent earnings-price ratio?

A. Yes, that is my testimony and I believe if I took Northern Natural prices as of today and made a calcula-

tion I would find that that percentage had gone up quite a bit from 10.38 which you mentioned, which is a further indication of the trend, so the 12 percent doesn't seem to me to be out of line at all.

Q. You are not suggesting that you want to raise the 12 percent?

A. No. That was a judgment figure that I used at that time based on this study. As I have said repeatedly in this testimony, until conditions change so radically, as related directly to the Panhandle Eastern Company, I will stay with my figure. When conditions so change, I would [fol. 6950] want then to take another look.

Q. Now, in your in opinion, then, you say that the investors expect to earn 12 percent on their common stock investment in Panhandle Eastern Pipe Line Company?

A. Well, to turn it around, what I am saying is that so long as the conditions which we have enumerated continue to be present, that investors in the common stock of Panhandle Eastern Company will likely require a 12 percent earnings-price ratio if they are to be approached to purchase additional common stock.

Q. That statement holds good today?

A. It holds good at the time of this study. I haven't brought this down to the date of January 28. I think, generally, it would be true today and I still make the statement, and I don't know how to change it, that until I am sure that conditions have changed radically, so that the factors are altered radically, this figure would hold.

Q. You say that you cannot advise the Commission whether it may rely upon this 12 percent figure shown in Chart No. 22 today?

A. No. I am saying that so far as I am concerned, that figure closely approximates conditions today, and I am sticking with it.

Q. And it has approximated conditions and would hold [fol. 6951] good each day back to June 30, 1941?

A. Well, I wouldn't say each day, because I have said that we are talking about on the average.

Q. Well, on the average, would it?

A. On the average, yes, I think so.

Q. Well, are you saying that the Commission can rely on this 12 percent figure one day and not on the next day?

A. No, I just got through saying that you can rely on it on the average in a period such as we have been in and are in right today.

Q. How about tomorrow?

A. Tomorrow, too, if you say "on the average." You have to have more than one or you can't get an average.

Q. Did you testify in the Young suit as to what return investors in Panhandle Eastern Pipe Line Company's common stock might reasonably expect?

A. I testified as to what I thought the reasonable expectancy of earnings might be on the common stock, as I recall.

Q. Do you remember what you said on the subject?

A. I don't, no.

Q. Do you remember the percentage that you used?

A. No, I don't believe I remember that.

I recall to your mind again that reference to the date of the Young suit is taking us back before Munich and the [fol. 6952] waf, so far as we were concerned, and a hundred other items, so that certainly whatever I said there would apply to the times then and would not necessarily apply now.

Q. Well, you testified in the Young suit in the latter part of 1939, did you not?

A. That is correct.

Q. And you there stated that your testimony with respect to your projected period would hold good for an indefinite period in the future, did you not?

A. No, no, I didn't say "indefinite period." I said "a reasonable period," I believe.

Q. What was a "reasonable period", speaking as of the end of 1939?

A. Ordinarily, I would define a reasonable period where we weren't having tremendously abnormal conditions as something around three years but after all, it is not the length of period that is to be taken into consideration, it is various factors that you have to consider, for example, I can talk to you today about this situation and if tomorrow I would discover that the British Isles had been blown out of the sea and the Allied Powers were definitely to be licked and the best thing we could do would be to make any kind of peace that could be done,

I think probably I would want to have the opportunity to change my thought.

[fol. 6953] Q. Mr. Coffman, did you testify as follows in the David Young III suit:

"I concluded from this data that 7½ percent rate was a reasonable rate to capitalize the dividends which had been projected on the common stock of the Panhandle Eastern Pipe Line Company"?

A. If it is so stated in the record, I said it, yes.

Q. Now, will you state how you reconcile any such figure with the 12 percent that you are using for purposes of this proceeding?

A. Yes, I just got through doing that. January 28, 1942, is not a point to be compared with July of 1939, or whatever date it was of that case. If all other conditions had remained the same, I probably would be talking in terms of 7½ percent, but the fact is that all other conditions have not remained the same, investors so state, and I am registering that fact in this study.

Mr. Wheat: Mr. Littman, I am sorry. I was doing something else. Was that a 7½ percent dividend rate?

The Witness: I will explain it. It is a 7½ percent dividend rate. It is a yield rate.

Mr. Wheat: Thank you.

By Mr. Littman:

Q. What portion of earnings did you testify in the David Young suit should be distributed by way of dividends?

[fol. 6954] A. I don't recall, but if you have that photostat copy, I can tell.

Q. Was it approximately 80 percent?

A. That would sound about right to me, but if you have those charts, I think I can tell you.

Q. Very well. I will hand you the charts.

A. 80 percent, I think, sounds about right.

Mr. Wheat: Will you read the question, please?

(Whereupon the question on line 24, page 6953, was read by the reporter.)

The Witness: It was 80 percent.

By Mr. Littman:

Q. Yes. Now, Mr. Coffman, you have said that conditions have changed since you testified in 1939 in the David Young suit which warrant raising the figure from seven and a half percent up to 12; is that right?

A. That is correct.

Q. That is right? A. That is correct.

Q. Will you look at your chart No. 19 of Exhibit 65, and will you read into the record from that chart the average earnings price ratios of natural gas pipe lines' common stock for the year ended 1938, the average shown?

A. El Paso Natural Gas Company—

Q. (Interposing) No. I mean the average for all [fol. 6955] of them. Isn't it 13.45 percent?

A. 13.45 percent, yes.

Q. And what is the average in 1939? A. 13.28 percent.

Q. And what is the average as shown in Chart No. 22 as of the last period in 1941 for the natural gas pipe line companies? A. 12.99 percent.

Q. Lower as of 1941 than as of 1939; is that correct?

A. Yes, the 12.99 is somewhat lower than those other figures.

Q. Well, certainly your average earnings-price ratios show that if there has been a change since 1939 with respect to the common stocks of natural gas pipe line companies, the change has been down, not up; isn't that right?

A. Well, for the average that is true and I took that into consideration. I used the 12.99 percent.

Q. You certainly did take it into consideration. You raised Panhandle up from seven and a half percent to 12 percent.

A. No, I deny that.

Q. And the average shows that all the rest of them on the average went down; isn't that right?

A. No, that absolutely is wrong, because you are con- [fol. 6956] fusing two issues. We are talking in this present hearing about earnings-price ratios and have been throughout and now you are trying to make a comparison with the David Young suit of a seven and a half percent which is a yield, so that those two just

can't be compared and it is misleading to undertake to do it.

Q. Well, give me the yield for Panhandle Eastern common stock, in your opinion, comparable to the seven and a half percent that you testified to in 1939.

A. Well, I would have to make some calculations to get that. I can do it at noon or if you want to take some time out, I can do it now.

Q. Isn't that a perfectly simple calculation? 80 percent of your 12 percent would give it to you, inasmuch as you have stated that 80 percent is the proper amount of earnings to be distributed to common stockholders as dividends?

A. No, I don't think it is that simple, Mr. Littman, because what I would have to do to make the calculation is to go back and get the dollar amount and see what is taken out, first, of earnings. In other words, I would have to take the earnings available for common stock, eliminate the senior capital and then find out what that would be in terms of per share. It isn't quite as easy as you suggest.

[fol. 6957] Q. Are you stating that less than 12 percent should be made available to the common stockholders by way of dividends?

A. Well, my goodness, it would have to be.

Q. Well, how much?

A. I haven't heard of any company ever distributing 100 percent of its earnings unless it was about to liquidate. You have to have something for working capital and for a margin of safety if you want to continue to operate.

Q. How much money would be available for dividends on common stock of Panhandle Eastern according to your study in Exhibit 65? It must be 12 percent, must it not?

A. Common stock, earnings available, as shown in Chart No. 37 of Exhibit 65, including the surplus is $3,510,995.

Q. And that amounts to 12 percent of the outstanding common stock and surplus? Isn't that right?

A. That is correct.

Q. Now, how much of that amount should, under your theory and under your study, be available to the common stockholders by way of dividends?

A. You are still confusing two things, Mr. Littman. The common stock, so stated, also includes surplus, so that if you take 12 percent, what you are going to say is that you will distribute not only a percent of this year's [fol. 6958] earnings, but you will distribute all the past accumulated earnings. I say that the management couldn't possibly think of it, so you have got to get that distinction before you go on. That is the reason, if you want the figure, why I would like to calculate it accurately instead of jumping at some of these simple things which will give you a wrong answer.

Q. Are you saying that the earnings required by the common stock and surplus of Panhandle Eastern Pipe Line Company should be something less than $3,510,995, shown in your table for Chart No. 26?

Mr. Wheat: Will you read that, please?

(The pending question, as above recorded, was read by the reporter.)

The Witness: No, I am not saying that it should be less, I am saying that it is the dollar amount represented for the common stock and surplus. All I wish to do is to distinguish between the two items and make a calculation.

Q. Now, you are at this time unable to state what percentage of return the common stockholders of Panhandle Eastern Pipe Line Company are going to earn on their investment as of today under your study?

A. Why, I am not aware that I said any such thing as that.

Q. Well, state the figure, then.

A. The figure for the total amount is just what I have [fol. 6959] read from Chart 37 in Exhibit 65, $3,510,995, but those are dollar earnings, they are not dollars of dividends.

Q. All right. What dividend rate are you assuming for purposes of your study for the stockholders of Panhandle Eastern?

A. In this particular case, I made no assumption of any dividend whatsoever. I didn't make any.

Q. You didn't make any? A. No, sir.

Q. You are unable to state at this time what the common stockholders of Panhandle Eastern are going to receive by way of dividends, according to your study?

A. Yes, that is correct.

Q. You are unable to state that?

A. That is correct.

Q. Now, does your testimony in the David Young suit concerning the 80 percent distribution of earnings available for common stock still hold good?

A. I don't know, it might; I haven't made that a part of this study. It could be 80 percent or it could be less; obviously I don't think it could be any more and still have this company operate on a sound managerial basis.

Q. Will you please make the calculation? Can you [fol. 6960] make that calculation over the noon recess?

A. Yes, surely.

Q. You will report back after the noon recess as to the percentage of earnings to be distributed to the common stockholders? A. Yes, I will.

Q. And that will give you a figure which you will state into the record which is comparable to the seven and a half percent dividend figure which you testified to in the David Young case, I mean the same type of figure?

A. It wouldn't be exactly comparable.

Q. Well, will it be close, close enough for all practical uses and purposes?

A. Well, I will say that it will be a figure.

Q. Well, if that is all it is going to be, it isn't going to be worth much by way of enlightening the record.

A. The only point I make, Mr. Littman, unless I use the identical procedure here throughout the study that was used in the David Young case, is that I don't see how you can say the figures are comparable as such. It is true each figure represents a percent of earnings paid in dividends and gives you a yield rate, but there is still a difference.

Q. Depending on what case you testify in?

A. No, it doesn't make any difference to me about that. [fol. 6961] Q. Well, if we want it to be strictly comparable, can't we use the same 80 percent here that you used in the David Young case?

A. No, I don't think so, because I just don't think at the moment that you are talking about the David Young suit and leaving the impression as to what it was. The

only purpose that I ever had, the only assignment I ever had in the David Young case was to discuss the Columbia Oil and Gasoline Corporation, but I found in making that study that it had a large equity in a subsidiary called Panhandle Eastern Pipe Line Company. Using the method of projection there as a basis of establishing fair value, it was necessary for me, naturally, to find out about what the top company, naturally, Columbia Oil and Gasoline Corporation, could expect to receive from that subsidiary in the way of earnings on the stock it held in order to find out what that top holding company would have by way of earnings for its security holders. That is what I testified in the David Young suit, if I recollect correctly.

Q. Now, would you use a different method here to ascertain what dividends Panhandle Eastern's present stockholders have a right to [reasonable] expect, or do you use a different method here?

A. Well, we are just talking about different things, Mr. Littman. In the case of the David Young suit, I was [fol. 6962] asked to determine a fair value, that isn't a part of this proceeding, if I understand it correctly, at all.

What I did here was to try to ascertain the number of dollars that would be needed to keep this firm going. I wasn't trying to say that the value of the Panhandle Eastern common stock is thus and so.

Q. Well, but, Mr. Coffman, you have clearly stated that in the process of arriving at the ultimate result that you were seeking in the Young suit it became necessary for you to determine the amount of dividends which the common stockholders had a right to expect or could reasonably expect; is that right?

A. That is right.

Q. And that was based upon your projection of earnings of 8.4?

A. I don't know about the figure, but if the figure is what you state in the record, I accept it.

Q. Well, we stated it yesterday.

A. Yes.

Q. I am asking you to do the same thing here, to determine for us, according to your study shown in Exhibit 65, the dividend rate which the stockholders of common

stock of Panhandle Eastern Company might reasonably expect out of this 12 percent earnings figure which you have used. Is that right? Isn't that what you under-[fol. 6963] stand me to ask you to do?

A. That is correct.

Q. Now, why should the method of reaching the answer to that problem here be any different from the method that you used in the David Young suit?

A. Well, merely because that, since the David Young suit, I have made more elaborate studies and I have come to this report, the three exhibits, which is as complete as I have produced and I believe that the calculations that I have made here and the data that I have used is more complete, for one thing, than I had available to me at the time I testified in the David Young suit. I have come to rely more on the matter of what the investors require in the market to find out whether they will be willing to invest further capital in the business or not.

Q. Well, now, you had an over-all earning figure in the David Young case, did you not? A. I did.

Q. And you have an over-all earnings figure here?

A. Yes, that is correct.

Q. And your over-all earnings figure here you consider to be more accurate than the one in the David Young suit?

A. Under the conditions of this study, yes.

Q. That is just what you said in effect a moment [fol. 6964] ago?

A. That is right.

Q. Now, what does that have to do with the accuracy of a method for determining the portion of those earnings attributable to dividends to the common stockholders?

A. Why, it has everything to do with it, Mr. Littman. As I got through saying, in this case I didn't talk about dividends at all. I made no study as to what is the proper rate, what I would suggest as fair, whereas in the David Young suit I did.

Now, I can make a calculation for you again, but it wouldn't be based on a study where I have devoted time to seeing what would be, under the circumstances, a reasonable amount. I will look at it to the best of my ability, take a percentage figure, find out what those dividends would be on the basis of those earnings, and give you a yield figure and that is what it will be, just based on

what I have said and nothing more. That is the difference between this method and that. In the David Young suit I set out to do one thing and did it. In this case I didn't have to consider dividends, so I didn't consider them.

Q. I am asking you here to consider dividends in the same manner that you considered dividends in the David Young suit, that is all.

[fol. 6965] A. I know, but I spent some time doing that on the David Young suit. I didn't just go over on my lunch hour and compute it and come back with a report. I just want to make that clear.

Q. Mr. Coffman, if the figure that you speak of computing over the noon recess is as meaningless as that, as you indicate, I don't think I want you to compute it for me. If it isn't going to mean anything, we don't want to have it.

Trial Examiner: Do you understand, Mr. Coffman, that you are to prepare something?

The Witness: I understand that I am to forget it.

Trial Examiner: That the request is waived?

Mr. Littman: Yes, sir, in view of Mr. Coffman's statement that the figure would not be a proper one for us in this proceeding.

The Witness: I didn't say it wasn't proper. I will stick by the answer I gave, not by the answer you imply I said.

By Mr. Littman:

Q. Well, can you give us a figure that will be a reasonably accurate figure showing the amount of dividends that Panhandle Eastern's common stockholders might reasonably expect to derive from your 12 percent overall earnings on common stock?

[fol. 6966] A. Yes, I can, but I just don't want to commit myself to do it on a noon hour and say, "Here it is. It is perfect." If you want to give me a little more time, I will be delighted, but on a noon hour, no, I am saying it is meaningless.

Q. Don't you recall that I asked you a few minutes ago whether you could do it on a noon hour and you said certainly you could?

Now, if it is going to take longer, you can have more time, but I want you to state how long it will take.

A. I would like to have the record straight myself. I think I said to you that I could get a figure but that it would not be comparable. How long would it take? Well, I could work it over a noon hour, but it is just that kind of a figure, so I wasn't at variance with any of the statements, was I? If you would like to give me a little more time for the figure, I personally would like to have until around Monday.

Q. Well, we have too many strings attached to this figure and, therefore, we will waive the request.

Now, will you please turn to your Chart No. 19, Exhibit 65?

Do you know what the depreciation policies of the five natural gas pipe line companies which are listed in this Chart have been?

[Vol. 6967] A. No, I don't. I have said already that I took the figures that were used in these calculations from annual reports as a dollar figure and that is the amount that goes to the stockholders or the investors and that is the only amount that they have to go on, to form an opinion.

Q. In other words, you do not know what the depreciation policies are of the five natural gas companies shown on Chart No. 19, to-wit, El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Southern Natural Gas Company, and Panhandle Eastern Pipe Line Company?

A. No, but in using the figure in the annual report I was aware of the fact that all of those utility companies are subject to commissions which have certain uniform accounting procedures and they have to file reports. I thought it was a fair assumption of what they showed in their annual report and was not, very likely, very far off from being a fairly proper figure. I made that assumption.

Q. That is quite an assumption.

A. Well, I came back to my statement that that is the figure that is reported to the prospective investor. That is all he has to go on. He is putting his capital up or has

his capital already in the business and that is the figure [fol. 6968] he gets.

Those statements were certified by accountants so they couldnt be too much out of line with sound accounting practice, I would say.

Q. You didn't assume that Panhandle Eastern Pipe Line Company was setting aside a sufficient amount for depreciation, depletion, and amortization, did you?

A. In my calculation, I took 1/25 as I have explained, and as is fully recorded in the record.

Q. Yes, and it gave you several hundred thousand dollars in excess of what Panhandle Eastern was actually charging on its books, didn't it?

A. I forget the exact amount, but that is a close approximation.

Q. And the Panhandle Eastern Pipe Line Company's depreciation amounts have been certified in their statement; is that right?

A. That is right, but you are neglecting to consider other parts, which are equally right, of this study, wherein I said I was undertaking here to ascertain the number of dollars needed to render a service and maintain the credit. In this particular case, looking 25 years in advance, based upon Ralph E. Davis's report, I felt that was as long as you could ask investors to try to discount what was going to happen. Therefore, I took 1/25. [fol. 6969] Q. And that gave you approximately $225,000 per year more for depreciation, depletion, and amortization than Panhandle Eastern Pipe Line Company had charged for those purposes on its books in the past year; isn't that right? Approximately?

A. Approximately, that is correct, yes.

. . . . . .

[fol. 6970] By Mr. Littman:

Q. Mr. Coffman, yesterday I requested you to make a calculation with respect to the net income that would be available to the company after taxes computed on the basis of the 1941 Federal income and excess profits tax, assuming a reduction in gross revenues of $1,000,000.

Do you have the calculation with you?

A. Yes, I do.

Q. What do you show?

A. In answering this, Mr. Littman, may I tell the figures I used and then the answer so that we will be sure that I used the right base from which to deduct the $1,000,000?

Q. Yes.

A. I took the gross revenues for 1940, the full year, which was $13,535,453 and subtracted therefrom the $1,000,000 figure which you gave me so that my adjusted gross was $12,535,453.

[fol. 6971] Then, allowing all other deductions except the taxes to remain the same and calculating the tax figure on the same basis in accordance with the Act as in the exhibit, the amount for Federal income and excess profits taxes would be $2,644,475.

Mr. Littman: Will you read that figure?

(Whereupon, the figure indicated was read by the reporter.)

The Witness: And that figure is based upon the 1941 tax rates.

By Mr. Littman:

Q. I do not know as I understand this figure of $2,644,475. What is that?

A. That is the figure comparable, on Chart No. 30, Exhibit 65, to the figure in the amount of $3,363,000 in my projected column.

Q. What was that figure?

A. $3,363,000 even, and the new figure was $2,644,475, making the adjustments you requested.

Q. In other words, this $2,644,475 is to be deducted from the $3,363,000 shown in Chart No. 30 and you get $718,525?

A. Well, I do not know exactly what you are doing there because the $3,363,000 was computed, as you know, not on the basis of the adjusted revenue for 1940, so that [fol. 6972] I merely said the figure was comparable. I did not say deduct it.

Q. Let me see if I understand you. What you are saying is that, applying the 1941 tax rate, the Federal income taxes and excess profits taxes would be $718,525 less than the $3,363,000 shown on Chart No. 30 if the gross revenues were $1,000,000 lower than that assumed for Chart No. 30?

A. No, Mr. Littman, what I am saying is that computing the Federal income and excess profits taxes at the 1941 rates but based upon the 1940 gross revenue minus $1,000,000 for tax adjustments, gives you $2,644,475.

Q. Of taxes?

A. Of taxes, of Federal and excess profits taxes, yes.

Q. In other words, if the gross revenues had been reduced by $1,000,000, the taxes would have been $2,644,475 instead of $3,363,000?

A. Using the full year, 1940, gross revenue as a base minus the $1,000,000.

Q. And you have read the gross revenue figure into the record, have you not? A. Yes, I did.

Q. Does your calculation show that for each dollar that gross revenue is reduced, net operating revenue will be reduced by less than 30 cents?

[fol. 6973] Mr. Wheat: You mean assuming that Uncle Sam loses a little over 70 cents in each instance?

Mr. Littman: Under the assumption that this witness has made of gross revenue.

Mr. Wheat: That was my assumption, too.

The Witness: Would you read that question now, please?

(Whereupon, the pending question was read by the reporter.)

By Mr. Littman:

Q. Maybe we can get at it this way, Mr. Coffman.

A. I do not believe we are comparing the same figures.

Q. Let me take it up step by step and we will try to make certain that we understand each other.

Now, you have testified that, under the assumption that you made of the reduction in gross revenue of $1,000,000 from 1940 revenue, that if the 1941 Federal income tax and excess profits tax were applied, the reduction of $1,000,000 in gross revenue would produce a reduction in those taxes of $718,525, isn't that correct?

A. No, that is where I say you are making an inaccurate comparison, Mr. Littman.

Q. I am trying to understand your calculation.

A. By your own assumption, in my opinion, there is only one way that it can be done. The comparisons would be this:

[fol. 6974] First, we must stick with the adjusted gross figure which is the full year 1940 figure gross, minus $1,000,000. That adjusted figure was then $12,535,453.

That is merely a million dollars difference in what the actual report shows.

Now, to get the comparison straight, we would have to make a comparison of the reduction in gross, as just stated, calculate the income-tax rate thereon at the 1940 rate to get the new tax figure.

Then we would take the adjusted gross, apply the 1941 rate to get the tax figure. The difference between those tax figures would be the change in the tax on the same basis attributed solely to an increase in rates so that you can not make the comparison and get anything out of it, so far as I can see, by comparing my figure of $3,363,000 against your hypothetical situation.

Q. Well, apparently you have not given me the figure that I want.

A. Yes, I believe I have. You asked me, if I recall correctly, to take the 1940, full year gross, and assume a rate reduction equivalent to $1,000,000, if I recall correctly.

Then you said recalculate that situation, so far as taxes are concerned, using the 1941 tax base and that is exactly what I have done to get the $2,644,475, but that figure [fol. 6975] cannot be subtracted from the $3,363,000, as such, I think, to make comparison if you want to ask the question you are asking.

Q. All I wanted was this and possibly we should not have injected the 1940 revenue into this at all.

A. That is right.

Q. All I wanted was that you assume a reduction in gross revenue in the year 1941 of $1,000,000, which $1,000,000 would fall into the highest tax bracket, and merely state how much of that $1,000,000 would be paid in taxes, both Federal income and Federal excess profits taxes, and how much then would be left to the company by way of net operating revenue after taxes.

A. All right.

Q. That is a rather simple question.

A. That comparison would be all right but the figure I have given you, you cannot use for that purpose. I cannot do that here in a couple of minutes but I can have that done while I am going on or I can do it and submit it to you later.

Q. That is perhaps stated more simply. If you could have that done for me, I would appreciate it.

A. All right.

Q. Now, at the noon recess, we were discussing your Chart No. 49 and Chart No. 20 of Exhibit No. 65 and I be-
[fol. 6976] lieve you stated that you do not know what the depreciation policies are of the five natural-gas pipe-line companies shown in those charts, to wit, El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Southern National Gas Company and Panhandle Eastern Pipe Line Company, is that right?

A. As I said I took the published reports, looked at the dollar amount that was seggegated for the item to which you refer and that is the figure I used.

I have no detailed knowledge about specific depreciation policies or procedures.

Q. Of any of those companies?

A. Of any of those companies.

Q. Then you do not know, of course, whether these companies have, in fact, made adequate or inadequate provisions for depreciation, depletion and amortization?

A. I have not made such study. As I say, I assumed that the figures shown in their annual reports, most of which, if not all of which, were certified, must have been within the realm of reason from the accounting point of view.

Q. So that your answer to my question is that you do not know?

A. No, I made the assumption I have just stated.

Q. Now, if the provisions for depreciation, depletion and amortization by these companies have been inade-
[fol. 6977] quate, what effect would that have upon the companies' earnings? Would they be overstated or understated?

A. Overstated.

Q. And what effect, in turn, would that have upon the earnings-price ratios of those companies? Does it follow that under the assumption which I made the earnings-price ratios shown in Charts Nos. 19 and 20 of Exhibit No. 65 would be correspondingly overstated if those companies had been making inadequate provisions for depreciation, depletion and amortization?

A. That would be true at the time of the calculation.

Q. Now, the earnings-price ratios, as shown in Charts Nos. 19 and 20 and also those shown in Chart No. 22, for "Average of pipe-line companies", Panhandle Eastern Pipe Line Company and Northern Natural Gas Company are determined by using the market price of the common stock as related to earnings?

A. The average market prices related to earnings per share, yes.

Q. Of course, we are excluding from that answer the 12 percent figure shown at the extreme right-hand side of the column of Chart No. 22 of Exhibit 65 which is your final judgment figure?

A. That is a judgment figure, yes, sir.

Q. Now, assuming that the common stock of a natural [fol. 6978] gas pipe line utility is selling on the market at twice its book value, isn't it a fact that such utility would have to earn 24 percent of the book value of its common stock in order to show an earnings-price ratio of 12 percent on the market price of that stock?

The Witness: Would you read that question, please?

(Whereupon, the pending question was read by the reporter.)

By Mr. Littman:

Q. That is purely a mathematical result, is it not?

A. Well, I would like to make the observation that it seems to me there that we are again confusing two things. It is one thing to say what the market price of a share is. It is another thing to talk about book value.

Throughout this proceeding here, I have talked in terms of market value.

Q. I do not think there is anything at all confusing about the question. I am asking you to assume that the

common stock of a given natural-gas pipe-line utility is selling on the market at twice its book value and I am asking you whether, under that assumption, it is a fact that such utility would have to earn 24 percent of the book value of such common stock in order to earn 12 percent on the market price of that stock?

A. Yes, I think that is correct.

Q. Now, would you recommend in those circumstances [fol. 6979] that a 24 percent return be allowed on the book value of the common stock of such a pipe-line company where that stock is selling at twice the book value in the market?

A. Well, before I answer that, I have got to explain I do not think book value, as such, means anything, so why should I say 24 percent, 12, or 36?

Q. You do not think book value of the common stock means anything?

A. Not in comparison to investor's appraisal, no. The investor is appraising this concern as an operating concern and he is looking at the earning power.

Take railroad companies, for example, that have a tremendous book value. The earnings are nothing and the investors in the market are saying they are worth nothing.

Q. Under the assumptions that I have given you of a company whose common stock is selling on the market at twice its book value, would you recommend that a 24 percent return be allowed on that book value where that stock was selling at twice the book value in the market?

I take it your answer is "yes", because you say you do not think the book value—

A. (Interposing) If your assumption is true, I will say "yes", because, as I have stated, book value, as such, without careful analysis, has no meaning.

Q. Well, did you make any allowances of the book [fol. 6980] value of these various natural-gas pipe-line companies which you have compared with Panhandle Eastern Pipe Line Company in your Charts Nos. 19, 20 and 22 of Exhibit 65?

A. The only one that I compared is the one shown on Chart No. 24, Exhibit 65, which is a comparison of Pan-

handle Eastern and there it is shown that the book value and the market value were very close together.

The rest of them, I made no comparison. I used market prices, as I have stated.

Q. Is it your testimony that you do not attach any significance to the book value or book cost of the common stock of any natural-gas pipe-line company?

A. I did not say that. I said that in the analysis which is made here, I had no occasion to use book value and that book value, in and of itself, without an analysis, does not represent any particular thing so far as investors are concerned, because, as we all know, there are many stocks selling above, considerably above, their book value and there are many other companies' stock selling considerably below their book value.

It just so happens in this particular study that the book value and the market value, as of June 30, 1941, for Panhandle Eastern Pipe Line Company, were about the same.

Q. Well, what significance do you attach to that?

A. I did not attach any except to show the comparison [fol. 6981] that existed. I did not use it in the study. I had no occasion to use it.

Q. What, if anything, does it indicate to you?

A. I put it in for the use of the Commission, merely to show, if there was a question about book value of Panhandle Eastern, the figure was a certain amount and if you wanted to compare it on the market value, it was another amount and the two totals are $61,423,853 on a book-value basis for total invested capital and $64,219,240 on a market-value basis. The two figures are close together.

Q. That is just a circumstance or just a happenstance?

A. There are many companies where that would not hold true at all, yes, many companies.

Q. And it would not make any difference one way or another, would it?

A. For this particular study it would not, no.

Q. So that for your purposes, it is the ratio of earnings to the market value of common stock that is important and not the ratio of earnings to book cost of common stock that is important?

A. Well you have there, again, got to define some language.

Q. For the purpose of your study, I said a moment ago, you did not attach any importance in this study to book cost?

[fol. 6982] A. I do not want to be fussing, Mr. Littman, but when you talk about "book cost" in one place and "book value" in another place, let's get the language straight.

There are many companies where books do not show value in book cost because there have been appraisals and reappraisals made which do not show up without analysis so it does not mean anything.

If you eliminate the book cost and talk about book value, such as the book value is, I say that it varies as between companies and in this case, I did not refer to it for purposes of my study.

Q. Let's then talk about book value. You gave book value no consideration because it does not amount to anything for the purposes of your study in this case?

A. That is correct, because I was taking the investor's risk appraisal which depends upon market values and not upon book values.

Q. So that if the earnings-price ratio of a common stock of a particular natural-gas pipe-line company of 12 percent, in reality represented a 24 percent return on the book value of that stock you would, nevertheless, recommend, all other things being equal, that the 24 percent return on the book value be allowed?

A. On the assumption, as you have stated and as I understand it, my answer is "yes".

[fol. 6983] Q. Now, if a 12 percent return on market value of common stock was reasonable, as you suggest, then rates of return on original cost for different companies would vary according to whether the market price of the stock was more or less than the book value under your theory, isn't that correct?

A. I do not think so, if you follow the statements I believe I have made.

In other words, if it is true that a market price is the best indicator you can get as to what investors believe

is the value of this company, which includes original cost plus earning capacity, then that is the value the investors say is there and the book value may be $10 and the market value $20 or any variable.

The market price weighs not only the original cost but the earning capacity of the firm. I think that we have discussed that in perhaps different language but getting at the same point.

Q. Let me put the question this way. If a 12 percent return on market value is reasonable, as you suggest, then rates of return on the book value of different companies will vary according to whether the market price of the common stock was more or less than the book value under your theory?

Now, that necessarily follows, does it not, from what [fol. 6984] you have heretofore testified?

The Witness: May I have the question read back, please?)

(Whereupon, the pending question was read by the reporter.)

The Witness: Yes, I think so.

By Mr. Littman:

Q. Now, you stated a moment ago that it so happened that the book value and market value of Panhandle Eastern's common stock were almost the same.

A. They closely approximate each other, yes, as of June 30, 1941.

Q. What does that indicate to you, if anything?

A. It indicates that the investors in Panhandle Eastern are stating that they believe the book values in the firm are about even with the market price.

Q. Then the investor does attach some significance to the book value of the common stock of a utility, does he?

A. I think I have stated we consider it but whether or not you attach value to it, Mr. Littman, is exactly what is in the record, that I would not attach value to it until I had analyzed it.

In some cases it may mean everything it says. In other cases, there are write-ups, write-downs and appraisals, any

number of things and without knowing that, book value would not mean a thing, not a thing.

[fol. 6985] Q. Are you suggesting there are some write-ups in the accounts of Panhandle Eastern Pipe Line Company?

A. I do not believe I suggested that, did I?

Q. Well, you talked rather generally and vaguely.

A. Yes, I am talking about general companies. You asked about "companies." Your own question here says, "companies" and I am saying that you can find, taking companies as a group, the many corporations in this country, that book value, as such, without analysis to see how it has [een] constructed, would mean very little.

I do not know of any write-ups or write-downs or any appraisals in the case of Panhandle Eastern. I made no investigation as to that fact.

Q. Now, you stated at Page 1127 of the transcript of the testimony in this proceeding that "from studies that I have made of numerous other companies, it is seldom that one finds the appraisal made by the market of the total capitalization of a company approximating the book value and, in this particular case, it would indicate to me that the investors believe that the book value here must be an accurate figure."

A. Well, I believe, in different language, that is just what I gave in the recent answer.

Q. Now, I would like to have you state what you mean when you say that the investors believe that the book value [fol. 6986] here must be an accurate figure. Accurate as to what?

A. Accurate as to the component parts of a corporate entity which include the assets, the management and the combination of the two to create ability to earn money.

Those factors are considered in the market price. The investor, having a price on securities outstanding in Panhandle Eastern is saying if those prices add up and give you a total invested capital which is similar to the book value, that he believes the combination of the assets and the management and so forth warrant that value and that is all he is saying.

Q. Well, if the stock sells for less than the book value, what would that indicate to the investor?

A. Let's take a concrete example. Many of the railroads, until recently, when the armament boom came on, were exactly in that fix.

Market prices were considerable under book values and all the investor was saying is, we do not believe the combination of management and these assets can create sufficient earnings to warrant any such price, so that on an earnings basis, the price is what we say it is in the market and that is considerably under what the books say as to book value, and that would be true, not only of railroads but any other corporate entity that has the same [fol. 6987] combination of factors.

Q. Now, if the stock sold for more than book value, what would that indicate to you?

A. That would indicate to me that the investors say that they believe there is a combination of assets and management here creating earning power which warrants a higher price; more potential earning capacity, in other words.

Q. Well, in your opinion, is it easier or less costly for a company to finance where the market price of the stock is above book value than where it is below book value?

A. I think the predominating consideration there, Mr. Littman, is the matter of earnings, earnings record and prospective earnings, and if those show up to give you adequate coverage for interest, preferred dividends and allow a reasonable amount of return on common stock, why, that will be sufficient to float the issue.

Q. Then doesn't it matter what the matter what the market value of the common stock is, or does it?

A. It doesn't matter?

Q. I am asking you whether it matters or doesn't matter what the market value of the common stock is.

A. I guess I have lost the tread of thought there for a moment. In regard to what, as related to what?

[fol. 6988] Q. At any rate, your earnings-price ratios are definitely related to market value, are they not?

A. Yes, indeed.

Q. Of the common stock? A. Yes, sir.

Q. Let us look at Chart No. 19 of Exhibit 65.

Now, you testified yesterday that the earnings-price ratios shown in Chart No. 19 and in Chart No. 20 were calculated by straight mathematical averages. Is that right?

A. Yes, of comparing the earnings per share with the average price per share.

Q. In other words, looking at the upper left-hand portion of Chart No. 19 for the year 1937, your average earnings price figure of 13.51 percent is [simple] the addition of the three figures on the left, divided by 3, is that right?

A. That is correct.

Q. And the same is true for the other years shown on the chart?

A. Yes, that is correct.

Q. Now, by that process, you gave equal weight to each each of the companies shown in this chart for each year?

A. That is correct.

Q. Whether the company is small or large? A. Yes. [fol. 6989] Q. Now, I believe you stated yesterday that in your Exhibit 63 you determined your earnings-price ratios of over-all capital; not by straight mathematical averages but by weighted averages, did you not?

A. That is correct.

Q. Now, have you ever made a calculation to determine the weighted average of these companies for each of the years 1937 to 1940, inclusive, shown in Chart No. 19?

A. No, I have not because, as I explained yesterday, where you are talking about common stock only, you have a little greater difficulty in talking in terms of a weighted average as against over all capital because there is the question of eliminating the earnings that must be taken out for bonds and [proferred] stocks and, in some cases, participating preferred stocks before you get to common so it is not as simple to take an earnings per common unless you convert it to a per-share basis as it is to do it for over all capital and that is the reason I followed this procedure.

It just is not a simple mathematical procedure.

Q. Well, it is not a difficult mathematical procedure either, is it?

A. Yes, it is much more difficult than doing it for overall capital because there you take net available for distribution.

[fol. 6990] It is one solid and you can put your hand on it and use it, but for common you cannot do that. There are adjustments that have to be made.

Q. We had no difficulty doing it. At any rate, you did not do it?

A. That is correct, I did not do it.

Q. Now, look at Chart No. 20 and state whether I am correct in understanding that in the lower left-hand portion of that chart you show the earnings-price ratios separately for each of the five natural-gas pipe-line companies and then, on Chart No. 22, you show the mathematical average of those pipe-line companies, the figure of 12.99 percent? A. Yes, that is correct.

Q. And that is for the year 1941?

A. For the current period, 1941.

Q. Will you please turn to your table for Chart No. 20 of Exhibit 65?

Now, isn't it clear that you can very quickly and readily determine the weighted average for those five pipeline companies for the year 1941 from the data shown on this table and also by utilizing the data shown for those companies in Exhibit 64?

A. That part can be done, Mr. Littman, but, as I commented yesterday in discussing this same subject, as I [fol. 6991] recall, it makes a difference as to the nature of the capital structure.

One company has all common stock. Another has 40 or 30 percent in bonds, 20 percent in preferred stocks, and therefore, to get a weighted average of common stocks where you include one company that has all common stock and another company that may have only 20 percent in common outstanding, is not, in our opinion, a sound weighed average. Therefore, we did not use it.

Q. What effect did you give to these differences that you have just described?

A. I took the companies just as their stock was outstanding at a market price and weighted nothing, so far as common was concerned.

Q. So you did not give any effect to this condition either, did you?

A. Yes, I did because if the earnings per share are there on the calculation that is made, I used that figure, obviously, in getting whatever the percentage is shown there.

Q. Now, will you state whether or not the weighted average earnings-price ratio can be readily determined for the five companies shown on your table for Chart No. 20?

A. Yes, I can take the earnings there shown per share and multiply it by the number of shares outstanding.

[fol. 6992] Q. You do not even have to do that. All you would need to do would be to total your amount shown for common stock as shown in your second column of figures—

A. (Interposing) That is correct, I can do that.

Q. So that is not a very difficult calculation, is it?

A. No, I can make that one but I still say it has a serious question about it.

Q. Well, what you would get by such a weighting process is the figure that you would get if one person owned all of these shares of common stock of these five companies, is that right?

In which event, if that person, to ascertain his earnings-price ratio, would add up all of the earnings available and divide into that figure the total market value of all of his stocks, then that individual could determine the total earnings-price ratio?

A. So far as his holdings of one share each was concerned, yes.

Q. I am assuming that this individual owns all of the common stock.

A. Of all of the five companies?

Q. Of all five companies. That is what he would do, isn't it? A. Yes.

[fol. 6993] Q. And if he did that, he could tell how much he has earned, isn't that right?

A. That would be his percentage return.

Q. He wouldn't take the five companies and determine what the average was for each separate company and divide by five, would he?

A. No, he would not have to there, since he owned them all, but that does not happen to be the fact nor is it probable it will ever be for some time to come.

Q. Of course, I am making an assumption here for the purpose of pointing out the effect of a weighting process and the logic of using a weighted figure.

Now, that is what such an individual would do, isn't that correct, add his total earnings and divide that by the total market value of his shares?

A. That is what an individual could do. Whether he would do it, I do not know, because we serve clients all the time and they are getting the figures both ways and they are adding them up both ways.

Q. Let's see what figure we would get when we give effect to weighting these figures. I shall read them into the record and I shall ask you to check them at your early opportunity.

A. I do not have to work it out now?

Q. No, I wouldn't work them out now because it would [fol. 6994] take some time.

Looking at Chart No. 19—I might say that in each and every instance, the weighted average figure is below the mathematical average figure which you used and that is obviously so because of the fact that the companies that have the highest earnings-price ratios, as shown on this chart, are given greater weight and effect in the answer when you simply take the mathematical average—.

Now, looking at the year 1937 in Chart No. 19, the weighted average figure is 11.83 percent in place of the 13.51 percent which you have.

For the year 1938—and, by the way, I am writing these figures immediately above the orange column—in 1938, the weighted average figure which we have secured by the use of your charts and figures and Exhibit is 12.12 percent in place of 13.45.

For the year 1939, the weighted average figure is 11.04 percent instead of the 13.28 percent.

For the year 1940, the weighted average figure is 12.56 percent in place of the 13.82 percent.

Mr. Wheat: Are you going to give another figure for 1941?

Mr. Littman: I was just going to go to the green bar shown in Chart No. 22—what did you want, an average figure for all of the years?

[fol. 6995] The Witness: I thought that was what Mr. Wheat—

Mr. Wheat: (Interposing) No, I wanted you to state for the record just how you arrived at your weighted averages so we would know what you did, Mr. Littman.

We are a little dubious here as to what you did.

Mr. Littman: I shall be glad to furnish Mr. Coffman with our working papers.

Mr. Wheat: No, I would like to have you explain it on the record, if you would, so that not only Mr. Coffman but ourselves would know what you did.

It must be a simple calculation if you take just one of them, 1937, where there are only three figures, for example, and tell us what you did, then we would know more what you mean by that 11.83 that you give us.

By Mr. Littman:

Q. Now, turning to Chart No. 22, the green bar shows 12.99 percent on the chart as the average of the pipe-line companies.

I believe you testified yesterday that this 12.99 percent is a straight mathematical average, is that right, Mr. Coffman?

A. I do not have that calculation. I believe that it was.

Q. Well, if there is any doubt about it, I think we ought to establish that now.

[fol. 6996] A. I am getting the figure [the figure] here.

[fol. 6997] The Witness: Yes, it is an arithmetic figure.

By Mr. Littman:

Q. The weighted average figure that we have for the "average of pipe-line companies," for Chart No. 22 is 12.21 percent as compared with your mathematical average of 12.99 percent.

In addition to that, Mr. Coffman, we have made a computation to determine the weighted average for pipe-line companies, including the Northern Natural Gas Company, and we have included in this calculation the earnings figure after giving effect to the 1941 Federal taxes.

The earnings figure for Northern Natural Gas Company which we use is $3,300,260 and the weighted average for those six companies, to-wit, Interstate Natural Gas Company, Memphis Natural Gas Company, El Paso Natural Gas Company, Southern Natural Gas Company, Panhandle Eastern Pipe Line Company and Northern Natural Gas Company, based on the 1941 market prices, is 11.73 percent.

Now, I am going to ask you to check those earnings-price figures and report back with respect to their accuracy when you return here next Monday.

A. Yes, I can do that.

Q. Now, I would like to briefly state on the record [fol. 6998] the method that we have used in weighting. We have totaled the market value of the common stocks for these companies for the periods shown and have divided that total into the total earnings available for common stock for the same period, all of these figures having been taken from your Exhibits 65 and 64.

Will you please refer to Chart No. 22, Mr. Coffman, and state whether the 12 percent estimated cost for new financing to Panhandle Eastern Pipe Line Company shown in the right-hand side of that chart reflects the 1941 Federal tax rate?

A. Yes, I think it has been taken into consideration.

Q. Now, state whether or not any of the earnings-price ratio figures which you show in Chart No. 20 reflect the 1941 tax rate?

A. As I recall it, those figures do not take in the 1941 rate. They were the actual earnings reported by the companies for the 12-month period ended at various dates, as shown on table for Chart No. 20, Exhibit 65.

Q. Panhandle Eastern's earnings are shown for the 12 months' period ended June 30, 1941, is that correct?

A. Yes, that is correct.

Q. And the same is true of Southern Natural Gas Company and El Paso Natural Gas Company, is that right?

A. That is correct.

[fol. 6999] Q. That leaves two companies shown on Chart No. 20 whose earnings were taken for the full year 1940, isn't that right?

A. The full calendar year 1940, yes.

Q. Now, if you had reflected or had given effect to the increased Federal taxes attributable to those earnings of El Paso Natural Gas Company, Southern Natural Gas Company and Panhandle Eastern Pipe Line Company for the six months ended June 30, 1941, you would have shown ver earnings-price ratios, isn't that true?

A. Yes, with that adjustment they would have been lower.

Q. And, of course, that would have lowered the 12.99 percent average of pipe-line companies shown by the green bar in your Chart No. 22 of Exhibit 65?

A. Yes, it would have an effect on that figure.

Q. Both on the straight mathematical average basis or on the weighted average basis, isn't that correct?

A. That is correct.

Q. As a matter of fact, you show in the case of the Northern Natural Gas Company by Chart No. 21, the effect of the increased Federal taxes for the year 1941 upon the earnings-price ratio, do you not?

A. That is correct.

Q. It falls from 11.72 percent to 10.38 percent as shown [fol. 7000] in the lower right-hand portion of the chart as "Based upon price to public", is that correct?

A. That is right.

Q. And that figure of 10.38 percent which I just read, after 1941 taxes, for Northern Natural Gas Company does not give effect to any further increases in taxes which you have stated are to be expected in the year 1942?

A. Not as of the date of that calculation.

Q. Now, while on the subject of Chart No. 20 of Exhibit 65, I note that the Southern Natural Gas Company has the highest earnings-price ratio of the companies there shown, to-wit, a ratio of 17.27 percent; is that right?

A. That is correct.

Q. And looking at the preceding chart, No. 19, Southern Natural Gas Company stands out like a sore thumb in the years 1940, 1939, with earnings-price ratios of 20.13 percent and 21.59 percent, respectively, isn't that right?

A. That is correct.

Q. That is, they are head and shoulders above the other four companies there shown?

A. Yes, those figures are larger.

Q. Now, did you investigate the cause or causes for Southern Natural Gas Company's high earnings-price ratios in the years shown in Charts Nos. 19 and 20?

[fol. 7001] A. No, I did not. I calculated the figure based upon the earnings per share as reported and the average of the high and low prices.

Q. Weren't you interested in what produced this result which affected so heavily your average for the various periods?

A. In this particular case, I was merely interested to see what the investors were saying about the individual companies which were included and whatever the market price, whatever the average of the market price was and the earnings were, I made my calculation.

Q. What reliance would an investor put upon earnings-price ratios such as those shown for Southern Natural Gas Company in Charts Nos. 19 and 20 for the years 1939, 1940 and 1941, without making an investigation?

A. No doubt the investors did make the investigation and through that determined the price which I used but I did not make the investigation.

Q. But this situation, with respect to Southern Natural Gas Company, as, reflected by its earnings-price ratios, does and did have an important bearing upon your ultimate conclusion as to Panhandle Eastern's estimated cost of new financing for common stock, did it not?

[Q.] Well, the Southern Natural Gas figure was included and, naturally, to the extent that it was included [fol. 7002] it had some bearing on the result but so far as

my analysis is concerned, investors not only look at a given company but they also look at the industry to see what the trend is and, therefore, if Southern Natural is a part of this industry it has to be taken into consideration and I included it in the list.

Q. Well, when investors are about to invest their money in the securities of Panhandle Eastern, how much weight do you think they would give to any such earnings-price ratios as those shown for Southern Natural Gas Company in these charts?

A. The investor does, I think, pretty much what we do. We study the industry and try to find out as much as we can by studying the history of the various companies. If there are a number of companies in a particular industry which are having difficult times and so on, we know that it has a definite influence on the investor's thought so that he would give attention to this and if there were two or three similar situations in the natural-gas pipe-line industry, he would give that pretty considerable weight.

Q. You gave it more weight than you gave any other company, isn't that right?

A. I gave it a weight of one in the total of the number of companies shown.

[fol. 7003] Q. Well, inasmuch as it had a much higher earnings-price ratio than any of the other companies, it did get much greater weight than did the other companies, did it not?

A. That is correct but I had no way of weighting it otherwise. I mean it was one company along with Interstate and the rest.

Q. Well, before using the earning-price ratio of Southern Natural Gas, weren't you interested in ascertaining first whether that company was properly comparable to Panhandle Eastern Pipe Line Company?

A. No. In this study I tried, as I think I explained, to include every company upon which there were data available to make the calculation and so far as my ability permitted, I believe I have done that.

Q. In your opinion, is Southern Natural Gas Company comparable to Panhandle Eastern Pipe Line Company?

A. I do not think it is and I do not think I am saying that it was.

This is 21.59 percent in 1939 and 20.13 percent in 1940, and I am not talking in those kind of terms at all for Panhandle Eastern so I do not say that it is comparable but it is, nevertheless, a natural-gas pipe-line company and investors very definitely look at it along with the rest and if there were a number having the same experience as Southern Natural, I think the investors would be on the [fol. 7004] whole a little skeptical of it as an industry in which to place money.

Q. If you had excluded Southern Natural Gas Company from your average, you would have certainly secured an average for pipe-line companies considerably below 12.99 percent, would you not?

A. Yes, and, on the other hand, if I had left Southern Natural in and excluded Interstate Natural, I would have gotten a much higher percent so I included both Southern and Interstate.

Q. You have no basis of comparison, either—

A. (Interposing) In this particular case where I am trying to secure the investor's appraisal of risk in so far as data are available on all companies to get the investor's appraisal, they should all be included.

Q. So you threw all the good ones in and all the bad ones in, added them and divided by the total?

A. That is what the investor says is the industry and what it is doing as an industry, yes, absolutely.

Q. Why didn't you throw a few of the bankrupt companies in here while you were at it, because the investor is always fearful that that might occur some day, sometime, somehow, isn't that correct?

A. The difficulty is, on companies of that kind, you usually find that the data which I am talking about is [fol. 7005] not available.

There were no quotations available to make calculations or the earnings are so tied up in bankruptcy proceedings that you do not have those, so you are unable to make the calculation for lack of data.

Q. You think then, that the consumers and customers of Panhandle Eastern Pipe Line Company should pay a higher return for their service, a higher price for the service rendered by Panhandle Eastern Pipe Line Company

simply because some other companies in the industry have had some difficulties in the past or have been in hot water from time to time. Is that your testimony?

A. I do not believe I said that, did I?

Q. I am asking you whether that is your testimony. That seems to be the effect of it.

A. I do not believe it is. What I am saying is that investors, to the best of their ability, review the trends in the industry which includes all of the companies operating therein upon which they can secure data.

Q. Now, do you think that the natural-gas customers of Panhandle Eastern Pipe Line Company should pay higher rates simply because Southern Natural Gas Company has an earnings-price ratio in excess of 20 percent?

A. Let me answer again—

Q. (Interposing) Can you answer that yes or no?

[fol. 7006] A. No, I do not think I can.

Q. You have some doubts about that, have you?

A. No, I do not think your question is complete so that it can be answered that way. What I have been saying right along is that the investors are appraising the risks of capital in this business to the best of their ability and in so far as they require a certain earnings-price ratio be willing to have their capital invested in this business, the ratio so found pretty much is an indication of what they say.

Now, if the customers, on the other hand, have different ideas about this service, then it seems to me that the only way to settle that is for them to determine that they should not get their money from the public but, perhaps, get it from the Government, in which case, then, we have no worry about the investors at all, but if they are going to rely on public financing, then they must take these various matters into consideration which the investors take into consideration before they will invest their money or not.

Now, it can be done either way, it seems to me, but so long as a private person's capital is in this business he, naturally, wants to have some say about that capital and if it is going to get to a point where the company will not be permitted to make earnings sufficient to give him se-

[fol. 7007] curity of principal and a return, no doubt he

will withdraw it and at that time the Government can finance it.

At least, that is one other possibility of financing.

Q. Well, you are not suggesting that your method is the only method that could be properly adopted for ascertaining the rate of return for rate-making purposes, are you, Mr. Coffman?

A. I have never said that in these proceedings, but I have said that I thought it was one indispensable part of such consideration.

Q. Of course, when you begin to get results like these, it might suggest that something is wrong with this method, might it not?

A. I do not think any more so than with the classical theory where, under that procedure, you find that there seem to be difficulties in the results that have been had over the years.

Q. Will you tell me why the customers of Panhandle Eastern Pipe Line Company should pay more for gas simply because another natural-gas company got into a jam at one time or another?

A. I do not think they are paying more. As I indicated here in Southern Natural, the percent was 21.59, as I remember it.

[fol. 7008] The figure I am talking about is 12 and that is based upon the trends in the industry and the peculiarities of the Panhandle Eastern Pipe Line Company.

Q. Yes, and you arrived at that 12 by giving great weight to this Southern Natural Gas Company's earnings price ratio because it was included in your average, was it not?

A. I am not giving it great weight, I am giving it the weight of one in the amount of the figure that is shown there.

Q. You are giving it as much weight as if it were strictly comparable to the Panhandle Eastern Pipe Line Company?

A. That is right, because the investors placing money in this industry believe it must be a little more hazardous than others or such companies wouldn't be in such difficulty.

Q. Now, suppose Southern Natural Gas Company had an earnings-price ratio of, let us say, 75 percent. Would you average it in with the rest of the companies and use the average, the straight mathematical average of those companies as a guide for you in determining the amount of earnings to which Panhandle Eastern is entitled on its common stock?

A. Well, I think the answer there is "no", because [fol. 7009] the earnings, presumably, under such a situation are approaching zero, in which case there would be some reason for eliminating it.

Q. Well, there are some companies throughout the length and breadth of this land that are in that kind of a predicament. Isn't that right?

A. That is correct, there are companies of that sort.

Q. You wouldn't think of penalizing the customers of other companies simply because some were in that kind of a jam, would you?

A. Well, as I say, this is just one firm that has been included, and the figure that was included here is not 70 percent or 75 percent, as you are talking about, it was 20, which was not so much far out of line with other companies.

It was higher, very definitely, but not so much out of line as to be ridiculous.

Q. Do you know what the figures were for Southern Natural Gas Company for the years 1937 to 1938?

A. In earnings figures?

Q. Yes, which earnings figures are not shown in your Chart No. 19.

A. No, I do not have those figures.

Q. Well, the net effect of your method is to reflect in the rate which you have estimated for Panhandle Eastern [fol. 7010] the earnings-price ratio of Southern Natural Gas Company, among others, as shown in your Charts Nos. 19 and 20, whatever the cause for that rather high earnings-price ratio for Southern Natural Gas Company.

The Witness: Will you read that please?

(Whereupon, the pending question was read by the reporter.)

The Witness: Well, only partially so, Mr. Littman, as you know from the exhibits because, as I stated, the 12 percent which I used was a judgment figure which was not based directly on the 12.99 percent as I calculated it by my method which included the Southern Natural, so that there has not been an undue weight given to Southern Natural by any manner of means.

By Mr. Littman:

Q. Well, you did not shave off the .99 percent because of any situation which prevailed with respect to Southern Natural Gas Company, did you?

A. No, I was talking about Panhandle Eastern and giving my best judgment as to about what that company would have to expect in the market.

Q. Using the average of the El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company and Southern Natural Gas Company as a guide?

A. As one of the guides, yes. That is one of them.

Q. Well, to the extent that you did consider that aver- [fol. 7011] age figure your ultimate judgment rate, the 12 percent does reflect the Southern Natural Gas Company's earnings-price ratio. Isn't that right?

A. I will answer again, partially so and no more for this reason—

Q. (Interposing) Well, I said, "to the extent" and I thought I stated exactly what your exhibit shows.

A. Well, maybe I am being a little too technical here, but as I visualize it, if you have five companies, one of which is a little larger in its earnings-price ratios than another, dividing by five to begin with carries only one-fifth of that overage of weight, as you would like to describe it.

Then in addition to that, I had the 12.99 and took 12, so there is a further amount out, so that when you say that you give it great weight, as you were talking about, I just want to get my answer correct that I do not think that it was given great weight.

My answer does not give it great weight.

Q. When I used the term "great weight", I was referring to the average figure of 12.99 percent, which aver-

age includes Southern Natural Gas Company. Didn't you so understand it?

A. No, I thought you were talking about the over-all picture.

[fol. 7012] Q. Well, let's look at Chart No. 19 for the year 1940.

Now, you gave Southern Natural Gas Company more weight than both El Paso Natural Gas Company and Interstate Natural Gas Company, combined, didn't you, for that year?

A. Just slightly more weight, yes.

Q. Do you know where Southern Natural Gas Company secures its gas supply?

A. Yes, as I recall it, it secures it in the general territory of the Amarillo region, I believe.

Q. In Texas? A. I believe so.

Q. How long has that been going on? Before you look up that matter, Mr. Coffman, you are unable to answer that without making a reference to some publication or other?

A. That is right, I want to check my recollection.

Q. And you are now examining Moody's?

A. Moody's Manual, yes, sir.

I do not know, from what I have read here; at this point the only information I see in Moody's in regard to your question is in connection with the statement that the company formerly owned a half interest in the Georgia Natural Gas Company which it disposed of in 1937 and in 1939 leases on approximately 1100 acres in the Tinsley Field near Yazoo City, Mississippi, were acquired.

[fol. 7013] The company has assigned these leases to an oil operator for development, containing a normal participation of one-fourth in the proceeds of all wells drilled.

I would have to check those facts to answer the matter. I cannot tell you correctly.

Q. Mr. Coffman, you are interested, are you not, in the pronouncements of the Securities and Exchange Commission with respect to various utilities and you keep currently abreast of the opinions and findings of that Commission with respect to the industry?

A. Yes, we try to following all those releases.

Q. Well, I read you from the findings and opinion of the Securities and Exchange Commission, Holding Company Act Release No. 2476 dated January 10, 1941, in the matter of Southern Natural Gas Company and Federal Water Service Corporation as follows—I might state before quoting this that wherever the term "Southern" is used the reference is to Southern Natural Gas Company:

"Southern is presently required to purchase all of its supply of gas in the Monroe Field under contracts with certain producing companies. Such contracts, which extend until December 31, 1949, obligate each seller to deliver gas to a specified maximum amount in any day (which amounts aggregate 162,500 M.c.f.), subject to the sellers having gas available from the Monroe Field and subject, [fol. 7014] also, to the reservation by the sellers of such gas for certain purposes, including the delivery of gas to the pipe lines serving St. Louis, Memphis, New Orleans and Shreveport. The contracts permit the sellers to deliver gas from other fields and provide that, in the event the sellers do not have available gas to supply Southern's requirements, Southern may purchase or otherwise obtain gas from any source to supply such deficiency.

"The Monroe Field is not expected to produce gas in sufficient quantities to meet peak demands for more than three or four years. Since August 1, 1940, Southern's wholly-owned subsidiary, Southern Production Company, Inc. (Production Company) has entered into agreements with the holders of gas and oil leases in the gas producing area known as the Logansport (Joaquin) Field, located partly in Western Louisiana and partly in eastern Texas about 135 miles west of the Monroe Field, providing for the assignment to the Production Company of the gas rights in leases covering an aggregate of approximately 11,000 acres. About 3,220 acres of this land is located within the proven area and comprises about 27 percent of the proven area.

"In order to relieve itself of the limitations of its existing gas purchase contracts with producers operating in the Monroe Field, Southern has for some time been carrying on negotiations with these producers looking toward

[fol. 7015] the execution of new gas purchase contracts, to extend until December 31, 1949, which will provide that Southern will purchase from the present producers specified percentages, aggregating initially 75 percent, of the requirements of its system, the remaining 25 percent to be purchased or otherwise obtained from any source. The price payable for all gas will consist of a commodity charge of 5 cents per M.c.f. plus a demand charge of $4.20 per M.c.f. per year on the maximum number of M.c.f. provided to be delivered in any day during each year. If the proposed new contracts had been in effect during the 12 months ended August 31, 1940, the price paid for gas would have been 6.59 cents per M.c.f. instead of the average price of 5.63 cents per M.c.f. paid under the present contracts, an increase of $418,942."

Now, I ask you, Mr. Coffman, whether you have ever read that part of the Release of the opinion and findings of the Securities and Exchange Commission?

A. No, I have not.

Q. Now, the fact which I have read, that the Monroe Field from which this company, to-wit, Southern Natural Gas Company has been securing its gas supply is not expected to produce gas in sufficient quantities to meet peak demands for more than three or four years would have what effect upon the earnings-price ratios of Southern Natural Gas Company?

A. Well, it would tend to make the price ratio rise.

[fol. 7016] Q. And that factor clearly has something to do with the Southern Natural Gas Company's earnings-price ratio which exceed 20 percent, as shown in your charts?

A. I think the investors have given weight to that.

Q. Now, what do you say about the effect on the earnings-price ratios of Southern Natural Gas Company because of the fact that they were confronted with a situation under which they would have to pay $418,942 more for gas, as I have read from the opinion, than they had paid in the previous year? What effect would that have upon the earnings-price ratio?

A. Well, investors would try to appraise the situation as best they could and if there is a question about the risk, the tendency would be for it to rise under the pres-

ent situation, but that, I think, is in line with what I said a few minutes ago that investors in this industry study that type of situation because they would want to find out whether Panhandle Eastern, for instance, might not have some trouble along the way in the same kind of situation.

Q. Are you still of the opinion that Southern Natural Gas Company—

Mr. Culton: (Interposing) Just a minute. Don't you think, in view of your question, you should also ask if he thought the investors would take into consideration the [fol. 7017] opinion of Ralph E. Davis as to the life of that field since it is in the same one?

Mr. Littman: Mr. Culton, you are at liberty to read any part of that finding you wish to read which you feel is material.

Mr. Culton: I do not think any of it is material, but I just happened to notice that that same thing says that Ralph Davis' estimation was for the supply at 1949 instead of for three or four years.

Mr. Littman: I will read this part into the record, if you will—

Mr. Culton: (Interposing) I do not think any of it is material, but I thought if you were going to ask the witness if he thought he should take the three or four years into consideration—

Mr. Littman: (Interposing) Of course, Mr. Davis is not speaking of peak loads, and my questions, after reading this report, had to do with peak loads.

I think the record will show you did not hear me. The question that I put to this witness was related to the fact that the Monroe Field is not expected to produce gas in sufficient quantities to meet peak demands for more than three or four years, however, I think I had better read the other statement into the record.

Mr. Wheat: Did you, Mr. Littman, also, read in the [fol. 7018] statement from that opinion that the Southern Natural was obtaining an additional gas supply? I believe you did.

Mr. Littman: Yes.

Mr. Wheat: And I would suppose that you would ask the witness whether that was possibly responsible for the reduction in the earnings price ratio for Southern Natural in 1941. I do not know.

Mr. Littman: But they are obtaining it an an increased cost of $418,000 a year.

Mr. Wheat: I am not talking about the other, Mr. Littman, at the Monroe Field. I am talking about that which they are obtaining out of the Logansport and the Joaquin Field which was gone into at such length in the application of Tennessee Gas and Transmission Company.

By Mr. Littman:

Q. Well, do you know anything about these facts that we have been discussing?

A. Not for purposes of this study, because I have described exactly how I prepared the study. I took the prices and I took the earnings as were reported.

Q. Then you do know that the earnings price ratio shown for Southern Natural Gas is unusual, do you not?

A. It is larger or higher than for the other companies shown.

Q. And reflect certain fears, do they not?

[fol. 7019] A. They must reflect that in the minds of the investors.

Q. Now, whether or not I have given you all the fears that are reflected in the mind of the investor or not, of course, I do not know, but you do know that there must be something akin to fear in the mind of the investing public who are investing in the common stock of Southern Natural Gas Company in order to have an earnings-price ratio in excess of 20 percent. Isn't that right?

A. I think the investors by having this higher priced ratio indicated that there is a greater hazard in Southern than in the other companies listed.

Q. And we are agreed, are we not, that you did not make any investigation to ascertain precisely what those hazards were?

A. That is correct, for this study.

• • • • • • • • • •

[fol. 7020] By Mr. Littman:

Q. Mr. Coffman, before proceeding with this line of inquiry which I suggested just before the recess, will you please state whether you have made the calculation with respect to the 1941 Federal income and excess profits taxes on the $1,000,000 of gross revenue concerning which we have heretofore discussed?

A. Yes, I have.

Q. Now, will you please state the results of your tabulation?

A. On the assumption of a reduction in rates which would total $1,000,000 in gross, there would be a change in the Federal income tax and excess profits taxes, based on the 1941 rates, so that the net operating income would be $276,000 less or out of a million-dollar reduction there is less than 30 cents change in net, which I believe was the way—

Mr. Culton: (Interposing). Out of a dollar reduction?

The Witness: (Continuing) Out of a dollar less than 30 cents, which I believe is the way you originally asked the question.

Mr. Wheat: Did all the difference represent taxes that would be lost to the Government?

The Witness: Yes, sir, that is correct.

[fol. 7021] Mr. Wheat: How much is that?

The Witness: That would be $724,000.

Mr. Wheat: Thank you.

By Mr. Littman:

Q. Now, I would like to have you assume a bond in the principal amount of $1,000 selling on the market at $105, that is, $1,050, which is commonly referred to as one thousand and five, and having a coupon rate of 4 percent with a maturity date of 15 years hence.

A. How much was the coupon rate, please?

Q. Four percent.

Now, am I correct in understanding that the "current yield" on that bond is determined simply by dividing 4 by 105 to get 3.81 percent?

A. That is the current yield, yes.

Mr. Wheat: How do you do that now?

Mr. Littman. Divide 4 by 105.

By Mr. Littman:

Q. Now, the "yield to maturity" is always less, is it not, than the current yield?

A. That usually is correct, I mean it would depend on whether your bond is selling at a premium or discount and so forth.

Q. Well, that would always be true where the bond is selling at a premium, isn't that correct?

[fol. 7022] A. Yes.

Q. And the premium in this instance is $50?

A. Yes.

Q. Now, am I correct in stating that the amount by which the yield to maturity is less than the current yield is dependent upon and governed by, first, the number of years to maturity and secondly, the amount of the premium?

A. That is correct.

Q. And is it also true that if the premium is large the yield to maturity will be substantially less than the coupon rate or the current yield rate?

A. Yes, generally.

Q. Now, it is a well-recognized fact that these yields to maturity are always a vital factor considered by the investor?

A. Yes, he considers those and refers to yield books, bond tables and so on.

Q. And it is a fact that the yield to maturity represents the investor's real yield. Isn't that right or actual yield?

A. Yes, that is right.

Q. Now, the investor who wants to ascertain the true return upon his investment must use bond tables to make the tabulation, must he not?

A. That is correct.

[fol. 7023] Q. Now, this same situation obtains with respect to preferred stock having a sinking-fund provision which sells at a premium, isn't that true?

A. That would be correct.

Q. And it would, also, be true, would it not, of preferred stock that is not callable until a certain date?

A. The investor would take into consideration the call price, that is, the closer you approach the callable date he would take that into consideration.

Q. That is to say, he would amortize his premium and give effect to the premium in determining his true yield. Isn't that right?

A. That is correct. Presumably as the callable date approached, the price, if it had been in excess, would have begun to come down near or at the level of the callable price.

Q. Now, I want you to assume a preferred stock having a par value of $100 callable 10 years from date at 110 and I want you to further assume that this stock has a dividend rate of 5 percent and is presently selling on the market at $120.

Now, isn't it a fact under these circumstances that the investor amortizes out of his dividend the premium of $10 over the 10 years. Is that right?

A. Yes, that is correct.

[fol. 7024] Q. Another way of stating the situation is that he receives $50 over the 10 years in dividends but he only considers $40 of this total $50 dividend payment as his real income, doesn't he?

A. That is correct.

Q. Because he had to take $10 from the proceeds of his dividends to write off the premium?

A. That is correct.

Q. Now, let's assume that we have some common stock of the Natural Gas Pipe Line Company and now we are speaking of common stock and I want you to assume that this Natural Gas Pipe Line Company has a finite life of 15 years.

I would also like to have you assume that this stock has a book value of $10 and is selling on the market at a price of $20. I would like to have you further assume that this

hypothetical pipe line company is fortunate enough to be earning 10 percent per annum on the market price of this common stock or $2 per share throughout the entire 15 years of its life and I want you to assume that this $2 dividend is paid each year throughout the 15 years.

Now, this $2 per share of earnings represents 20 percent of the book value of the common stock, does it not?

A. Twenty percent of the book value?

Q. Yes.

A. Yes, that is correct.

[fol. 7025] Q. Now, let's look at the picture 15 years hence when the gas supply is exhausted and the company winds up its affairs and goes out of business.

Now, the stockholder has received $2 per share for 15 years, a total of $30 in dividends, has he not?

A. That is correct.

Q. He gets back $10 in liquidation at the end of the 15 years because the company has wound up its business and has paid off the book value to the stockholder. Do you get that?

A. Yes.

Q. So that he has received $30 in dividends plus $10 in liquidation, a total of $40, is that correct, over the 15 years?

A. He gets in liquidation $10 in addition to the $30 he receives, so he received a total of $40?

Q. Yes.

A. That is right.

Q. Now, you understand that this investor's original investment was $20 in this share of stock, was it not?

A. Yes, it was.

Q. What was this investor's true earnings on this share of stock for the 15 year period during which he held it?

A. Are you now asking for dollars or for percentage?

Q. Dollars.

[fol. 7026] A. Well, he received altogether 100 percent on his original investment.

Q. Well, I asked you for dollars.

A. Well: $20.

Q. His true earnings are $20, is that right?

A. That is the amount he received in excess of his original cost.

Q. Now that true earnings of $20 is $1.33 per year, is it not, dividing the $20 by 15 years?

A. That is approximately right. I haven't figured it. Yes, that is correct.

Q. And expressing this true return upon investment in terms of percent, it amounts to 6⅔ percent, does it not?

A. Yes, that is correct.

Q. Now, may we not agree under these circumstances that the true appraisal of risk by this investor is 6⅔ percent? A. Yes, that is correct.

Q. Now, if this company were shown in your Chart No. 19 or 20 of Exhibit 65, the earnings-price ratio of this company's common stock would be shown at 10 percent, would it not, and you would term that 10 percent the "earnings-price ratio" or "investor's appraisal of risk"?

A. That is correct.

[fol. 7027] Q. Notwithstanding the fact that this particular investor has received a true earning of 6⅔ percent?

A. Well, that is correct except in the assumption we have only got one thing straight at this point, that here you are talking about the thing being wound up and all facts known, whereas in this study it is impossible to do that. With that one exception, I agree with what you have said.

Q. Well now, under the set of facts which I have asked you to assume, it is clear, is it not, that this particular investor having paid $10 more than the book value of the stock had to amortize that $10 premium over the 15 years during which he held the stock, isn't that right?

A. That is right, he can do that.

Q. And in order to amortize that $10 bonus that he paid or premium that he paid, he had to do that out of the annual dividends that he received, did he not?

A. He had to make allowance for it in that calculation.

Q. And in order to determine the true yield to the investor you simply have to take into account the fact that he had to amortize this premium out of the total dividend which he received.

A. That is correct.

Q. Very well. In arriving at your 12 percent cost of [fol. 7028] common stock for Panhandle Eastern Pipe Line Company, you stated yesterday in your testimony that you have given considerable weight to the cost of financing Northern Natural Gas Company's common stock, which was offered to the public on September 10, 1941, the facts of which are shown in Chart No. 21 of Exhibit 65 and in the table for Chart No. 21. Isn't that right?

A. That is correct, I considered that.

Q. You considered it and gave it great weight?

A. And gave it weight in my calculation of 12 percent, yes.

Q. Would you say great weight?

A. I do not recall that I did, I gave it weight. I mean I am always fearful when you use these "greats" because they are relative terms. Just how great do you mean?

Q. Well, what would you say in characterizing it?

A. Well, I gave the weight along with these other items and because it was a recent financing of a natural gas pipeline company, I thought it was pertinent to put it in but, in other words, I cannot tell you that I gave it 40 percent weight and something else 20 percent and so on.

My figures of judgment are a figure taking all these factors and forming a judgment.

Q. Well, it certainly entered into your judgment in arriving at this 12 percent estimate?

[fol. 7029] A. Yes, it did.

Q. Well now, what did Northern Natural's common stock sell for as shown by your Chart No. 21?

A. It sold to the public at $31.40.

Q. There seems to be some controversy as to the exact selling price due to a 60 cent dividend that was declared in 1944, is there not?

A. Well, this price that I mentioned is ex the dividend, it excludes the dividend.

Q. As a matter of fact, they did pay a 60 cent dividend and the prospectus of Northern Natural Gas Company for this common stock shows the price per share, including the dividend, at $32, does it not?

A. Yes, that is correct.

Q. Well, I merely wanted the record to show that the price that you have used here is exclusive of the 60 cent dividend.

A. It is exclusive.

Q. Well, at any rate, the price to the public, exclusive of the dividend, was $31.40, as shown by you in Chart No. 21, of Exhibit 65?

A. Yes, it was.

Q. At the time of the sale, what was the book value of this common stock per share? Can you answer that?

A. I don't believe I have that figure, but I will check. [fol. 7030] Q. Mr. Coffman, I hand you a copy of the prospectus of Northern Natural Gas Company for the 355,250 shares of common stock par value, $20 per share, which covers the stock issued shown in your Chart No. 21 of Exhibit 65, and I refer you to page 4 of this prospectus and particularly to the insert on that page, which I believe will give you the book-value figure.

A. Well, the amount stated here is $22.78 per share, but there are qualifications so that it probably would be better to read the whole statement to have it actually in the record.

Q. Suppose you read the entire statement.

A. On Page 4 of this exhibit—

Q. (Interposing) This is not an exhibit in this proceeding.

A. (Continuing) This prospectus, under the caption, "Net Tangible Asset Value," which is an insert to Page 4, it states as follows:

"Based upon the consolidated balance sheet of the company and subsidiary companies as of June 30, 1941, as shown in this prospectus, the net book value of all assets other than intangible assets, prepaid insurance, rentals and so forth and deferred charges, less long-term debt, current liabilities, reserves for depreciation, depletion and insurance and contributions in aid of construction amounted [fol. 7031] to $23,123,531.65 at that date which is equivalent to approximately $22.78 per share on 1,015,000 shares of common stock now outstanding. Neither the company nor the underwriters represent that the amounts at which assets are stated in the balance sheet represent the realizable or fair market value thereof or that the amount of $22.78 per share would be available upon liquidation of such assets and after discharge of the company's liabilities."

Q. You are satisfied from the reading of this portion of the prospectus that at the time of the sale the book value of this common stock was $22.78 per share. Right?

A. Yes, in accordance with that statement.

Q. Now, an investor buying a share of common stock of Northern Natural Gas Company would have to amortize the amount by which the price of $31.40, which he paid for the stock, exceeds the book value of $22.78 of this stock, to wit, the difference of $8.62 over a period. Isn't that right?

A. May I refer to that again before I answer please?

(A document was furnished the witness.)

The Witness: I think there is some question there, Mr. Littman, I would suppose it would be better to consider the par value of $20. After all, that is all the firm commits to pay upon liquidation regardless of what the book [fol. 7032] value was at the time.

By Mr. Littman:

Q. Very well. Let's take the $20 as the amount which the firm will pay upon liquidation when the gas supply is exhausted.

I understand that Northern Natural Gas Company also has a finite life, does it not, inasmuch as it relies upon a natural resource?

A. That is right, it has reserves which will be exhausted.

Q. Now, this investor in a share of common stock of Northern Natural Gas Company has to somehow get back this $11.40 which he has paid over and above the par value of the share of common stock. Isn't that correct?

A. That is correct.

Q. Now, the only way he has of getting that $11.40 premium back is by amortizing that amount over a period from the total dividends which he receives, isn't that right?

A. Well, that is one way of doing it, except that we must still take into consideration that the common-stockholder, unlike the callable preferred holder and the bondholder, has no time except the life of the company.

In other words, his problem is considerably different than a call date in case of preferred or a maturity date in

case of a bond, and yet you were trying to draw an analogy [fol. 7033] here which would put this in that class.

On an assumption I am perfectly willing to go along with it, but I just want to have it clear that there are wide differences between the types of securities.

Q. Well now, let's suppose that you were an investor in Northern Natural Gas Company's common stock. What term would you use for the amoritzation of this premium of $11.40 that you have paid?

A. In Northern Natural?

Q. In Northern Natural.

A. I would assume that if I could get a reliable engineering estimate as to the term of years that would expire prior to the exhaustion of the reserves, that that would have to be used in my calculation.

Q. Yes.

At any rate, there isn't any question but that an investor would have to amortize this premium of $11.40 certainly over some period and, as you have said, probably over the period of the life of the natural gas resources of the company. Is that right?

A. That is right. He wants to, when the thing has wound up, get his capital back and meanwhile have had a reasonable return thereon.

Q. Now, it is equally true, is it not, that if this investor in the common stock of Northern Natural Gas Company [fol. 7034] were to want to ascertain his true earnings on this common stock, he would have to take into consideration the amortization of the $11.40 premium, would he not?

A. Yes, he would take that into consideration although, as we know, common stockholders just do not keep their accounts that way, at least I have never heard of any that did.

Q. Well, let's take a large insurance company that have staffs for that purpose. You would expect that they would certainly go through the calculation to make certain that they had amortized the premium, wouldn't they?

A. I am not sure that insurance companies do that. I wouldn't want to say that they did or didn't. Most common stockholders don't. As a matter of fact, I never heard of one that did.

Q. Well, whether the investor actually sits down and works out the calculation, he certainly has uppermost in his mind, whenever he thinks in terms of true yield and true earnings, the giving of effect to the amortization out of his gross earnings from the start, the premium of $11.40 which he has paid. Is that right?

A. Well, actually he doesn't do it that way, but he could, I mean just as you or I can make the calculation, but actually he doesn't do it.

Q. Well, as the Vice President of a large firm, to-wit, [fol. 7035] Standard and Poor's, which advises investors and acts as counsel to investors; you would certainly advise investors to take this situation into account, would you not, to determine his true yield?

A. I do not know as we ever have, because, after all, we have never, so far as I have known, contended that a common stock was exactly like a preferred stock which is callable, or a bond, not to my knowledge.

Now, if the company has, I must beg off on innocence but I do not know of any such thing.

Q. Well, the logic is the same, isn't it?

A. Well, I wouldn't quite say that; at least, answering it again, the investors have never believed it to be so.

Q. But if you wanted to be exact about the matter, if you own a share of common stock in Northern Natural Gas Company and you wanted to determine precisely what your true earnings were, you would make the calculation, wouldn't you?

A. Well, with the exception of a few companies, Mr. Littman, the common-stock dividends, as we know, jump all over the lot from one year to another in distinction to your interest on your bond and your preferred dividend on your preferred stock.

That is what the investor has to contend with. That is [fol. 7036] the kind of security he bought. One year they may give him $3 in dividends, the next year it may be $1.50, all depending on earnings, so that it is rather difficult to work your situation out on a mathematical scale such as you could a sinking fund bond or a sinking fund preferred stock.

Here again, it is not quite so simple.

Q. Well, would you please answer my specific question?
A. I thought I did.

Will you read the question, please?

(Whereupon, that question at Line 15, Page 7035 of this record was read by the reporter.)

The Witness: If the situation on a common stock were just exactly as you said, a regular dividend each year of $2, a finite term of 15 years for certain, and all other items just as you said, I would believe it possible, but taking the actuality as you find in the market in common stocks, I would say no.

I think you could not do it with any degree of ease or accuracy.

Q. But in buying this share of common stock of Northern Natural, you would certainly be aware of the fact that you would somehow have to amortize this $11.40 through the dividends received, wouldn't you?

A. I would hope, as I believe the average common [fol. 7037] stockholder does, that over the period of years that he holds this common stock there will be enough return in dividends plus what he receives, if any, in liquidation, should he hang on that long, to give him his principal complete and the equivalent of a fair return thereon.

That is actually the way the investors look at common stocks today.

Q. And that is how they look at common stocks where they pay a premium over and above the book value of that common stock. Isn't that true?

A. Well, as a matter of fact, very few stocks sell at their par value and the only place you would ever have the question to begin with would be in a new issue.

The rest of the investors that we are talking about are not buying new issues, they are buying a share on the New York Stock Exchange which has long since been outstanding and been up in price and down in price.

Q. Now, confining ourselves, for the moment, to Northern Natural Gas Company, this is a new issue that we are speaking of, isn't that right?

A. That is correct.

Q. And there isn't any question in your mind that those individuals who invested their hard-earned cash in Northern Natural's common stock and [payed] a premium of $11.40 over par had in mind very definitely the earning of [fol. 7038] a return that would not only compensate them for the use of their money, but which would amortize that $11.40. Isn't that right?

A. That is correct.

Mr. Culton: Mr. Littman, you said that was a new issue of Northern Natural stock. When was it dated? I was under the impression that that was the issue that was sold by one of the owners.

Mr. Littman: September 10, 1941, as reported in Chart No. 21.

Mr. Culton: Is that the date the stock was issued?

Mr. Littman: I read from the caption of Chart No. 21 of Exhibit No. 65—

Mr. Culton: (Interposing) I know when it was offered to the public, but when was the stock actually issued?

Mr. Littman: Maybe the witness can enlighten us on that, if there is any question.

The Witness: The stock was authorized and issued sometime before that, I forget the date, but this was the first offering to the public of a portion of the over-all issued and outstanding some years prior.

Mr. Culton: The offering has not been by Northern Natural, as I understood it, but by the owning company. I may be mistaken as to that.

The Witness: No, I believe that is correct.

[fol. 7039] By Mr. Littman:

Q. Well now, would anything that Mr. Culton has called to your attention—

Mr. Culton: (Interposing) I just wanted to correct your statement that it was a fresh issue of actual stock.

The Witness: I understand, by listening to this, that you were not using "issue" in the technical sense as we say "authorized and issued".

You are referring to it as this quantity of shares that was then being made available to the public. That was my interpretation rather than pinning it to the technical use of "issue".

By Mr. Littman:

Q. That is right.

Now, looking at your Chart No. 21 of Exhibit No. 65, you have shown in that chart an earnings-price ratio for Northern Natural Gas Company based on the price to the public after the earnings are adjusted to reflect an increase in taxes under [they] Revenue Act of 1941 of 10.89 percent. Is that right?

A. That is correct.

Q. Now, the true return and the true appraisal of risk to the investor is something less than 10.38 percent, is it not?

[fol. 7040] A. Well, if you are following the same basis that you wish to amortize the situation, why, you can pack it down between the two items, but I still contend that it is a purely theoretical condition that you cannot find to exist.

Q. Well, what is theoretical about an investor paying out $11.40 in cold cash for a premium that he knows he can never get back except through the medium of dividends?

What is theoretical about that?

A. Well, I answer you in this fashion, that you have many oil companies, for example, that have gone along for years and never paid a dividend. Then, they paid one.

I would not know, as a holder of that common stock, whether I should, because of an expiration of years with no dividends, take that entire dividend and credit it against my premium or whether I should do as you want me to do, take one-fifteenth and say that applies as against the premium and the rest as against income.

I do not know how the investor does it. As a matter of fact, I know he doesn't do it. It is very difficult thing to do, except in your own hypothetical situation.

Q. Are you suggesting by your last answer, Mr. Coffman, that the investor should use the first dividends that he

receives for amortization purposes and then, after having amortized his premium, to receive a return on his investment?

A. I did not make any such suggestion, but in many common stock situations it would have been wise had a [fol. 7041] man done that, because many a company winds up with no liquidation and even many a going concern today under the Commission's rulings is saying there is no equity in the common stock. Well, who knows.

Q. Well, now, there isn't any question, is there, Mr. Coffman, in your opinion, that this 10.38 percent figure shown in Chart No. 21 as the earnings price ratio for Northern Natural Gas Company's common stock does not reflect the true yield to the public?

A. Yes, it includes the entire yield at the moment and I say that unless Northern Natural finds itself in a position exactly as you have enumerated that it would be difficult to apply an amortization scheme such as you propose.

Q. Regardless of how difficult it may be, regardless of how difficult the calculation, in truth and in fact this 10.38 percent upon which you relied in making your estimate contains and reflects a rate sufficient to amortize the premium of $11.40 which the investor has paid on this common stock. Isn't that true?

A. I still say that that is not true, Mr. Littman, and for several reasons.

I want to go back again to make it clear about the analysis between a bond and preferred stock which is callable. Those two items are set up a good many times on a certain [fol. 7042] schedule of life which may or may not be related to your natural resources.

An equity holder, on the other hand, puts money into this business and if he does not receive it back in the form of large dividends over a period of years, but such earnings are retained in the business to finance new purchases, so long as gas might be available on purchase or otherwise to this company, not from its own reserves, but from any reserves which they might lease or buy in the territory, the equity holder then is in perpetuity, not for the length of the preferred stock and its callable date, not for the maturity date of the bond, and that is the difference.

You cannot issue a bond in a natural resource company without taking the immediate reserves into consideration and it would be rather unfortunate to issue a preferred stock.

I just want to be sure that you understand my point of view. I have just stated it, I think, pretty clearly.

Q. I will understand your point of view, Mr. Coffman, only when you tell me how this investor is going to get back his $11.40 from any other source or in any other way than from this 10.38 percent, so-called, earnings-price ratio. How is he going to get it?

A. If he can take the dividends as they come, he can do the best he can to work out some amortization scale if he likes. In a hazardous industry, however, I as ad- [fol. 7043] visor would be perfectly willing to tell him that he might take all his dividends and accumulate them until it met his par and then when that was done anything over that he had would begin to look like a return. I would call that a good, conservative practice.

Q. Well then, you are stating, of course, that this 10.38 percent earnings price ratio on the common stock of Northern Natural Gas Company includes gross, the over-all earnings to the investor, including the amount that he is going to have to use to amortize his premium, isn't that right?

A. For his premium, but that still is separate and apart from the principal amount that he invested. The premium he paid is only one portion and a very small part of the total he paid and he expects to get his principal back, too.

Q. He can get that back on liquidation, can he not?

A. We are not at all sure of that. There are not very many companies that liquidate and pay 100 percent on the common stock. They have no claim whatsoever.

Q. That is all he can hope to get back, isn't it, his par value?

A. If they have retained earnings in the company, no, not at all. If they have distributed all of the earnings as they have gone along he must have some accumula- [fol. 7044] tion there to distribute.

Q. But your earnings as you use them in these charts include all the earnings available for common stock. Isn't that right? A. But not distributed.

Q. Well, whether distributed or not distributed, this 10.38 percent reflects all the earnings?

A. All the earnings available for the stock.

Q. Whether it is paid out in dividends or not paid out in dividends?

A. That is right, so it cannot include dividends. The reason I bring it up is that when you tell me to amortize something, I have nothing to amortize as high as a stockholder gets a dividend.

Not for one minute will I think of amortizing earnings that the company was keeping and not distributing to me, not on your life.

When they give me my capital back in the form of a dividend, I will be willing to talk business with you.

Q. Are you saying that the stockholder is never going to get back even this 10.38 percent?

A. I am saying until it is distributed I do not know and he does not either. That is a management policy. They can pay a dividend or not as they see fit, unless the Commission wants to step in and tell them to or a stock [fol. 7045] holder brings a suit and forces them to.

Q. Tell me how this investor is going to get back the $11.40 of premium that he paid on this common stock, if he is not going to get it back through this 10.38 percent.

A. Well, in the first place, as I have just tried to explain to you, the 10.38 percent is not going to be all distributed, at least it has not been in most companies and I would not suppose it was here, so he will get only a portion of that in a dividend.

Now, if it is regular and he wants to work out an amortization schedule, he can try it, but it is not a very simple thing.

Q. Mr. Coffman, I have a very simple question and I think it can be answered very easily. My question is simply this:

The amortization of this premium of $11.40 must come out of the 10.38 percent yield, must it not? Yes or no?

A. It will come out of there when it is paid. I want to get it in the payment there because it is pretty important to the investor, if you don't mind.

Exhibits:		
1, Statement of operating Results of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Company, 1938-1940	10775	4012
Operating Results	10775	4012
Cost, and Cost Less Reserves, of Plant and Operating Results as of December 31, 1938	10777	4013
Cost, and Cost Less Reserves, of Plant and Operating Results as of December 31, 1939	10778	4014
Cost, and Cost Less Reserves, of Plant and Operating Results as of December 31, 1940	10779	4015
Working Capital Estimate, December 31, 1938-39-40	10780	4016
Working Capital Estimate Approximate Payroll Basis, December 31, 1940	10782	4017
2, Determination of possible Revenue Reduction of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Company	10783	4018
3, Excerpts from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission, February 12, 1937, with respect to Gas Reserves	10785	4019

	Original	Print
4, Excerpt from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission, November 13, 1940, with respect to Gas Reserves	10786	4021
5, Excerpts from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission, November 13, 1940, with respect to Design, Construction and Maintenance of Property	10789	4025
6, Statement of Operating Expenses and Taxes at 100% Load Factor Operation	10791	4029
7, Statement as to necessary Price per M. C. F. at 100% Load Factor	10793	4030
8, Statement of estimated Effect of 100% Load Factor on earning Power of System	10795	4030
9, Statement of Factor affecting the Nature and Magnitude of reported Net Incomes	10796	4031
10, Statement showing Effect of Variation in accounting Practices on Reported Incomes of an Enterprise	10799	4034
11, Chart showing Relation of Yield of United States Treasury Bonds and Notes	10800	4035
12, Statement showing United States Treasury Bond Yields	10801	4037
13, Chart showing History of Yields of United States Bonds, 1920-1939	10806	4045
14, Average Yield of United States Treasury Bond	10807	4047
14-A, Securities & Exchange Commission Releases Nos. 2778 and 2834 — Findings and Opinion of the Commission in the Matters of Panhandle Eastern Pipe Line Company, et al	10808	4047

Index, Volume IX.

Order of Securities & Exchange Commission Denying Applications in Part and granting Applications in Part	10842	4087
Supplemental Order of Securities & Exchange Commission amending Findings and Opinion	10844	4089
17, Miscellaneous Data concerning Property and Operations of Panhandle Eastern Pipe Line Company	10848	4090
Schedule 1, Panhandle Eastern Pipe Line Company System Compressor Stations	10848	4090
Schedule 2, List of Communities receiving Service directly or indirectly from Panhandle Company including Population and Number of Customers as of June 30, 1941	10849	4091
Schedule 3, List of Industrial Customers receiving Service direct from Panhandle Company System, June 30, 1941	10853	4099
Schedule 11, Panhandle Eastern System Summary — Miles of Pipe by Sizes, June 30, 1941	10926	4101
30, Testimony of Rufus M. Smith	10958	4103
Schedule 2, Estimated Original Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10986	4125

	Original	Print
Schedule 3, Estimated Remaining Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10987	4125
Schedule 5, Comparison of Open Flow Potentials in Texas Panhandle Gas Field	10990	4129
Schedule 6, Gas Acreage owned and under Gas Purchase Contracts held by Panhandle Eastern Pipe Line Company as of June 30, 1941	10991	4131
Schedule 7, Hugoton Production to Argus Natural Gas Company, Inc. by Panhandle Eastern Pipe Line Company, et al	10992	4133
Schedule 8, Texas Production to Panhandle Eastern Pipe Line Company	10993	4135
Schedule 9, Hugoton Production to Panhandle Eastern Pipe Line Company	10997	4143
Schedule 10, Hugoton Production to Panhandle Eastern Pipe Line Company	11000	4149
Schedule 11, Analysis of Cumulative Production to Main Line to and including Fiscal Month of June 1941	11003	4155
Schedule 12, Comparative Statement of Production and Purchases from each District for the two Years ended June 22, 1940 and June 22, 1941	11004	4157
36, Testimony of Glenn G. Bartle	11010	4159
Schedule 3, Estimated Original Gas Content in the Hugoton Field, (Kansas, Oklahoma and North Texas Panhandle), under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	11038	4176
Schedule 4, Estimated unmetered Gas from Panhandle Eastern Pipe Line Company Wells in the Hugoton Field Kansas, connected to Argus Natural Gas Company, Inc. as of July 1, 1941	11041	4181
37, Testimony and Exhibits, Market Value of Leases of Panhandle Eastern Pipe Line Co.	11047	4187
R. J. Wallace	11047	4187
Summary of Market Value of Leases	11064	4199
38, Basic Statistics used in calculating Interest, ad valorem Taxes and operating Expense attributable to unused Capacity	12159	4203
39, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	12162	4206
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	12163	4206
Statement relating to Reproduction Cost—New—June 30, 1941	12164	4207
Summary	12165	4207
39-A, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	13130	4208
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	13130	4208

	Original	Print
Statement relating to Reproduction Cost New—June 30, 1941	13131	4209
Summary	13133	4209
40, Table showing estimated Main Line Sales, years 1941-1946, inclusive	13149	4211
41, Graph showing Sales and Gas Plant by Years, Panhandle Eastern Pipe Line Company and Subsidiary Companies	13150	4213
42, Testimony of C. H. Hinton relating to Future Capital Expenditures and Operating Expenses in Production and Gathering System West and South of Liberal, Kansas	13151	4215
43, Schedules presented in connection with the written Testimony of C. H. Hinton	13193	4244
Schedule 1, Additional Capital Expenditures required to produce and gather Basic Load, or Present Requirements	13194	4244
Schedule 2, Additional Capital Expenditures required to produce and gather Anticipated Increased Load	13195	4244
Schedule 3, Estimate of Operation and Maintenance Costs —west of Liberal Panhandle Field — Basic Load	13196	4245
Schedule 4, Estimate of Operation and Maintenance Costs — west of Liberal Panhandle Field — Estimated Future Load	13199	4251
Schedule 5, Probable Production from Panhandle Eastern's own Wells and Wells under Gas Contracts (Panhandle Field) during the Period July 1, 1940 to December 31, 1956	13202	4257
47, Panhandle Eastern Pipe Line Company and Subsidiary Companies, future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward	13206	4257
48, Statement showing Balance Sheets per Books Panhandle Eastern Pipe Line Company and Subsidiary Companies, as at each December 31, 1930 through 1940 and as at June 30, 1941	13207	4259
49, Income Statement per Books — Period from April 1, 1932 to December 31, 1941	13210	4265
50, Statement showing Earned Surplus per Books, Period from Commencement of Operations to June 30, 1941	13212	4269
51, Statement showing Capital Surplus per Books, Period from September 1, 1930 to June 30, 1941	13214	4273
52, Statement showing Investment in Gas Plant as at each December 31, 1930 through 1940 and as at June 30, 1941	13215	4275
53, Statement of Dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941	13217	4279
54, Statement of Dividends paid on Common Stock from beginning to September 1, 1941	13219	4280
55, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940 and 1941	13220	4281
55-A, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940, and 1941	13221	4283
56, Statement of Gas Produced, Period from April 1, 1932 to June 30, 1941	13222	4284
57, Statement of Gas Purchased, Period from April 1, 1932 to June 30, 1941	13223	4285

	Original	Print
58, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941 and Schedule showing Detail of Sales to various Types of Customers, 1939 and 1940	13224	4287
Schedule 1, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941	13224	4287
Schedule 2, Detail of Sales to Gas Utilities, years 1939 and 1940	13225	4289
Schedule 3, Detail of Sales to Industrial Customers, years 1939 and 1940	13227	4293
59 Statement of Gas Revenue by States, Period from April 1, 1932 to December 31, 1941	13229	4297
60, Statement showing Sales Agreements with other Gas Companies as at June 30, 1941	13230	4299
61, Study of Current and Future Trends in Commodity Prices and Wages, by David Friday	13238	4310
Graph showing Wholesale Prices from 1800 to 1940	13239	4311
Index Numbers of Wholesale Prices of Commodities by Groups	13241	4313
Commodity Price Indexes of Ten Countries	13247	4318
Statement relating to Tax Collections in the United States, from 1913 to 1942	13258	4328
Index Numbers of Wholesale Prices of all Commodities by Months, from 1890 to 1940	13263	4333
Statement relating to Wholesale Prices for Week Ended September 20, 1941	13264	4335
Graph relating to Average Weekly Earnings in Manufacturing Industries of New York State from 1914 to 1941	13266	4339
Graph relating to Average Hourly Earnings and Average Actual Hours per Week per Worker in twenty-five Manufacturing Industries from 1914 to 1941	13267	4341
Graph relating to Average Cost of Living from 1935 to 1939	13268	4343
62, Deduction from Cost of Reproduction New for Depreciation and Present Value of Plant, Property and Business as of June 30, 1941	13270	4345
Letter from P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, September 30, 1941	13271	4345
General Summary	13272	4347
63, Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as compared with other Divisions of the Utility Industry, Summary of Analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corporation	13321	4349
Table of Contents	13322	4349
Statement of Experience and Qualifications of Paul B. Coffman	13327	4354
Investors' Appraisal of Capital Risks in Various Divisions of the Utility Industry	13348	4371
Statement A, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13351	4373

	Original	Print
Statement A-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13352	4375
Statement B, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13353	4377
Statement B-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13354	4379
Statement C, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13355	4381
Statement C-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13356	4383
Statement D, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13357	4385
Statement D-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941 January-August, Both Inclusive	13358	4387
Statement E, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13359	4389
Statement E-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13360	4391
Statement F, General Information Covering each Company as to the Nature and Size of the Business and the Territory served	13361	4393
64, Statistics supporting Data, Exhibit 63, Appendixes A, B, and C	13379	4414
Appendix A, Complete List of Companies studied and Reasons for eliminating those not used to determine Investors' Appraisal of Risks of Capital	13380	4414
Appendix B, Securities of forty-three Natural Gas Companies considered Representative of the Industry, etc.	13387	4426

Index, Volume X.

Appendix C, Working Papers showing the Computation of Investors' Appraisal of the Risks of Capital	13398	4446
Water Companies	13399	4447
Electric Operating Utility Companies	13420	4461
Manufactured and Mixed Gas Companies	13465	4501
Natural Gas Companies	13495	4521
65, Study relative to Rate of Return on Panhandle Eastern Pipe Line Company prepared by Paul B. Coffman, Vice President, Standard and Poors Corporation	13533	4547
Table of Contents	13534	4547
Chart No. 1, Main Transmission System of Panhandle Eastern Pipe Line Co. and Subsidiary	13542	4559
Chart No. 2, Growth of Natural Gas Industry in United States of America from 1906 to 1940	13548	4567
Chart No. 3, Consumption of Natural Gas in United States of America from 1919 to 1940	13550	4571
Chart No. 4, Revenue from Natural Gas Consumed in United States of America from 1919 to 1940	13552	4573

	Original	Print
Chart No. 5, Average Revenue per M. C. F. from 1929 to 1940	13554	4575
Chart No. 6, Panhandle Sales by States, vs. Industry Consumption of Natural Gas from 1934 to 1940	13556	4577
Chart No. 7, Trends of Gross Revenue from 1934 to 1940, Panhandle vs. other Pipe Line Companies and Industry	13558	4579
Chart No. 8, Operating Ratio of Panhandle Compared with other Pipe Line Companies from 1934 to 1940	13560	4581
Chart No. 9, Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Company from 1934 to 1940	13562	4583
Chart No. 10, Percent Earned on Invested Capital of Panhandle Based upon Capital Structure	13564	4585
Chart No. 11, Percent Earned on Invested Capital of Panhandle Based upon Net Property, Intangibles and Working Capital	13566	4587
Chart No. 12, Return to Common Stockholders of Panhandle Eastern Pipe Line Company from 1934 to 1940	13568	4589
Chart No. 13, New Tax Bill will reduce Income sharply Computations based on Operations — Twelve Months ended June 30, 1941	13570	4591
Chart No. 14, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13572	4593
Chart No. 15, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13574	4595
Chart No. 16, Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Company—from 1930 to 1941	13576	4599
Chart No. 17, Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company	13578	4603
Chart No. 18, Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Company from 1937 to 1941	13580	4605
Chart No. 19, Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks from 1937 to 1940	13582	4607
Chart No. 20, Current Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks	13584	4609
Chart No. 21, Cost of Financing Northern Natural Gas Company Common Stock — Offered to Public on September 10, 1941	13586	4613
Chart No. 22, Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Company	13588	4615
Chart No. 23, Continuing Growth of Panhandle System Indicates Future Needs for New Capital	13590	4617
Chart No. 24, Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941	13592	4621
Chart No. 25, Preferred Stock Unusual in Natural Gas Pipe Line Companies	13594	4623
Chart No. 26, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13596	4625
Chart No. 27, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13598	4627
Chart No. 28, Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure	13600	4629

Q. Whether it is retained by him and paid out at the end of the life of the company in a liquidating divided is immaterial for purposes of this discussion and this study.

A. Well, I—

Q. (Interposing) That does not disturb me at all. [fol. 7046] The thing I want to make certain about is that the amortization of this premium of $11.40 must come out of the 10.38 percent figure shown in your Chart No. 21 for Northern Natural Gas Company's common stock. Is that right?

A. That is right, it must come out, but I still want to get clear on the record that unless they pay a dividend there is no use at all of any common-stockholder working out any amortization schedule, because he is just sitting there as a stockholder holding the bag and that is important to this study, notwithstanding the statement that you said it was not.

Q. You say the stockholder is not at all aware of the fact that he is paying $11.40 in excess of the par value of the stock?

A. I did not say that.

Mr. Culton: Did you say par value or book value?

Mr. Littman: Either one, I will say par value.

The Witness: Par value, I will say, of course, the stockholder knows that. If he buys a share it is stated on the face.

By Mr. Littman:

Q. Now, your earnings-price ratio of 10.38 percent was not adjusted by you to take into account this situation which we have been discussing of the amortization of the premium. Is that right?

[fol. 7047] A. Not at all, because it cannot be. How can it be?

(Discussion off the record.)

[fol. 7050] LEITH V. WATKINS, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

* * * * * * * * *

[fol. 7051] By Mr. Gorman:

Q. Mr. Watkins, will you please refer to the copy of Exhibit No. 39 for identification which I have handed to you and refer to Page 966 of that proposed exhibit, which is entitled, "Panhandle Eastern Pipe Line Company and Subsidiary Companies—Cost of Business Development" and will you note at Lines 1 to 29 thereon are set forth certain statements purporting to represent payments to utility companies which, according to Line 30, represent a total of such payments of $553,992.48.

Can you tell us what disposition of these various amounts was made on the books of the Panhandle Eastern Pipe Line Company, that is to say, were these items charged to expense or were they capitalized?

A. Before answering, may I properly identify what [fol. 7052] has been submitted to me as Exhibit No. 39. It is not so marked as you gave it. I am of the opinion that it is what I know to be Exhibit No. 39 and I believe your question spoke of the title of the exhibit generally being "Cost of business development" whereas it appears that the correct title of the entire exhibit is "Reproduction Cost New of Property Plant and Business as of June 30, 1941."

Q. Yes, but the title I read is shown on Page 966.

Mr. Wheat: Your question, Mr. Gorman, was whether these items—what was that page?

Mr. Gorman: Page 966.

Mr. Wheat: Were capitalized or charged to operations?

Mr. Gorman: That is right.

The Witness: The witness' memory at the moment with respect to virtually all of the items shown on Page No. 966 of Exhibit No. 39 is that the charges they represent were first registered against gas sales and purchase contracts and have been held in that account subject to gradual amortization.

Now, it may very well be that some of the smaller items, such as that shown on Line 3, amounting to $152.50 or that shown on Line 4 amounting to $651 or other items of that general nature may not have first gone into the account Gas Sales and Purchase Contracts.

As a matter of fact, they may never have been regis-
[fol. 7053] tered as a charge against that account.

Does that supply the information you seek, sir?

By Mr. Gorman:

Q. Partially so.

A. We may as well identify these two sheets, don't you think?

Q. If may be well, yes. You are referring to certain working papers?

A. To two working papers which counsel just presented to the witness?

Q. Yes.

A. They are copies of Pages 13 and 14 to this witness' working papers with respect to Exhibit No. 52.

Q. Do those working papers, Mr. Watkins, show that of this total amount of $553,992.48 only $33,130, representing the amount shown at Lines 3 to 11, inclusive, on Page 966 of this Exhibit No. 39, have been charged to operating expenses on the books of the Panhandle Eastern Pipe Line Company?

A. These working papers do not make such showing, that is, Pages 13 and 14 of the working papers to Exhibit No. 52.

Q. Do you have any other working papers or any other information which would permit you to answer the question I have propounded?

[fol. 7054] A. My attention has been called to a memorandum which apparently was supplied during the course of the examination of certain of the company's records by some member of the staff of the Commission during one of their visits to our office at Kansas City, which seem to indicate that some of the $553,992.48 shown on Line 30 of Page No. 966 of Exhibit No. 39 had been charged to operating expenses and that $520,862.48 of the same total amount had been charged to other gas sales and purchase contracts, but notwithstanding the treatment which may

have been given to these items on the company's books, they do represent payments made to utility companies as shown on Line 1 of Page 966 of Exhibit No. 39.

Q. Yes, but the amount of $520,862.48, which you have just supplied, has been capitalized and charged to the account of gas plant, gas sales and purchase contracts, has it not?

Mr. Wheat: I wonder if you would give me that figure? I want to get it.

Mr. Gorman: $520,862.48, which account is presently being annually provided for looking to a subsequent and complete amortization, is it not?

The Witness: That is true and, Mr. Gorman, there is no contention on the part of the company, as far as I know, that some portion of the total $553,992.48 shown on Line 30 [fol. 7055] as total payments to utility companies has not been charged to operating expenses through amortization since the creation of those charges on the company's books.

There has been testimony, I believe, on questions asked heretofore in these proceedings with respect to that amount, $553,992.48, and an amount of $365,334.99 shown on Page 16 of the working papers to Exhibit No. 52 which represented the balance at June 30, 1940, of a portion of the item shown on Page 966 of Exhibit No. 39 comprising the total $553,992.48.

By Mr. Gorman:

Q. I might state that the questioning with respect to the items shown on this page, according to my present recollection, was directed to Mr. Biddison who offered this Exhibit No. 39.

As I recall Mr. Biddison's testimony, he was not familiar with the charges on the books of the company with respect to the items which make up the total shown at Line 30 on this page.

It is also Mr. Biddison's testimony that he merely took these figures, as furnished to him by the Accounting Department of the Panhandle Eastern Company and, in further explanation, I should like to state I am merely inquiring of you and trying to determine for this record pre-

cisely what portion had been previously written off by the [fol. 7056] company as a charge to operating expenses and what portion was capitalized in the gas plant account of the company and charged to the account for gas sales and purchase contracts.

Now, as I understand, your testimony presently is and in accordance with the best information available to you at the moment, that $33,130 of the total of $553,992.48 was written off as a direct charge to operating expense and that the balance of $520,862.48 was capitalized in the gas plant account, is that correct?

A. Well, without raising any particular objection to your characterization "written off" and "capitalized", I think that is substantially a correct statement.

Q. Yes.

A. We are speaking about the original treatment of these items, that is, at the time they first came into existence, not with respect to what has happened to them since they were first so disposed of.

Q. By that, are you referring to the fact that there has been certain amortization applied to the amount which was capitalized?

A. To illustrate what I mean, if you will refer to Page No. 15 of Exhibit No. 52—

Mr. Wheat: (Interposing) You mean of these working papers that counsel has now presented to you for consideration?

The Witness: That is correct—you will observe there [fol. 7057] that the total amount of payments made, on account of contracts with Michigan Consolidated Gas Corporation, agents assisting in the procurement of such contracts, with respect to the change-over cost by Michigan Consolidated Gas Company and contributions in connection with the acquirement by that company of house heating customers, was $438,000, a portion of which was applicable to Michigan Gas Transmission Corporation.

The residue was applicable to the affairs of Panhandle Eastern Pipe Line Company and constitutes the $371,076 shown opposite Line 13.

Mr. Wheat: You mean Line 13 on Page 966 of Exhibit 39?

The Witness: Correct.

Mr. Wheat: Thank you.

The Witness: Now, at June 30, 1941, there had been $113,214.72 of the $371,076 applicable to Panhandle Eastern amortized through gradual charges to operating expenses so that the portion of the balance in the gas sales and purchase contracts to which the original amount $371,076 had been charged, amounted on June 30, 1941, to $257,861.26.

That is intended to illustrate what has happened to the original charges, either to gas sales and purchase contracts or to operating expenses subsequent to the making of such original charges.

By Mr. Gorman:

[fol. 7058] Q. Yes.

A. Now, if I may proceed slightly further, the items shown on Page 966 of Exhibit No. 39 on lines 1 to 11 and possibly some of the smaller items elsewhere on that page constitute the $33,130 previously referred to here this morning and are not a part of Pages 15 and 16 of the working papers to Exhibit No. 52. But those working papers very clearly show a total amount of original charges of $627,905.55, a portion of which was applicable to the affairs of Michigan Gas Transmission and show that, of that amount, Panhandle Eastern Pipe Line Company had amortized at June 30, 1941, $155,527.49 so that at June 30, 1940—

Mr. Wheat: (Interposing) 1941?

The Witness: That is correct. The working papers, however, have a column headed "June 30, 1940", which is apparently in error. The balance was $365,334.99 of the original $520,862.48.

There is no secret that there has been amortization of those amounts since they were first charged to gas sales and purchase contracts.

By Mr. Gorman:

Q. Yes. Is there presently any proposal on the part of the company or on your own part to change in any way the charges which have been made to these various items [fol. 7059] on the books of the company?

A. Not unless and until there be some circumstance, such as the cessation of deliveries under any of the contracts, for whatever reason, to bring such condition about or unless the company, at some time in the future were to adopt a policy of disposing of the entire balance.

Further than those possibilities, it would seem that our plan of amortization would continue.

Q. You spoke of the possible change in the event that deliveries were ceased under any one of these particular contracts to which any of these various charges are applicable.

What would be done in that event with such amounts?

A. I do not know that I am in position to definitely state. I think we would have to learn something of the conditions that existed at that particular time.

Now, I do remember that with respect to one of the charges made to gas sales and purchase contracts, possibly that shown on Page 16 of the working papers to Exhibit No. 52 which is there characterized as "Partial Refund of Contribution for Line Extension to Serve Industrial Customers (Ingram-Richardson)" that by Voucher No. 10 54 entered in the year 1940, a credit of some $2,500 was made to this account.

The reason for that, if the witness' memory is accurate, [fol. 7060] is due to the fact that the arrangement with the customer in this instance was such that if the total amount of gas purchased over the period covered by the purchase contract under which such sales were being made was not sufficient at some stipulated rate in the contract to equal the amount of the original advance made jointly to that company by Panhandle Eastern, Michigan Gas Transmission and possibly one of the Indiana companies, that the unamortized portion would be refunded and the amount the witness has referred to represents the portion of such residue applicable to the affairs of Panhandle Eastern.

Such things as that could give rise to changes here.

Q. Of course, just exactly what disposition might conceivably be made in the future of these various items is not presently known to you?

A. So far as the records are concerned, that is quite correct.

Now, if I may make this further remark: The request that came to the company with respect to certain items shown on Page 966 of Exhibit No. 39, I am now very much of the opinion, was improperly interpreted by those of us who prepared the information or had it prepared.

Were such a request to be made of this witness today, in the manner in which it was originally made—

Q. (Interposing) By whom was such request made?

[fol. 7061] A. (Continuing) —the total would have been on the order of $2,400,000.

Would you like an explanation of how that might be arrived at?

Mr. Culton: He injected a question there.

By Mr. Gorman:

Q. I was just going to repeat that. I was going to ask, when you referred to a request of your or other accounting officials of the company, by whom was such request made?

A. The record in the proceedings, Mr. Gorman, very clearly shows that Mr. Biddison testified that the information shown on Lines 1 to 30 on Page 966 of Exhibit 39 was supplied to him by officers of the company.

It happens that your present witness is the officer who supplied it. The request for the information came from Mr. Biddison and the request, if I recall it, ran something along this order: "Will you please prepare and furnish me a statement showing payments to utility companies?"

Now, I am probably at fault by not having examined that request a little bit more than my memory at this moment tells me I did examine it. There was and still is on the books of the company two amounts having to do with gas sales and purchase contracts; one of which, at June 30, 1941, as shown by Line 40 on Page 2 of Exhibit No. 52 was $2,930,286.40.

The other amount, as shown by Lines 43 and 44 of the [fol. 7062] same page of the same exhibit was $365,334.99.

Now, when the question was put to your witness with respect to this amount, properly or improperly the witness connected it with the original items which gave rise to the balance of $365,334.99 shown opposite the caption on Lines 43 and 44 on Page 2 of Exhibit No. 52.

It did not dawn on me then and I did not awaken to the fact that perhaps what Mr. Biddison was requesting was the total amount of such payments from the very inception of the company until I had occasion to take a quick glance at a portion of his testimony.

So, as I stated before, had the question been put subsequent to such knowledge on my part or had my thoughts at the moment been a little bit more mature than I now see they were, the total we would have given to Mr. Biddison would have been on the order of $2,408,000 and I should be very glad to supply you what seems to me to be the items that constitute that total, if you wish them.

Mr. Gorman: Will you read that answer back, Miss Reporter, please?

(Whereupon, the last answer was read by the reporter.)

By Mr. Gorman:

Q. Will you please refer us to those items which constitute the total of $2,400,000?

A. Refer you to them where?

[fol. 7063] Q. Well, you said you would furnish that information. I was wondering if it was shown on any of these exhibits.

A. It is not, as such, but the detail of the items is a part and parcel of the company's records. Not all of the things that have been shown here or will be shown here are a minute part of the exhibits which have been or may be presented in the proceedings, I do not believe.

Q. Are such amounts that constitute the total of $2,400,000 shown in the balance sheets, Exhibit No. 48, or in the income statement, Exhibit No. 49, or in the gas plant account, Exhibit No. 52?

A. Yes, sir, they are.

Q. Very well. Will you please proceed to give us an explanation of those items which you are referring to?

A. The total, $2,408,623.50 is comprised of the following items:

In connection with contracts acquired by assignment from Missouri-Kansas Pipe Line Company as of September 1, 1930 (amount at which carried on the books of Missouri-Kansas Pipe Line Company)— $1,106,250.

Notes issued for purchase of Missouri-Kansas Pipe Line Company stock used in connection with obtaining gas sales contracts— $556,000.

Amount paid Missouri-Kansas Pipe Line Company to [fol. 7064] reimburse them for expenses incurred in obtaining gas sales and purchase contracts— $75,000.

Premium paid for contract bond in connection with obtaining gas sales contracts— $1,000.

Payment to agents for fees and expenses in connection with obtaining gas sales contracts— $9,500.

Traveling expenses of F. P. Parish in connection with obtaining gas sales contracts— $786.30.

Payroll and expense incurred in connection with obtaining gas sales contracts— $12,703.04.

Those items make a total of $1,761,239.34 and comprise a part of the $2,930,286.40 shown opposite Line 40 on Page 2 of Exhibit No. 52.

Then there were other gas sales and purchase contracts consisting of the following:

Costs of securing gas sales contracts, contributions to change-over costs, new house heating customers' campaign and line extension costs, and so forth, in connection with gas sales contracts acquired since August 31, 1935, segregated as:

Costs to June 30, 1941— $520,862.48 and

Costs July 1 to November 30, 1941— $6,724.

Making a total of— $527,586.48.

Then there were further costs of attaching business, originally charged to fixed capital account then in use as [fol. 7065] No. 203, separated between:

Market survey— $28,932.74

Other costs— $57,734.94

Those two items aggregate— $86,667.68.

Then there were costs charged to operating expenses as previously testified represented by disbursements for cost of business development in Missouri and Illinois and house heating customers' campaign amounting to— $33,130.

The total of all of which is— $2,408,623.50.

Q. Does that complete your answer?

A. Yes, sir, it does.

Q. And according to your previous statements, had you known at the time you prepared the information at Mr. Biddison's request instead of furnishing the amounts totaling $553,992.48 as shown at Page 966 of Exhibit No. 39, you would have furnished the items which you have just read into the record totaling $2,408,623.50, is that correct? A. Yes, that is correct.

Now, the reason for the apparent misunderstanding, Mr. Gorman, is that no explanation was given, as I remember, as to the use and even had Mr. Biddison stated the use he intended to make of the material or if he had made such an explanation, the witness would probably have attached no great significance to it.

The record has clearly shown the two amounts we have [fol. 7066] referred to this morning on Lines 40, 43 and 44 on Page 2 of Exhibit No. 52. They were there for any one to treat with as they saw proper.

You can appreciate that company officials would not question Mr. Biddison necessarily as to the exact purpose he expected to use material he was requesting, no more than it would to seek to have the representatives of this Commission who were in our office at about the same time tell us what they proposed to do with the information they requested and we refurnished.

Q. Does that complete your answer? A. It does.

Q. Mr. Watkins, your previous references to Mr. Biddison's request indicate that such request was communicated to you in writing, is that correct?

A. No, sir, I do not believe I intended to leave any such inference. Mr. Biddison did make some requests to us

in writing. I do not recall at this moment just exactly what they were.

Mr. Biddison was in our office a very great portion of the time during the preparation of some of the material that he has introduced in these proceedings. Even your own staff, sir, did not present their requests in writing. I doubt very seriously if time would have permitted them to have reduced to writing all of the requests they made or [fol. 7067] [or] may hereafter make.

Q. That is entirely foreign to the question here.

A. The same thing applies to Mr. Biddison.

Q. Did Mr. Biddison furnish a written request for this information?

A. I do not recall.

Q. Will you undertake to determine from your records whether or not he did furnish such a request?

A. I shall.

Q. And if he did, will you furnish us with copies thereof together with any reply that you made thereto?

A. I think I can develop that information for you sometime during the course of a rest period in the next day or so.

Q. Very well.

Now, when you refer to these items under the designation of "gas sales and purchase contracts", does that mean sales by the Panhandle Company to its customers and a purchase by the Panhandle Company of producers or others of a source or supply of gas?

A. Either Panhandle Eastern Pipe Line Company or its subsidiary companies.

Q. They are differentiated then, that is, there is a valuation of sales contracts on the one hand and of gas purchase contracts on the other hand?

[fol. 7068] A. No, they are commingled. There is no distinction between the amounts which occur on the books with respect to gas sales contracts or gas purchase contracts except in so far as some of the charges made to either of these accounts originally represented disbursements for a specific purpose.

I believe, Mr. Gorman, if you will permit the suggestion and without attempting to tell you what you should do, we

probably would get along a little faster and our record would be a little bit clearer if we treat with these items in two parts: If we think first of the $2,930,000-odd item and then of the $365,000-odd item, both of which are shown in Column M on Page 2 of Exhibit No. 52.

I only offer that suggestion, sir for whatever help it may be.

Q. Yes, I think we must necessarily do so.

A. And I believe, if you would permit me to kind of go along in my own fashion, I probably could help you a bit on the $2,930,000-odd item. That is to say, if you want history in the record as to how it came into being and, generally, what it represented.

Q. I think we must get that, but first may I ask you a question or two, Mr. Watkins?

A. Certainly.

Q. Does this $2,930,286.40 item to which reference has [fol. 7069] been made and which, as stated before, is shown at Line 40 of Page 2 of Exhibit No. 52, the particular mention being shown in Columns H to M, both inclusive, for the years 1936 through 1941, that is, through June 30, 1941.

That refers, does it not, to gas sales and purchase contracts acquired from the Missouri-Kansas Pipe Line Company at August 31, 1930?

A. Not necessarily so. My general explanation, if such an explanation is permitted to be made, would cover that point.

Q. Very well, maybe it would expedite things, Mr. Watkins, if you gave us what you consider to be your explanation of that item and, as you indicated before, confining it solely to the item we are now discussing.

A. When I first became connected with Panhandle Eastern Pipe Line Company and noticed an account on its books, "Gas Sales and Purchase Contracts", amounting at that time to something over $3,000,000, I viewed the account with askance.

It seemed to me, from a very casual observation, that it might be the result of the effort on the part of someone to breathe life into something that did not exist, but, at

that time, I simply passed it out of my mind as being something that, when time permitted, I would find out what made it click and, believe you me, I have found out a good [fol. 7070] deal about it during the past ten years, and I turned my attention at that time to matters that seemed more important.

Now, as the years have passed, this is a summary of the things that have weeded themselves out of a great number of many other things with respect to this particular account.

First let's go back to a certain contract that has been mentioned heretofore in these proceedings of September 17, 1930, by virtue of which Panhandle Eastern Pipe Line Company came into possession of some $19,000,000-odd of assets, the detail of which, I believe, is already in the record, and refer, as well, to Table No. 2 of the report by Mr. M. C. Steele of the Federal Trade Commission in response to Senate Resolution No. 83, the exact number of which I believe you, Mr. Gorman, supplied in the record one day last week.

Q. Yes, that is Volume 84-1 of the Federal Trade Commission Report.

A. And note on that table that there apparently was, on the books of Missouri-Kansas Pipe Line Company, an amount charged to gas contracts aggregating $926,250, and that when such amount was recorded on the books of Panhandle Eastern Pipe Line Company, it became $2,398,402.19.

The company's records with respect to the determination of the amount of $2,398,402.19 show action on the part of [fol. 7071] the Board of Directors at a meeting held February 3, 1931, and without attempting to criticize in any manner the action by the Board of Directors at that particular time, it may have proven improvident and certainly troublesome that certain language was used in connection with that resolution because it had to do with statements concerning valuation.

The language might better have run to a statement that the action of the officers was assigning certain amounts to certain things recorded as a result of the contribution by

Missouri-Kansas Pipe Line Company was, in all respects, approved, ratified, and confirmed, but that was not done.

I find, in my search through the company's records and affairs and questioning of anyone that had anything to do with any of the transactions that gave rise to this amount, in so far as I was able to find any such individuals and I could not tell you at this moment who they were, that there apparently was a meeting of minds between a seller and a buyer in September, 1930, with respect to amounts at which one-half of the stock of Panhandle Eastern Pipe Line Company, purchased by Columbia Oil and Gasoline Corporation, were to be determined and it would appear that to an extent, at least, the entry giving rise to the $2,398,402.19 of gas sales and purchase contracts took into consideration such a viewpoint or such an interpretation of the agreement between those two parties.

[fol. 7072] Now, that might be characterized by some as a "writeup". Frankly and honestly, I do not know what a writeup is. I have searched the Authorities and I do not find any specific definition of a write up, nor am I sure that such a statement can be made with respect to the recordation of an amount at which some asset is carried, presented by a donation, but be all that as it may, I have found this with respect to the $2,398,402.19, that at the time an entry was made in 1930 by Journal Voucher J-2, 1930, there was apparently $1,106,250 on the books of Missouri-Kansas Pipe Line Company representing disbursements made with respect to its affairs so that the remainder added to those disbursements by Panhandle Eastern Pipe Line Company in this original entry and by the Board of Directors at the action concerning which this witness has just referred ran to the order of $1,292,152.19 rather than the amount of $1,472,152.19 as shown by Mr. Steele's Table No. 2 as heretofore identified.

The difference between those two figures may have been the result of some adjustment made on the books of Missouri-Kansas Pipe Line Company subsequent to September, 1930, which is a fact that I have no knowledge whatever about and my statement with respect to that is pure conjecture.

Q. May I interrupt to get the statement with respect to those figures which you just read?

* * * * * * * *

[fol. 7073] The Witness: During the year 1930, Panhandle Eastern added to the $2,398,402.19 or rather had had some previous expenditures which raised the total of the charges to the gas sales and purchase contracts at April 30, 1932, to $3,053,391.53.

This total is without respect to an amount which this witness referred to in his original testimony of some $10,300,000 that went into the account in 1930 and was reversed, so to speak, in 1932 so that, if I may, we will simply disregard that total of that amount at this time.

* * * * * * * *

Q. That was a valuation figure, was it not?

A. That is correct. The additions were made up of the totaling items—

Q. (Interposing) You are speaking about the additions—

A. (Continuing) —the additions raising the total from $2,398,402.19 to the total at April 30, 1932, of $3,053,391.53. They consisted of $420,000 which represented the cost of 15,000 shares of Missouri-Kansas Pipe Line Company stock at $28 per share in payment of which Panhandle Eastern Pipe Line Company issued, in compliance with action taken by its Board of Directors at a meeting held May 23, 1930, [fol. 7074] certain 5 year, 6 percent note or notes, and also an amount of $136,000 to record the issuance of a 7 percent bearer note with no maturity mentioned in exchange for 4,000 shares of Missouri-Kansas Pipe Line Company stock at $34 per share.

Apparently the first of these two transactions had to do with contracts wtih Illinois Power and Light Company and Missouri Power and Light Company or it may have been that the latter of the two items had something to do with those contracts.

There was a cash payment made by Missouri-Kansas Pipe Line Company to the American Coke and Chemical Contracting Company to reimburse them for their expenses in securing sales contracts with Keystone Steel & Wire

Company, Peoria Malleable Castings Company, Caterpillar Tractor Company and the R. Herschel Manufacturing Company.

There was a further disbursement for insurance premium on contract bond furnished in connection with the Keystone contract amounting to $1,000. In addition, there were payments made to American Coke and Chemical Contracting Company for engineering fee and/or expenses in connection with the securing of the sales contracts with Keystone Steel and Wire Company, Peoria Malleable Castings Company, Caterpillar Tractor Company and the R. Herschel Manufacturing Company, as well as a small item of expenses amounting to $786.30 of one of the officers of the [fol. 7075] company.

Q. Was that not Mr. Parish?

A. That is correct.

Then, for the period from September, 1930, up to and including sometime in 1932, there were expenses, general payroll expenses, attorneys' fees and so forth, amounting to $42,703.04, all of which we added to the original amount, $2,398,402.19, which aggregated $3,053,391.53.

Now, subsequent to those transactions and I believe it was about the early part of 1936, the small amount of amortization recorded on the company's books with respect to gas sales and purchase contracts was applied as a reduction of the addition between the $2,398,402.19 and the total $3,053,391.53 so that as you observe in Column H on Line 40 of Page 2 of Exhibit No. 52; the balance was reduced to $2,930,286.40 which is the amount now being amortized in conformity with the Certificate of Incorporation of Panhandle Eastern Pipe Line Company at the rate of $24,419.05.

Is that sufficient detail before the witness proceeds, so far as the make-up of the charges are concerned?

Q. Yes. Of course, I anticipate discussing with you somewhat more in detail the several charges which you have mentioned.

A. Yes, I rather anticipate that myself.

Q. Yes, I would imagine so.

[fol. 7076] A. Now, to get back to the general viewpoint and description of the sum total of the items, it appears that there was received as a result of the contribution made by Missouri-Kansas Pipe Line Company, among other things, gas purchase contracts representing some 50,000-odd acres of gas-producing lands or lands which may not have become producing but, at any rate; there was apparently that number of acres involved and there were some 23 or thereabouts gas sales contracts involved.

Now, sales are not at this moment being made under each of such contracts but sales are being made to each of the purchasers represented by such contracts, either in the form of new contracts with them or in the form of rate schedules, so that, as a result of the sales in the manner described from September 30, 1930, to or about December 31, 1940, there has been a total revenue received by the company somewhere in the neighborhood of $15,000,000.

Q. Do you mean from these—

A. (Interposing) From these companies or their subsidiaries under the contracts that were received as a part of the donation from Missouri-Kansas Pipe Line Company or from new contracts executed with them or from sales made to them under rate schedules.

Now, the new contracts, and please do not misinterpret that characterization because that does not mean a new contract with respect to some other uses necessarily but [fol. 7077] it might have well developed that there were circumstances making desirable the execution of a contract in some slightly different form. Regardless of how this total of $2,930,000-odd came into existence or regardless of whether or not a part of it could properly be described as a write-up, if one chose to view it from that standpoint, there was some substantial importance in the thing received by Panhandle Eastern Pipe Line Company without cost to it and it should be represented in its records and affairs in some manner.

Now, if I may go back for a moment to my original statement, you probably drew the conclusion and properly so, that at the time this witness first noticed those amounts on the books of the company, he was of the opinion that perhaps there was nothing there but, I must say, sir, over the

width and breadth of my experience with the company and my knowledge of the benefits received from the rights represented by these so-called charges to gas sales and purchase contracts, whether they were received by Panhandle Eastern Pipe Line Company as a contribution or by any amount at which it was recorded on its books or by subsequent additions, that if I were qualified to properly place a value on such amount, it would be far in excess of any amounts at which those items are carried on the books of the company and that, I believe, sir, finishes my statement. [fol. 7078] Q. By your last statement, you indicate, do you not, that you did not consider yourself qualified to so evaluate these gas sales and purchase contracts?

A. I am not attempting to make any such evaluation, sir. I believe I have sufficient information concerning them to speak something with respect to their value.

I have observed the performance under them over all these years. I have known what the income from them meant to the company when dollars were far more scarce than they are at the moment and I believe I do have some very definite knowledge as to what they have meant to Panhandle Eastern Pipe Line Company.

I am not an expert with respect to the valuation of such items and I hope that is satisfactory for your purposes.

Q. By your explanation, Mr. Watkins, you have not attempted to indicate in any way, have you, that the various totals which you have read aggregating, in 1935 and for several years prior thereto, $3,053,394.53 as shown in Columns D through G on Page 2 of Exhibit No. 52 at Line 40 and the total aggregate amount of $2,930,286.40 as shown on this same line in Columns H through M as representing, in toto, expenditures made in connection with gas sales and purchase contracts either by Mo-Kan or by the Panhandle Eastern Pipe Line Company?

A. I am not so sure I understand just what you mean [fol. 7079] there.

Q. To put it succinctly, has your statement indicated in any way that these amounts to which I just made reference represent expenditures actually made by Mo-Kan or Panhandle Eastern Pipe Line Company?

A. I have no knowledge, Mr. Gorman, of the records of Missouri-Kansas Pipe Line Company. I can only speak

with respect to that as to the information that I have gleaned in searching out data with respect to this.

Q. Yes.

A. I am conscious of the fact that certain representations with respect to those expenditures have been made in certain reports filed in several different matters, so that so far as Missouri-Kansas Pipe Line Company is concerned, or the portion of such expenditures made by that company, I am not qualified to state anything with respect to the actuality of such expenditures.

So far as Panhandle Eastern Pipe Line Company is concerned, to the extent that it represents that it has made any such expenditure, I shall be very glad to assist you in any manner that I can.

Perhaps this should be added to what has already been said: Panhandle Eastern and its subsidiary companies do not follow the custom or practice of charging to an asset account, capitalizing it, as you put it, all the cost incident [fol. 7080] to the acquisition by it of either gas sales contracts or gas purchase contracts.

As you may well imagine over the years we acquire a vast number of gas purchase contracts and if we were to have accumulated the cost of acquisition of all of those we would have had a sum far in excess of what is shown on the records.

Furthermore, gas contracts acquired in the ordinary course of business that require no contribution or payment to the selling company or to another company who may be selling to the distributing company, are not capitalized. There is a tremendous amount of expense incurred by the company in such effort that goes through operating expenses and does not necessarily become a part of a charge to any asset account and held for any gradual amortization.

I should not want the record to indicate that this witness has categorically stated that the amounts shown by any exhibits that he has presented represent all the dollars actually expended by Panhandle Eastern and its subsidiaries for this particular purpose. Are we clear there?

[fol. 7081] Mr. Wheat: Mr. Watkins, in connection with the statements that you have been making this morning, have you prepared a three-page document entitled, "Statement of Cost of Business Development—Period from April 1, 1932, to June 30, 1941", which contains details of the total of $553,992.48 which, I believe, is the item which you gave to Mr. Biddison?

The Witness: I have prepared such a statement, or, rather, such a statement has been prepared under my supervision.

Mr. Wheat: And is the document which I now show you the statement to which you have just referred?

The Witness: It is.

Mr. Wheat: Mr. Examiner, it occurs to me, and I have discussed the matter with Mr. Gorman, that it might be advisable at this time to have the three-page document marked for identification in this proceeding.

Trial Examiner: This will be marked for identification as Exhibit No. 153.

(The document referred to was marked Exhibit No. 153 for identification.)

By Mr. Gorman:

Q. Mr. Watkins, in your statement of a short time ago with respect to these items we have been discussing, you referred to Table No. 2 as contained in the report prepared by Mr. M. C. Steele, an Examiner of the Federal Trade Commission, which has previously been identified in the [fol. 7082] proceeding as Exhibit No. 6575 as contained in Federal Trade Commission Report 84-1 to which reference has been made previously, which table is shown at page 1195 of this volume, and I believe you also referred to the difference between the amount which is purported to have been carried on the books of the Missouri-Kansas Pipe Line Company for gas contracts totaling $926,250, which was subsequently recorded on the books of the Panhandle Eastern Pipe Line Company at a total of $2,398,402.19.

Now, you made some reference to the difference in these figures shown on this Table No. 2, which is purported to be

$1,472,152.19 as distinguished from a total of $1,292,152.19 which you read into the record.

A. What was the last amount, please?

Q. $1,292,152.19. Isn't that correct?

A. I believe there must be some confusion, Mr. Gorman. First, the witness has previously identified the table from which you quoted in the Federal Trade Commission report as being substantially the same as Table No. 2 on page 17 of Mr. Steele's report with respect to Panhandle Eastern, has he not, so if you refer to that table and the witness refers to this, we are unquestionably speaking about the same table?

Q. Yes, they are identical tables, Mr. Watkins.

A. Now, I believe the thing that is just slightly confus-
[fol. 7083] ing here is this: At the time Panhandle Eastern made the entries recording the gas sales and purchase contracts acquired from Missouri-Kansas Pipe Line Company, it apparently had knowledge of the fact that Missouri-Kansas Pipe Line Company carried those amounts on its books at $1,106,250 rather than the $926,250 referred to by Mr. Steele and, in the proceedings this morning, the witness has stated that, while there was such a difference, no one of the people connected with Panhandle Eastern Pipe Line Company had any knowledge as to the exact thing that gave rise to the difference.

There may very well have been an adjustment of some sort made by Missouri-Kansas Pipe Line Company on its books subsequent to September 30, 1930, but before the examination referred to in Mr. Steele's report, or whoever made the report, with regard to Missouri-Kansas Pipe Line Company.

Q. Will you please refer to page 19 of this report of Mr. Steele to which you are referring. Do you note on that page that there is contained a summary of gas contracts as recorded on the books of Missouri-Kansas Pipe Line Company? A. I do.

Q. Do you note also that there is contained in such summary the following statement?

"Less portion of gas contracts acquired at organization and credited to capital surplus written off, $180,000", which
[fol. 7084] results, when deducted from the total of $1,

106,250, in the total stated ledger value of gas contracts as of August 31, 1930, of $926,250, which is the same amount referred to in Table 2 on page 17 of that report?

A. Those facts are shown on page 1196 of Mr. Steele's report with respect to Panhandle Eastern, but the witness wishes to differ in at least two directions with the material shown there.

In the first instance, I must make it clear that in any statements I have made during the proceedings this morning, or heretofore for that matter, with regard to gas sales and purchase contracts, and the amount at which they are carried on the books, that I have in no wise intended to give any indication that it was my view that the ledgers or the records state values.

Secondly, although I do not know the exact date of the adoption of Senate Resolution No. 83 nor do I have at this moment the exact date of the examination by Mr. Steele or any other member of the staff of the Federal Trade Commission of the books and records of Missouri-Kansas Pipe Line Company nor, for that matter, do I recall the absolute dates upon which such examination was made by Mr. Steele and his assistants of the accounts and records of Panhandle Eastern Pipe Line Company, it is still my opinion, from the information I have thus far been able to determine with respect to the $1,106,250 item or the $926,
[fol. 7085] 250 item, as shown in this table, as you have stated, that the adjustment could have very well been made subsequent to the date it was recorded on the books of Panhandle Eastern Pipe Line Company or, for that matter, subsequent to August 31, 1930, the date shown on page 19 of the report to which we have just been referring.

Q. By that do you intend to create the inference that, insofar as your knowledge goes, such write-off of $180,000 was not made prior to August 31, 1930, as of which date the property was transferred to the Panhandle Eastern Company?

A. No, sir, your statement is wrong in two respects. First, the witness makes no effort to characterize the difference of $180,000, I believe it is, as a write-off. Mr. Steele does that, and Mr. Steele speaks for himself.

Secondly, the position the witness has been trying to take and show you is that at the time Panhandle Eastern

Pipe Line Company made the entries recording on its books amounts at which it was to carry the sum total of approximately $19,300,000 of assets received as a capital contribution from Missouri-Kansas Pipe Line Company, the amount of $1,106,250 was based on such entries. Whether that be correct or not, is an entirely different thing.

Q. Is it true that the first recordation on the books of Panhandle Eastern Company of this item was in the amount of $2,398,402.19?

[fol. 7086] A. Yes, sir, that is correct.

Mr. Wheat: May I ask, Mr. Watkins, at what date that entry was made? Do you have that?

The Witness: I do not have the actual date. My remembrance is it was the very first journal entry made by Panhandle Eastern Pipe Line Company, or perhaps the second entry made by Panhandle Eastern Pipe Line Company, at the time all of these assets were received by it as a capital contribution from Mo-Kan back in the year 1930.

Mr. Wheat: In other words, it was synchronous with that transaction, is that true?

The Witness: Quite.

Mr. Wheat: Yes, thank you.

Pardon me, Mr. Gorman.

The Witness: It can very easily be found in the company's records.

By Mr. Gorman:

Q. Do you know whether or not, Mr. Watkins, this amount of $2,398,402.19 represented a valuation made by the Board of Directors at a board meeting held on February 3, 1931, of gas sales and purchase contracts acquired from the Missouri-Kansas Pipe Line Company as of August 31, 1930, without consideration being paid therefor?

A. Mr. Gorman, our entries are actually a little ahead of the Board of Directors' in this instance. The entries [fol. 7087] were made in 1930 and the meeting of the Board held on February 3, 1931, and in the manner the witness has heretofore testified. Whether the Board's use of language in its determination was provident or improvident, the Board did authorize or approve or ratify or

confirm, if you please, the making of what the Board said were certain valuations, but, regardless of what the Board then said or may thereafter have said or may in future say with respect to valuations, it is the position of this witness that books, records, and accounts cannot, except by mere coincident, show valuation, and I doubt if such a coincidence can ever exist.

Q. Well, who, according to your knowledge and information, determined the amount which was, as you stated, set up on the books of the company prior to this so-called valuation by this Board of Directors at their meeting on February 3, 1931?

A. May the witness have this understanding with you, sir, and for the record, that he believes will simplify the response to the questions, that in any sense that you refer to this as a "valuation" and in any response this witness gives in respect to this item, he will not be agreeing with your statement that it does represent value. If we can have that understanding, it will remove the necessity of any qualifications of my answers hereafter as to this item.

Q. That may be so understood but, in that connection, [fol. 7088] if you dislike the term "valuation", what would be your preference in the matter?

A. The amount assigned to this particular item at which it shall be carried on the books of the company.

Q. Which, in your opinion, would have no relation whatsoever to value?

A. This witness has repeatedly stated, sir, that he does not believe that books and records can ever show value.

Q. Yes. With that understanding, can you answer the question which I previously put?

A. My investigation and my remembrance of the multiplicity of things that have passed through my mind in connection with the original entries and the basis upon which such original entries may have been reached or the basis upon which the seller and purchaser may have had some agreement, is that, whoever drafted the original entries recording these items was interpreting, if you please, to the extent that the amounts included in such original entries did not actually represent amounts on the books of Missouri-Kansas Pipe Line Company or its subsidiaries, what he believed was the amount at which the so-called gas sales and purchase contracts were included in the agreements or

discussions before or after the September 17, 1930, contract.

As to the exact individual who made the entry, I am in about as big a fog as you are. I should like to ask that [fol. 7089] gentleman some questions myself, but he seems to be as nonexistent as a dodo.

Does that answer your question, sir, with respect to the origin of the amount that became a part and parcel of the original entry?

Q. I think it does, yes.

And from your last statement, I infer that you have, in times past, made an effort to ascertain the name of the individual who, shall we say, set up the various amounts which were originally entered on the books of the Panhandle Company as representing the recorded value of the property and other assets acquired from the Mo-Kan Company?

A. Prior to the action on February 3, 1931, by the Board of Directors?

Q. Yes.

A. I may have confused you slightly there. The witness believes he could actually ascertain the person who did the mechanical job of making up the entry after somebody else had arrived at what the entry should be.

Q. You mean the actual one who made the entry on the books?

A. I think that person could be found and, as a matter of fact, it is quite probable the entry itself would show his initials on that entry, because our entries are rather full in that respect. As a matter of fact, all of the entries, [fol. 7090] all of the journal entries made by the company since I have been connected with it, I believe, bear my initials, so that I would have to have responsibility for that. Back in the early stages of our affairs, we may not have been so careful in that respect or we may now be too careful.

The gentleman I should like to reach to clear up a few things in my mind, or should have liked to have been able to reach over the past years to clear up a few things in my mind, or gentlemen, if you please, if such were the condition, were the person or persons who determined this

amount of $2,398,402.19 which I now believe is very, very inadequate.

Q. Yes. Well, of course, we are both speaking about the same people.

Do I understand that you have made, in the past, some effort to ascertain the name or names of this individual or these individuals who made such determinations, and by that I am speaking of those, other than the ones who actually made the bookkeeping entry?

A. Yes, we have desperately tried to learn as much as we possibly could about this item. Experience has taught us possibly more about what the item is worth to the company than had we been able to question anyone who had to do with the original entry.

Q. Despite whatever conclusions you may have subsequently reached, they have not resulted in a restatement of [fol. 7091] this amount on the books of the company?

A. They have not.

Mr. Gorman, I should, no doubt, in justee to our independent public accountants who have certified to examinations of the company's affairs over the period of years, state that most of their reports have some statement of the nature this witness referred to in his testimony last week, the necessity of which is manifested in the requirements of certain of the reports to be made to other governmental commissions, but their exceptions, if any, to the item were not of a nature to cause its removal from the books and records of the company.

Q. In that connection, Mr. Watkins, have you or any others of the official staff or the other employees of the company ever caused anything to be removed from the books of the company?

A. That is such a broad question that I do not think one could answer it.

Now, you do not mean, I am sure, improper removals?

Q. No, I am not impugning anything like that.

A. There have, no doubt, been a vast number of items removed from the books through the normal processes of accepted accounting practices consistently followed.

Q. Have there been any such removals occasioned by the request of Arthur Anderson and Company or other accountants who were auditing the books of the company?

[fol. 7092] A. I could not answer such a question as that off the top of my head, sir. I must say in response to that simply this: Panhandle Eastern's officers charged with its accounting affairs have tried to work as closely as they possibly can with the company's public accountants, and if the public accountants, in some form or fashion, appear critical of some charge, shall we say, either to operating expenses or to gas plant, which their judgment would seem to indicate should go to the other account, we have had such discussions as any conditions of that nature might warrant and have properly disposed of the item. You just cannot answer a question such as you have put in any concrete fashion.

Now, if the question were somewhat along this line—Does this witness know of any important instance in which, as the result of a request, a suggestion, or whatever you please, by its public accountant or by any body having competent jurisdiction?—then the answer would be unqualifiedly no.

Is that the avenue down which we are trying to drive?

Q. I think so.

A. Are you conscious of the fact that with respect to the gas sales and purchase contracts following some of the transactions that were consummated in the early part of 1936, perhaps as of December 31, 1935, some $600,000-odd of the original $3,053,391.53 was written off to reserve?

[fol. 7093] Q. Is that shown in any of the exhibits which you have introduced in this case?

A. The effect is certainly shown. Whether it is specifically shown in any of the exhibits, I do not recall at the moment, but the fact is simply this, and I think I touched on it this morning, amortization of the gas sales and purchase contracts originated in the early years and continued at a rather slow pace, shall we say, up to the beginning of 1936 at the time of the Certificate of Amendment in which was a provision that we must amortize the residue of the gas sales and purchase contracts or the amount of $2,398,402.19 at the rate of $24,419.05 per month, the reserve previously created and the difference between the $2,398,

402.19 and the total amount of $3,053,391.53 was disposed of through appropriate entries at that time.

Q. Where is the effect of that reflected in the exhibits presented by you?

A. On page 2 of Exhibit 52 at line 40, column H.

Q. Does that complete your answer, Mr. Watkins?

A. Yes, sir.

Q. And I believe you referred to a figure of approximately $500,000. As I note the difference and I believe you also referred only to line 40, did you not?

A. I did refer to line 40.

Q. As I make that calculation, the difference between [fol. 7094] the figures shown in column H for 1936 and that shown in column G for 1935 is only $123,105.13, which appears to be the amount set forth at line 42 in column G.

Now, what or where is shown the difference between that $123,000-odd and the approximately $500,000 which you mentioned?

A. Counsel will observe opposite line 42 on page 2 of Exhibit No. 52 certain amounts of reserves in the years 1932 to 1935 or, specifically, columns D, E, F, and G, which were applicable, as has been previously stated, to the $3,053,391.53 amount.

[fol. 7095] Q. Are the amounts shown at Line 42—

A. (Interposing) I am sorry, I had not finished, if you please.

Q. I thought you had.

A. This reserve, or rather these reserves were first applied to the asset account and the residue was then written off and the witness is sorry he does not have before him at this moment an explanation of just how that entry was made.

I shall be very glad to get it and supply the information.

Q. Will you undertake to do so, please. A. Yes, sir.

Q. I personally am still somewhat confused with respect to the application of the amounts shown at Line 42 to the amounts shown at Line 40 on this Page 2 of Exhibit No. 48.

First, let me ask you this, whether or not the amounts shown at Line 42 for the respective years do not represent the balances as of December 31; of each of those years?

A. They do.

Q. Does the $123,105.13, as shown in Column G on Line 42, represent the balance as of December 31, 1935, which, apparently, from the amounts shown as remaining in the gas sales and purchase contracts asset account at December 31, 1936, was apparently applied to that account in the year [fol. 7096] 1936? I am still somewhat at a loss to understand your statement with respect to a figure of approximately $500,000 which was applied during this period. Maybe you can enlighten me further with respect to that.

A. I do not recall the $500,000 figure, sir, and the witness has volunteered to obtain the information as to what happened to the difference between the $600,000 odd item and the accumulated reserve of, I believe you said, $123,000 and until I can obtain such information, I cannot enlighten you further.

Q. Very well. We shall let it go at that.

Mr. Wheat: I think, Mr. Gorman, when you referred to a $500,000 figure, you were intending to refer to the $600,000 odd figure that the witness had previously mentioned.

Mr. Gorman: That apparently is correct.

Mr. Wheat: Yes.

By Mr. Gorman:

Q. Now, Mr. Watkins, if you will please refer to Line 40, Column H on this page which indicates that there was a balance at December 31, 1936, in the reserve for amortization of gas sales and purchase contracts of $295,731.30. Does that indicate to you that this amount was accrued during the year 1936 to this reserve account?

A. Accruals to this reserve account began as of January 1, 1936, at the rate of $24,419.05, continued constantly [fol. 7097] throughout that year and, for that matter, have continued constantly at that amount to this date and the $295,731.30, to which you have just referred; shown opposite Line No. 42 in Column H on Page 2 of Exhibit No. 52, must unquestionably represent the total accrual at the monthly rate heretofore stipulated for the year 1936.

Q. Yes.

A. Likewise, the totals shown on the same line on the same page of this same exhibit, in Column I, J, K, L and M represent the accumulation of such accruals at that rate at the dates represented by such columns.

Q. To what extent is the total appearing as of June 30, 1941, which is shown at Column M, Line 40, of Page 2 of this Exhibit No. 52 shown in Exhibit No. 48 at Line 1 of Page 1 of Exhibit 48, Column M, that is, in the gas plant account?

A. The net difference between the amounts carried at Line 40—we are speaking now of June 30, 1941, are we?

Q. Yes.

A. In Column M of Page 2 of Exhibit No. 52, the amount $1,611,657.30 shown opposite Line 42 in the same column is represented as a part of the $66,689,669.57 shown as gas plant at Line 1 of Page 1 of Exhibit No. 48 in Column M at June 30, 1941.

The reason for that treatment, Mr. Gorman, is simply [fol. 7098] this: Company officials and general counsel for the company have interpreted the language of the Certificate of Incorporation in such manner that we are precluded from applying the reserve, as created, to the asset account.

Otherwise, it would have likely been our practice to have taken these amounts as they were created each month or certainly, shall we say, at the end of each year and have applied them to the asset account.

We did that with respect to the amounts shown opposite Line 44 on Page 2 of Exhibit 52 or, said differently, both types of gas sales and purchase contracts are reflected opposite Line 1 in Exhibit No. 48 at the various dates for which information is there shown net.

However, in the one instance, shown broad on Exhibit 52 and, in the other instance, net.

Q. Can you also explain to us why the full amount assigned to these gas sales and purchase contracts, as reflected on Line 40 of Page 2 of Exhibit No. 52 is not, in toto, reflected in the gas plant account as an asset and the reserves also reflected on Page 2 of Exhibit No. 48 as a liability in conformity with the treatment given to other similar items in the balance sheet?

A. Mr. Gorman, there are no other similar items—

Q. (Interposing) Other similar reserves, then.

A. (Continuing) —in the balance sheet. These re- [fol. 7099] serves are quite a different "breed of pups"

from a reserve for depreciation. These amounts have been taken out of earnings to represent the gradual amortization of an asset.

It could very well be that they are improperly called "reserves".

In the instance of the gas sales and purchase contracts shown opposite Line 44 in Columns H, I, J, K, L and M of Page No. 2 of Exhibit No. 52, our accounting treatment has been to reduce the asset account by the amortization taken in each year.

As a matter of fact, my remembrance is that we do that monthly in our entries for that particular month and this witness has shown, by previous answers, that his preference with respect to the other gas sales and purchase contracts would have been to have accorded those the same treatment as new gas sales and purchase contracts.

Our interpretation and the interpretation of the company's general counsel of the requirements of its Certificate of Incorporation is such that we cannot give such treatment, that we must maintain this reserve until there has been created a total of $2,930,286.40 if the Certificate of Incorporation is not amended to cause different treatment in the meantime and, at that time, charge the asset account to the reserve account and wipe it out.

[fol. 7100] There is no significance, if you please, in the variation of treatment between these reserves and the method of showing other reserves in Exhibit No. 48. As a matter of fact, we thought we were being rather nice to the Commission in putting them up in this form. We thought it was informative and probably what the Commission wanted.

Q. By that do you mean that the balance sheet which you have presented here as Exhibit No. 48 is different from the balance sheet which you customarily prepare for other purposes?

A. Yes, it is as to form and, I believe we have covered that ground before. This will be at least the third time that this witness has stated, if you do not stop me, that our effort in the construction of the exhibits that were introduced through him was to conform them as nearly as

we [possible] could to what we understood the requirements of the Federal Power Commission were.

There is no restriction, as far as this witness knows, in any regulation that this company is subject to that it may not treat, in a balance sheet, these items or any other assets in any conventional form which may at the time be acceptable.

This witness has also stated heretofore in these proceedings that when securities are listed on the New York Stock Exchange the company listing such securities must make [fol. 7101] certain representations with regard to the manner in which it is going to continue to supply information contained in annual reports to its stockholders so, in reporting annually to our stockholders the amounts invested in gas plant, we have not even included this item of gas sales and purchase contracts. It had been set out entirely separate under a heading called "Intangibles" and the reserve accumulated at the end of that period has been deducted therefrom and the amount has been shown entirely separate.

Q. But Exhibit No. 48 is, is it not, a reflection of the accounts as shown on the books of the company?

A. It is a reflection of the accounts, not necessarily as the accounts are shown. There are, of course, in the records of any corporation most always far more accounts than can be included in the balance sheet.

Q. Well, of course, I was referring to controlling accounts and those, of course, are the ones which are shown on the balance sheets.

A. There may be groupings, even, Mr. Gorman, of controlling accounts. There is no effort on the part of Panhandle Eastern Pipe Line Company to actually restrict its records to such a point that one could go to the records and instantly pull off information in the exact form in which it is shown in Exhibit No. 48 or any other balance sheet that may be prepared for the company and from my experience, that is most always true in any organization that you en- [fol. 7102] counter.

Q. Now, Mr. Watkins, you have, from time to time, in connection with these gas sales and purchase contracts and

the amortization thereof, referred to provisions in the Certificate of Incorporation, as amended.

Will you please undertake to supply for us copies of the Certificate of Incorporation and the several amendments thereto?

A. Subject to your choice, I shall either do that or read the applicable portion of the Certificate of Incorporation, as amended, into the record.

• • • • • • • • •

[fol. 7103] By Mr. Gorman:

Q. Now, Mr. Watkins, continuing our discussion of the amounts shown at Line 40 of page 2 of Exhibit No. 52 for gas sales and purchase contracts, do I understand your testimony of this morning correctly that you did not designate this $2,930,286.40, which is shown in this exhibit for this account, as either a valuation or as representing cost directly attributable to the acquisition of such contracts, is that correct, but is merely, at least to the extent of $2,398,402.19, an assignment which has been placed upon the books of the Panhandle Eastern Pipe Line Company? Is that a correct summation of your testimony this morning?

A. I am afraid not, sir.

Q. In what respects is it erroneous? Maybe we had better break that down into this fashion: Do I understand correctly that you do not represent this amount of $2,930,[fol. 7104] 286.40 as representing costs to either the Missouri-Kansas Company or the Panhandle Eastern Pipe Line Company of acquiring the various gas sales and purchase contracts represented by this amount?

A. This witness has made no such representation. As a matter of fact, the testimo . . given this morning shows that there was a portion of the $2,930,286.40, shown on Line 40 at Column M of page 2 of Exhibit No. 52, that came into existence perhaps, although I cannot state too categorically that that is the condition without reference to cost to either Panhandle Eastern or Missouri-Kansas. I do not believe there is any misunderstanding between us as to that.

You will recall this morning that we spoke of a difference, both between a portion of this amount between the books of Panhandle Eastern and Missouri-Kansas Pipe Line Company and, further, that we dealt with an amount

that was assigned, at the time that the original increases were made, to gas sales and purchase contracts over and above any amounts that the records might show at that time were costs.

Q. Yes.

A. Now, as to valuation, my statements have consistently been that the records cannot, in my conception of values, show valuations. Further, the testimony this morning will [fol. 7105] show that in my own estimation the effects of the receipt by Panhandle Eastern of whatever contracts for whatever rights it received among the assets donated by Missouri-Kansas Pipe Line Company, aggregating some $19,300,000 flowing from the instruments or the medium or whatever it may be that is now recorded on the books of the company as a part of the gas sales and purchase contracts, is substantially in excess of any amount shown by the books. I went further, of course, to state that I probably could not qualify as an authority to make such valuation.

Q. Now, Mr. Watkins, will you please refer to the report which was prepared by Mr. Steele, the Federal Trade Commission Examiner, and particularly to page 19 thereof, which is shown at page 1196 of Volume 84-I of the Federal Trade Commission reports which we have been discussing, and for the purpose of the record read from the report which you have, commencing on page 19, the paragraph which commences, "A summary of gas contracts as recorded on the books of Missouri-Kansas Pipe Line Company."

Do you find that?

A. I do.

Q. Will you please read that and the paragraph which follows such summary?

A. Without adopting the paragraph counsel has referred [fol. 7106] to as the witness' own testimony, the matter referred to follows:

"A summary of gas contracts as recorded on the books of Missouri-Kansas Pipe Line Company follows:

"Valuation of gas contracts acquired at organization of Missouri-Kansas Pipe Line Company . . $ 880,000

"Non-producing leaseholds held by Missouri-Kansas Pipe Line Company assigned to affiliated companies for certain gas purchase rights.....$ 225,000

"Legal fees.....$ 1,250

The sum of those three items is shown in this tabulation as.....$1,106,250

"Less:—"

Q. (Interposing) Mr. Watkins, what did you state the legal fees to be there? A. $1,250.

Q. Oh I understood you to say $550.

A. (Continuing)

"Less: Portion of gas contracts acquired at organization and credited to capital surplus written off.....$ 180,000"

There then remains an item shown here as [fol. 7107] "Ledger value of gas contracts as of August 31, 1930.....$ 926,250."

Q. Now, will you please read the paragraph which succeeds the summary you have just read?

A. "The value placed on gas contracts at the organization of Missouri Gas Pipe Line Company was credited to capital surplus in the amount of $180,000 and the remaining $700,000 was offset by the stated value of common stock issued to the organizers without cost to the latter. The non-producing leaseholds assigned to affiliated companies for certain purchase contracts were acquired in a similar manner from Messrs. Shippey, Maddin and Parish, who organized and controlled Missouri-Kansas Pipe Line Company.

"Consequently, it appears that except for legal fees the amount of gas contracts shown on the books of Missouri Gas Pipeline Company did not represent actual cost, but merely book figures reflected in the stated value of common stock issued," which ends the paragraph referred to.

Q. Thank you.

Now, have your investigations, which you indicated this morning you had made with respect to ths item, led you to any conclusions with respect to the statements which

[fol. 7108] you have just read from this report of the Federal Trade Commission?

A. They have not. I have been conscious of this statement, very naturally, since the report was first in draft form.

The practice followed by the Federal Trade Commission Examiners was to submit to the companies the draft of their report, the companies had the right to examine it, offer comments, criticism, and so forth, and Panhandle Eastern was accorded this privilege and did act upon it, but with the specific understanding that by so doing it was simply attempting to assist the Examiner in getting his facts correct, but was not in any manner whatsoever adopting the statements made by the Examiner.

Now, this witness' examination of these amounts, very naturally, has been circumscribed by data available to the company subsequent to the acquisition of this and the other items from Missouri-Kansas Pipe Line Company's capital contribution.

We have had no access to their books or records, so that speaking from my own personal standpoint I have no definite information upon which to either base a concurrence of the facts stated by Mr. Steele in the paragraph we have just read, nor to take issue with the statements stated therein.

[fol. 7109] Q. Do you know whether or not any attempt has been made by anyone connected with the Panhandle Eastern Company to obtain access to the books and records of the Missouri-Kansas Company for the purpose of examining them in so far as they touch upon the items which we are now discussing?

A. I made a trip to Chicago during the time Missouri-Kansas Pipe Line Company was in receivership for the particular purpose of trying to eliminate some difference between the receivers and Panhandle Eastern Pipe Line Company as to amounts that were in controversy of what we knew at the time as the Missouri-Kansas open account. This was an account that came into being about the time the properties we have referred to many times in these proceedings were received from Missouri-Kansas and that had for its purpose the receipt of charges and credits to

Missouri-Kansas arising through the transition of the assets or liabilities from their records to the records of Panhandle Eastern.

My remembrance at the moment is that the total amount involved there was some $40,000, which later, by the way, Panhandle Eastern absorbed.

When discussing these items with Mr. C. R. Phillips, the Chicago receiver of Missouri-Kansas, and his assistant—there may have been one assistant—my very distinct remembrance is that the books and records of Missouri-
[fol. 7110] Kansas at that time were in a very disturbed state of affairs. I remember rather vividly walking into some storerooms in the basement of the building in which they had their office and being terribly shocked at the condition of the records lodged there. Without any idea whatsoever of casting any disparaging remarks in any direction, I recall that some offhand statement was made, "This is what the Federal Trade boys do to your records."

It was very difficult to ascertain any facts with respect to the items and there were a great number of them, both charges and credits that made up the balance of some $40,000, so that the purpose of my trip there was a complete bust.

[fol. 7111] Now, subsequent to that time in the preparation of registration statements and for other purposes we have requested certain information of the officials of Missouri-Kansas Pipe Line Company or of the receivers. Not only that, but the public accounting firm, who has made the audits of Panhandle Eastern Pipeline Company's records and the records of its subsidiaries, happened to have been the accounting firm that was employed by Missouri-Kansas Pipeline Company for some of its affairs prior to September 30, 1930 and they may have done some work for them subsequent to that time, and they made inquiry, I believe, and possibly searched some of their working papers for whatever items of any nature Panhandle Eastern had occasion to try to examine with respect to the books and records of Missouri-Kansas.

Specifically as to the items in question here, we have not made a great amount of investigation for the very reason that it did not seem to us over the period of years, as I now

recall, that any demands might have been made during those years, had any great importance to what the amounts were on the records of Missouri-Kansas Pipeline Company. There is a very definite beginning of the amounts, as to Panhandle Eastern Pipeline Company's records, commencing with September, 1930, which were, as we have heretofore spoken of today, concurred in by the Board of Directors at [fol. 7112] a meeting held sometime in February, 1931.

We are in the process, as you know, Mr. Gorman, of making a response to this Commission's Order No. 73 with respect to original cost. We hope to be able to say to the Commission that these items represent cost to the companies first devoting them to public service. I can not assure you that that fact will be the final outcome of our preparation. It might be noted here that the period in which we were to make a report under the Commission's Order No. 73 has been extended to March 31, 1942, although our request was for an extension beyond that date and this witness is at this moment very much of the opinion that it will be totally impossible to meet the March 31, 1942 date.

I hope that that rather long statement was responsive to the question you asked.

Q. Yes, I think we finally got the answer.

Well, have your studies of this original cost statement to be submitted to the Commission included, as yet, any consideration of the items we are now discussing?

A. In a general way only.

Q. In other words, you have not yet completed your study with respect to such items?

A. Well, we have not yet completed our study with respect to original cost as a whole and I should like not to be forced to make any statements with respect to original [fol. 7113] cost as we may finally conclude from our studies at this time.

Q. So that as of the present time you do not consider yourself in a position to state what portion, if any, of this $2,930,286.40 represents cost?

A. I think that is correct.

Q. Now, the items which were referred to and the statements which you read from the Federal Trade Commission

report are those same items, are they not, which were subsequently—in view of your previous statements I find it difficult to refer to that in any manner except that of an assignment of $2,398,402.19?

The Witness: May I have that question, please?

(Pending question read by reporter.)

The Witness: They are.

By Mr. Gorman:

Q. And that amount, of course, of $2,000,000 odd is entered on the books of your company as a contribution of capital from Missouri-Kansas, is that correct?

A. The effect of the entry on the credit side of the ledger took that position, yes.

Q. That is what I am speaking of.

Now, in addition to this amount of $2,398,402.19, is there not a further entry on the books of the Panhandle Eastern Pipeline Company in the amount of $642,286.30, to which I believe you have previously made reference in your state-
[fol. 7114] ments?

A. That amount I do not believe constituted one single entry. There were, and the record of this morning's proceedings will show there were, several items making up that amount.

Q. Yes, I so understood. Now, let us consider each of those several entries. A. All right, sir.

Q. Is the first such entry, in the amount of $556,000, representing notes issued for purchase of Missouri-Kansas Pipe Line Company's stock, used in connection with obtaining gas sales contracts?

A. My analysis of the account shows the $556,000 in two items.

Q. One of which was $420,000 and the other was $136,000? A. That is correct.

Q. And is your analysis in conformity with the books of your company, that is to say, is it set up there as two amounts or one amount?

A. Those two amounts, plus several other amounts, made a part of the record this morning, as well as the $2,398,402.19, to which we have made reference a number of times, constitute a portion of the entries in one account,

which, for convenience, the company thinks of as gas sales [fol. 7115] and purchase contracts, old. It is not so characterized, but the residue of all of those entries is shown line 40 at page 2 of Exhibit No. 52, in column M.

Q. Now, does this first item of $420,000 represent a transaction in May of 1930 whereby five year, 6 per cent bearer notes were given in payment for 15,000 shares of common stock of Missouri-Kansas Pipe Line Company at $28 per share for use in connection with obtaining gas sales contracts with Illinois Power & Light Corporation and Missouri Power & Light Company? A. It does.

Q. And were these notes issued persuant to authorization of the Board of Directors of the Panhandle Eastern Pipe Line Company at a meeting held on May 23, 1930?

A. They were. I believe, although I can not find it at this moment, I have an excerpt from the minutes of that meeting.

Q. May I invite your attention, Mr. Watkins, to page 41 of the Federal Trade Commission report prepared by Mr. Steele and ask you whether or not that is the excerpt of the minutes of which you were speaking?

A. Well, obviously, you would not expect me to remember the exact language from the minutes, but the excerpt shown here on page 41 does appear to be, as best I can recall, the exact precise language taken from the minutes of a meeting of the Board of Directors of Pan- [fol. 7116] handle Eastern Pipe Line Company held May 23, 1930.

Q. Yes.

With the Examiner's permission, I shall propose to read into the record this excerpt to which we have just been making reference with the understanding that Mr. Watkins may consult the official minutes of the company and make such corrections as may be necessary to conform thereto.

Trial Examiner: You may proceed.

By Mr. Gorman:

Q. The excerpt which I propose to read appears at page 1206 of Volume 84-1 of Federal Trade Commission report, which is the same as page 41 of the report prepared by Mr. Steele to which I made reference a moment ago and reads as follows:

"The president stated that under date of May 19, 1930 the company had entered into contracts with Illinois Power & Light Corporation and Missouri Power & Light Company under the terms of which said companies had agreed to purchase natural gas from this company for the purpose of supplying the gas requirements of Decatur, Danville, Urbana, Champaign, Jacksonville and Clinton, Illinois, and Jefferson City, Boonville, Excelsior Springs, Moberly, and Mexico, Missouri and that in connection with the obtaining of said contracts commitments had been made requiring [fol. 7117] 15,000 shares of common stock of Missouri-Kansas Pipe Line Company.

"Thereupon, upon motion made, seconded and carried, the following resolution was unanimously adopted;

"'Resolved, that the officers of this company be, and they are hereby, authorized and empowered to purchase from Frank P. Parish and Company 15,000 shares of common stock of Missouri-Kansas Pipe Line Company, at the price of $28 per share, and to give to said Frank P. Parish and Company in payment of said purchase price the promissory note of this company dated May 23, 1930 in the sum of $420,000, payable five years after date, bearing interest at the rate of 6 per cent per annum; and be it further

"'Resolved, that the president of this company be, and he is hereby, authorized and empowered to make such use of said 15,000 shares of stock of Missouri-Kansas Pipe Line Company so purchased as he may deem advisable and in the best interests of the company.'"

Mr. Watkins, do you know whether or not such transaction was actually consummated, that is, the purchase of 15,000 shares of common stock of Missouri-Kansas?

A. I have no definite information with respect to either the purchase of that stock or what may have been done with it if it was purchased. My belief is that it was purchased and that some distribution was made of the stocks so pur- [fol. 7118] chased. As a matter of fact, I believe throughout the history of the company we have come across divergent views in certain instances as to what happened with that stock and whether it was what should have happened to it. As far as the company is concerned, here is the record.

The notes were issued for the purpose the Board authorized them to be issued. They were eventually paid. I presume the stock was purchased; I also assume that it was distributed. Further than that, I have no specific knowledge and I am sure you do not want any hearsay from me concerning the transaction.

Q. No. Do your statements indicate, Mr. Watkins, or is it your intention to so indicate that the records of the Panhandle Company do not show whether or not the stock was actually acquired and, also, do not show what disposition was made of it, if it was acquired?

A. Mr. Gorman, this witness has never been able to find in the record of the company any specific matter of the nature that he could answer your question other than that it would appear that the stock was purchased and distributed.

There have been responses, I believe, in some litigation, the exact details of which this witness is not too familiar with, which would tend to indicate that some distribution [fol. 7119] was made. We have referred a number of times to Mr. Steele's report and I believe Mr. Steele purports to have some information as to what disposition was made of the stock. Whether that squares with the facts or not, frankly, I do not know.

[fol. 7120] Q. Do the records of your company show that some time subsequent to May, 1930, payment was made by the Panhandle Eastern Pipe Line Company upon the note which was issued for the purchase of these 15,000 shares of Missouri-Kansas stock?

A. I am quite positive that those notes were paid. At this moment I do not know when nor how nor to whom, but, obviously, the obligation has been discharged.

Q. Yes. Well, then, may it not be properly inferred that in so far as the books and records of Panhandle Eastern Pipe Line Company are concerned, that the only data which they would have respecting this transaction would be the minute which we have read into the record and possibly the record of the issuance of the note and, subsequently, the payment of the note?

A. So far as this witness is concerned, Mr. Gorman, I believe we can go a step or so further than that. Prior to September 30, 1930, Panhandle Eastern Pipe Line Company

was wholly-owned by Missouri-Kansas Pipe Line Company. The two items which we have just been referring to came as a result of action taken by the Board on May 23, 1930, and then there was an entry made on June 30, 1930, with respect to $136,000 and it could very well be that there is in existence somewhere and intended for Panhandle Eastern Pipe Line Company's records an accounting to it of the [fol. 7121] disposition of the shares we purchased.

If you understand what I am trying to say, it is simply this: That Missouri-Kansas Pipe Line Company may have carried away from the offices of Panhandle Eastern Pipe Line Company after September 17, 1930, or subsequent to the closing date of the matters covered by this September 17, 1930, contract, as amended, some of the material that rightfully belonged to the record of Panhandle Eastern. It would be very foolish for anyone, I believe, to state that there never was such an accounting, although, as I started to indicate, my feeling is that I should go so far as to tell you that I have never found anything in the records of Panhandle Eastern that shows disposition other than, perchance, it be some statement made by some witness in the record of some proceeding or some deposition or correspondence of some general nature, the exact form of which I would not recall at this moment nor would I definitely recall whether I have ever seen any such statements.

That gives you a rather definite answer, doesn't it?

Q. Yes, I think so. Of course, I assume you are referring to statements and testimony contained in this volume of the Federal Trade Commission reports which we have mentioned and other volumes of reports prepared for the same purpose?

[fol. 7122] A. Oh, anywhere they might chance to be.

Q. Yes. Well, have you or has any other member of the staff of the company ever undertaken to ascertain the complete facts with respect to this transaction?

A. There was no occasion for us to make such an ascertainment, Mr. Gorman.

Q. Well, I merely inquired whether or not there had been such an investigation made.

A. I can only speak for myself. The answer is "No."

Q. Then, in so far as you know with respect to others, do you know whether they have made any such study?

A. I am of the opinion that somewhere among the many discussions that may have taken place between myself and others connected with Panhandle Eastern Pipe Line Company during the past ten years that I have had some statements made to me that some one of those individuals, however many or few there may have been, tried to learn more about these two items than were shown by the cold facts and figures in the books and records.

Q. You do not know who that person might have been or what the result of such a search may have produced?

A. I am afraid you are asking me to draw entirely too much on my memory to state positively whether there was even such a circumstance, although I seem to remember [fol. 7123] that we just did not pass it over lightly. Our custom is not to do that. We have had so many occasions upon which we have diligently sought to know a little bit more about the gas sales and purchase contracts than the records would show us, that we must have pursued and exhausted all reasonable courses and avenues open to us to learn something more about it.

Q. You refer to a note in the amount of $136,000. Was that a similar transaction whereby the company purchased 4,000 shares of common stock of Missouri-Kansas Pipe Line Company, also from Frank P. Parish & Company, and for similar reasons?

A. It was for similar reasons. The transactions may not have been exactly similar due to the fact that it appears that there was no specific action taken by the Board of Directors with respect to the latter amount. There may have been some informal discussions at some meeting of the Board. My memory at the moment is, however, that it was not authorized by the Board in the same manner as the purchase of the 15,000 shares represented by the $420,000 item.

Q. You are, of course, familiar with the statements contained in the report of Mr. Steele of the Federal Trade Commission to the effect that the majority of these 19,000 shares of stock we have been discussing were distributed to [fol. 7124] Frank P. Parish and to W. G. McGuire, are you not?

A. I observe that Mr. Steele states that on page No. 41. I heard of such a distribution before. I have, also, heard —and this is pure hearsay—that there may have been

some difference between those two gentlemen as to who got what and why.

Q. Yes, but you, I assume, according to your previous testimony, know no facts with respect to this distribution?

A. I do not, and from the standpoint of the controversies that I seem to remember I am rather grateful of that fact.

Q. Mr. Parish, according to your knowledge, was president of the Missouri-Kansas Pipe Line Company, and also president of the Panhandle Eastern Pipe Line Company and, also president of the Frank P. Parish & Company in 1930, at the time of these transactions?

A. I have no knowledge, whatever, of Frank P. Parish & Company other than of the nature of one who had acquired such knowledge by hearsay, newspapers, or otherwise. I do not recall at this moment of having any knowledge whatever, specifically, of the officers of Frank P. Parish & Company.

I would assume, however, that the name would indicate [fol. 7125] something and it may have been possible that Mr. Parish was president of the company.

As to Missouri-Kansas, I do not believe there is any question, is there, that Mr. Parish was not the president of that company and, certainly, there cannot be any question that Mr. Parish was not president at one time of Panhandle Eastern Pipe Line Company. Whether all of those facts were coincident is something, sir, I believe you will have to supply me with.

Q. Can you tell us, Mr. Watkins, whether the records of your company show that as of May 23, 1930, or some date prior thereto, the Panhandle Eastern Pipe Line Company had actually entered into contracts with the Illinois Power & Light Corporation and the Missouri Power & Light Company for the sale by Panhandle and the purchase by the other companies of natural gas?

Mr. Wheat: What companies were those?

Mr. Gorman: Illinois Power & Light and Missouri Power & Light. Those are the two companies which were referred to in the minute of the Board of Directors, May 23, 1930, which has been read into the record?

The Witness: Mr. Gofman, if I may, I would like to answer your question this way: I recall very vividly at the time I first became connected with Panhandle Eastern Pipe Line Company, which was the 17th day of November, [fol. 7126] 1931, that the company did have contracts with Missouri Power & Light Company and with the Illinois Power & Light Company. Without refreshing my memory by reference to our documental files, I should say that Panhandle Eastern Pipe Line Company or Panhandle Illinois Pipe Line Company, a subsidiary since dissolved, both or either actually made deliveries to those companies under such contracts and have continued to makes deliveries continuously thereafter, either under the original contracts and some amendment thereof, some extension thereof, some renewal thereof, or some rate schedule, which companies were required to or found it necessary to file either with the Public Service Commission of the State of Missouri, or with the Illinois Commerce Commission.

The total sales to Missouri Power & Light Company from September 1, 1930, to December 31, 1941, arising either from contracts acquired by Panhandle Eastern and subsidiary companies directly or through Missouri-Kansas Pipe Line Company amounted to $3,742,445 and to Illinois Power & Light Company, the successor company—correction, please, the name of which has since been changed to Illinois-Iowa Power Company—on May 1, 1937, the sales were $3,385,922.92 for the same period. During that period Panhandle Eastern or Illinois Natural Gas Company, likewise, sold the Keystone Steel & Wire Company $2,373,[fol. 7127] 964.46, the Caterpillar Tractor Company, $285,076.94, and the R. Herschel Manufacturing Company $41,799.13, or a total of these five organizations of $9,829,208.45.

Q. Are you finished? A. I believe I am, sir.

Q. Despite the length and breadth of your answer, I do not believe you have answered my question.

Will you read that back?

(Question read as follows: "Can you tell us, Mr. Watkins, whether the records of your company show that as of May 23, 1930, or some date prior thereto, the Panhandle Eastern Pipe Line Company had actually entered into contracts with the Illinois Power & Light Corporation and

the Missouri Power & Light Company for the sale by Panhandle and the purchase by the other companies of natural gas?")

By Mr. Gorman:

Q. Do you understand my question, Mr. Watkins?

A. Pardon me, I was trying to find something so that I could answer your question definitely. May I have the opportunity to continue my search?

Q. Yes, indeed. A. Now, may I have the question?

(Question re-read.)

[fol. 7128] The Witness: I am quite positive Panhandle Eastern had entered into such contracts. If you care to have me do so, I shall obtain the dates upon which the contracts, if there be any, came into existence, whether it be prior to May 23, 1930, or subsequent thereto. One of the reasons why I am positive there were such contracts as that when I appeared on the scene in 1931 Panhandle Eastern was involved in a proceeding of some sort before the Illinois Commerce Commission or, rather, I should say, Panhandle Illinois Pipe Line Company was involved as a result of some of the contracts for the sale of gas for distribution in the State of Illinois. I remember that quite distinctly.

[fol. 7129] Q. Had you completed your answer?

A. I believe so, yes, sir.

Q. Was that controversy, to which you are now referring, one involving a proposal of certain towns in Illinois to change over from manufactured to natural gas, which was a proceeding before the Illinois Commerce Commission?

A. It was before the Illinois Commerce Commission. There were change-over requirements involved, the exact file or docket number I could not supply.

Q. And it is your present recollection that the contracts were enter into with these companies before such controversy arose?

A. Yes, it is.

Q. Well you please undertake, Mr. Watkins, to furnish us with the dates of the first contracts with these companies or their subsidiaries if the sales were actually made to subsidiary companies and if you are able to do so furnish

us with at least one copy of such contracts? I might state if it should perchance happen that any of these contracts had been previously filed with the Federal Power Commission, if you will just refer us to the title thereof, we shall endeavor to locate it in the files of the Commission without your furnishing it.

A. I should be very glad to do that, sir.

Q. Now, in the course of a statement a few minutes [fol. 7130] ago in response to the previous question, you referred to certain sales, both in volume, I believe, and dollar value, to certain companies other than the Illinois Power & Light Company and the Missouri Power & Light Company.

A. That is correct, except there was no reference to volume.

Q. Yes. Well, were those other companies to which you made reference subsidiaries of either the Illinois corporation and the Missouri company?

A. I believe they were not.

Q. Well, what was the purport of your statement with respect to sales made to these other companies?

A. If you will recall, this morning reference was made to those five companies in previous testimony and while having the memorandum in front of me at the time I was giving you the data with respect to Missouri Power & Light and Illinois Power & Light, I simply volunteered the remaining information.

Q. Well, now, were those sales made pursuant to contracts which were acquired from the Missouri-Kansas Pipe Line Company?

A. Either pursuant to such contracts, renewals, amendments thereof, modifications, or whatever you do with a contract or rate schedule that subsequently replaces the contract, there were sales, the origin of which can very [fol. 7131] definitely be traced back to the right Panhandle-Eastern acquired from Missouri-Kansas Pipe Line Company by virtue of certain of the assets, constituting a part of the $19,300,000 donated September 17, 1930.

Q. But they were not related to the—

A. (Interposing) Two items of $420,000 and $136,000, no.

Q. Now, were these contracts which we have just been discussing purported justification for the payments in 1930 to the American Coke & Chemical Contracting Company of $75,000 for securing such contracts?

A. If I understand your question correctly, sir—

Q. (interposing) Let me put it this way.

A. If you will pardon me, please.

Q. Yes, indeed.

A. If I understand your question correctly, sir, and I am rather careful with Panhandle Eastern Pipe Line Company's money, there could be no hesitancy whatever on my part of recommending an expenditure of $75,000 which would produce over the period from September 1, 1930 to December 31, 1940 sales from Keystone Steel & Wire Company and Caterpillar Tractor Company and the R. Hersehel Manufacturing Company, aggregating, respectively, $2,373,964.56, $285,076.94 and $41,799.13.

. . . . . .

[fol. 7132] Q. Now, were these contracts which we have just been discussing purported justification for the payments in 1930 to the American Coke & Chemical Contracting Company of $75,000 for securing such contracts?

The Witness: There is slight confusion in the witness' mind, Mr. Gorman, whether or not your question was directed to the $420,000 and the $136,000 items, or whether it was directed to the $75,000 item, because the companies involved in the first two of those items were different from [fol. 7133] the companies that you mentioned with respect to the $75,000.

. . . . . .

By Mr. Gorman:

Q. Let us put it this way, Mr. Watkins, and I think we can dispose of it more readily. Do the books of the Panhandle Eastern Pipe Line Company show a payment of $75,000 to the American Coke & Chemical Contracting Company as payment for their services for securing certain gas contracts?

A. They do, and that facts was fully testified to by this witness this morning.

Q. Yes. And those contracts, in which the American Coke & Chemical Contracting Company was purported

to have rendered assistance in the acquisition of, were contracts with the Keystone Steel & Wire Company, the Peoria Malleable Castings Company, the Caterpillar Tractor Company and R. Herschel Manufacturing Company, all of Peoria, Illinois. Is that correct?

A. I do not know whether all of the companies were of Peoria, Illinois, or not. I will accept your statement as to that. Otherwise, it is correct and the amounts that I have previously testified are the amounts that we received from such sales for the period from September 1, 1930 to December 31, 1940.

Q. Thank you.

. . . . . .

[fol. 7134] Q. Mr. Watkins, at the time of the recess we had just mentioned certain payments to the American Coke & Chemical Contracting Company for its assistance in securing gas sales contracts with the Keystone Steel & Wire Company, Peoria Malleable Castings Company, the Caterpillar Tractor Company and the R. Herschel Manufacturing Company.

Did the Panhandle Eastern Pipe Line Company subsequently enter into contracts or a contract with the Peoria Malleable Castings Company?

A. I do not know.

Q. I believe you have mentioned sales figures concerning sales made under contract to the other companies I have just mentioned, have you not?

A. I have.

Q. Do you know, or do your notes show the date of such contracts with these companies?

A. They do not and, as the witness has tried to explain throughout the testimony today, it may very well be that if there were contracts with the companies to which counsel refers at or about the date of payment to American Coke & Chemical Contracting Company that subsequent deliveries were made in pursuance to such contracts, per se. [fol. 7135] There may have been changes brought about by reason of differences and circumstances or conditions or requirements of the Illinois Commerce Commission, but, nevertheless, sales were made to those companies and came about by reason of the activity of the company to whom

the payment of $75,000 was made, not wholly because of the activity of that company but through the assistance it rendered.

Q. Can you state, generally, what assistance was given by the American Company in securing these contracts? First, let me ask you this, whether or not you know if any of these companies which subsequently became purchasers of the Panhandle Company were subsidiaries or affiliates of the American Coke & Chemical Contracting Company?

A. I do not.

Q. Do you know what assistance it did give in securing contracts from these companies?

A. I would simply assume, Mr. Gorman, that it must have given some substantial assistance, otherwise the payment of $75,000 would not have been made. Actually the exact assistance rendered is something about which I know nothing.

Q. Now, will you undertake, Mr. Watkins, to obtain for us the dates upon which the Panhandle Eastern Pipe Line Company entered into contracts with the Keystone Steel & Wire Company, the Caterpillar Tractor Company and the R. Herschel Manufacturing Company, and also, furnish [fol. 7136] us with copies of such original contracts?

A. I will undertake so to do. May I state, however, that we have throughout the afternoon been referring to Panhandle Eastern and contracts with certain organizations, some of which may be in the State of Illinois? Those contracts may have not been between Panhandle Eastern and the purchasing company. The sale may have been through a subsidiary of Panhandle Eastern. The contract may have been with a subsidiary of Panhandle Eastern or the contracts may have been with the purchasing company whether it was a distributing organization or an industrial user and Missouri-Kansas Pipe Line Company, so that when we speak broadly of Panhandle Eastern it is a witness' assumption that we are talking about the original contract with whomever it may have been, although it came to Panhandle Eastern by right of succession, if that is a proper way to put it.

Do we understand each other?

Q. Yes, that may be so understood. Of course, it is my understanding, also, that since these amounts are set up on the books of the Panhandle Eastern Pipe Line Company itself, it would be some subsidiary other than the Illinois Natural Gas Company. Is that correct?

A. Illinois Natural Gas Company did not come into existence until the early part of 1938, I believe.

Q. So that these contracts could not, in any way, af- [fol. 7137] fect that subsidiary of the Panhandle Company?

A. Oh, yes, they could.

Q. You mean as of delivery?

A. The effect of the delivery subsequent to the time Illinois Natural acquired the properties of Panhandle Illinois Pipe Line Company is a most vital part of Illinois Natural's affairs.

[fol. 7138] Q. Well, now, let us see if we can understand one another a little more. Do you recall approximately when the Panhandle Illinois Company was organized?

A. August 16, 1930, and it was dissolved July 30, 1938. Illinois Natural Gas Company was organized January 19, 1938, and has not yet been dissolved.

Q. Now, any contracts and any payments made in connection therewith, to which the Illinois Natural Gas Company has succeeded to the rights of the Panhandle Illinois Company, would be reflected on the books of those two companies, would they not?

A. That is correct, however, I do not believe there were any charged on the books of either of those companies of the character that Panhandle Eastern carries in its gas sales and purchase contracts. The $75,000 item, concerning which we have been discussing, was registered on the books of Panhandle Eastern Pipe Line Company, although the benefit flowed directly to a subsidiary.

Q. Yes.

A. The reason for that, sir, if I may supply it, if you want it, is due to the fact that originally it was intended that Panhandle Eastern would have all the facilities from the producing fields to its present terminus at or on the Illinois-Indiana State line. There were reasons when the construction work was undertaken that made it necessary [fol. 7139] to bring about the corporate existence of a subsidiary to own and operate the properties and facilities

located within the State of Illinois. Subsequent to those requirements, it has been possible for Panhandle Eastern Pipe Line Company to acquire the main transmission system in the State of Illinois represented by the line the witness is pointing to on Exhibit 15 placed here on the wall at the hearing room.

At that time, which was as of June 30, 1938, I believe, Illinois Natural Gas Company acquired the lateral lines used to serve the customers in the State of Illinois. A recent decision of the Supreme Court may make it possible for Panhandle Eastern to acquire, through the dissolution of Illinois Natural Gas Company, all of the facilities that that subsidiary owns in the State of Illinois.

Now, we are dealing with a consolidated picture here, so that if we inadvertently speak of Panhandle Eastern having made disbursements with respect to something that Panhandle Illinois or Illinois Natural, or any of its other subsidiaries received the benefit of, it does not change the consolidated picture, so far as the whole is concerned. Perhaps we should not worry ourselves about being too precise.

Mr. Culton: Panhandle Illinois was a 100 per cent subsidiary of Panhandle Eastern?

[fol. 7140] The Witness: It was, sir, and the date of its incorporation and the date of its dissolution, as well as the date of incorporation of Illinois Natural, is shown on page 1 of Exhibit No. 112 in this proceeding.

Mr. Culton: And Illinois Natural, likewise, is a 100 per cent subsidiary?

The Witness: That is correct, sir.

Mr. Culton: Pardon me for interrupting, but I wanted that to appear.

Mr. Gorman: Yes.

By Mr. Gorman:

Q. As a point of clarification, only, Mr. Watkins, as a matter of fact, the entire amount which has been set up as representing amounts allocable to gas sales and purchase contracts has been contained solely in the books of

the Panhandle Eastern Pipe Line Company, has it not, despite the fact that such contracts may have been in the past or possibly even in the present made with a subsidiary of the company?

A. I believe that is quite true. There may, however, be this situation, Mr. Gorman:

If you recall during the morning session the witness testified that there were certain office payroll general expenses, attorney fees, and so forth, aggregating some $12,000-odd that formed a part of the $3,053,391.53, to [fol. 7141] which some reference was made this morning, that may have come into existence in one of the subsidiaries, but it found its way into the Panhandle Eastern Pipe Line Company's records, and I do not recall at this moment of any items that now are reflected in records of or books of account of Illinois Natural Gas Company of that nature.

Q. Now, I believe you have previously referred to an item entered on the books of the company under this account in the amount of $1,000, which, as I recall your testimony, was a premium paid for a contract bond in connection with the gas sales contract with the Keystone Steel & Wire Company.

A. I have.

Q. And that, I assume, represents wholly and entirely the actual premium paid on such bond. Is that correct?

A. It does.

Q. Now, do you, also, have an entry on your books in the amount of $9,500 representing payment to agents for fees and expenses in connection with obtaining gas sales contracts?

A. We do.

Q. Can you tell us, generally, what that item represents?

A. That payment was likewise, made to American [fol. 7142] Coke & Chemical Contracting Company for engineering fees and/or expenses incurred by that company in connection with the procurement of gas sales contracts with Keystone Steel & Wire Company, Peoria Malleable Castings Company, Caterpillar Tractor Company, and R. Herschel Manufacturing Company.

Q. In other words, that was for the same purposes that the $75,000, to which we have previously made reference, was paid?

A. Yes, that is correct, except that in the one instance one apparently was in discharge of an obligation for services rendered while the smaller amount or $9,500 was for expenses incurred in connection with the rendition of such services.

Q. And is there, also, an entry on the books of the Panhandle Eastern Pipe Line Company in the amount of $786.30?

A. As a matter of fact, there are three entries making up the total of $786.30, all of which were in settlement of traveling or other expenses incurred by Mr. Frank P. Parish.

Q. And those, I correctly assume, do I not, represent actual moneys expended for such purposes?

A. As far as I know, they do.

Q. Now, all of the items we have heretofore discussed [fol. 7143] in detail were entered on the books of the company prior to December 31, 1930, were they not?

A. Well, we have discussed a lot of items, Mr. Gorman.

Q. Well, shall I sum it up this way, the item of $556,000 the item of $75,000, the item of $1,000, the item of $9,500, the item of $786.30 and the item of $2,398,402.19—

A. (Interposing) Were entered on the books of Panhandle Eastern Pipe Line Company prior to what date, sir?

Q. December 31, 1930.

A. That is correct.

Q. And do you, also, have an entry some time during the year 1931, in the amount of $11,142.12?

A. There were several entries made during the year of 1931 and 1932, the total of which is $12,703.04.

Q. Yes. Were those all made for the same purpose?

A. The same general purpose.

Q. Yes.

A. Not with respect to the procurement of any of the contracts we have specifically referred to.

Q. And what were those payments for in a general way?

A. Well, they were in connection with the procurement [fol. 7144] of any contracts, gas sales or gas purchases contracts procured during that interval by such of the

company's employees whose salaries and expenses were at that time allotted to this particular work and it consisted, generally, as we have heretofore stated, of payroll, traveling expenses and a very small item I observe here of attorney fees.

Q. And with the exception of the attorney's fee, a small item which you mentioned just now, those are what might be termed generally promotional expenses incurred by members of the staff?

A. I think that is correct. Now, in connection with that, I should like to call attention, again, to this fact, that is, as you know, prior to March 31, 1932, although we maintained records with respect to income and expenses, the result of the maintenance of those records is now reflected in the Gas Plant Accounts for the reason that as of March 31, 1932, any net income or net losses were capitalized.

We understand that, do we not?

Q. Yes. Now, the total of all of these items represents, does it not, the aggregate of $3,053,391.53, which is shown under various columns on Line 40 of page 2 of Exhibit No. 52?

A. It does.

Q. And, as you have previously indicated, there was [fol. 7145] debited to this reserve in 1936, an amount of $123,105.13 representing the application of reserves accumulated against this account as of that date?

A. Not debited to it, Mr. Gorman, but credited to it.

Q. I beg your pardon.

A. It was applied to the total. That is the substance of what we are getting at here.

Q. And that, of course, resulted in the total of $2,930,286.40, which is shown at Line 40 of Exhibit No. 52, page 2, in Column M, and the succeeding columns shown thereon?

A. If the reduction of the amount $3,053,391.53 by the $123,000-odd item leaves that figure, yes.

Q. Now, all of these expenses and charges, other charges, are related, are they not, to those contracts only which are said to have been acquired from the Missouri-Kansas Pipe Line Company as of August 31, 1930?

A. At the origin of the account they were related to such contracts. I have tried to explain during the course

of the testimony today that the contracts we may have received at the time the account originated may not be the exact instrument.

Q. Yes, it may have been modified or changed or revised wholly?

[fol. 7146] A. Or service may now be being rendered under a rate schedule.

Q. Yes.

A. With that explanation, the answer to your question is yes.

Q. Now, these items have no relation whatsoever to the amount of $553,992.48, which is shown at page 966 of Exhibit No. 39 for identification, and at page 3 of Exhibit 153, for identification, do they?

A. Mr. Gorman, I am afraid that I cannot make too definite statements with respect to page 966 of Exhibit No. 39, because I am not responsible for that exhibit. The total shown there in one instance of $553,992.48 apparently represents the same items that are a part and parcel of the three pages of Exhibit No. 153.

Q. Yes. Of course, an examination and comparison will readily disclose that, but in your examination of this morning, and I assume you have previously examined page 966 of Exhibit No. 39, it is your impression, is it not, that they do represent the same items?

A. To the extent that the amounts are the same, that is, the total amounts are the same, I think that is quite proper.

[fol. 7147] Q. By that you mean the aggregate total as distinguished from the individual payments to the several utility companies?

A. Not necessarily, no. My remembrance goes to the fact that page 966 of Exhibit 39 has some $5,000,000 odd.

Q. Well, I am speaking now only of the total and components of such total which are shown at line 30 and the lines above line 30 on page 966 of Exhibit 39.

A. With that correction, sir, they are identical.

Q. Now, will you please refer to Exhibit 153, which is entitled "A Statement of Cost of Business Development, Period from April 1, 1932 to June 30, 1941," particularly to lines 1, 2, and 3 on page 1 of this exhibit?

A. I am ready, sir.

Q. I note that as of August 7, 1936 a cash payment of $87,500 was made to one Frank P. Parish and on the same date a cash payment of $12,500 was made to one Dupuy G. Warrick. Are you familiar with the circumstances which led to such payments?

A. I am.

Q. Will you, for the purposes of the record, give us in some detail the circumstances which led to the payments which I have just mentioned?

. . . . . .

A. On or about June 20, 1935, Mr. Frank T. Parish [fol. 7148] came to the company and stated that he had been in Detroit with his lawyer for a considerable time, that he was satisfied he could obtain the contract for the supply of Panhandle gas to the City of Detroit, that it was expensive for him and his lawyer to travel back and forth to Detroit, and live there, and asked if the company would be willing to pay this expense. He was told that the company would give him $1,000 a month for four months and at the end of that time if the situation did not warrant, after a review, the company's feeling that sufficient progress has been made to justify a continuance of the advances, that such advances would cease.

On or about October 15, 1935, the Directors of Panhandle Eastern in an informal discussion decided to continue the arrangements made with Mr. Parish on or about June 20, 1935, temporarily, at the discretion of the officers. After a contract had been obtained with the Detroit City Gas Company,—and there is no question I presume that we are referring to what is now known as Michigan Consolidated Gas Company,—Mr. Parish rendered an expense statement for himself and his attorney in the aggregate amount of $12,769.92, which Panhandle Eastern Pipe Line Company paid.

At a board meeting held July 14, 1936, Panhandle Eastern Pipe Line Company acted upon a claim for compensation by Messrs. Parrish and Warrick in connection [fol. 7149] with the contract with Detroit City Gas Company dated August 31, 1935 and payments of such compensation aggregating $100,000 were made to Mr. Parish for his part in the amount of $87,500 and to Mr. Warrick for $12,500.

If you wish to be very precise about the payments of the $87,500 made to Mr. Parish, $50,000 was made for his account to Michigan Gas Transmission Corporation, I believe, who had previously advanced such an amount to Mr. Parish and to whom Mr. Parish assigned $50,000 of the amount awarded him by Panhandle Eastern Pipe Line Company.

What gave rise to the distribution between Parish and Warrick of the amount, the total of $100,000 paid by Panhandle Eastern is something this witness has no knowledge of. A purely gratuitous observation on the part of this witness, however, is that if Mr. Parish and Mr. Warrick rendered any service whatever in connection with the procurement of the contract with the Detroit City Gas Company, the amount they received from Panhandle Eastern Pipe Line Company was certainly quite modest.

Q. Mr. Warrick was attorney for Mr. Parish, was he not?

A. In this particular instance he was. Whether he was Mr. Parish's—

Q. (Interposing) Well, I meant in this instance.

A. Correct.

Q. And, of course, that would explain any payment [fol. 7150] which was made to Mr. Warrick by Mr. Parish or directly by the company, itself?

A. I think it should, yes.

Q. Now, at the meeting of July 14, 1936 of the Board of Directors of the Panhandle Company at which this compensation was decided upon, the Board had before it, did it not, a letter dated July 6, 1936 from Messrs. Parish and Warrick giving an outline of the services they claim to have rendered in procuring the Detroit gas contract?

A. It did.

Q. Will you undertake, Mr. Watkins, to furnish to me, please, a copy of such letter of July 6, 1936?

A. If I must.

Q. Was Mr. Parish at this time connected with the Panhandle Eastern Pipe Line Company in the capacity of an officer or director of that company?

A. He was not.

Q. Do you know when his severance with the company had been made?

A. Mr. Parish ceased to be president of Panhandle Eastern Pipe Line Company on October 23, 1930 and was replaced by Mr. F. W. Crawford, who became president on that date.

Q. Was that his last official connection with the company, either as an officer or as a director?

A. Mr. Parish continued to be a director of Panhandle [fol. 7151] Eastern Pipe Line Company until the annual meeting of the stockholders of the company held March 14, 1932, at which time he was replaced by Mr. J. H. Hillman, Jr. Slightly prior to that date or about that date, Missouri-Kansas Pipe Line Company found itself in receivership.

Q. Now, all of the other payments shown on this Exhibit No. 153 were in the nature of contributions to public utility companies for expenses incurred with change-over to natural gas or promotion of the sale of natural gas in the communities served by the various utilities, were they not?

A. Before I answer that question, Mr. Gorman, may I go back for a moment to make this observation with respect to the dates upon which Mr. Parish ceased to be an officer or a director and the dates upon which his successors were chosen?

Q. Yes, indeed.

A. And state that the tabulation from which my answers were given speak as of the date the change became effective. It may have been possible, for instance, that Mr. Parish had a resignation pending prior to the date upon which he ceased to be either president or a director.

Now, as to the other payments, Exhibit No. 153, they do represent payments made to distributing organizations or to organizations purchasing gas from Panhandle Eastern Pipe Line Company for resale or to organizations delivering gas on Panhandle Eastern Pipe Line Company's account to some distributing organization.

[fol. 7152] The purpose, I believe, is shown, generally, in Exhibit 153 as to each such payment.

Q. Yes.

A. In characterizing the amounts on Exhibit 153 as payments, it would be well for us to remember that the

totals in several instances are the results of more than one payment. For instance, the $94,000 on line 18, page 1, of Exhibit No. 153 represents three amounts.

Mr. Wheat: Well, Mr. Watkins, as shown in Column F of Exhibit 153, is it not?

The Witness: That is correct.

By Mr. Gorman:

Q. So that the general facts are more or less generally set forth on this Exhibit 153?

A. I believe they are quite fully set forth.

Q. Now, amortization is provided and has in the past been provided, has it not, for this total [mount] of $553,992.48, which is shown in Column E, line 36, page 3, of Exhibit 153?

A. Not for the entire amount, because as you recall—

Q. (interposing) Well, by that I mean the entire amount is presently being amortized, is it not?

A. The residue?—

Q. That is right.

A. Of the original amount is. You recall that you di- [fol. 7153] rected the witness' attention this morning to certain items that have been charged in the first instance to business promotion expense.

Q. Yes, excepting the $30,000 odd which we have previously discussed.

A. Your statement is correct, sir.

Q. Is the accrual for amortization provided in a specified manner, as is the annual accrual with respect to the gas sales in certain contracts as distinguished from this account of "Other Gas Sales and Purchase Contracts"?

A. These items are a part and parcel of the amounts registered as charges to other gas sales and purchase contracts.

Q. Yes, but as I understand the testimony you have previously given, you are required by a certain amendment to your certificate of incorporation to set aside each month a certain specified amount to amortize the amount shown on line 40 at page 2 of Exhibit No. 52, as representing the account for gas sales and purchase contracts. Is that correct?

A. That is correct.

Q. My inquiry presently is whether or not you have such a specific provision for amortization in the amounts shown at lines 43 and 44 on page 2 of Exhibit No. 52 for account entitled "Other Gas Sales and Purchase Contracts."

[fol. 7154] A. In the certificate of incorporation or elsewhere?

Q. Elsewhere.

A. No.

As the witness has previously testified, our procedure with respect to these amounts is to amortize them through gross income over the life of the contract or based on units of sales, as the case may be, and the amount is determined by the conditions present in each of the contracts, in connection with which the expenditures comprising the original total of which the amount $365,334.99 shown on line 44 in column M on page 2 of Exhibit No. 52 represents.

Q. Well, where you are making sales pursuant to a contract which has a certain specified term, do you provide amortization on a straight line basis over the term of the contract?

A. We do. Would you like an instance.

Q. I would appreciate one.

A. With your concurrence, we shall refer to certain of the items shown in detail on Exhibit No. 153, making up a total of $371,076 which have to do with the procurement of our contract with Detroit City Gas Company, now Michigan Consolidated Gas Company. At September 30, 1941, according to our determination, that contract had 123 months to run and the amount of amortization set aside with respect to the $371,076 on a straight line basis for the month of September, 1941 was $2,046.53.

[fol. 7155] Q. That represents, does it, 1-123 of the remaining balance which had not been amortized?

A. In this particular case, I believe it would represent the result of dividing the $371,076 by the total number of months the contract period originally covered.

To amortize it on the basis of 1-123 for the month of September and 1-122 for the month of October might not give exactly that same result.

Q. And in such cases, I assume that you have been providing such amortization since the time that charges were made as shown on Exhibit No. 153?

A. That has been our general practice, yes.

Q. And as you have indicated, on a monthly basis in all cases?

A. Not in all cases. Some of the amortization, in prior periods, may have been based on units of gas sold. The particular treatment depended upon the terms of the contract or the conditions or provisions of the particular contract in connection with which such expenditures had been incurred.

Q. Under what circumstances would you provide for an amortization on the basis of units of gas sold?

A. If we acquired a contract from a distributing organization or from an industry for that matter, and there were [fol. 7156] costs in connection with the acquiring of such contract a portion of which might be returnable to the company if the sales under the contract did not aggregate either certain annual figures or certain amounts in volume over the life of the contract, it would be necessary and proper, we believed and still believe, to base such amortization on units of volume.

Q. Is the company at the present time providing amortization accruals on both bases?

A. I do not believe we have at this time any amounts subject to such amortization that require months amounts determined on the basis of volume.

Q. So that in so far, conversely speaking, as you are presently aware, all amortization accruals are based upon the contract terms?

A. That is correct.

Q. From time to time, Mr. Watkins, you have referred to sales made under rate schedules and, apparently, in such references, distinguish them from sales made pursuant to contracts.

Does the Panhandle Company presently make sales pursuant to open schedules, that is, schedules available to any customer along its line?

A. If so, such contracts are a part of the files of this Commission. If you would not bind me too closely to an [fol. 7157] answer, I will give you the best of my remembrance at the moment.

Q. You may do so, if you will.

A. All or virtually all of the sales made in the State of Illinois for the past several years have been made under rate schedules. At the time of the adoption of such rate schedules, there may have been some contracts in existence and there still may be some peculiar contracts in existence dealing with or having to do with, rather, with industrial sales.

Most recently, Panhandle Eastern adopted rate schedules for the States of Missouri and Kansas and, more recently, for the State of Indiana. And you may recall some delay the company has experienced with the Indiana sales subsequent to August 1, 1941, so that my statement may be imperfect in certain directions with regard to those sales.

Q. Yes.

A. Now, in the filing of the rate schedules for the States of Missouri and Illinois and, I believe, in Indiana, our effort has been to preserve—and here I may be dealing with legal phraseology concerning which my knowledge is somewhat limited—the right Panhandle Eastern has to require any of the organizations it may have been selling gas to under contracts before the rate schedules were filed throughout the natural life of such contracts. Is that understandable?

[fol. 7458] Q. Yes, it is.

May it be properly concluded, therefore, Mr. Watkins, that all of the gas sales contracts which are being presently amortized, represent what you have designated as contracts as distinguished from the rate schedules that you have just been discussing?

A. I think that is proper to state if we connect it with the time at which the disbursements were made.

Q. Yes. I, of course, am not referring at all or considering in any way the fact that most, if indeed not all, of these several contracts have been filed with the Federal Power Commission as rate schedules. You so understood, I believe?

A. I believe I understand that, although I should like to state, without quibbling over minutiae, there may

be some industrial contracts in some of the exhibits presented in these proceedings which Panhandle Eastern does not necessarily, of itself, consider that it has filed. It has furnished, pursuant to certain orders, certain contracts which it, Panhandle Eastern, does not necessarily feel must be filed formally with the Commission.

Mr. Culton: You had reference to gas for resale?

Mr. Gorman: Yes. I think we understand one another. I merely wanted to distiinguish between what we consider [fol. 7159] as rate schedules under the Natural Gas Act as distinguished from those which Mr. Watkins has been designating here as contracts.

* * * * * * * *

By Mr. Gorman:

Q. Mr. Watkins, I invite your attention to Lines 19 to 35, Page 3, of Exhibit No. 153, at Line 23, Column B.

There is set forth a total amount of $33,130 which is explained on the Lines 19 to 23, inclusive. Is this amount of $33,130 the same amount which we have previously been discussing as having been charged as an operating expense rather than to the gas plant account?

A. It is.

Q. And with the exception of that $33,130, has the remaining balance of the total of $553,992.48 been expended in connection with sales made east and north of the termination point of the line of the Panhandle Eastern Pipe Line Company at Dana?

A. You would not be wanting to cause me to state definitely where change of title took place, would you?

[fol. 7160] Q. I do not quite understand your question, Mr. Watkins.

A. Michigan Gas Transmission Corporation transports certain gas for Panhandle Eastern Pipe Line Company—

Q. (Interposing) I am merely speaking now of geographical location as distinguished from the actual seller.

Mr. Culton: That was the question, east of Dana.

Mr. Gorman: Yes, that is right.

* * * * * * * *

The Witness: I shall state that it represents disbursements made in connection with sales, either east or east and north of the termination of Panhandle Eastern Pipe Line Company's facilities at or near Dana.

By Mr. Gorman:

Q. Yes, and do the amounts shown on Page 2 of Exhibit No. 52 at Line 40 for gas sales and purchase contracts represent contracts in what has been generally described in this proceeding as the Local Area?

A. What line, sir?

Q. Line 40.

A. No, it would not be proper to say that. The Local Area, as it has been generally defined in this case, would not, according to my remembrance of such definition here, include sales made, for instance, in the State of Illinois [fol. 7161] and as you will recall, some portion of the $2,930,286.40 shown on Line 40 was in connection with sales to be made or being made in that State.

Now, we must examine the constituent parts of the $2,930,286.40 somewhat more than could be done by your statement, your question, before arriving at an answer and give consideration to the difference between the amount at which this item or the items represented by this amount as carried on the books of Missouri-Kansas Pipe Line Company and as recorded on the books of Panhandle Eastern Pipe Line Company before we dispose of the question.

Said differently, it would seem that there was in the mind of someone the rights either to buy gas or to sell gas somewhere other than perhaps such rights represented by the actual instruments received from Missouri-Kansas Pipe Line Company, without cost, by Panhandle Eastern when the amount at which the items were recorded on the books of Panhandle Eastern was determined.

It is correct to state that a considerable portion of the gas purchase contracts represented the right to purchase gas in the so-called Local Area.

Q. Were there any gas purchase contracts in any other than the Local Area territory?

A. There were some purchase contracts, Mr. Gorman, representing the right to buy gas in either the Panhandle

[fol. 7162] of Texas or in the Hugoton Field in the company's possession at or about this time or in the possession of one of its subsidiaries.

Whether the difference assigned to this particular account represented any of such contracts, I am not in position to state.

I have the feeling, however, that this difference must have represented some substantial right in the minds of the people making the entry and, likewise, in the minds of the Board of Directors when, at its meeting held in February, 1931, I believe, it ratified, approved and confirmed the action theretofore taken in recording the amounts.

Does that seem confusing to you?

Q. Well, I do not quite understand all of it. I was just turning over in my mind the hope that when I see it on the record, it might be more understandable.

A. Thank you, sir.

Q. May I summarize a portion of your statement and ask you whether or not it is to the effect that such obligations or contracts as the Missouri-Kansas Pipe Line Company may have contracted for and which rights were subsequently transferred to the Panhandle Eastern Pipe Line Company as of August 31, 1930, represented not only certain contracts which the Missouri-Kansas Pipe Line Company, as an operating utility, had been performing prior to such transfer and for which it had such facilities [fol. 7163] as would enable it to perform such contracts but also represented other rights or other contracts which, by a subsequent construction, it hoped to be able to fulfil?

A. Well, we have our facts slightly awry there, Mr. Gorman.

First, I would not characterize Missouri-Kansas Pipe Line Company as a utility.

Q. I was speaking of such of its activities as would be classified as a public utility.

A. Second, not all of the facilities were constructed at September 30, 1930, or, rather, September 1, 1930, and, finally, it was not the witness' intention to leave the im-

pression that it was his view that in recording the gas sales and purchase contracts of [of] September 1, 1930, there was, in the minds of the people making the entries or in the minds of the Board of Directors when ratifying such action later in the early part of 1931, an effort to assign any amount on the books of the company representing any contracts that might later be acquired.

The statement or rather the answer that I gave that may have been confusing to you ran to the feeling in my mind that there was some very good reason, unquestionably, for the difference between either amount you choose to use of the $926,250 or the $1,106,250 and the $2,930,286.40, all of [fol. 7164] which we have discussed at quite some length today and I must state again that, looking at this action in retrospect, it does seem to this witness that the amount was totally inadequate.

Q. Yes, but it has also seemed to be your testimony, I believe, that any amount attributable or set upon the books of the Panhandle Eastern Pipe Line Company was supposed to be related in its entirety to contracts which were in existence as of August 31, 1930, at the time of the transfer?

A. Whether or not we have heretofore specifically referred to each of those contracts, as such, in these proceedings, that is my belief.

Q. Yes?

Now, sometime ago, Mr. Watkins, in your testimony, you referred to, if my recollection is correct, some 23 gas sales contracts which were transferred or assigned, if you will, by Mo-Kan to the Panhandle Eastern Pipe Line Company. Is that correct?

A. Yes, I made such a reference.

Q. Could you furnish me with a statement showing the names of the purchasers under these contracts?

A. I could but I would rather refer you to a source where you can get them without my having to do so, if I may.

[fol. 7165] Q. It is satisfactory to me.

A. I believe you will find some substantial detail with respect to those contracts and to the 50,000-odd acres of gas purchase contracts as well in the files of the Internal

Revenue Department having to do with Panhandle Eastern Pipe Line Company's income-tax return for the year 1936 and if it be necessary for Panhandle Eastern to authorize such reference, I shall undertake to supply whatever authorization is required.

I suggest this, Mr. Gorman, because there is a rather substantial amount of detail involved and we are so terribly busy with so many other things that if somehow the Commission's staff could seek the information it wants from that source, it would be a material accomodation to us.

Q. I would be very glad to avail myself of your suggestion, Mr. Watkins, except previous experience in attempting to secure data of a nature similar to this from the Internal Revenue records has demonstrated it is very difficult to accomplish within a very short space of time and, as a contrary suggestion, may I inquire whether or not you have a copy of such income-tax statements which could be made available to me for photostating and return to you?

A. Not here, I do not. I simply have a summarization. If you must do that, we will furnish it.

Q. Well, I meant, do you have one in your office?

[fol. 7166] A. Yes, we will furnish it for you.

Q. I do not want you to think that I am trying to duck you but I have had previous experience with the Internal Revenue Bureau.

A. Well, I would not guarantee that I do not think that but I will get it for you.

Q. And I assume that such data, when it is shown, will indicate the date of the contract with these several customers?

Mr. Wheat: You mean the date of each contract?

Mr. Gorman: Yes.

Is that correct, Mr. Watkins?

The Witness: My remembrance, sir, is that it will not only give that but a great deal of other information concerning each of the contracts.

By Mr. Gorman:

Q. Very well, I think that probably will be sufficient.

Now, you also had previously referred to some 50,000 acres, I believe it was, stated as leaseholds, which were contributed by Mo-Kan to Panhandle Eastern at the time of the transfer in 1930, is that correct?

A. That is correct.

Q. And is it correct that those rights, so transferred, were represented by leaseholds or leases, if you will?

A. They were.

[fol. 7167] Q. And as you have previously indicated, I believe that all such land covered by these leases was located in the so-called Local Area?

A. I believe that is quite correct, sir.

Q. Do you know whether or not the production in the Local Area is presently being made from all or any portion of these 50,000 acres?

A. I would say very definitely that it is not.

Q. That is, it is your opinion that these leases have since been abandoned or surrendered?

A. At least some of them.

Q. To what extent, you are not now prepared to state?

A. I am not.

Q. Now, Mr. Watkins—

A. (Interposing) If I may interrupt, Mr. Gorman.

In determining the number of contracts and the leases representing gas purchase contracts which seem to have been acquired as of September 1, 1930, our approach to that was, a few years ago, in connection with Federal income matters.

There may be some gas purchase contracts or gas sales contracts that were acquired at the time of the substantial contribution of assets by Mo-Kan to Panhandle Eastern that, during the intervening years, we have lost sight of.

If you were to put a question to the witness whether or not, in his opinion, there were a great number, his answer [fol. 7168] would be "no," but it would not quite be proper to say that the list of the 23 contracts we shall procure for you represent exactly the sum total of such contracts coming into the possession of Panhandle Eastern originally and this statement is not made for the purpose of confusing but for the purpose of elucidation.

We are going to give you what we think is the exact number of contracts we received.

Q. That is what I am after, yes.
A. It is sales contracts only.
Q. Yes.

Would your purchase contracts be in a form other than a lease?

A. There were some purchase contracts at or about September 1, 1930, as I have stated, covering lands located in the Panhandle of Texas and southwest Kansas which may have been associated directly or indirectly with this difference between the amounts shown per the books of Missouri-Kansas Pipe Line Company and the amounts assigned to such assets on the books of Panhandle Eastern.

I have tried to simply show that there could have been such a condition without making any specific statement that there was.

Q. Yes.
A. So that the 50,800 acres represented by gas leases [fol. 7169] or leaseholds or gas purchase contracts need not necessarily have been all of the gas purchase contracts at that time.
Q. Would leaseholds or leases have been classified as gas purchase contracts in so far as the account set forth at Line 40 of Page 2 of Exhibit No. 52 is concerned? —
A. In determining the amount set forth there, someone must have given consideration to the instrument or the thing conveyed by the instrument giving Panhandle Eastern a right to buy gas, if there was production on 50,000 acres.
Q. But to what extent or whether or not this was actually done, you do not know?
A. That is a correct summarization of my present knowledge.
Q. And the only place in which your gas purchase contracts would have been reflected would have been in the amount of $2,398,402.19 which was assigned to these contracts by the Board of Directors on February 3, 1931, is that correct?

A. Except to this extent, when Panhandle Eastern Pipe Line Company acquires a lease, it capitalizes the first cost of the lease—

Q. (Interposing) Just a moment, Mr. Watkins. I do not like to interrupt you but have we not gone through all of the details which make up the total of $3,053,391.53 and [fol. 7170] the total for other gas sales and purchase contracts amounting to $553,992.48 and other items of expense in the amount of $33,130 and in going through such amounts, I do not believe that we have come across any payments actually made as reflected by the exhibits and testimony for the gas purchase contracts which we are now discussing. Is that correct?

A. Limiting our question and answer entirely to the two amounts you just mentioned, that is correct.

Q. Yes.

A. But your question before was a rather broad one, according to my interpretation, dealing with gas purchases.

Q. Well, my question—

A. (Interposing) And we have acquired some substantial rights since September 1, 1930, in that direction and I did not want any confusion to creep into the record in that respect.

Q. Yes. Of course, what I am discussing presently are those gas purchase contracts which are purported to have been transferred by Mo-Kan to Panhandle in 1930 and since we have more or less explained all of the claimed expenditures in connection with either gas sales or gas purchase contracts, without referring in such explanation to detailed items of expenses incurred or claimed to have been incurred for gas purchase contracts, they must, of [fol. 7171] necessity, be reflected solely in the $2,398,402.19 which was a subject of confirmation by the Board of Directors on February 3, 1931. Do you understand what I am speaking of?

A. I believe I not only understand it but I concur in the statement.

Q. Yes.

Now, as I understand your previous testimony, you do not know nor have you been able to determine from any examination you have been able to make of the records

and books of the company of any specific amount which was allotted to gas purchase contracts?

A. I have not.

Q. And, conversely, of course, as I believe you have previously indicated, you also were not able to ascertain any specific amount which was allocated to gas sales contracts?

A. I have not and, in both answers, we are dealing solely with the—

Q. (Interposing) $2,398,402.19.

A. That is right.

Q. Sometime previously, in connection with the discussion of the payment made as of August 7, 1936, to Frank P. Parish as shown on Page 1 of Exhibit 153, you mentioned certain advances which had been made to Mr. Parish by the Columbia Oil and Gasoline Corporation, I [fol. 7172] believe, in the amount of $50,000, did you not?

A. I mentioned such an advance but Columbia Oil and Gasoline Corporation was not involved. The company involved was, I am sure, Michigan Gas Transmission Corporation.

Mr. Culton: That is what you testified.

By Mr. Gorman:

Q. Are you familiar, Mr. Watkins, with the fact that Mr. Beckjord, who has testified in this proceeding, testified to the effect that he was the party who represented Panhandle Eastern Pipe Line Company in the negotiation of the contract with the Detroit City Gas Company?

A. I have not Mr. Beckjord's testimony but I can well imagine he may have made such a statement.

Q. Do you know it to be a fact that he was the party who negotiated such contract?

A. Mr. Gorman, I have heard a great number of people claim that they were solely responsible for the procurement by Panhandle Eastern of the contract with the Detroit City Gas Company.

As a matter of fact, Panhandle Eastern was a party to a suit brought by some gentleman for a quarter of a million dollars who claimed he was the person who procured that contract.

I believe Mr. Frank P. Parish probably would make the statement that he was responsible for it. It may also be [fol. 7173] true that some of the officials of Missouri-Kansas Pipe Line Company might likewise make the statement that they were solely responsible for it.

I further believe that there is no gainsaying the fact that Mr. Beckjord was among the principal participants in the acquisition of the contract and he may have been the one person who did more to turn the trick for us than anybody else.

Unquestionably, Mr. Parish rendered some substantial service or our Board of Directors would not have paid him and Mr. Dupuy G. Warrick the sum of $100,000.

We do not toss our money about that way. I am sorry, sir, that I cannot categorically tell you that I know exactly who did that job but whoever did it, did a swell piece of work.

Q. Well, from that and your previous statements, may we not properly conclude that it has not been your intention to create any inference that the payment of $100,000 made to Mr. Parish was in payment for services rendered by him exclusively which resulted in the Detroit City Gas Company contract?

A. I do not believe, sir, that I specified exactly what Mr. Parish's services were. I did make a statement on the circumstances surrounding the payment to Mr. Parish. You have asked that a copy of a letter dated July 6, 1936, [fol. 7174] signed jointly by Mr. Parish and Mr. Warrick be made a part of this record and, when so made, it should speak for itself.

Panhandle Eastern Pipe Line Company's Board of Directors acted upon such a request. The payment was made. This witness has no specific knowledge of the efforts Mr. Parish was making. He knew, in a general way, that he was involved in an effort to sell gas eventually to Detroit and he must have done a pretty good job. He got a lot of money for whatever he did. I would not mind undertaking some task of that sort myself and receiving some such remuneration.

Q. Yes. Since you, yourself, as you just stated, do not know exactly what Mr. Parish's or Mr. Warrick's activities were in connection with the securing of the Detroit City gas contract, you, of course, are unable to say whether or not the statements contained in the letter of July 6, 1936, from Mr. Parish and Mr. Warrick is an accurate statement of their activities in this connection or not, is that correct?

A. I would assume that it was, Mr. Gorman.

Q. I know, merely on the assumption that these men were not falsifying.

A. On that assumption, yes. I do not know what these gentlemen did, any more than I knew exactly what Mr. [fol. 7175] Beckjord did or what Delos G. Smith or any of the members of the Missouri-Kansas Pipe Line Company organization did and I must confess, sir, that all during that whole activity, I had somewhat of a feeling we were throwing money away. Honestly, I did not believe we were going to have a contract with Detroit.

I did not have the feeling that they wanted natural gas and I was among some people that were surprised, when I learned that we had people in Detroit signing the contract.

Mr. Wheat: When you said you did not believe they wanted natural gas; did you mean the company with whom the contract was finally made?

The Witness: Detroit City Gas Company, now Michigan Consolidated Gas Company.

. . . . . .

By Mr. Gorman:

Q. Mr. Watkins, in a Registration Statement which the Panhandle Eastern Pipe Line Company filed with the Securities and Exchange Commission under date of September 24, 1941, which is identified as Registration No. 2-4919 at Page S-5, there appears certain notes as an attachment to the balance sheet in this statement.

Now, the first note "A. (1)" reads as follows:

"Property, plant and equipment is stated at cost except for $2,417,948.52 thereof assigned by the Board of

[fol. 7176] Directors to assets acquired as of August 31, 1930, as a capital contribution, and intangibles are stated at cost except for $2,398,402.19 thereof assigned by the Board of Directors to gas sales and purchase contracts acquired as of August 31, 1930, as a capital contribution."

At Page S-5 of the Compiled Registration Statement which is Exhibit No. 145 for identification, the first note thereof which is also a note to the balance sheet and is also identified as "A. (1)" reads as follows:

"Property, plant and equipment and intangibles are stated at cost except for $4,816,350.71 thereof which was recorded at the amount assigned by the Board of Directors to assets acquired as of August 31, 1930, as a capital contribution. It is the belief of the present management of the company that the amount assigned to the capital contribution represented the value of the assets contributed as determined by the donor, Missouri-Kansas Pipe Line Company. Of the total, $2,417,948.52 represented the amount at which the contributed tangible property was recorded on the books of the Missouri-Kansas Pipe Line Company, was assigned to property, plant and equipment and the balance of $2,398,402.19 was assigned to gas sales and purchase contracts."

Now, of course, a comparison of these two notes indicates there has been considerable change in the language. [fol. 7177] I invite your attention particularly to the second sentence of the paragraph which I have last read, namely:

"It is the belief of the present management of the company that the amount assigned to the capital contribution represented the value of the assets contributed as determined by the donor, Missouri-Kansas Pipe Line Company."

Now, since your name appears on this Registration Statement, both the original as filed December 24, 1941, and in the Compiled Registration Statement, Exhibit No. 145, perhaps you can tell us the reason for and the significance of the sentence which I have last read.

A. I can and I will be very glad to do so.

Q. Will you please?

A. To those who have filed Registration Statements with the Securities and Exchange Commission, it is a well-known fact that frequently you get deficiency memorandums with respect to such filing.

I must say here, parenthetically, that our deficiency memorandums, we believe, have been somewhat modest.

A part of the deficiency memorandum received by Panhandle Eastern with respect to the original filing of Registration No. 2-4919 ran to a request by the Securities and Exchange Commission for the amendment of such Registration Statement to state as nearly as Panhandle Eastern Pipe Line Company could, the basis upon which Missouri-[fol. 7178] Kansas Pipe Line Company had assigned values to such of these capital contributions as are referred to in the note to the balance sheet, both in the original filing and in the Compiled copy of the Registration Statement.

That, sir, is the only purpose of adding the sentence and does not constitute, in this witness' mind, a tremendously important change in the language from the original filing.

It represented purely and simply an effort on the part of the management of Panhandle Eastern Pipe Line Company to satisfy a portion of the deficiency memorandum with respect to the original filing.

Apparently it accomplished that purpose because the Registration Statement became effective January 21, 1942, as of January 12, 1942.

Q. Yes. Can you tell me upon what basis the present management of the Panhandle Company reached the belief that $2,398,402.19 represented the value of the assets of the gas sales and purchase contracts "as determined by the donor, Missouri-Kansas Pipe Line Company", since that was a determination made by officials and members of the staff of Panhandle Eastern Pipe Line Company and was confirmed by the Board of Directors of that company?

A. Well, there may be some improvidence in the language with respect to that. I do not believe that there was an effort on the part of Panhandle Eastern, in making this [fol. 7179] statement, to involve Missouri-Kansas Pipe Line Company in any manner.

I have quoted to you my remembrance of the deficiency memorandum. Perhaps I stated incorrectly that the request of the Securities and Exchange Commission was to state the basis of a determination by Missouri-Kansas when actually, I believe, it was a request for us to state the basis upon which the Board of Directors assigned this amount in its determination on February 3, 1931. As you may well imagine, it was very difficult, from the somewhat meager records we have concerning this particular item and for the further reason that very few, if any, of the Directors of the company at February 3, 1931, are now Directors of the Company, for us to do other than try to ascertain, as best we could, what might have been the basis upon which the Board did take such action.

Q. Well, is this sentence to which I have been making reference intended to represent that the assignment of $2,398,402.19 to gas sales and purchase contracts was determined by the Missouri-Kansas Pipe Line Company as representing the value of these assets?

A. Mr. Gorman, let me try to answer that, if I may, if I can do so, in a common-sense sort of way.

Q. I might state that my present state of confusion is brought about entirely by the fact that throughout the day [fol. 7180] we have been discussing the fact that these determinations were made by officials and Directors of the Panhandle Company, not Missouri-Kansas Pipe Line Company.

A. Is it not true also that in the general statement this witness made quite earlier in the day concerning the gas sales and purchase contracts, that there must have been an effort on the part of the mind of somebody in setting up these entries to cause their general effect to coincide in some degree or in some manner or in some respects with the determination by a buyer and a seller of a value at which those two parties were to determine the cost to one and the amount to be received by the other of one-half of the then-outstanding shares of the common stock of Panhandle Eastern Pipe Line Company.

Now, as nearly as we have been able to do so, from the information we have, it would appear to us that the difference between the amount at which the gas sales and purchase contracts were carried on the books of Missouri-

Kansas Pipe Line Company and the amount at which they appeared in the records of Panhandle Eastern Pipe Line Company could have very well represented the difference between the sum of a certain number of specific assets that Mo-Kan was donating and the amount it included in its computation and which must have been agreed to by the buyer of one half of the interest in Panhandle Eastern, so [fol. 7181] that in recording this amount, consideration was given to that fact.

Now, the language that you observe in the Combined copy of the Registration Statement is intended to encompass such a situation as that and does not, as the witness has stated, intend to involve Missouri-Kansas Pipe Line Company in any manner whatsoever.

Q. And is it upon the basis, that such statement in the Registration Statement was made, upon the basis of the conclusions which you have just mentioned?

A. Those, among others. We tried to find exactly what the Securities and Exchange Commission wished. We, as the witness has said, were not Directors, none of the officers, that is, none of the senior officers were officers at that time.

We could not obviously find all of these people who were Directors and examine them. We did the very best we could. This is the result. It seems innocuous to us.

Q. Well, it may be that I have read it improperly but, as I read the sentence which I have been discussing, it is a very definite statement that the valuation of assets amounting to $2,398,402.19 for gas sales and purchase contracts was made, not by the Panhandle Eastern Company or its officials or Directors, but by the Missouri-Kansas Pipe Line Company.

A. I do not believe one could characterize language [fol. 7182] beginning as this does in this fashion and I quote, "It is the belief of the present management", to be so specifically construed as you have construed it.

Q. Well, of course—

A. (Interposing) Please excuse me.

Q. Yes, indeed.

A. Now, Missouri-Kansas Pipe Line Company had something to sell. It put a price upon it. Part of that price

probably was these gas sales and purchase contracts, perhaps at some determination other than actually shown by its books.

That fact, I believe, will be borne out by some of its income tax returns filed with the Internal Revenue Department. In one of such returns may be found a statement where it computes to it the cost of the things it was obligating itself to turn over to Panhandle Eastern Pipe Line Company without cost to Panhandle Eastern at the time it sold one-half interest to Columbia Oil and Gasoline Corporation and to that extent, this seems a very proper statement for the officers of Panhandle Eastern Pipe Line Company to have included in the Registration Statement.

The statement likewise is a part of the notes to the balance sheet which has been certified to by the company's public accountants and they are just as cautious as the company.

. . . . . .

[fol. 7188] Cross-Examination (Continued).

By Mr. Gorman:

Q. Mr. Watkins, in your testimony of yesterday, I believe it commenced at Page 7062 of the transcript and on certain succeeding pages, you were discussing and made statements to the effect that if you had been better advised of the purpose for which Mr. Biddison requested information as to the cost of business development; instead of furnishing him with the statements which aggregate some $553,000, you would instead have furnished him with a statement which you outlined in detail which, instead of the $553,000 odd would have aggregated approximately $2,408,000.

That is generally correct, is it not?

A. That is generally correct except Mr. Biddison's request, as I recall it, made no reference to cost of business development.

He simply asked for payments made to utility companies.

Q. Yes. May I inquire whether, in introducing those statements of yours in this record, there was any intention on your part of contending for consideration of the amount of $2,408,000-odd instead of the amount of $553,000-odd which Mr. Biddison has set forth at Page 966 of his Exhibit No. 39?

[fol. 7189] A. Mr. Gorman, I believe a proper statement for this witness to make is, that in the introduction of facts with respect to Panhandle Eastern Pipe Line Company or its operations or its combined operation, it has been my purpose to supply, in connection with these proceedings, factual matter for whatever use to which it may be put.

Specifically with respect to the $2,408,000 amount as contrasted with the $553,000 amount, both being approximate figures, the witness attempted to show you the data he would have supplied to Mr. Biddison in the examination referred to at Page 7062 of the transcript of yesterday's proceedings and the pages succeeding that page, rather than the amount he did supply and then it would have been up to Mr. Biddison to treat with it in any manner he saw proper.

Q. Well, in so far as your present intentions are concerned with respect to the testimony relative to this item, you are not here proposing the substitution of the figure of $2,408,623.50, to which you testified yesterday, rather than the figure of $553,992.48, which is the total figure of payments to utility companies shown at Line 30 of Page 966 of Exhibit No. 39?

A. I believe that is a correct statement of fact. However, it does occur to me that consideration should be given to the $2,408,000. I should judge that in a proceeding of this kind, the Commission, as well as the public, as well [fol. 7190] as the company, wants the facts known and that any final determination would naturally take those facts into consideration.

Mr. Gorman: Yes.

May I inquire of counsel for the Panhandle Eastern Pipe Line Company whether or not there is any such contention on their part that this amount of $2,408,623.50, to which reference has been made by Mr. Watkins, should be substituted for the figure of $553,992.48?

Mr. Wheat: Mr. Gorman, we believe, of course, that all facts brought out in this record ought to be considered and we shall, of course, make whatever contentions we feel are proper at the conclusion of the record in whatever briefs may be filed or in arguments made before the Commission.

I am not now advised as to the incidence of all these facts and I am, therefore, unable at the moment to answer you directly on the point.

Mr. Gorman: My query, of course, was propounded with the thought that if the figures shown at Line 30, Page 966 of Exhibit No. 39 are contended to be erroneous by counsel, then I think Commission counsel, the Examiner and all others participating in this proceeding should be so advised so they may treat with that item accordingly.

Mr. Wheat: Nobody has suggested it is erroneous. The [Vol. 7191] witness has suggested that possibly there are other facts which should be taken into consideration with it. That is the point which I wish to express to you.

Mr. Gorman: Of course, we all appreciate the fact that the Commission, in its final determination, will give consideration to any pertinent fact.

Mr. Wheat: Surely.

Mr. Gorman: But my inquiry is as to whether or not we should treat Exhibit No. 39 in this respect as having been corrected to the extent that Mr. Watkins has testified in his testimony of yesterday.

Mr. Wheat: To the extent to which Mr. Watkins' testimony can be considered a correction, and I am not sure that he suggested that, as such, why, I think the facts testified to by Mr. Watkins should be considered, of course, along with all the other facts in this proceeding.

By Mr. Gorman:

Q. Mr. Watkins, I should like to invite your attention to certain statements given by Mr. Biddison in his testimony in this proceeding on September 4, 1941, commencing at Line 25 of Page 554.

I might say for the record this is a part of the direct testimony of Mr. Biddison.

Mr. Culton: I wonder if we might not borrow the Examiner's copy so he can follow you.

[fol. 7192] Mr. Gorman: Yes, indeed. That is Page 554, September 4.

By Mr. Gorman:

Q. Do you have the place, Mr. Watkins?

A. I do.

Q. (Reading).

"Q. Now, will you turn to page 966 which you have headed: 'Cost of Business and Development', and tell us what is included on that page?

"A. Upon the completion of a natural gas line, business does not just walk down the street and attach itself. It takes effort to attach business. It takes time to attach business and costs money to attach business.

"Q. Is there usually some lag of that sort?

"A. It is almost inevitable. I know of one or two exceptions, where business was immediately attached to substantially the capacity of the business, but those are very rare.

"In general, it takes five years or more to develop the business for which a line is constructed.

"On this particular system, in order to develop business, and in line with what is being proposed on more recent construction, payments were made to some of the distribution utilities to aid them in their sales campaigns for industrial gas, for house heating gas, and contributions were made to bear part of the cost of their changing over their systems from manufactured gas to natural gas.

[fol. 7193] "I have listed, on page 966, a statement, beginning at line 2 and ending in a total at line 30, of such payments made to utility companies. The purpose of the payment is generally shown.

"Q. You mean payments actually made by Panhandle Eastern Pipe Line Company?

"A. Yes, sir."

Mr. Wheat: By the way, Mr. Gorman, that refers to the table totaling $553,000-odd that was referred to yesterday in the witness' testimony?

Mr. Gorman: That is correct and is shown, as indicated in this testimony I have just quoted, at Page 966 of Exhibit No. 39.

Mr. Wheat: Thank you.

By Mr. Gorman:

Q. In view of that statement of Mr. Biddison's and his intent with respect to his presentation of that part of his Exhibit No. 39, do I understand correctly that it is your opinion that the cost of attaching business should include payments made by the Missouri-Kansas Pipe Line Company for contracts which it acquired?

A. Mr. Gorman, this witness has given no specific testimony that he remembers with respect to any representation as to what the cost of business development should in- [fol. 7194] clude nor is he entirely familiar with the treatment given any items which may have been furnished by him to Mr. Biddison and used in connection with Exhibit No. 39 on Page 966 or elsewhere therein.

If you wish my personal opinion—

Q. (Interposing) I am asking the opinion upon which you made the statement it was your belief that the amount should have been $2,408,623.50—

A. (Interposing) Let's get our facts straight, sir.

I did not say it was my conclusion that Mr. Biddison should have used $2,408,000. The record does not show that.

Q. Well, I beg to differ with you in that respect.

A. You may do so—

Q. (Interposing) May I refresh your recollection as to what you said yesterday. At Page 7062 you said, in discussing this item:

"It did not dawn on me and I did not awaken to the fact that perhaps what Mr. Biddison was requesting was the total amount of such payments from the very inception of the company until I had occasion to take a quick glance at a portion of his testimony.

"So, as I stated before, had the question been put subsequent to such knowledge on my part or had my thoughts at the moment been a little bit more mature than I now see

they were, the total we would have given to Mr. Biddison [fol. 7195] would have been on the order of $2,408,000 and I should be very glad to supply you what seems to me to be the items that constitute that total, if you wish them."

That, to my mind, is a very clear and definite statement that it is your belief that the figure, instead of $553,992.48 should have been "on the order of $2,408,000."

Is that an incorrect reading of your language there?

A. I believe it is an incorrect conclusion, certainly. My language was a simple statement that my present interpretation of the request put to me by Mr. Biddison, which resulted in the furnishing to him of certain information aggregating $553,992.48, was improper, and in the light of further consideration and of the facts that have developed since, had such question now been put, the answer would have contained the items placed in the record yesterday aggregating slightly more than $2,408,000.

How any other construction could be placed on the statements made by the witness at Page 7062 is something the witness cannot understand.

Q. Yes. Now, you took exception to the phrase "cost of business development." Of course, in reviewing Mr. Biddison's testimony, as you indicated you did and obviously in connection therewith, considered this Page 966 of Exhibit No. 39, you did know the purpose which Mr. Biddison put this information to and the stated purpose for which [fol. 7196] he proposed it to be used, did you not?

A. I not only knew it then but I think perhaps I might have known it at the time he asked for it.

Q. Yes.

A. However, he was the gentleman that treated with it. Now, as I started to say a short while ago, if you would like my expression of what might have been the cost of business development to Panhandle Eastern Pipe Line Company, I do not believe it is yet in the record because certainly we have a situation with respect to our company where some consideration should be given to the years up to the time when the company began to make some sort of a profit that could be represented as a return to the stockholders.

I am not testifying with respect to the cost of business development. I simply give you a slight indication of what my view might be with respect to that particular item.

Q. So, of course, from this and your previous statements, we may properly conclude that you have not and do not now intend to offer the figure of $2,408,623.50 in substitution for the figure shown at Line 30 of Page 966 of Exhibit No. 39?

A. As stated before, Mr. Gorman, the purpose of showing that amount was because the witness wished to have the record disclose what he believed was information that the Commission, the company, the intervenor, the City of [fol. 7197] Detroit, Wayne County, or any other participant in these proceedings might reasonably require for a proper and equitable determination of any questions involved in these proceedings.

Q. Is the answer to my question, Mr. Watkins, no, that you do not propose such substitution?

A. Only to the extent that I have qualified heretofore.

Q. Well, as I understand your qualification, you have submitted your testimony with respect to these figures for whatever use they might be put by the Commission?

A. I believe that is a correct statement, sir.

Q. And that in so far as your intent is concerned, you have not directly proposed it to be a substifution for the figure which we have been discussing as shown on Page 966 of Exhibit No. 39?

A. Not directly, no, sir.

Q. There is a further question, Mr. Watkins. Yesterday we disgussed at some length various contracts of the Panhandle Eastern Pipe Line Company. May I inquire whether or not those contracts that we were discussing, so far as they are presently effective, are they the ones which are reflected on Exhibit No. 60?

A. Did we discuss contracts, as such, sir, or only as they might have been involved in certain other matters we were discussing yesterday? It does not seem to the wit- [fol. 7198] ness that it is quite proper to say that we discussed the contracts, as such. Reference was made—

Q. (Interposing) Well, we made general reference to certain contracts. Exhibit No. 60 is in two parts, one of which deals with sales agreements with other gas com-

panies as at June 30, 1941, and the second portion deals with sales agreements with industrial customers as at June 30, 1941.

A. And your question with respect to the contracts shown on Exhibit No. 60 is in connection with the amount shown on the company's books in the account, "Gas Sales and Purchase Contracts"?

Q. That is correct.

A. They are not necessarily the same at all because there are many contracts included in Exhibit No. 60.

Q. Yes. Well, of course—

A. (Interposing) That had no reference whatever to the amounts carried by the company in its gas sales and purchase contracts.

If I may repeat a portion of what I believe I said yesterday, subsequent to August 31, 1930, save for a very small amount of dollars charged to gas sales and purchase contracts, it was not the accounting practice of the company to charge cost incident to the acquisition of such contracts to an asset account and hold it in such account for gradual amortization.

[fol. 7199] That practice continued until about the time the company, as a matter [—] fact after the time the company acquired a contract on August 31, 1935, with Detroit City Gas Company, now Michigan Consolidated Gas Company, and it was then changed only to the extent that in instances where a specific contract required, on Panhandle Eastern's part, a payment of some nature, that those amounts were charged to an asset account and held for gradual amortization.

The witness tried to show yesterday that there were many other such costs that were not so treated. They were absorbed as incurred through operating expenses.

As you no doubt know, we are constantly dealing with the acquisition of leases, sales contracts and purchase contracts. In the ordinary course of business, we make no effort whatever to accumulate the cost of such acquisitions in an asset account and amortize it over the natural life of such contract.

Does that answer your question, sir?

Q. Yes, I think so. Of course, my only purpose in raising the point at all was merely to indicate on the record that the exhibits which we discussed yesterday, in so far as they related to particular contracts, those contracts were explained somewhat in Exhibit No. 60.

A. Except to the extent, sir, that the witness tried to show that in fixing at least a part of one of those amounts [fol. 7200] at the time the original entry was made, there may have been some contracts, either purchase or sales contracts, that were included in the difference between the two amounts that we cannot definitely put our fingers on.

* * * * * * * *

[fol. 7208] Q. And you went to work, if I understood you correctly, for the Management Company of Columbia Gas in 1926?

A. Mr. Irvine, who was the manager of the Cincinnati [fol. 7209] office of Ernst & Ernst, persuaded me, in 1926, to become a member of his staff. Mr. Irvine at that time had left Ernst & Ernst and had become the general auditor for Columbia Gas & Electric Corporation and its subsidiary companies.

He was organizing a staff and he was going to develop certain different departments and what not. He did not know just exactly where he was going to put what person and I first went into the organization on the payroll of Columbia Engineering & Management Corporation.

My remembrance at this moment is that the first assignment I received under Mr. Ervine was a course of study, so to speak, that consumed a month or some period up until about the time Columbia Gas & Electric Company and Ohio Fuel Corporation—those names may not be precise, sir—

* * * * * * * *

(Continuing) —were merged in late 1926 and my activities after that merger drifted into budget work for the newly-merged system.

My scene of activity was changed shortly thereafter from Cincinnati to New York although my residence was retained at Cincinnati. About 90 percent of the time I was engaged in this assignment, my duties were wholly in connection with the installation of operating and construction budgets

in the various group offices of the Columbia Gas & Electric Corporation organization.

[fol. 7210] That continued until perhaps the year 1927 or 1928 when the management of the Union Gas & Electric Company at Cincinnati asked that I be returned to that organization permanently.

That did not displease me because my family was at Cincinnati. I did not care for this jumping around over the country too much although the experience was quite valuable. I had a great admiration for the management at Cincinnati, as well as the management of the other groups of Columbia Gas & Electric Company so, altogether, I was quite satisfied to go back to Cincinnati.

Q. Then your engagement with Columbia Engineering and Management Company was very shortly after its organization and while it was in a formative period?

A. Yes, but its records might show differently and, if you will permit me to do so, I will develop that fact for you.

Upon returning to Cincinnati, I became assistant treasurer of Union Gas & Electric Company and all of the subsidiaries of the Columbia organization whose headquarters were lodged in the Cincinnati office and retained that office until November 17—no, that is not correct—I was sent to Kansas City to learn something about an organization that I really never had heard anything of with the understanding that I probably would be there about two weeks. This was in November, 1931.

[fol. 7211] When I now look back over the years, I am aware of the fact that I never did get back to Cincinnati but my connection with Union Gas & Electric, according to its records, probably continued until the next annual meeting of the officers which probably was in the early part of the year 1932.

Now, after becoming connected with Panhandle Eastern for some internal purposes, my name was still carried on the organization rolls of one of the Columbia companies, I do not recall which, and the specific and only purpose for that was so that I might enjoy the benefits of a group-life insurance certificate that was issued to me in Cincinnati until such time as Panhandle Eastern might have some

plan of that sort itself and that was the sole purpose for that and I merely mention it so that, if someone reviewing the records ascertains when my name last appeared on the rolls, they would not be misled.

Q. It was my recollection that the Management Company was organized about December 1, 1925.

A. I have no specific knowledge as to that, sir.

Q. Well, you are aware, of course, that you were developing the personnel of the company in 1926?

A. I was a part of the personnel being developed, sir.

Q. Yes, and during that period, your staff developed [fol. 7212] the system of budgetary control that is still in use, did they not?

A. Well, we perhaps had something to do with the development of the system that is being used. Whether it is being used in the exact manner in which we developed it, I rather seriously doubt because, over the period of years, they must have worked some rather marked improvements in the system.

If I know those people very well, that was the natural outcome of any attention they would give to a thing that was installed in 1926 and still is in effect at this time.

Q. To what extent do you follow the construction and operating budget forms that you developed—I mean, to what extent did you follow them in Panhandle Eastern?

A. The staff of Panhandle Eastern at the time I appeared on the scene was composed of certain employees who likewise had been connected with the Columbia Gas organization in some fashion and the budget forms which the Columbia Companies had been using prior to the connection of those gentlemen with Panhandle Eastern were in effect when I appeared.

There probably is some great similarity even to this day between the two sets of forms used by the two companies. We have improved them. We have discarded certain things that that organization may have used. Alto- [fol. 7213] gether, naturally, having had something to do with the birth of the system, I should not say that it was worthless.

Q. Then, in the early period of your employment, you did go into the New York office there for a time?

A. That is quite true and, as the record will show, I likewise returned to New York in 1934, I believe it was, and served in a dual capacity as an officer of Columbia Oil & Gasoline Corporation and its subsidiary companies and of Panhandle Eastern Pipe Line Company and its subsidiary companies.

Q. Your offices then, and I speak of the offices of the Management Company, were with those of Columbia Gas & Electric Corporation?

A. At that particular time, 1934 to 1937, sir, nor subsequent to the time I returned to Cincinnati, as I explained before, I had no connection with the Management Company and we are speaking of Columbia Engineering & Management Company?

. . . . . .

[fol. 7216] Q. But what I was addressing my question to was as to your own personal contacts there during the period from 1926, was it, to 1928 that you were in New York?

A. It was sometime, Mr. Chamberlain, in 1927 and a part of 1928, as well as I recall at the moment.

Q. But the offices were all together, were they not, that is, the Management Company and the Gas and Electric Corporation had the same offices?

A. They occupied the same quarters, whether or not they had the same offices, I do not recall.

Q. Well, they were close, on the same floor, were they not, the same building?

A. Yes, that is correct.

. . . . . .

[fol. 7217] Q. Who asked you to go to Kansas City to look into the affairs of Panhandle?

. . . . . .

A. Well, it came about somewhat like this: I was called into the office of the treasurer one afternoon about 4 o'clock and a conversation was going on over the telephone. The treasurer turned to me and asked me if I could be prepared to be away from home for about ten days or two weeks and, very naturally, my response was yes, so the next I heard was: "Buy a ticket tomorrow from

Dayton to St. Louis and meet Mr. E. B. Flahive on the train leaving Dayton about 1:30 or something like that. Mr. Flahive will tell you where you are heading."

Mr. Flahive was at that time treasurer, I believe, of Columbia Gas & Electric Corporation. He was perhaps also treasurer of Columbia Engineering and Management Corporation. He may have been an officer or director of [fol. 7218] a great number of other companies and he might even have been connected with Panhandle Eastern.

The surprising part of the whole thing was, about the time I got ready to leave, the treasurer handed me a little package and said, "Here is a little present for you." That did not look like a two-week trip, so to make a long story short, I met Mr. Flahive on the train, hit Kansas City November 17, 1931, and have been connected with Panhandle Eastern ever since and I hope I shall be able to be connected with it all my life.

I have enjoyed the work thoroughly, have a wonderful company with wonderful potentialities.

. . . . . .

[fol. 7219] Now, I wish you would read into the record, unless it is already there, the list of the officers of Panhandle Eastern at the time you went there, and as you read them, state whether or not they were connected with the Columbia Gas Organization.

. . . . . .

[fol. 7220] The Directors were Frank P. Parish and, I believe, you will agree that he had no connection with Columbia Gas.

Q. I am sure of that.

A. E. L. DuPont, and I think the same situation may be said to be true with respect to Mr. DuPont—

S. A. Russell—as to Mr. Russell's connection with Columbia Gas, I am ignorant.

. . . . . .

Mr. William G. Maguire—I do not believe you would say that Mr. Maguire had any connection with Columbia Gas.

Mr. E. W. Crawford—Mr. Crawford may have been an officer of Columbia Gas. At any rate, he was an officer of Ohio Fuel Corporation which was a part of the merged Columbia Company.

Mr. T. G. Gregory—Mr. Gregory was at one time a Vice President of Columbia Gas and many of its subsid-
[fol. 7221] iaries or held office in some of its subsidiaries. I think it could properly be said he was connected with Columbia Gas.

Mr. E. Reynolds, Jr.,—Mr. Reynolds was certainly connected with Columbia Gas because he has been an officer of Columbia Gas ever since I have known anything about the organization and is at this [moments] its President, I believe.

Mr. T. R. Weymouth—now, Mr. Weymouth apparently became a Director of Panhandle about November 30, 1931. That would be shortly after I became connected with Panhandle Eastern and Mr. Weymouth, according to my information here, succeeded Mr. C. A. Munroe. You know Mr. Munroe. You know that he was President of Columbia Oil & Gasoline Corporation. I do not recall at this moment whether he was ever an officer of Columbia Gas & Electric Corporation or not.

There was a vacancy as a result of the resignation of Mr. H. G. Howard. Mr. Howard, apparently, resigned about the 4th of November, 1931, or at least at a Director's meeting held that day, his resignation was put in, it is apparent from the memorandum I have here. Now, I do not know much about Mr. Howard except heresay. Wasn't he connected with one of the financial institutions or organizations in New York?

United Corporation, I believe, at the moment owned
[fol. 7222] some of the stock of Columbia Gas & Electric Corporation. Whether or not it did in 1931 is something I do not know so I could not state specifically whether or not Mr. Howard had any direct or indirect connection with Columbia at that time.

* * * * * * * * *

Mr. E. R. Bay was Vice President and Mr. Bay, so far as I know, had never had any connection with Columbia

[fol. 7223] Gas & Electric Corporation. I believe his origin in Panhandle Eastern Pipe Line Company's affairs was from the Cities Service organization or some of its affiliates or subsidiaries.

Mr. R. G. Crandall was likewise a Vice President and Mr. Crandall was a member of a firm of attorneys whose offices were located in Chicago and I do not believe anybody could say that they had had any connection with Columbia Gas & Electric Corporation.

Mr. A. W. Leonard was likewise a Vice President. Mr. Leonard originally came, I believe, from the same general territory in Pennsylvania from which the Crawford family originated and he may at some time have had connection with some of the Columbia companies, either directly or indirectly. I do not know. At the time of he was connected with Panhandle Eastern, he had been loaned to the organization to assist it in the completion of its construction program and did a swell job.

* * * * * * * * *

Mr. E. Reynolds, Jr., was a Vice President at the time— [fol. 7224] Yes; he was likewise Secretary. Mr. Reynolds, as we have stated before, was also a Director and was very closely connected with Columbia Gas.

Mr. Seyffert, whose name you mentioned a short while ago, was Treasurer of Panhandle Eastern Pipe Line Company and Mr. Seyffert, at the time, I believe, held offices with some of the Columbia companies located at Columbus, Ohio.

* * * * * * * * *

[fol. 7225] (Continuing) And, of course, he has, as we have stated, had connection with the Columbia Gas & Electric Corporation or its subsidiaries.

Mr. H. H. Pell, Jr., was an assistant secretary of Panhandle Eastern Pipe Line Company and Mr. Pell at the time was, likewise, an officer of some of the Columbia Companies and one of the hardest workers I believe I have ever come across.

Mr. F. B. Flahive, as we have stated, was assistant treasurer of Panhandle Eastern Pipe Line Company.

Then, there was yours truly, who was, likewise, an assistant treasurer.

. . . . . .

[fol. 7226] Now, what was the fact with respect to who did the actual secretarial work after you were elected assistant secretary and took up your residence at Kansas City?

A. The board meetings were not held at Kansas City. The secretarial work was, no doubt, done by the secretary of the company, or one of its assistant secretaries located at the point where the meetings were generally held. I knew nothing of the minutes of the board meetings until we received copies of them at the Kansas City office.

. . . . . .

[fol. 7227] Q. Now, there was a reorganization of the Columbia Oil & Gasoline Corporation board the day after the Securities and Exchange Act was put into effect, was there not?

A. Well, I do not know, sir. I cannot connect those two things together.

As to Columbia Oil & Gasoline Corporation's affairs, I shall not be able to testify in connection with these proceedings. I am not an officer of the company and I have nothing to say about its affairs. I became an officer of Columbia Oil & Gasoline Corporation, I believe, about May, 1934. I continued to be an officer of Columbia Oil & Gasoline Corporation and its subsidiary companies until February 10, perhaps of 1937.

Q. Well, you were elected as a director and secretary and treasurer of Columbia Oil & Gasoline Corporation on June 7, 1934, were you not?

A. I do not remember the exact date. I think perhaps that is the correct date that I was elected to those offices. [fol. 7228] Q. And you acted as secretary-treasurer and director until some time in 1938, did you not?

A. 1937, sir. The early part of 1937.

Q. Now, who was it who asked you to become an officer of Columbia Oil & Gasoline Corporation?

A. Well, there, again, sir, it was not so much a request as it was direction. That circumstance came about somewhat after this fashion:

Mr. Charles A. Munroe, and several of the other directors of Panhandle Eastern Pipe Line Company visited its offices in Kansas City, perhaps it was in April of 1934, and during the course of that visit Mr. Munroe stated to me that I should report the next Tuesday at 61 Broadway, New York City, because I was to become an officer of Columbia Oil & Gasoline Corporation. There was no alternative left as to whether I wished to become one or not, and I cannot say that I particularly regret the fact that I was an officer of that organization. I had some rather interesting experiences then and have since connected with its affairs and Panhandle Eastern's. They were very instructive, as well.

Q. Mr. Munroe had become an officer of Panhandle Eastern, then, after his resignation in 1931?

A. It seems that Mr. Munroe became a director of [Rel. 7229] Panhandle Eastern about May 5, 1932, and remained the director of Panhandle Eastern until January 31, 1936, which was a day or so after a certain consent decree was entered, and I imagine we may hear more of that in these proceedings.

Q. Yes. That is my recollection, that he again went on the Board. Did he become an officer after 1932?

A. An officer of Panhandle Eastern?

Q. Yes.

A. I do not believe that he did.

Q. Well, then, you recognize the orders of Mr. Munroe, although he was but a director of the company?

A. At the time Mr. Munroe spoke to me there was present with him an officer of the company.

Q. Who was that?

A. Mr. E. Reynolds, Jr.

Q. Yes.

A. Who, at that time, was secretary.

Q. And vice-president?

A. Of Panhandle Eastern, yes, he was vice-president at that time.

Q. Well, at that time Mr. Reynolds was vice-president of Columbia Gas & Electric Corporation, was he not?

A. He may have been; he was vice-president of Columbia Gas & Electric Corporation.

* * * * * * * * *

[fol. 7230] Q. Well, he was, also, an officer of Columbia Oil at that time, was he not?

A. I think he was secretary of Columbia Oil at that time. He may have been a director of Columbia Oil, as well.

Q. Let me withdraw that. Does the incident of this conversation bring to your mind a statement made by Mr. Reynolds and Mr. Manfoe as to why they were putting you on the Columbia Oil board?

A. This thing comes to my mind, that in causing Leith Watkins to become connected with Columbia Oil & Gasoline Corporation, as well as Panhandle Eastern, there was a very definite effort being made to save a few dollars, and that statement was made rather clearly to me.

Q. That is strong in your mind?

A. That is correct. In connection with that they just [fol. 7231] worked the devil out of me.

Now, as to why I was becoming a director, I could surmise, but no definite statements were made. Maybe I was foolish enough to think that perhaps I could be of some assistance. I knew of the affairs of Panhandle Eastern. I had been with it for quite some while. It was so inexorably all meshed up in my life that it meant quite a lot to me and still does, and, as I have said before, I hope it ever shall.

Perhaps it was worth while to have someone on the Columbia Oil board that knew something of the affairs of Panhandle Eastern, because Columbia Oil, after all at that time had a substantial stake in the company and it wanted to know something about what was going on. There was a similarity of duties and functions and procedure with respect to the accounting affairs of Panhandle Eastern, as well as Columbia Oil & Gasoline Corporation. It was of some material assistance to me, as an officer in charge of that phase of the work of both of those organizations and the subsidiary companies, to have knowledge of what the other was doing, because it was not infrequent that I used the employees of those two companies interchangeably to effect economies and to eliminate rough spots, and so forth, in the organizations.

If, perchance, I saw a lad in the Kansas City office of [fol. 7232] Panhandle Eastern that could do us a rather nice service in the office of Columbia Oil & Gasoline Corporation down at Charleston, I sent him over there for that purpose, had him do that particular job, get it under way and go back to his own duties. That was true, likewise, with Columbia Oil & Gasoline Corporation's forces.

Q. The conversation you mentioned with Mr. Munroe and Mr. Reynolds was at Kansas City?

A. It was.

Q. And were you in New York at the meeting of Columbia Oil & Gasoline Corporation on June 7, 1934?

A. I think unquestionably I was.

Q. Now, at that meeting all of the officers of Columbia Oil, who were at that time officers of Columbia Gas, resigned, did they not?

A. I shall accept your statement, sir. I must, again, insist that I am not a witness in these proceedings to testify with respect to the affairs of Columbia Oil & Gasoline Corporation, and were I permitted to make such a statement without seeming to be officious, it would occur to me that they are irrelevant, immaterial, and so forth.

[fol. 7233] Q. Well, I am unable, Mr. Watkins, to change rules of law here to conform to what may be your wishes about these matters, but I must ask you as to facts within your knowledge.

A. I do not recall sir, exactly what happened at that meeting. It was many years ago and there had been a multiplicity of things happen. I have had my hands in what seems to me like a million different things, and I do not specifically recall what happened at the meeting.

Q. Will you refresh your recollection by looking at the annual reports of Columbia Oil & Gasoline Corporation now before you, and tell me in what way the Board of Directors was changed at your meeting of June 7, 1934?

A. You have supplied the witness with a copy of the annual report of Columbia Oil & Gasoline Corporation which shows, in part, on page 2, apparently it is, that the officers of Columbia Oil & Gasoline Corporation at the time such report was issued, which—

Q. Mr. Watkins, I am not asking you to read from that at all. I am asking you to refresh your recollection.

A. The only way I can refresh it is to look at this report—

Q. Of that meeting?

A. This report was apparently issued on March 30, 1934. I had nothing to do with the affairs of Columbia [fol. 7234] Oil & Gasoline Corporation in 1933, and if I must answer a question concerning the affairs of that company as of that date, I must refer to something and you have given me a report to refer to.

If you wish this witness to state the officers and directors of that company as of or about that time, he can only do so by reading from this report.

Q. Mr. Watkins, did you testify before the Securities and Exchange Commission in a recent hearing with respect to the exemption of Panhandle Eastern as a subsidiary of the Columbia system?

A. I may have testified to the extent of introducing some documents only. I do not recall, Mr. Chamberlain, that I gave any testimony in that proceedings with respect to whether or not Panhandle Eastern should be exempted. My remembrance at the moment is that the only purpose for which I was used was, perhaps, to identify documents.

Q. Have you read the findings in the hearing in that matter, which is Release No. 2778 and Exhibit 14 in this case?

A. I probably have.

Q. I now lay before you a copy of that Release, and ask if that refreshes your recollection as to what was done at that time?

A. We are now referring to the meeting of Columbia [fol. 7235] Oil & Gasoline Corporation that occurred on June 7, 1934?

Q. Yes, sir.

A. According to page No. 7 of the Release, to which counsel has referred—

Q. (Interposing) Mr. Watkins, I am not asking you to read that. I am asking you if it refreshes your recollection.

A. It does by reading it, sir.

Messrs. Harrop, Watkins, Philips & Munroe constituted the new Columbia Oil board.

Q. Then, at that time Mr. Reynolds resigned, did he?

A. I presume he did, if he was a director before, and I think he was. I believe, further, he was an officer.

Q. And Mr. Munroe resigned as a director of Columbia Gas, did he not?

A. That I do not know.

Q. You cannot remember that?

A. Mr. Chamberlain, I do not know anything about the affairs of Columbia Gas & Electric Corporation. I wasn't at any of its board meetings. Mr. Munroe may have been a director of Columbia Gas, he may have been a director, I do not know specifically, nor do I know when he resigned. I would assume that he did, and my assumption is based on this fact; that the possible further sever-[fol. 7236] ance of the connection between Columbia Oil and Gasoline Corporation and Columbia Gas & Electric Corporation was intended to be a part of the result of the transactions that took place at this June 7, 1934, meeting; assuming that to be the proper basis of the action that took place there, it would follow that Mr. Munroe would certainly resign from the board if he were on such board.

Q. Then, you do recall that the purpose of the meeting was to sever the relations there, in so far as the two companies were concerned, do you not?

A. I have no notice. I received no notice of the purpose of the meeting. I do not recall that Columbia Oil's by-laws at that time, nor do I recall that their by-laws during the time that I was an officer of the company required that notices of any of its meetings need state the purpose of such meeting.

I was not informed prior to the meeting what its purpose was. What I learned about the meeting was during the process of the meeting.

Now, my memory is not perfect enough to tell you specifically exactly what happened or the purpose of the things that did happen.

Q. The minutes of the meeting were in your custody for some three years, were they not?

A. Oh, yes; but I made no effort to make such a card [fol. 7237] index of my mind that I can instantly pluck from it incidents that occurred eight years ago. There has been so much happened, I have been involved in so many things of what seemed to be matters at the moment, that I feel that a job done is finished, behind, and put on the shelf.

Q. Is your memory clear as to what happened with respect to the resignation of Columbia Gas directors from Panhandle Eastern's board in 1934?

A. I can refer to the memorandum that I quoted you of the officers and directors a few moments ago and tell you what happened to them.

. . . . . .

[fol. 7238] Q. I am asking you whether or not every director of Columbia Gas who was a director on the board of Panhandle Eastern did not resign in the year 1935?

A. I do not know.

Q. Well, will you look and see?

A. Here are the changes in the year 1935.

Q. Let's save time here. Did Mr. Reynolds resign?

[fol. 7239] A. Mr. Reynolds apparently was not a director of Panhandle Eastern Pipe Line Company at any time during the year 1935.

Q. Then, he must have concluded in 1934?

A. According to my information Mr. Reynolds was not a director of Panhandle Eastern Pipe Line Company subsequent to the directors' organization meeting in 1932, which occurred about March 29 of that year.

Q. He was vice-president and secretary, at that time, in 1934?

A. That is correct. We are talking about the years 1932, 1933, 1934, and 1935, and he continued to be secretary of Panhandle Eastern Pipe Line Company until some time around the directors' meeting of the company held in April, 1935.

Q. That is right.

Now, Mr. Gregory was a director?

A. Mr. Gregory apparently ceased to be a director of Panhandle Eastern Pipe Line Company about April 24, 1935, and was at that time succeeded by Mr. W. P. Phillips.

. . . . . .

[fol. 7240] Q. Mr. T. R. Weymouth?

A. Mr. Weymouth was a director of Panhandle Eastern Pipe Line Company for a certain period up to and including April 24, 1935, when, at the directors' meeting held that day, apparently his resignation was acted upon and he was succeeded by Mr. J. L. Harrop.

Q. At that meeting were you elected secretary and treasurer of Panhandle Eastern for the first time?

A. That is correct.

Q. And has there been any officer of Columbia Gas & Electric Corporation on the board of directors of Panhandle Eastern since April of 1935?

A. Mr. Chamberlain, I do not know all of the officers and directors of the Columbia companies, so, please will you tell me who it is you are inquiring about and I shall attempt then to answer? I cannot answer such a general [fol. 7241] question.

Q. You mean that with all of your connections with the Columbia organization, your intimacy with the personnel, that you are unable to tell whether upon the small board of Panhandle Eastern there has been an officer or director of Columbia Gas & Electric Corporation, since April of 1935?

A. I mean exactly, sir, that, and I should ask you whether or not you can look back through your memory and tell me specifically who was a director of the United Power & Light Company, I believe it is, the parent of Michigan Consolidated Gas Company, or any of the subsidiaries or parents of that subsidiary, at any specific date certain.

Q. Do you know of any officer or director of Columbia Gas & Electric Corporation who have been an officer or director of Panhandle Eastern since April of 1935?

A. Of either Columbia Gas or Columbia Oil?

[fol. 7242] Q. I said Columbia Gas & Electric Corporation.

A. It would appear, sir, from the information I have before me and subject to my lack of knowledge with respect to some of the individuals that there had been no officer of Columbia Gas & Electric Corporation an officer of Panhandle Eastern Pipe Line Company, nor has there been any director of Columbia Gas & Electric Cor-

poration a director of Panhandle Eastern Pipe Line Company since the date to which you referred.

Q. Did I understand that after your election the office of secretary-treasurer of Columbia Oil you moved to New York?

A. Yes, sir.

Q. And for how long a period did you live there?

A. In New York?

Q. Yes.

A. Well, I live in South Orange, at this very moment.

Q. You are living there still?

A. Oh, yes, yes, but let's be sure that we understand what we mean when we say that. The record will show that during the time that I was an officer of Columbia Oil & Gasoline Corporation I was running around over the country between Kansas City and Charleston and various other points where my duties took me far more than the Watkins family appreciated. Now, then, I am still sub- [fol. 7243] ject to the necessity of spending a vast amount of my time in Kansas City.

. . . . . .

Q. Yes. Now, you became, at that time, the secretary and treasurer of the various operating subsidiaries of Columbia Oil & Gasolene Corporation, did you not?

A. Not treasurer, sir. Secretary and assistant treasurer of the subsidiaries.

Q. I see. And you served in substantially that capacity with respect to the subsidiaries until your resignation from the Columbia Oil organization in 1937?

A. That is correct.

[fol. 7244] Q. And as secretary of Columbia Oil, were you the chief accounting officer?

A. I was, not necessarily because I was secretary, however.

(Interposing). But I was the chief accounting officer.

Q. The by-laws of Panhandle Eastern make you the chief accounting officer, do they not?

A. The by-laws of Panhandle Eastern provide that there is to be a controller and the controller may be the same person as the secretary and the controller is the chief accounting officer.

Q. But, as a matter of fact, your were the chief accounting officer of Columbia Oil during the period of your service with that company? A. That is correct.

Q. You had the custody of the minutes of the Board of Directors of that Company, and also the subsidiaries, did you not? A. I did.

. . . . . .

[fol. 7245] Q. Do you remember where you were on the 6th day of March, 1935?

A. I do not. Does this mass of details show it?

. . . . . .

[fol. 7246] Q. That was the day the Government filed this anti-trust action against Columbia Gas and Columbia Oil, was it not?

A. I do not know.

Q. You do not know about that. You recall, do you not, about the early part of 1935 that the Department of Justice filed an action in equity in the Delaware District in Cause Number 1699, I believe, which was in the nature of an anti-trust action against Columbia?

A. I know there was such action filed. As to the actual date upon which it was filed; I cannot answer.

Q. And do you remember about in July that there was another suit filed by Henry T. Bush and C. Ray Phillips as receivers of Missouri-Kansas Pipe Line Company, against Columbia Oil & Gasoline Corporation and others in the Southern District of New York, United States District Court?

A. I believe there was such a suit filed. I do not know whether it was filed on that day or not. There have been such a vast number of suits filed directly by all of the companies over the period that I have been connected with them that I could not specifically recall the date of such [fol. 7247] suits or the nature of the action.

Q. These two actions are such that you remember them, do you not?

A. I remember, as I have stated in answer to your question, that there was a suit. I remember, likewise, that Messrs. Phillips and Bush, receivers of Missouri-Kansas, probably filed more than one suit. If they are anything like Missouri-Kansas, they surely did.

Q. Now, what other suits did they file?

A. I really do not know.

Q. That is just sort of a guess?

A. Perhaps a guess.

Q. Now, on June 1, 1936 there was an agreement entered into between Columbia Oil and in this examination may I use the words "Columbia Oil," "Columbia Gas," and "Panhandle Eastern" and "Missouri-Kansas" to represent the four companies, and you will understand them in that way?

A. I shall so understand them and, likewise, use them in that fashion, sir.

Q. Now, on June 1, 1936, was there not an agreement executed between Columbia Oil, Columbia Gas, Panhandle Eastern and Henry T. Bush and C. Ray Phillips, as receivers of Missouri-Kansas Pipe Line Company, which involved a settlement of the various difference that existed between these people?

[fol. 7248] A. There was such an agreement entered into, and we, of Panhandle Eastern, know of it generally as the four party agreement as of June 1, 1936.

If my memory serves me correctly, there was, likewise, a three-party agreement entered into on the same date, whether it be between two of the companies involved in the June 1st, 1936 agreement and the Missouri-Kansas receivers or just who the parties were to the so-called three-party agreement of 1936, my memory is somewhat vague.

Now, as to exactly what the June 1, 1936 three-party or four-party agreements contained, I cannot tell you in very great detail, except this, that I believe you will find by an examination of one or both of those agreements, that they were designed to put in writing certain conclusions tending to dispose of some alleged, real or fancied differences that existed between the parties, part of that time, and did specify certain things to be done by certain of the parties, but you would not ask me to recall each and every thing that they contained, I am sure.

Q. I must ask you if you signed that as secretary of Panhandle Eastern?

A. If the secretary of Panhandle Eastern Pipe Line Company signed it, I surely did, because I was the secretary at that time.

Q. Well, can you refresh your recollection by examin-
[fol. 7249] ing the exhibit before you?

A. The signature of Leith V. Watkins was apparently affixed to the document in question in that attestation of the signature of the vice president of Panhandle Eastern Pipe Line Company, who signed it, and that gentleman's name was Mr. James L. Harrop.

Q. And at that time Mr. James L. Harrop was vice president of Columbia Oil & Gasoline Corporation, was he not?

A. I believe he was and your witness was, likewise, secretary-treasurer of Columbia Oil & Gasoline Corporation.

Q. And a director?

A. Correct, and Mr. Harrop was, likewise, a director.

Q. Now, the settlement that was outlined and set out in this agreement was approved by the Board of Directors of Columbia Oil & Gasoline Corporation, was it not?

A. I think it may have been, Mr. Chamberlain. I would assume that naturally, it would have been.

Q. Yes. And it was done at a meeting at which you were present; was it not? A. Beg pardon?

Q. It was done at meetings at which you were present?

A. I would assume that to be the case, because, as I recall, I was present at most of the meetings of the Board of Directors of Columbia Oil & Gasoline Corporation, as long as I was a director of that company.

[fol. 7250] Q. Now, I shall, again, ask you to refresh your recollection, if you do not remember the matters which were settled by that agreement, and ask you if it did not cover a settlement of all claims between Columbia Oil, Columbia Gas, Missouri-Kansas, the National City Company and Panhandle Eastern with respect to the agreement of September 17, 1930, and the amendment thereto, to which you have referred in your previous testimony?

. . . . . .

A. I was hoping certainly that it would do that very thing. That was among its purposes.

. . . . . .

[fol. 7255] Q. You and I can not argue law, but I am directing your attention to whether or not Panhandle Eastern released all of these parties from any liability under the contract of September 17, 1930, and I refer you—

A. (Interposing) Did I say that the document I am referring to or, rather, it is the four-party contract of June 1, 1936, did not do that very thing?

Q. Yes, sir, but that is my question, Mr. Watkins.

A. Then I misunderstand your question.

Q. Did it?

A. It did, certainly, if it had any such obligation.

. . . . . .

[fol. 7256] Now, this settlement arose out of a longer period of litigation between the two stockholders of Panhandle Eastern, did it not?

A. I think that is correct, sir.

Q. And there passed between these people various charges against each other, and there had been a considerable period of litigation and various cases filed in the court with respect to these charges, had there not?

A. I think there was a lot of such action with respect to those alleged, real or fancied differences or charges, if [fol. 7257] you please.

Q. And these settlements were more particularly of interest to the stockholders than to Panhandle Eastern and, of course, I speak of that only in a financial way, not a business way.

A. Well, I do not believe I would agree entirely with that statement, sir, because Panhandle Eastern has always felt the anxiety of having any alleged, real or fancied difference, whether it be between its stockholders or otherwise, cleared up.

. . . . . .

Q. Well, I think you are quite correct, Mr. Watkins, but Panhandle received a substantial benefit resulting from this compromise settlement, did it not?

A. In what way, sir?

[fol. 7258] Q. Well, in the way that you have just indicated.

A. Well, we certainly received some peace of mind, because one of the humps was behind us. We were over that

hill, at least. We have had some others that have crept up since then.

. . . . . .

Q. It occurs to me that you have had substantial benefits in the way of aid in your refinancing without any particular expense to Panhandle Eastern. That is true, is it not?

A. I do not know what you mean.

Q. Well, you were recapitalized, were you not; without some 11,000,000 of preferred stock or cash without any expense for broker's commissions, is that not true?

A. Yes, there was no brokerage commission in connection with that.

. . . . . .

[fol. 7263] Mr. Watkins, I ask you to examine Exhibit No. 145—

. . . . . .

Now, you signed this Registration Statement?

A. In two or three places, yes, sir.

Q. Are you familiar with it?

A. I think I am reasonably familiar with it, yes, sir.

Q. Now, I would like to have you refer to the first para-[fol. 7264] graph under "Certain other phases of corporate history" if it is necessary to refresh your recollection and then I want to ask you a question.

A. I have referred to the paragraph, sir.

Q. All right. Is it true that on March 6, 1935, the United States Government instituted an anti-trust suit against Columbia Oil, Columbia Gas & Electric Corporation (hereinafter sometimes called Columbia Gas), George H. Howard, Phillip G. Gossler, Charles A. Munroe, Thomas R. Weymouth, Thomas B. Gregory, Edward Reynolds, Jr., Burt R. Bay, and John H. Hillman, Jr., alleging, among other things, the defendants had dominated the company for the purpose of preventing competition between The Company and Columbia Gas?

A. Such a suit was filed and the facts you have recited appear as a part of Exhibit No. 145 in these proceedings and your witness is among the officers of Panhandle East-

ern Pipe Line Company who signed that Registration Statement and the facts stated in it are correct.

Q. And it is your understanding that any reference to "The Company" refers to Panhandle Eastern Pipe Line Company?

A. Wherever the words, "The Company" are used in this exhibit, they do refer to Panhandle Eastern.

Q. Yes. Now, is it true that in October, 1935, the Government amended its Bill of Complaint in that suit and [fol. 7265] that the suit was finally terminated by stipulation and consent decree entered January 29, 1936?

A. That is true and it was also true that yesterday was the sixth anniversary of that.

Q. A copy of that decree was appended to your Registration Statement, A-2, was it not, and the stipulation—

A. (Interposing). Well, it was not appended to the stipulation, no, sir.

Q. Filed as an exhibit?

A. I shall refer to the list of exhibits and see whether or not it was incorporated by reference or filed with the exhibit itself.

On Page 95 of Exhibit No. 145, as exhibit K-1, there was incorporated by reference a copy of the stipulation and decree entered January 29, 1936, in Cause No. 1099 In Equity in the District Court of the United States for the District of Delaware, filed as Exhibit I-1 to the company's Registration Statement No. 2-2764.

Q. Now, you have seen the stipulation in that case, have you not, Mr. Watkins?

A. Unfortunately so, sir, I have.

Q. And you would recognize a printed copy of it, would you not?

A. I think I might.

Q. Now, I would like to have you state whether or not [fol. 7266] the stipulation entered in that case, being Equity No. 1099 of the United States District Court, District for Delaware, did not contain the following provisions:

"V(c) The Defendant, Columbia Oil, agrees to make, within 48 hours of the entry of the attached decree, a bona fide offer in writing to the receivers of Missouri-

Kansas Pipe Line Company, appointed by the Delaware Chancery Court, providing among other things for the settlement of the claims of the receivers, as asserted against the defendant herein and the acquisition by the receivers of a direct interest in the stock of Panhandle Eastern Pipe Line Company, to the extent that one-half of the initial amount of common stock of Panhandle Eastern Pipe Line Company to be outstanding after a recapitalization thereof, subject to any right of preferred stock which may have voting rights and rights of conversion into common stock and also subject to other conditions of the offer which may alter the proportionate interest of the various parties in Panhandle Eastern Pipe Line Company."

. . . . . .

[fol. 7270] Q. Now, Mr. Watkins, is it true that on July 18, 1935, Henry T. Bush and C. Ray Phillips, as Receivers of Mo-Kan, instituted a suit for damages against Columbia Gas; Columbia Oil, and certain individual defendants, claiming damages by reason of the alleged domination of the company by these defendants, and the suit was settled on or about April 29, 1936?

[fol. 7271] A. That is correct.

Q. And is it true that copies of the offer of settlement, as extended and modified, and of the acceptance thereof, [by] incorporated by reference as Exhibit K-2, to your registration statement No. 2-4919?

A. That is correct and the registration statement refers to that exhibit for a complete statement of its provisions.

. . . . . .

Now, I would like to have a document I now hand the reporter marked for identification with the next number and that there be attached the suffixes "A", "B", and "C" to cover what is in the exhibit named as "Exhibit H-6", "Exhibit H-9", and "Exhibit I-2" the purpose being that I desire to offer them collectively and separately, as well, and, further, that they refer to different matters.

. . . . . .

[fol. 7272] Trial Examiner: (Interposing) The folio which you are now discussing will be marked for identification as Exhibit 137 and I understand that it consists of

three parts which you desire now to separately identify as, respectively, A, B, and C?

. . . . . .

[fol. 7274] (Exhibits 157-A, 157-B and 157-C marked for identification.)

. . . . . .

By Mr. Chamberlain:

Q. I refer you, Mr. Watkins, to Exhibit 157, including the three portions, A, B, and C, and I will ask you if Exhibit 157-A is not a copy of the agreement between Columbia Oil, Columbia Gas, Panhandle Eastern and the two receivers of Mo-Kan as of June 1, 1936?

. . . . . .

[fol. 7277] The Witness: The witness has been supplied by Mr. Chamberlain with a file certified to by the Secretary of the Securities and Exchange Commission as being full, true and complete copies of Exhibit H-6, Exhibit H-9, and Exhibit I-2 to the registration statement filed by Panhandle Eastern Pipe Line Company pursuant to the provisions of the Securities Act of 1933 under File No. 2-2764 and in connection with that file, Mr. Chamberlain has offered, if the witness understands the status of the proceedings at the moment, certain portions of that certificate as exhibits Nos. 157-A, B and C.

. . . . . .

[fol. 7278] Exhibit No. 157-A for identification was a photostatic negative copy of an agreement dated January 31, 1936, between Panhandle Eastern, Columbia Gas and Columbia Oil. There were no exhibits attached to that agreement.

Exhibit No. 157-B for identification is a photostatic negative copy of an agreement dated as of June 1, 1936, between Columbia Oil, Columbia Gas, Panhandle Eastern and the receivers of Missouri-Kansas Pipe Line Company, to which there were attached certain exhibits.

Exhibit No. 157-C for identification consisted of photostatic negative copies of a letter dated January 31, 1936 from Columbia Oil to the receivers of Mo-Kan, concurred

in by Columbia Gas, as well; the photostatic negative copy of a letter dated March 4, 1936 addressed to Columbia Oil & Gasoline Corporation which was signed by Messrs. Frank P. Parish and Dupuy G. Warrick; as well as a photostatic negative copy of a letter dated March 5, 1936 addressed to Messrs. Frank P. Parish and Dupuy G. Warrick by Columbia Oil & Gasoline Corporation, concurred in by Columbia Gas & Electric Corporation; as well as a photostatic negative copy of a letter dated April 22, 1936 addressed jointly to Columbia Oil and Columbia Gas, the subject of which is shown as "Missouri-Kansas Pipe Line Company receivership," which was signed by Messrs. C. Ray Phillips and Henry T. Bush as receivers of Missouri-Kansas Pipe Line Company, which said let-
[fol. 7279] ter carries a foot not agreeing to the modifications set forth therein by Columbia Oil and Columbia Gas.

There is a further photostatic negative copy of a letter dated April 29, 1936, addressed jointly to Columbia Gas and Columbia Oil which was signed on behalf of Henry T. Bush and C. Ray Phillips, receivers of Missouri-Kansas Pipe Line Company, by Marvel, Morford, Ward & Logan, their attorneys.

* * * * * * * * *

The Witness: This material is certified to by the Secretary of the Securities and Exchange Commission as being Exhibit H-6, H-9, and I-2, to the registration statement filed with the Securities and Exchange Commission on December 30, 1936, by Panhandle Eastern Pipe Line Company pursuant to the provisions of the Securities Act of 1933, as amended, under File No. 2-2764, and if the witness may speak further, as the respective documents were referred to in identifying them with Exhibit Nos.
[fol. 7280] 157-A, B and C for identification, it is his belief that they are true and correct copies of the documents they purport to be.

* * * * * * * * *

[fol. 7299] Trial Examiner: The item of going-concern value, as presented by Mr. Biddison, I believe, was desig-

nated "Cost of developing business." May I ask, Mr. Wheat, whether you are in agreement with Commission counsel that the items to which Mr. Chamberlain has referred, aggregating $5,000,000 or more, may be classed as [fol. 7300] a part of the claim for going-concern value?

Mr. Wheat: We have not so used any such term. We have considered this as a cost in dollars of carrying unused capacity just exactly the same as interest during construction or any of the other costs to which this company was put in bringing its business to a stage of full operation. That is the basis of the claim.

We do not personally feel, on behalf of the company, I think it should be stated again, as it has been stated many times before in this record, that the type of proof which Mr. Chamberlain now suggests is material to that issue. The money unquestionably was spent and there is not even a hint in counsel's statement or in the statement of Commission counsel that the money was not spent.

Trial Examiner: Is there any distinction between the item in this case aggregating $5,000,000 or more and the item of $8,500,000 which was designated, as I recall, going concern value in the case of the Natural Gas Pipe Line Company?

Mr. Wheat: I do not know, sir. I think that is a matter that would require very considerable consideration. Mr. Culton is, of course, familiar with the record in that matter.

Mr. Culton: The items are the same. It was referred [fol. 7301] to, as Mr. Biddison stated, in that case as "going concern value," but it is not going concern value in the sense that those words have been used in the former cases. The items are similar.

Trial Examiner: You have covered the point the Examiner had in mind, whether or not the character of the expenditures there characterized as going concern value were similar to the expenditures involved in this aggregate of $5,000,000.

Mr. Culton: That is right.

Trial Examiner: Proceed, Mr. Chamberlain.

Mr. Chamberlain: The intervener now offers in evidence as a supplement to Exhibit No. 145, introduced by Panhandle Eastern, and particularly with reference to the statements on page 9 thereof, Exhibit 157.

Mr. Wheat: Mr. Examiner, we have no objection, of course, to any data which this company has filed with the Securities and Exchange Commission being made a part of this record on any basis or principle. We think, however, that we are encumbering the record, commencing, at least, the encumbrance of the record with what probably will become a very large encumbrance before we are through and it is, to a great degree, immaterial.

This witness, of course, can be asked to identify large numbers of documents. We understood the witness was under cross-examination.

[fol. 7302] I offer this statement merely to show that we have no desire to have this record encumbered with tonnage.

. . . . . .

[fol. 7304] Mr. Chamberlain: I am sure that there is a reasonable informality in these proceedings but perhaps I should, as a matter of caution, ask that the record show that I have offered Exhibit No. 157-A, 157-B and 157-C, separately. That is, the ruling is to be deferred and I have no objection to that but I would like the record to show that I offered them separately.

Trial Examiner: Very well, they will be so treated.

Q. Now, Mr. Watkins, getting back to our questions on page 9, I wish to ask you whether the suit of Henry T. Bush and C. Bay Phillips of Mo-Kan against Columbia Oil and others on July 18, 1935, was still pending at the time of the signing of the stipulation and decree in the antitrust [fol. 7305] action, to wit, January 29, 1936?

. . . . . .

A. It was and this witness had testified previously that it was not settled until April 29, 1936.

Q. And that included at least claims of the receivers which had been asserted against Columbia Oil prior to January 29, 1936, did it not?

A. I suppose it did.

Q. Just one more question as to the pendency of the antitrust action. A supplemental complaint was filed by the United States Government on or about December 21, 1938, was it not?

A. In connection with the so-called antitrust suits to which reference has been made?

Q. Yes.

A. That is correct.

Q. And it is still pending at this time?

A. That is correct.

* * * * * * * *

[fol. 7306] Mr. Chamberlain: Of course, you are stating something that refers to peak loads, not to sales of gas. The company has ample gas for sale and I understand it is desirous of selling it.

By Mr. Chamberlain:

Q. I am referring you to the middle paragraph on page 10 for one question. Is it not a fact that the "amended and supplemental complaint of the Government in the antitrust action alleges that the decree of January 29, 1936 failed to nullify elements of control over the company by Columbia Gas which existed at the time of entry of such decree, that the company has been precluded from engaging in commerce in natural gas and from competing in any manner with Columbia Gas and Columbia Oil in the States of Indiana, Michigan and Ohio, and that the acquisition of [fol. 7307] the capital stock of Michigan Gas Transmission Corporation by Columbia Gas has had the effect of restraining commerce in natural gas in said States and of tending to create therein a monopoly in natural gas?"

A. Yes, I believe it is quite correct that the amended and supplemental complaint does contain such allegations but, by virtue of the mere fact of furnishing such information in a registration statement, neither Panhandle Eastern Pipe Line Company nor any of its officers or directors admitted that those facts were correct.

The purpose of supplying this information is responsive to the requirements of the rules and regulations governing the preparation and submission of a registration statement.

* * * * * * * *

[fol. 7310] Q. Now, I direct your attention, Mr. Watkins, to the contract of September 17, 1930, to which you have made a very considerable number of references. Do you have with you a copy of that contract?

A. I have.

Q. Will you get it before you? Did that contract contain a provision to the effect that Missouri-Kansas Pipe Line Company, either directly or through its present and/or future subsidiaries, will enter into gas purchase contracts with the Panhandle Company upon substantially the following terms:

. . . . . .

[fol. 7311] Q. (Continuing) "1. An excess capacity contract for the purchase up to 20,000,000 cubic feet of gas per day at 18 cents per m. cubic feet, without limit as to time so long as the Panhandle Company has any excess capacity, provided that if the Panhandle Company can sell all or any gas at a higher price it may reduce proportionately deliveries under this excess capacity contract.

"2. Firm contract, commencing when the Panhandle Company gives notice to the Pipe Line Company and Columbia that it no longer has any excess capacity, for ten years and thereafter with right of cancellation by either party on one year's notice, at the rate of 26½ cents per m. cubic feet, deliveries under such contract to be as required by the Pipe Line Company and to aggregate for each year an amount producing at least a 70 percent annual load factor based on the maximum daily delivery, [fol. 7312] which maximum shall in no case exceed 20,000,000 cubic feet per day, and after the expiration of one year from the effective date of this firm contract such maximum day shall not exceed the maximum day established during said first year."

A. The contract of September 17, 1930, does have the provisions which counsel has just read, and it might be of interest to observe in connection with those provisions that it is the witness' belief that United Light & Power Company had something to do, perhaps a good deal to do, with the fact that the contracts referred to in this particular section of the September 17, 1930, contract were not actually executed.

. . . . . .

[fol. 7314] Q. Now, let me ask you, Mr. Watkins, whether the contract of September 17, 1930, contains a somewhat similar provision with respect to the contract for the sale of gas to Columbia Gas & Electric Corporation, and, if so, will you read into the record that provision?

A. There is, apparently, a similar provision with respect to Columbia Gas & Electric Corporation included in that contract which appears at V-(c) and is as follows:

. . . . . .

[fol. 7315] "(c) That it will cause the Columbia Gas & Electric Corporation, either directly or through its present and/or future subsidiaries, to enter into gas purchase contracts with the Panhandle Company at or near the Indiana-Illinois State Line upon substantially the following terms:

"(1). An excess-capacity contract for the purchase up to 20,000,000 cubic feet of gas per day at 18 cents per m. [fol. 7316] cubic feet, without limit as to time so long as the Panhandle Company has any excess capacity, provided, that if the Panhandle Company can sell all or any gas at a higher price it may reduce proportionately deliveries under this excess capacity contract.

"(2). Firm contract, commencing when the Panhandle Company gives notice to the Pipe Line Company and Columbia that it no longer has any excess capacity, for ten years and thereafter with right of cancellation by either party on one year's notice, at the rate of 26½ cents per m. cubic feet, deliveries under such contract to be as required by Columbia and to aggregate for each year an amount producing at least a 70 per cent annual load factor based on the maximum daily delivery, which maximum shall in no case exceed 30,000,000 cubic feet per day, and after the expiration of one year from the effective date of this firm contract such maximum day shall not exceed the maximum day established during said first year."

. . . . . .

[fol. 7317] Q. Now, before leaving this contract, I wish to call your attention to Article VIII, particularly with respect to the gas sales and purchase contracts which are now carried on the books of Panhandle Eastern Pipe

Line Company, and I would like to have you read into the record Paragraph VIII.

. . . . . .

The Witness. "The price per share for the stock of Panhandle to be sold by the Pipe Line Company and to be purchased by Columbia under the provisions of this contract shall be ascertained as follows: There shall be de-
[fol. 7318] termined by Arthur Anderson & Co. the actual cash investment as of August 31, 1930, of the Pipe Line Company system in the Panhandle Company and the Panhandle's subsidiary companies as the subsidiaries now exist, such cash investment to be the actual original cash cost to the Pipe Line Company system, plus interest thereon during construction at the rate of six per cent per annum, and such cash cost to include the payments made for engineering services by others than companies affiliated with the Pipe Line Company system, legal expenses, taxes during construction, organization costs, costs of franchises, and the $631,000 expended by the Panhandle Company for gas sale or gas purchase contracts. To such aggregate cash investment shall be added the debts and obligations existing at the Panhandle Company and its subsidiaries on August 31, 1930, to be paid by the Pipe Line Company as per Article IV paragraph (c) above (these debts and obligations not to include those of the subsidiaries of the Pipe Line Company whose stock is to be transferred to the Panhandle Company as per said Article IV paragraph (c). To the sum so ascertained shall be added $7,333,000. This price per share of Panhandle stock shall be obtained
[fol. 7319] by dividing the total sum by 10,000 and adding interest on said price at the rate of six per cent per annum from August 31, 1930, to the date of payment for each share of stock."

[fol. 7320] By Mr. Chamberlain:

Q. Do you have with you a copy of the supplemental agreement between the parties, of date October 23, 1930?

. . . . . .

A. Yes, sir; I have it.

Q. Well, I would like to have you read into the record the first and second paragraphs in that they relate to the facts stated in the Article VIII of the original contract.

1. The first and second paragraphs of the memorandum of agreement dated October 23, 1930, to which counsel has referred, are as follows:

"First: In adjustment of a dispute existing between [fol. 7321] the parties, as to the amount required to be paid by the Oil Company under the contract for said shares of Panhandle stock, it is agreed that the computation of the purchase price per share of Panhandle stock to be purchased by Columbia is to be computed exactly as set out in Article VIII of the contract, except that the figure of $7,833,000 therein mentioned shall be reduced to $6,453,000 and the computation of interest therein provided for shall be correspondingly adjusted. The purchase price per share of Panhandle stock to be paid by Columbia as of the date hereof, before calculating interest from August 31, 1930, is accordingly $1938.58-2/3."

"Second: The book value of the property to be transferred by Missouri Kansas to Panhandle, according to Article IV (a) of the contract shall be not less at the closing date than on August 31, 1930, without revaluation of any of the items. Under date of October 22, 1930, Arthur Anderson & Co. advised Columbia and Missouri-Kansas that the book value of the items referred to, exclusive of investments, was as follows:"

There then follows a table under two general headings, the first of which is: "Particulars", and the second of which is: "August 31, 1930."

[fol. 7322] I shall first read the "Particulars" and then the amounts shown in the column headed "August 31, 1930."

The statement under the heading "Particulars" is as follows:

"Book value of assets to be transferred by Missouri-Kansas Pipe Line Company to Panhandle Eastern Pipe Line Company (paragraph (a) Article IV.):

"Gas purchase and sales contracts—stated at valuation determined by Messrs. Brokaw, Dixon Garner & McKee, Geologists and Petroleum Engineers, and approved by Board of Directors: $1,106,250.00

"Pipe lines, compressors, etc.-exclusive of Kentucky Division properties: 2,417,948.32

"Prepaid accounts: 3,565.19

"Materials and supplies at book values: 46,140.41."

Paragraph Second continues as follows:

"They further state, with reference thereto, as follows:

'The book values of the properties located in Kentucky and Southern Indiana have been determined as accurately as was possible in the time available, as noted above, the book value of the Kentucky Division properties has been excluded in the foregoing tabulation at both dates.' "

Q. Now, in your testimony yesterday you referred to [fol. 7323] certain items on the books of Panhandle Eastern, which reflected the cost of the purchase of these gas contracts, did you not?

* * * * * * * *

A. Well, this witness is not at all sure that Panhandle Eastern may have received all the gas-sale and purchase contracts that Missouri-Kansas had at August 31, 1930. It may have had some that were not even on its books.

Q. All right, will you please turn to Article IV of the contract of September 17, 1930, and read into the record the beginning of that paragraph down to the end of Paragraph (a)?

A. Article IV of the September 17, 1930 contract is as follows:

"IV. The Pipe Line Company agrees with the parties hereto as follows:

"(a) That it will transfer to the Panhandle Company all [fol. 7324] of the natural gas fields, gas contracts, pipe lines, distributing systems, etc. which it owns wherever located, except those located in Kentucky [of] Southern Indiana, and its stock ownership in all corporations which may own similar property located in the same territory."

Does that complete your question?

Q. Yes. Your agreement covered all that it had, did it not?

A. This agreement did. My answer to your previous question was that this witness had no knowledge that Missouri-Kansas actually transferred all of the things that have now been referred to in this Article IV, which has just been read into the record.

[fol. 7327] Q. Please refer, Mr. Watkins, to Article VIII of the contract of September 17, 1930, and to the statement that there is included the $631,000 expended by the Panhandle Company for gas sale or gas purchase contracts.

Now, what was on the books of Panhandle Eastern as of August 30, 1930? Let us have the—

Items as to the cost of gas sale or gas purchase contracts.

A. I cannot answer that question other than in this manner, the analysis that I have with me of the value of gas sales and purchase contracts for the books of Panhandle Eastern Pipe Line Company speaks of an amount as of April 30, 1932. There was, however, an entry made in 1930 which included a total of, $612,286.30. It is my present belief that that amount is substantially the amount referred to by you in Article VIII of the September 17, 1930, contract.

Q. That is the amount named in that contract with the addition of your miscellaneous expense of $11,286.30, isn't it?

A. The miscellaneous expense, to which this witness has testified, was a total of $12,703.04. Without further investigation, sir, I could not reconcile the difference between $631,000, as shown in Paragraph VIII of the September 17, 1930, contract, and the amount included in [fol. 7328] my analysis, other than to say this: that at August 31, 1930, the books of Missouri-Kansas Pipe Line Company or Panhandle Eastern Pipe Line Company were not exactly current. That is not a reflection on the employees responsible for the maintenance of those books or records, nor of the officers or directors of those companies. The companies were engaged in a very extensive construction program and were in the process of spend-

ing some $40,000,000. Their records were not quite up to date at the time this September 17, 1930, contract was entered into or, for that matter, at the time it was consummated, or, for that matter, they were not quite in as complete a state as they should have been when I appeared on the scene somewhat more than a year later.

That does not impeach the record, if you please, sir, that is simply my way of explaining the difference here.

Q. If I have the figures which you gave yesterday correct, you gave three items which would amount to exactly that $631,000. Now, see whether I have this correctly. In May, 1930, did you not mention a five-year six percent note issued to F. 2. Parish & Company in payment for the 15,000 shares of Missouri-Kansas stock at $28 per share for use in connection with obtaining gas sales contracts with Illinois Power & Light Corporation and Missouri Power & Light Company, $420,000?

[fol. 7329] A. I did.

Q. Now, did you not then have one in June of 1930 of a seven per cent note to the same company in payment of 4,000 shares at $34 per share in connection with gas sales contracts, or a total of $136,000? A. I did.

Q. And did you not have an item in June of 1930, payment to American Coke & Chemical Contracting Company for industrial contracts in Peoria, $75,000?

A. I do not know, sir, that I stated that that was in June, but there was such an amount and was paid to the American Coke & Chemical Contracting Company.

. . . . . .

Q. And my information leads me to believe that in [fol. 7330] your registration statement you have reported those payments as having been made by Panhandle Eastern in May and June of 1930 and, if so, that would account for the $631,000 mentioned in Paragraph VIII of the contract of September 17, 1930.

A. Well, they do account for the $631,000 mentioned there. If we are particularly interested in the dates, I shall try to ascertain them.

Q. No, I just wanted to know that they were before the date of the contract at all, except that it is before.

A. Oh, it is before.

. . . . . .

[fol. 7331] Q. Now, have you made any search to find the valuation that was placed on the gas purchase and gas sales contracts of Missouri-Kansas by Brokaw, Dixon, Garner & McKee prior to the September 17, 1930, contract?

A. I have not. Now, let me see, please, if I understand your question. You are asking the witness whether or not the witness has made any search to ascertain the [fol. 7332] fact that there was such a valuation made by that firm?

Q. Yes.

A. As far as I recall, I have never seen a copy of such valuation. It could be that I am wrong.

Q. This is the same firm of engineers who appraised the cash contracts at around $11,000,000, is it not?

A. That is correct, and, also, the same firm of engineers that had to do with the original construction of Panhandle Eastern properties and did a good job.

. . . . . .

[fol. 7337] Q. Now, as secretary of Panhandle Eastern, you are the custodian of the minutes of its Board of Directors? A. I am.

Q. And they are presently in your custody?

A. At this moment, no, sir. When I am in the office they are, sir. When I am away from the office, they are locked in the vault and my secretary has the key to it, yes, sir.

. . . . . .

[fol. 7339] Q. Will you please refer to page 888 of Document 92, Part 82, of the Report from the Chairman of the Federal Trade Commission, in response to Senate Resolution No. 83 of the 70th Congress?

With the agreement that this is subject to correction after an opportunity to compare with the original records, I would like to ask you as to the contents of the minutes of a special meeting of the Board of Directors of Panhandle Eastern, held at 61 Broadway, New York, on Tuesday, May 26, 1931,—first, who was present at the meeting?

A. According to this exhibit there was present Messrs. F. W. Crawford, F. I. Dulpont, T. B. Gregory, W. G. Ma-

guire, C. A. Munroe, F. P. Perry and S. A. Russell.

[fol. 7340] Q. Now, was counsel also present?

A. There was also present Mr. E. C. Bailey of counsel for the company and Mr. Ralph Shaw, who accompanied Mr. Perry.

Q. And did the secretary, Mr. E. Reynolds, preside?

A. No, sir, he acted as secretary of the meeting.

Q. I am sorry, I meant as secretary. Now, I would like to have you read into the record a statement made by Mr. Parish with respect to the management which you will find beginning at the bottom of page 889?

* * * * * * * * *

[fol. 7341] Q. I would like to have you read from the record of the minutes of the Board of Directors as of this date beginning with the words "Mr. Parish stated that he considered"—which you will find near the bottom of page 889, and to read down to the last paragraph of page 890.

A. Down to the last paragraph?

Q. Yes, sir, of Document 82, Part 92.

A. "Mr. Parish stated that he considered that one of the most important matters before the management at the present time was the insuring of the sale of the company's gas production, and that in this connection he requested a statement from the management as to the efforts being made toward that end and offered certain resolutions instructing the officers of the company to proceed with the preparation and execution of the contracts with [fol. 7342] Missouri-Kansas Pipe Line Company, and with the Columbia interests called for by the Agreement of September 17, 1930, between the Missouri-Kansas Pipe Line Company, the National City Company and Columbia Oil & Gasoline Corporation; which resolutions he requested the secretary to read.

"After reading the same, the secretary stated that the officers of the Company had had the form of such contracts under consideration for some time, but that it had not been thought necessary to press the matter since the pipe line would not be ready to deliver gas for several months.

"The president then made the following statement:

"'The Panhandle Eastern Pipe Line Company has made or has under consideration various contracts for the sale of gas to other companies, each for their requirements in certain specified quantities and territories.

"'Among such proposed gas sales contracts are those under which Columbia Gas & Electric Corporation and Missouri-Kansas Pipe Line Company would be entitled to call on the Panhandle Eastern Pipe Line Company to supply them with gas.

[fol. 7343] "'It was definitely agreed that any gas to be taken under such contract by Columbia Gas & Electric Corporation would be for supplying Indianapolis and northern Indiana territory, extending to Detroit and other points in Michigan and connecting with existing pipe lines in Ohio.

"'It was, likewise, definitely agreed that any gas to be taken under such contract by the Missouri-Kansas Pipe Line Company would be only for the purpose of supplying gas to the southwestern parts of Indiana through Terre Haute, and south to Nashville, Tennessee.

"'The Panhandle Eastern Pipe Line Company hereby notifies Columbia Gas & Electric Corporation and Missouri-Kansas Pipe Line Company that it does not consider that either of them would be entitled to gas under such contract, if the gas so supplied is to be used in violation of the above agreements or for the purpose of interfering with the distribution of gas by the other party.'

"Considerable discussion between various members of the Board followed, with reference to certain parts of the negotiations leading up to said contract of September 17, 1930, and developments thereafter bearing on the use of gas to be delivered by Panhandle Eastern Pipe Line Com-[fol. 7344] pany under the agreements provided for therein.

"During this discussion Mr. Parish renewed his motion that his resolutions be adopted and there was a delay of a few minutes while several members read the resolutions in detail. Mr. Munroe then stated that he did not see any particular objections to the adoption of the resolutions or the making of the contracts with Missouri-Kansas and Co-

lumbia Gas & Electric contemplated by them, but he wanted it distinctly understood that those contracts should definitely provide that none of the gas taken by Missouri-Kansas should be supplied in the Indianapolis market because that would be a violation of the agreement to take such gas for the purpose of supplying southern and southwestern Indiana and southward including Nashville, Tennessee. Mr. Gregory suggested that that statement be amended or supplemented by the statement that the Panhandle would sell gas to the Columbia Oil & Gasoline Corporation for distribution in the Indianapolis market because that was in accordance with the agreements on which such contracts would be based.

"The proposed resolutions were thereupon laid on the table without being voted upon."

. . . . . .

[fol. 7351] LEITH V. WATKINS a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Mr. Gorman: Mr. Watkins, at Lines 21 to 25 on Page 7092 of the hearing transcript of January 29, during the course of cross-examination by me, you made the following response to a question:

"A. Are you conscious of the fact that with respect to the gas sales and purchase contracts following some of the transactions that were consummated in the early part of 1936, perhaps as of December 31, 1935, some $600,000-odd of the original $3,053,391.53 was written off the reserves?"

Now, I understand that you have some correction to make with respect to that statement and similar statements which follow in the transcript. Is that correct?

The Witness: That is correct, sir. The actual facts were that the $3,053,391.53, as shown on Page No. 2 of Exhibit No. 52 in Column G on Line 40, was reduced by $123,105.13 as shown on Line 42 on the same page in the same column and that thereafter, the amount became $2,930,286.40 as shown on Line 40, Page 2, Exhibit No. 52, and

that the inference made by the witness previously that the [fol. 7352] difference between $123,105.13 and $600,000-odd was in some manner taken from the records was incorrect.

Mr. Gorman: Yes, and the result of your statement is that the $642,000-odd was originally contained in the $3,053,000-odd and from your present information, you do not know exactly what portion of that $642,000-odd was retired by the reduction of $123,105.13 to which you have made reference?

The Witness: Let's put it this way, Mr. Gorman, if we may:

The $123,105.13 reduction was not necessarily applicable to any individual element of the $600,000-odd. It was applied to the sum total.

. . . . . .

[fol. 7353] Q. Mr. Watkins, I call your attention to the minutes of an adjourned meeting of the Board of Directors of Panhandle Eastern held at 61 Broadway, New York, on Friday, June 5, 1931.

. . . . . .

Mr. Wheat: Mr. Chamberlain, these questions are asked at this time with the understanding that the witness may check against the original records.

Mr. Chamberlain: Yes, certainly.

[fol. 7354] By Mr. Chamberlain:

Q. Who were present at the meeting?

A. Messrs. F. W. Crawford, F. I. DuPont, T. B. Gregory, G. H. Howard, W. G. Maguire, C. A. Munroe, F. P. Parish, E. Reynolds, Jr., and S. A. Russell.

There were also present, by invitation, Messrs. E. C. Bailly, D. M. Moffat, Ralph Shaw, Ralph B. Mayo, Boykin Wright, B. R. Bay and L. A. Seyffert.

Q. Mr. Crawford presided, did he, and Mr. Reynolds acted as Secretary?

A. That is correct, sir.

Q. I would like to have you read into the record that part of it covering the last two or three paragraphs, beginning at the words "Mr. Parish then requested".

Mr. Chamberlain: Page 896.

The Witness: (Reading) "Mr. Parish then requested that further consideration should be given to the subject matter of the resolutions which he proposed at the previous session of the meeting, held May 26, 1931, and which had been laid on the table. Mr. Munroe then offered the following resolution as a substitute for the same:

"'Resolved, That the officers and counsel of this company be, and they hereby are, instructed to prepare and submit to this board, for approval, a form of contract for [fol. 7355] the purchase from this company by Missouri-Kansas Pipe Line Company, of gas in accordance with the agreement between Missouri-Kansas Pipe Line Company, the National City Company, and Columbia Oil & Gasoline Corporation.'

"Mr. Munroe's motion was seconded by Mr. Gregory and after discussion it was put to vote and unanimously adopted.

"Mr. Munroe then moved and Mr. Gregory seconded the following:

"'Resolved, That the officers and counsel of this company be, and they hereby are, instructed to prepare and submit to this board, for approval, a form of contract for the purchase from this company by the Columbia interests of gas in accordance with the agreement between Missouri-Kansas Pipe Line Company, the National City Company, and Columbia Oil & Gasoline Corporation.'

"Upon vote this resolution was also passed unanimously."

Q. Will you refer to the minutes of a special meeting of the Board of Directors of Panhandle Eastern, held at 61 Broadway, New York, on Thursday, July 16, 1931, and first state who were present at that meeting?

A. There were present Messrs. F. W. Crawford, F. I. Du Pont, T. B. Gregory, G. H. Howard, W. G. Maguire, C. A. Munroe, F. P. Parish, E. Reynolds, Jr., and S. A. Russell, who were Directors.

[fol. 7356] There were also present, by invitation of the Board, Messrs. R. B. Mayo, R. M. Shaw, D. M. Moffat, and E. C. Bailly.

. . . . . .

Q. I would like to have you read into the record from the minutes of that meeting the five paragraphs beginning with and following the words, "The president then stated [fol. 7357] that he wished to bring up for the consideration of the board the proposed contract between Panhandle Illinois Pipe Line Company and the local utility serving Lincoln, Illinois".

A. (Reading) "The president then stated that he wished to bring up for the consideration of the board the proposed contract between Panhandle Illinois Pipe Line Company and the local utility serving Lincoln, Illinois, in anticipation of which the construction of the lateral line to Lincoln had been embraced in the original project. During discussion of this matter, Mr. Munroe stated that he felt that consideration of this or any such contract was related to the preparation of contracts for the sale of natural gas at or near the Illinois-Indiana State line to Columbia Gas & Electric Corporation and Missouri-Kansas Pipe Line Company, and with the permission of the chairman, proceeded with discussion of the latter subject. He stated that the officers and counsel, pursuant to the resolution adopted by this board at its meeting held on June 5, 1931, had continued actively at work on the preparation of such contracts, in connection with which it had become necessary to make careful estimates to determine the extent to which this company could obligate itself to make deliveries of gas under such contracts in view of its existing obligations.

"He further stated that the figures which had recently been brought to his attention indicated the possibility of [fol. 7358] demands for gas from the Panhandle Eastern Pipe Line in excess of its available capacity without the expenditure of substantial additional sums for additional compressor capacity and perhaps pipe-line capacity. He therefore recommended that immediate, careful, and complete study of the entire situation involving the gas resources, line capacities, and market requirements of Panhandle Eastern Pipe Line Company, together with

determination by counsel of the obligation and responsibility of the company for deliveries under its present contracts, if demanded in excess of pipe line capacities, be made, as he felt that the board heretofore had not been in possession of sufficient facts adequately to realize the possible extent of the commitments which might already have been incurred by the gas-sales contracts heretofore authorized and executed, to say nothing of what might be incurred by the conclusion of further gas-sales contracts.

"To this end he recommended that a committee, composed of a representative of each of the stockholders of Panhandle Eastern Pipe Line Company, be appointed to investigate and make a report regarding the expected sales and earnings and possible additional investment required on the part of Panhandle Eastern Pipe Line Company, and that in case they could not agree as to such expectations, they should be given authority to employ such independent parties as they desire to assist them and that it was his thought that this information should be made [fol. 7359] available with all possible speed.

"Mr. Russell, in the discussion, said that he had recently been considering the advisability of having just such an examination made and suggested the advisability that Ford, Bacon & Davis, Inc., or some such firm of standing, be employed for the purpose, but Mr. Munroe expressed the belief that economy in time and cost would result from having the work started by members of the Columbia and Missouri-Kansas organizations, who might call in Ford, Bacon & Davis or other qualified advisers, if necessary, to bring them into agreement.

"Thereupon, after further discussion, on motion of Mr. Russell, duly seconded by Mr. Gregory and unanimously carried, Messrs. R. H. Delafield and R. B. Mayo were appointed a special committee to investigate and report to this board the facts regarding the expected sales and earnings of the pipe line west of Indiana, the additional investment required to produce such earnings, and any other relevant facts which would be helpful in preparing the contracts for the sale of gas at the Illinois-Indiana State line, with authority, if the members of said committee were unable to agree, to employ independent

examiners properly qualified to assist them in ascertaining the necessary facts. In connection with the appointment of this committee, the officers of the company were directed to obtain a report from counsel as to the obli- [fol. 7360] gations and responsibility for deliveries under the present gas sale contracts of the company and its subsidiaries in case deliveries should be demanded under such contracts in excess of the present or future pipe-line capacities."

Q. Please refer to the special meeting of the Board of Directors of Panhandle Eastern Pipe Line Company held at 61 Broadway, New York, on Thursday, August 13, 1931, and state who were present at that meeting and who presided.

* * * * * * * *

Trial Examiner: (Interposing) That is not necessary if you identify the source, because we have clearly in the record the understanding this is taken subject to correction of the original.

[fol. 7361] Mr. Chamberlain: May we have this understanding, then, that all of the testimony given by the witness today with respect to the minutes of the meetings of the Board of Directors of Panhandle Eastern will be read from Document 92, Part 82, of the Federal Trade Commission in response to the Senate Resolution No. 83, 70th Congress.

Trial Examiner: That is sufficient.

* * * * * * * *

The Witness: The Directors present at that meeting were Messrs. Frank W. Crawford, F. I. DuPont, Thomas B. Gregory, W. G. Maguire, Charles A. Munroe, Frank P. [fol. 7362] Parish and Edward Reynolds, Jr.

Q. I would like to have you read into the record that portion of the minutes of this meeting beginning with the paragraph after that paragraph noting that the minutes of the last preceding [—] of the Board were approved.

* * * * * * * *

"The chairman then read to the board a copy of a letter from Mr. F. P. Parish to Mr. B. R. Bay, dated August

7, 1931, in which criticism was made of the diligence with which the management of Panhandle Eastern Pipe Line Company was executing its responsibilities.

[fol. 7363] "Mr. Crawford said that he had been advised that a representative of Missouri-Kansas Pipe Line Company had made certain statements indicating that that company was dissatisfied with Mr. Crawford's discharge of his duties as president of Panhandle Eastern Pipe Line Company and felt that on account of his position as an officer and director of the Columbia companies he was not giving his undivided interest and attention to the Panhandle project. Mr. Crawford stated that he had given his entire time and attention to the Panhandle project, to the very great neglect of his Columbia interests, but that he did not care to continue in office if the feeling of the Missouri-Kansas Pipe Line organization was as stated above, and that he wished the representatives of that company on this board to express themselves on this point and wanted to know if such statements had originated with Mr. Parish.

"Mr. Parish denied having expressed any such feeling or ever having heard it mentioned, and Mr. Maguire said that this was the first time he had ever heard such a feeling mentioned. Mr. Parish further said that he was entirely satisfied to have Mr. Crawford continue as president of Panhandle Eastern Pipe Line Company and that he did not think it was necessary for Mr. Crawford to resign from this position or any position in Columbia or from any other position he might hold.

[fol. 7364] "Mr. Parish then said that he still felt that there had been a great deal of delay in effecting arrangements for additional sales of gas by the Panhandle Line and that he felt more would have been accomplished if more diligent efforts had been made to add load to the line.

"There was then a general discussion of the availability of additional gas for sale under contracts for firm delivery and with particular reference to the ability of the Panhandle Line to commit itself to the proposed contracts with Missouri-Kansas and Columbia interests, and as to progress made by the committee appointed by the board at its last meeting to investigate the entire situation.

"Mr. Munroe said that Mr. Mayo had been furnished with all information made available from the Kansas City office of Panhandle Eastern Pipe Line Company, but that there had been so much criticism and suggestion to the effect that the Columbia organization was attempting to color such statements that he wanted it to be made clearly understood that the Columbia organization does not take any responsibility for or express any satisfaction or agreement with such statements furnished to Mr. Mayo; and he said that furthermore the Columbia organization wished the matter taken out of the hands of the said committee, inasmuch as they did not want Mr. Delafield or any other member of the Columbia organization to be subjected to [fol. 7365] the continuation of such criticisms. He and Mr. Gregory recommended the immediate selection of an independent engineer to undertake the investigation in accordance with the discussion held at the last preceding meeting. He quoted remarks made by Mr. Shaw to Mr. P. D. Cravath, counsel for Columbia, charging unnecessary delay in this matter on the part of the Columbia organization.

"Mr. Munroe made it clear that neither he nor any other representative of the Columbia interests had ever said that Panhandle Eastern Pipe Line Company would not sell gas to Missouri-Kansas, but that he did say that representatives of the Columbia interests had expressed grave doubt as to the advisability of the Panhandle management committing the Panhandle line to deliver firm gas in the quantities and for the periods contemplated in the proposed contracts with the Columbia and Missouri-Kansas interests.

"Mr. Munroe reiterated that the purpose of the investigation was to determine the facts as to the ability of the Panhandle line to live up to its present commitments to deliver gas and to make additional firm commitments, because the information so far furnished him (in respect to which neither he nor any member of the Columbia organization took any responsibility) indicated the possibility that under its contracts already executed the Panhandle line might be called on as early as 1934 for deliveries in excess of its present pipe-line capacity, without considering any deliveries at the Indiana-Illinois State

[fol. 7366] line. He said that obviously an increase in the present capacity would require further capital expenditures and he wanted the investigation to determine the extent of the provisions necessary to be made, so that this board could consider means of obtaining the necessary funds.

"Mr. Gregory and Mr. Munroe stated that the successful development of the markets available to the eastern end of the Panhandle line could only be accomplished by the most complete cooperation of all the parties interested and that the present conflict between the stockholding interests in the Panhandle Pipe Line Company was effectively preventing such cooperation and that the reasons for such conflict must be eliminated immediately.

"It was finally decided that the existing committee, consisting of Messrs. Delafield and Mayo, should agree as soon as possible on the employment of an independent engineer to investigate and report to the board the facts of the situation in accordance with the instructions to such committee given by the board at its last meeting held on July 16, 1931."

[fol. 7369] Q. Mr. Watkins, however, you were remarking on one thing that rather fits into the statement of Mr. Gregory at the meeting of August 13, 1931, as to the conflict between the stockholding interests and I would like you to elaborate a little in the record on the information that you indicated that you had received and the actual situation at that time.

A. The witness was about to volunteer, sir, the warning, I suppose one would consider it, which was given to to him before he even put his foot in the offices of Pan-[fol. 7370] handle Eastern Pipe Line Company.

Mr. Wheat: Would you mind identifying the place and the time?

The Witness: As far as I remember, Mr. Wheat, it was on a train on the Pennsylvania Lines en route from Dayton, Ohio, to St. Louis, Missouri, about November 16, 1931.

I was being admonished and warned to the general effect that I was about to become identified, temporarily or permanently, with a situation where there was a conflict between stockholders.

Mr. Wheat: And who do you refer to as the person who admonished you?

The Witness: Mr. F. R. Flahive. Mr. Flahive's words were about like this:

"Now, Leith, the one thing that will cause you to lose your position quicker than anything else is for you to show the least favoritism in any manner, directly or indirectly, with respect to either of the stockholders and particularly with respect to the Columbia Oil side of the thing."

And that, sir is the feeling that was present to me in any contact that I may have had during the entire ten years I have been connected with Panhandle Eastern Pipe Line Company with the so-called Columbia interests.

I had during those years up to and including about the [fol. 7371] year 1936 or 1937, very little contact with anyone having any connection with the Missouri side of the affair but I believe had I had any such contact with that side and had they felt it necessary to make any statements to me, their warning or admonition would have been even stronger than that received from Mr. Flahive.

At any rate, it has been my observation that those of us connected with the affairs of Panhandle Eastern Pipe Line Company have made a most desperate effort to stay in the middle of the road and conduct its affairs purely on the basis of Panhandle Eastern Pipe Line Company without regard to what we might surmise might be the wishes of any stockholder and that is what we are doing at this very moment, sir.

Q. Do you mean that conflict is still continuing?

A. I would not know exactly as to the conflict that might have existed at that time. You remember, of course, that I was a stranger to the operations and knew very little about who the stockholders were.

I would not say it has continued to this date in exactly that manner or whether or not it continues. My statement to

the effect that we are doing exactly the middle-of-the-road job now had nothing whatever to do or any connection with any proposed difference, real or fancied, between stock-
[fol. 7372] holders but that is the position that officers and employees of a company should take in any event, whether there be differences or not.

Q. There was a real conflict up to the settlement in 1936, was there not, a continuous conflict between the two interests of the company?

A. You may know more about that than I do, Mr. Chamberlain. I think the records generally of some of our courts, commissions and so forth do show that there has been some squabbling between those stockholders over a rather long period of time.

Q. Mr. Watkins, you must know much more about it than I know about it. Let me call your attention to various things.

You went into Columbia Oil in June, 1934, did you not?

A. I did.

Q. And Columbia Oil was at least a stockholder owning one-half interest at that time?

Mr. Wheat: In what?

Mr. Chamberlain: In Panhandle Eastern.

The Witness: Yes, it was.

By Mr. Chamberlain:

Q. And it owned all of the bonded indebtedness?

A. As of what date, sir?

Q. 1934.

. . . . . .

[fol. 7375] Q. Well, you knew that they were working in the Columbia Oil offices with respect to the hearings in Delaware in 1934, did you not, and that they had attorneys and witnesses there for many weeks?

[fol. 7376] A. Who do you mean by "they"?

Q. Columbia Oil and Columbia Gas.

A. Well, I suppose they did.

Q. You knew that they had made an offer to the receivers, did you not, to—

A. (Interposing) Mr. Chamberlain, you keep saying "they", sir. I have stated before that I am not sure that that offer was made by Panhandle Eastern or was made by Columbia Oil.

Q. I do not know how Panhandle Eastern could make such an offer.

I am talking to you about what was done by Columbia Oil?

A. I should have to refresh my memory, sir.

Q. Don't you remember there was an offer made to the receivers of $300,000 or thereabouts for the entire interest of the Mo-Kan stockholders?

A. I have stated, sir, that I remember such an offer was made. I remember that there were those proceedings. I remember they were over a rather long period of time.

How they came about or why they came about or the exact details of the offer, I do not recall.

Q. Well, you knew that there were various protective, so-called protective stockholders' committees of Mo-Kan, do you not, which were defending against the proposed plan in the Delaware Court?

[fol. 7377] A. Yes, I remember that rather vividly. It seemed to me they broke out like the measles.

Q. Yes. Then the conflict was on in 1934, you agree to that?

A. The conflict between the stockholders of Panhandle?

Q. The conflict between the stockholding interests and Panhandle Eastern.

A. I should think it might properly be said a conflict of that nature was in existence probably before that, some of the testimony we have read into the record would indicate that.

Q. It was continuous, was it not, up until 1936?

A. I can only speak of that as one who was on the outside looking in and it would seem it was almost continuous. Actually, I cannot tell you.

. . . . . .

[fol. 7378] Q. Now, you knew that during the period that [fol. 7379] the trial was going on in the Delaware Chancery Court in 1934, that the protective committees were

attempting to get the Department of Justice to bring an anti-trust action?

A. I suppose they were, sir. Actually, I do not know. I had no contact with those committees and, as I have stated to you, sir, I was present at that hearing for about two or three days.

* * * * * * * * * *

Q. You knew that the Delaware Court refused the application of the receivers to compromise their difficulties, that is, the receivers of Mo-Kan to compromise their difficulties with Columbia Oil and transfer to Columbia Oil the last of their holdings in Panhandle Eastern?

A. I do not know that I can identify this thing as an [fol. 7380] application of the receivers. I know that this affair we have been speaking of was never consummated. Let me put it that way, if I may.

* * * * * * * * *

Q. Will you refer to the minutes of the special meeting of the Board of Directors of Panhandle Eastern held at 61 Broadway on Wednesday, November 4, 1931, and state who were present at that meeting?

* * * * * * * * *

A. The Directors present were Messrs. Fred W. Crawford, F. I. Du Pont, Thomas B. Gregory, W. G. Magafire, Charles A. Munroe, Frank P. Parish, Edward Reynolds, Jr., and Stanley A. Russell.

Q. Now, I would like to have you read into the record from the report of the minutes of that meeting beginning with the words, "After said minutes had been read, Mr. [fol. 7381] Parish said", near the top of page 902, and continue to the bottom of the page; referring to Volume 82.

A. (Reading)

"After said minutes had been read, Mr. Parish said that he objected to the wording in the letter from Indiana Gas Transmission Corporation referred to therein, which he thought was too broad, and that he wanted it understood and agreed and noted in the minutes that Panhandle Eastern Pipe Line Company was not, by accepting said letter of Indiana Gas Transmission Corporation, waiving its

rights to sell gas elsewhere in Indiana. He stated that the language in the letter as read was so broad that it covered all rights, ideas, and plans that Panhandle Eastern Pipe Line Company might have had or might later have in regard to selling gas elsewhere in Indiana and that he did not propose that it should later be said that the company had forfeited an opportunity which may develop in the future to do business in Indiana by accepting this agreement.

"Mr. Parish specifically asked, in connection with the letter referred to whether it was the opinion of any of the members of this board representing Columbia that if Panhandle Eastern Pipe Line Company should in the future have some opportunity to do business in Indiana it would be claimed then that Panhandle had forfeited such right by accepting this agreement. Mr. Munroe and Mr. Reynolds [fol. 7382] answered 'No' to this question.

"The motion having been made and seconded to approve the minutes as read, the chairman put the question to vote, and Messrs. Crawford, Gregory, Munroe, and Reynolds were recorded as voting 'Yes'; and Messrs. Parish, Du Pont, Maguire, and Russell voted 'No.'

"The discussion on the point in question continued, and Mr. Parish made a motion that a court reporter be called into the meeting and instructed to take down the minutes, including all remarks made during the discussion at this and all subsequent meetings. At Mr. Parish's request Mr. Du Pont, after consideration, seconded the motion.

"Mr. Russell then offered a motion, seconded by Mr. Maguire, that the secretary be instructed to spread the discussion on the minutes. During the discussion of this motion Mr. Munroe said that he felt there could properly be recorded, in connection with the approval of the minutes of the meeting of September 15, the statement that there was no desire to acquire on the part of Indiana Gas Transmission Corporation or to sell on the part of Panhandle Pipe Line Company anything except the property and assets of Panhandle Eastern Pipe Line Company in Indiana as then constituted or later acquired or constructed relating to the pipe line mentioned in the letter.

"After further discussion Mr. Parish withdrew his motion to introduce a court reporter, and Mr. Russell's mo-
[fol. 7383] tion that the discussion be spread on the minutes was put to vote and duly adopted, but it was informally agreed that the approval of the minutes of the September 15 meeting would be specifically introduced again at the next meeting of the board.

"The chairman then presented a letter from Mr. George H. Howard, dated October 21, 1931, presenting this resignation as a director of the company. He expressed his regret that Mr. Howard felt it necessary, owing to his other duties, to resign from the board. He suggested that Mr. T. R. Weymouth would make a very valuable addition to the board, to fill the vacancy, on account of his very great knowledge and experience in natural-gas operation in the southwestern fields. Mr. Parish objected to this suggestion and stated that Mr. Weymouth would not be acceptable to him on account of the nature of the questions coming before the board, although he meant this as no reflection on Mr. Weymouth as a gas-operating man; but he suggested that the filling of the vacancy be deferred until after further consideration."

Q. The minutes of that meeting refer to contracts executed under date of October 3, 1931, by Panhandle Illinois Pipe Line Company with Illinois Power Company and Central Illinois Light Company.

Were these the first contracts that were had with the Illinois Power Company and Central Illinois Light Company?

[fol. 7384] A. I do not know.

Q. Will you please read into the record from the minutes of this meeting the concluding portion of the minutes beginning with the words, "After the business on the program had been taken up", which appears near the top of Page 908 of this Volume 82.

A. (Reading)

"After the business on the program had been taken up, Mr. Parish stated that he wished to renew his objections to the previous approval given to the minutes of the meeting of August 13, 1931. He stated that when such minutes

were presented for approval there had never been read in his hearing a certain paragraph which he read to the board for identification and which is noted in the letter from Mr. Ralph M. Shaw, dated October 2, 1931, which letter from Mr. Shaw he demanded be spread in the minutes of this meeting. He said that he had other points of objection to the procedure and conduct of the business of this company which he had set forth in a memorandum which he would not take up time to present at this meeting, but which he would be glad to discuss at anytime with other members of the board; but he did insist that his objection to the approval of the minutes of August 13, 1931, meeting be recorded, made a motion to this effect, instructing the secretary to spread Mr. Shaw's letter of October 2, 1931, to Mr. Parish on the minutes. This mo[fol. 7385] tion being duly made and seconded and put to a vote, the chairman declared the motion carried. A copy of Mr. Shaw's letter is as follows:"

Do you wish that letter?

Q. Yes, I would like the minutes read to the conclusion.

A. (Reading)

"Winston Strawn & Shaw,

First National Bank Building, Chicago, October 2, 1931.

"Dear Mr. Parish: Referring to your letter of September 29 and confirming what I said to you at our conference in Chicago on October 2, touching the minutes of the Panhandle board meeting held on August 13, 1931:

"Of course I was not present at the meeting and therefore cannot possibly know what in fact took place there, but I direct your particular attention to the third page of the minutes, the third paragraph, reading as follows:

"'Mr. Munroe made it clear that neither he nor any other representative of the Columbia interests had ever said that Panhandle Eastern Pipe Line Company would not sell gas to Missouri-Kansas, but that he did say that representatives of the Columbia interests had expressed grave doubt as to the advisability of the Panhandle management committing the Panhandle Line to deliver firm gas in the quantities and for the periods contemplated in

the proposed contracts with the Columbia and Missouri-[fol. 7386] Kansas interests.'

"With my knowledge of the past the statement is absurd.

"At the meeting of the board held in New York on May 26, 1931, there is not the slightest possible doubt that the Columbia representatives on the board flatly stated that they would not sell any gas to the Missouri-Kansas Company, irrespective of such excess quantities as they might have at the Indiana State line, and irrespective of price, if the Missouri-Kansas Company proposed to sell it to the city of Indianapolis. They (the Columbia crowd) said they proposed to sell gas in the city of Indianapolis and that the Missouri-Kansas Company shouldn't.

"In my judgment the minutes as drawn were drawn for the purpose of clouding the issue and I do not see how you as a director can acquiesce in the statement in the minutes that Mr. Munroe made it clear, etc. The position taken by representatives of the Columbia Company on the Panhandle board at the meeting of the latter company above referred to had nothing to do with quantities or prices. It was a plain refusal to furnish gas irrespective of the contract, irrespective of excess volume, and irrespective of price, if you proposed to sell at Indianapolis, and I think you should hammer that in when you are asked to approve the minutes of the board meeting held on August 13 and say that you do not and cannot possibly acquiesce [fol. 7387] in the position that Mr. Munroe made it clear, because it can't be made clear.

"Very truly yours,

"Ralph M. Shaw.

"(Addressed to) Mr. Frank P. Parish,

"President Missouri-Kansas Pipe Line Co., 40 Wall Street New York."

Mr. Gorman: I wonder if the record heretofore shows who Mr. Shaw was. Was he not attorney for Mr. Parish or do you know, Mr. Watkins?

Q. It was Ralph M. Shaw of Winston Strawn & Shaw of Chicago, was it not?

A. I would assume so, because the letter just read into the minutes of the meeting has that heading. Actually, I do not know who that gentleman was.

Q. Mr. Watkins, refer to Page 916 of Volume 82 of the Federal Trade report and state whether or not Exhibit 6434 which was a letter or report made by Frank P. Parish to Philip G. Gossler, George H. Howard and Frank P. Parish, voting trustees, Panhandle Eastern Pipe Line Company, March 12, 1934, was incorporated or made a part of any of the minutes of the Board of Directors of Panhandle Eastern Pipe Line Company?

[fol. 7388] A. I do not know.

Q. Will you look that up at your convenience, Mr. Watkins, and let us know at a later time? A. I shall.

Q. Mr. Watkins, you were Secretary under the voting trust agreement, were you not?

A. As Secretary of the company, I suppose I was also the Secretary of the voting trustees. Actually, I never acted, as I recall at this moment, in any capacity as Secretary to the voting trustees except perhaps when the voting trust was dissolved and while we are on the subject, I would like to correct the date of dissolution from whatever date the previous record shows, to July 19, 1935.

That was the actual date of dissolution of the voting trust with respect to the common stock of Panhandle Eastern Pipe Line Company and was accomplished by instrumentalities of the voting trustees.

Q. I have a record some place of when you were elected as Secretary of the voting trustees. I thought I could put my hand on it at once.

Mr. Gorman: Yes, I was looking for a similar reference and I find a note on my papers here to the effect, and I merely make this statement to refresh your recollection, Mr. Watkins, so that you do not misspeak yourself, it is to the effect that you were elected and I emphasize the [fol. 7389] word "elected" to Secretary of the voting trustees of the owners of the common stock in Columbia Oil & Gasoline Corporation and—

Mr. Wheat: (Interposing) At what date?

Mr. Gorman: June 7, 1934, which I believe, was about the same date that you assumed the offices of Secretary and Treasurer and became a Director of that corporation and in assuming such position as Secretary of the voting trustees, you succeeded one Edward Reynolds, Jr.

Does that refresh your recollection?

The Witness: I believe you are correct, sir. I know it was about June 7, 1934, that I became Secretary and I recall that I did succeed Mr. E. Reynolds, Jr.

Since there were no activities subsequent to that time involving me as Secretary of the voting trustees and for the further reason I never received any remuneration in that capacity, I was in a complete fog in respect to it.

Mr. Gorman: And that trust was terminated, was it not, on or about May 28, 1936?

The Witness: No, sir, it was terminated on July 19, 1935.

Q. Mr. Watkins, Mr. Bay made weekly reports on his operations back in 1931, did he not, to Mr. Crawford, President of Panhandle Eastern?

* * * * * * * *

[fol. 7399] Q. Mr. Watkins, were gas sales contracts ever executed by Panhandle Eastern with Mo-Kan for the 20 million cubic feet of excess capacity gas at 18 cents per thousand as outlined in the contract of September 17, 1930?

A. They were not but the contract does not stipulate, necessarily, does it, 20 million cubic feet? Doesn't it say up to 20 million?

Q. Up to, I think, yes, but did they execute contracts for any part of it?

A. Panhandle Eastern never executed any contract, so far as I know, with Missouri-Kansas Pipe Line Company for the sale to Missouri-Kansas Pipe Line Company or the purchase by it for any gas whatsoever.

As a matter of fact, as you know, Missouri-Kansas Pipe Line Company had no transmission facilities.

Q. Did it ever execute a contract with Columbia Gas & Electric Corporation providing for the sale of any part of the 20 million cubic feet daily of excess-capacity gas at 18 cents as outlined in the contract of September 17, 1930?

A. Not as far as I know except to the extent that it could be said that the sales made to Indiana Gas Trans- [fol. 7400] mission Corporation beginning about the latter part of 1931, concerning which the witness was about to refer to a letter yesterday, which letter, I believe, is a part of the minutes of one of the meetings of Panhandle Eastern Pipe Line Company whereby the organization which at that time had an option to acquire a half-interest in Panhandle Eastern Pipe Line Company agreed and the Panhandle Corporation concurred in such agreement that, to the extent that Indiana Gas Transmission Corporation purchases its requirements, made up of a part of the quantity of gas that Columbia might purchase pursuant to the September 17, 1930, agreement of which Panhandle Eastern was not a party, that such purchases would be agreeable subject to termination, I believe, on 90-days' notice; and that notice, I believe, could be given by either party.

Those sales, if my memory serves me correctly, commenced, as I have stated, until about the latter part of 1931, which, by the way, was about the earliest date that deliveries could have been made in any quantity and continued on that basis until on or about August 31, 1936, at which time a contract was entered into between Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

The contract entered into with Michigan Gas Transmission Corporation at August 31, 1936, I believe you will find carries an effective rate, under certain conditions, at [fol. 7401] about 26½ cents which happens to have been one of the figures referred to in the September 17, 1930, contract, based upon the time when the excess capacity, as you refer to it, and as it may be referred to in the September 17, 1930, contract, became firm deliveries.

Q. Was a written contract ever entered into with Indiana Gas Transmission Corporation by Panhandle Eastern for the sale of gas at 18 cents?

A. No, sir, it was not. It continued, as the witness has stated, under this informal arrangement which was originated about the time United Light and Power had its options to acquire a certain portion of the ownership of Panhandle Eastern Pipe Line Company and shortly before—

Q. (Interposing) Mr. Watkins, you are usually very accurate, but you do not mean to say "control a portion of Panhandle Eastern", do you?

A. I did not say "control". I said "purchase."

Q. No, but to purchase any portion of Panhandle Eastern, they had no option for that, did they?

A. My understanding is they did because certainly there was some reason Columbia Gas would write to United Light & Power to find out whether or not it was agreeable to them, who had some interest in a purchase—whether or not they had an option, I am not sure—and United Light & Power would certainly not sign an acquiescence [fol. 7402] to such arrangement unless it had some interest.

I can develop that specifically for you, if you do not object. Yesterday you had some objection to my referring to a letter which contained those facts.

. . . . . .

Q. Mr. Watkins, the option, as you mentioned, of United Light was never carried out, was it, and they never acquired any interest in Panhandle Eastern property or securities? A. Property or what, sir?

Q. Property or securities?

A. I do not know about securities, sir. They may have owned some of the bonds. The bonds were bearer bonds and I would have no knowledge of that fact.

Q. You never heard of them owning any of the bonds? [fol. 7403] A. No, and I think they made a rather bad mistake by not owning some of the property, but that is neither here nor there.

A specific answer to your question, as I recall, sir, is, to the best of my knowledge and belief, United Light & Power never owned any of the securities of Panhandle Eastern Pipe Line Company.

. . . . . .

[fol. 7404] Q. Now, Indiana Gas Transmission was a subsidiary of Columbia Gas, you say?

A. No, sir, Indiana Gas Transmission at that time, [fol. 7405] I believe, was a subsidiary of Columbia Oil & Gasoline Corporation.

. . . . . .

[fol. 7413] Q. Let's complete the record on this contract with Indiana Gas Transmission Corporation by reading into the record a letter of January 19, 1932, which I suggest you will find on Page 1225 of 84-1 of the Federal Trade Commission report:

. . . . . .

A. (Reading) "After discussion on motion duly made [fol. 7414] and seconded, it was unanimously

"Resolved, That the arrangements entered into by the officers of this company for the sale of natural gas at the Illinois-Indiana State line to Indiana Gas Transmission Corporation, at the price of .18 cents per thousand cubic feet, and subject to cancellation by either party on ninety days' notice, be and hereby is in all respects approved, ratified and confirmed."

. . . . . .

Q. Will you also include the portion beginning with number "93" in which the chairman made his statement about this informal arrangement?

A. That is on Page No. 1225 of the Field Report which has just been identified?

Q. Yes.

A. Following the numeral "93" in brackets, there appears the following:

"The chairman stated that the officers of the company had made an informal arrangement, subject to cancellation by either side on 90 days' notice, for the sale of surplus gas at the Illinois-Indiana State line to Indiana Gas [fol. 7415] Transmission Corporation. He stated that this arrangement had been agreed to by the present and prospective stockholding interests of the company as shown by letters which he submitted to the meeting and copies of which are as follows:"

. . . . . .

Q. Now, Mr. Watkins, do you have any data available to you showing the amount of gas which was sold to Indiana Gas Transmission Corporation under this informal arrangement? A. I do.

. . . . . .

[fol. 7416] Mr. Wheat: We are able to supply this in exhibit form, Mr. Examiner, if you think it would be well.

. . . . . .

May I ask, Mr. Examiner, that the document which the witness has just produced and handed to the reporter be marked for identification with the next exhibit number?

. . . . . .

Trial Examiner: This is a statement of gas revenues from Indiana Gas Transmission Corporation and Michigan Gas Transmission Corporation during the period from [fol. 7417] November, 1931, to November, 1941, inclusive, as received or derived by Panhandle Eastern Pipe Line Company and will be marked for identification as Exhibit No. 158.

(Exhibit No. 158 was marked for identification.)

Mr. Chamberlain: Do you offer that, Mr. Wheat?

Mr. Wheat: Yes.

. . . . . .

Q. Do you have a statement showing the amount of gas purchased during the same period by Indiana Gas Transmission Corporation from Ohio Fuel Supply Company?

. . . . . .

[fol. 7418] The Witness: Well, I do not remember too definitely, Mr. Chamberlain, whether or not Indiana Gas Transmission Corporation purchased much or little gas [fol. 7419] from Ohio Fuel—you said, "Supply Company."

I believe you meant Ohio Fuel Gas Company.

Q. Ohio Fuel Gas Company, yes.

A. They may have purchased some substantial amounts at times. That I do not recall.

My memory at the moment would indicate to me that most of Indiana Gas Transmission's gas was purchased from Panhandle Eastern Pipe Line Company but I have had no contact with that company or any of its records since the date upon which I was last connected with it or an officer of it and my memory is quite hazy as to it.

. . . . . .

[fol. 7426] Q. Did Panhandle Eastern have an office in New York at that time?

A. I was located in New York and I was an officer of Panhandle Eastern Pipe Line Company and to the extent that it could be said that the affairs of Panhandle Eastern were being conducted from an office in New York, perhaps [fol. 7427] that would be proper. It paid no office rent. It had no separate space but at the time any of the other officers of Panhandle Eastern from its properties came to New York, they used my space as their headquarters, and so forth.

Q. Well, in your intercompany correspondence in the Panhandle Eastern Corporation, you had correspondence right along in your New York office in 1934.

. . . . . .

Q. (Interposing) Pardon me, I mean '34, '35, '36.

A. There were letters written between Kansas City and any of the officers or Directors of Panhandle Eastern Pipe Line Company all through the period of its organization, as far as I know, wherever those people might have been at any particular time and some of the officers of Panhandle Eastern Pipe Line Company, and there is no secret about it, were likewise officers of some of the Columbia Gas companies and they had mailing addresses at New York and it was at 61 Broadway and I believe their offices may have been on the 29th floor of that building or some of them may have been on the 30th floor of that building and when it became necessary for any correspondence to be had between those officers, it was had to the same extent that any correspondence might be had with anyone

[fol. 7428] connected with Missouri-Kansas Pipe Line Company or anyone else.

* * * * * * * *

[fol. 7451] Trial Examiner: The original studies of Mr. Coffman, which were marked for identification as Exhibit 63, covering risks of capital, No. 64, the supporting data related to Exhibit 63, and No. 65, rate of return, will be received in evidence without objection by corresponding numbers.

Likewise, Exhibit 150, relating to common-stock issues, No. 151, covering earnings-price ratios, No. 152, being a study of the effect of recent income and excess profits tax provisions, will be received without objection by corresponding numbers.

* * * * * * * *

[fol. 7452] PAUL B. COFFMAN, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Resumed).

By Mr. Littman:

Q. Mr. Coffman, when you were last on the stand, I asked you to check certain weighted average earnings-price ratios of natural-gas pipe-line common stocks for companies which are shown in your Chart No. 19.

Have you made a check of the weighted average earnings-price ratios which I read into the record at the last session?

A. Yes, sir, I have. I checked the arithmetic, in other words, the figures are properly calculated on the basis that you used.

Q. It is clear, is it not, from Chart No. 19 of Exhibit No. 65, that your average earnings-price ratios for each of the years 1937 to 1940, inclusive, include certain earnings-price ratios of Interstate Natural Gas Company?

A. Yes, sir.

Q. And the same is true, is it not, of your "Average of pipe-line companies" of 12.99 percent shown in Chart No. 22 based on the 1941 market prices?

A. Yes, sir, that is correct.

Q. What was the market value as of December 31, 1940, of the common stock of Interstate Natural Gas Company? In that connection I refer you to Exhibit No. 64, Appendix [fol. 7453] C. A. What was the date?

Q. December 31, 1940. That is at Page 107.

A. Now, the average of the high and low price on the capital stock of Interstate Natural Gas Company, Inc., for the year 1940 was $23.88.

Q. What was the total market value for all of the outstanding common stock of that company?

A. Using the average price just mentioned and multiplying it by the number of shares outstanding as of December 31, 1940, which were 952,953 shares, you have got a total market appraisal as of that date of $22,756,518.

Q. Now, what was the book value of the common stock of Interstate Natural Gas Company for the corresponding period? I refer you to Exhibit 64, Appendix B, Page 3.

A. Is that reference correct?

Q. Appendix B, Page 3, I believe it is, you will find it near the bottom of the page.

A. Are you talking about just the total securities outstanding?

Q. Yes, because I understand Interstate Natural Gas Company has no securities outstanding other than common stock.

[Q.] No, I just wanted to be sure. What you mean at the moment is the total dollars, not a per-share figure. That is what I want to get straight.

The total securities outstanding as shown in Appendix [fol. 7454] B, Page 3, for the Interstate Natural Gas Company as of December 31, 1940, was $6,529,530.

Q. Now, in order to get the book value of that common stock, including the surplus, you would have to add thereto the surplus, would you not? A. Yes.

Q. Now, the surplus figure is not shown in your exhibits, is it? A. No, sir.

Q. I hand you a copy of Moody's Public Utilities for the year 1941 and ask you to refer to that volume and

state the amount of surplus for Interstate Natural Gas Company for the year 1940.

A. The surplus of the Interstate Natural Gas Company, as of December 31, 1940, as shown in Moody's Public Utilities Manual for 1941, Page 1122 is $5,873,982.

Q. Now, adding the surplus figure to the book value of the common stock, produces a total of $12,403,000 odd, which represents the book value of the common stock and surplus as of December 31, 1940, for Interstate Natural Gas Company. Is that correct?

A. Yes, sir, that is correct.

Q. Now, it is obvious, is it not, that the market value of the common stock of Interstate Natural Gas Company, which you stated to be $22,756,518, is almost double the [fol. 7455] book value of that stock as of December 31, 1940. Is that right?

A. Well, the market value as stated is $10,353,000 in excess of the book value as stated.

Q. Now, the El Paso Natural Gas Company is another natural-gas pipe-line company which is included in your 12.99 percent, "Average of pipe line companies," based on 1941 market prices shown in your Chart No. 22. Is that correct? A. That is correct, yes, sir.

Q. Now, will you state the market value of the common stock of El Paso Natural Gas Company for the year 1940?

A. The total indicated market value of the El Paso Natural Gas Company, as shown in my Exhibit 64, Appendix C, Page 101, is $33,000,000—

Q. (Interposing) Pardon me, Mr. Coffman. I would like to have the year 1940 and I believe that is shown in your Appendix C at Page 104, is it not?

I am sorry, I have the wrong number.

A. It is 101, I believe.

Q. I beg your pardon. It is shown on Page 101.

A. All right. That total is $33,411,781, which is for the year 1941 and is based on the average of the high and low prices for the securities and for the full-year period.

Q. You mean for the year 1940?

[fol. 7456] A. 1940, yes, sir.

. . . . . .

Q. I would like to have the market value of the common stock only of the El Paso Natural Gas Company for the year 1940.

A. As shown in my Exhibit 64, Appendix C, Page 101, the indicated market value of the common stock of the El Paso Natural Gas Company, based upon the average of the high and low price for the year 1940 was $20,418,190.

That is, of course, merely the market quotation, including the market appraisal of surplus, and so forth. I merely want to be clear about it; the market quotation, so far as the investor is concerned, pays the full worth of the common stock.

Q. Including the surplus?

A. That is right.

Q. I so understood.

Now, will you please state the book value of the common stock of El Paso Natural Gas Company as of December 31, 1940, exclusive of surplus? I believe that figure is shown on Page 3 of Appendix B of Exhibit 64.

[fol. 7457] A. That, Mr. Littman, is not quite correct because of Knapp's figures, which are contained in my Appendix B, Page 3. These figures there refer to June 30, 1941, so that I will have to refer, if you want the December 31, 1940, figures, to Moody's Manual.

Q. Perhaps we had better do that in order to have the figures on a comparable basis.

A. The book value of the common stock of the El Paso Natural Gas Company as of December 31, 1940, is shown in Moody's Public Utilities Manual, Page 30, as $5,301,994, not including surplus.

Q. That figure is the same as the figure which you show in Appendix B of Exhibit 64, Page 3 as of June 30, 1941, is it not?

A. Yes, sir, the figures coincide.

Q. Now, will you please add the surplus and give me the total book value of common stock of El Paso Natural Gas Company including surplus as of December 31, 1940?

A. The surplus of El Paso Natural Gas Company as of December 31, 1940, as shown in Moody's Public Utilities Manual for 1941 at Page 30, amounts to $4,194,039 and that figure, added to the $5,301,994, gives a total book figure for common stock and surplus of $9,496,033.

Q. Which is the book value of the common stock of El Paso Natural Gas Company, including surplus, as of De-
[fol. 7458] cember 31, 1940?

A. Yes.

Q. Now, it is evident, is it not, that the market value of that stock for the year 1940 of $20,418,100 is more than twice the book value? Is that correct?

A. Yes, the excess of the market value over book value is $10,922,076.

Q. Now, I would like to have you turn to your Chart No. 18 of Exhibit 65 entitled, "Historical costs of Preferred Stock, Capital, of Panhandle Eastern Pipe Line Company as of 1937-1941."

I would like to discuss with you the preferred stock of Panhandle Eastern Pipe Line Company. Now, on this chart you show the actual historical costs of the preferred stock for the years 1937 to 1940, inclusive, and you have estimated the cost for the year 1941. Is that correct?

A. That is correct.

Q. Now, will you please turn to the table for Chart No. 18? You show on this chart that Panhandle Eastern Pipe Line Company presently has outstanding $6 Class A preferred stock, participating and redeemable, having a par value of $100 per share in the total amount reflecting par value of $10,000,000 for each of the years 1937 through 1941.

A. Yes, sir.

Q. And in addition, Panhandle Eastern has $6 Class B
[fol. 7459] preferred stock, non-participating and non-redeemable having $100 par value per share, a total outstanding par value of $1,000,000 for each of the years 1937 through 1941. Is that right?

A. Yes, sir.

Q. Now, that makes the total outstanding preferred stock $11,000,000. Is that right?

A. Yes, sir, according to the books.

Q. Now, the Class B preferred stock, of which there is $1,000,000 outstanding, receives a straight 6 percent dividend per year and is not entitled to any participation in further dividends, isn't that correct?

A. That is correct.

Q. However, the Class A preferred stock, of which there is $10,000,000, is entitled not only to the $6 regular

dividend per year but, also, is entitled to participate to the extent of 25 percent of additional dividends on common stock after $1.50 per share has been declared or paid in any one year. Is that your understanding?

A. That is my understanding.

Q. And as your Chart No. 18 shows, there have been participating dividends paid in 1940 and in 1938. I believe that is more clearly shown in the table for Chart No. 18, is it not?

A. Yes, that is correct.

[fol. 7460] Q. In other words, in the year 1938 the holders of the Class A preferred stock received not only $600,000 by way of regular 6 percent dividend on the $10,069,000, but, in addition, received $182,163 as a participating dividend. Is that right?

A. That is correct.

Q. And you show that in the year 1940 those preferred stock holders received $403,684 by way of participating dividends?

A. That is correct.

Q. Now, the regular 6 percent dividend has been paid on both classes of preferred stock through the years, isn't that right?

A. Yes, sir, that is through the years 1937 to 1940, as shown in the table, I mean without going back beyond that.

Q. Yes. Now, you show an estimated participating dividend for the year 1941 in the sum of $269,122. Is that correct?

A. That is correct.

Q. And you have used this figure of $269,122 as the estimated participating dividend for the year 1941 in calculating the 8.45 percent shown for the year 1941 in your Chart No. 18, is that right?

A. Yes, sir, I have.

[fol. 7461] Q. Now, you estimated this amount of $269,122 upon the assumption that in the year 1941 Panhandle Eastern would pay a common-stock dividend of $2.50. Is that right?

A. Yes, sir, that is correct.

Q. In other words, the common-stockholders would receive, first, $1.50 and out of the remaining dollar the preferred-stockholders would [received] 25 cents and the com-

mon stockholders would receive 75 cents. Is that right, is that the way you computed it?

A. That is right. For each dollar of dividend over and above the $1.50 of common, it was shared 75-25 percent.

Q. Now, will you please check your $269,122 and tell me whether that is a correct figure? I believe you will find it to be in error.

A. I think the figure is correct.

Q. Will you tell me how you compute the figure?

A. Well, the first calculation is based upon the 807,367 per share of common stock and the $1.50 shares total $1,211,051, that is the first payment prior to participation.

An additional dollar available makes $807,367. That is the equivalent of one additional dollar per common share which has to then be divided on a basis of 25-75 percent, the preferred participating 25 percent, and the common participating, 75 percent.

[fol. 7462] Q. Well, if what you have just said is the fact, and I so understand it to be the fact, you would take the $807,367, which represents $1 over the dollar and one-half for each of the 807,367 shares of common stock, and divide that amount by 4 in order to determine the 25 percent, which is the extent to which the preferred stockholders of the Class A preferred have a right to participate, and that would give you $201,842 instead of the $269,122, which you show in your table for Chart No. 18.

Now, I believe that you divided the $807,367 by 3 instead of by 4.

A. That is correct, that is how the $269,122 was calculated.

Q. Well, now, the $269,122 which you show in your table for Chart No. 18 is certainly in error, is it not? The figure should be $201,842, according to my arithmetic.

A. Well, except that I think you are neglecting to take into consideration that the dividend calculated upon the common stock, the total dividend calculated upon the common stock is $2.50.

You have taken out the 25 percent from the common stock. The common stock did not receive an additional 75 cents, the common stock received an additional dollar and

the 25 percent that the preferred received was excluding the dollar, because the common stockholders received a net dividend of $2.50, not a net of $2.50 minus the [fol. 7463] participation to the preferred, so that on that basis you would have to calculate that once you had arrived at a figure of $807,367, then you would figure that that amount was three times as great as the preferred participation.

What you are doing is saying that the total amount of dividend paid was an even dollar which had to be split 75:25. I am saying that the dividend directly to the common stockholders is $1, so there has to be a dividend greater than that amount in order that the preferred holder will get his 25 percent participation.

That is absolutely mathematically correct.

I do not know whether I make my point to you clear, but if I can, I think you will agree with me, Mr. Littman. I think what you are saying is that the total amount of earnings available for distribution over and above the $1,250 was $1.

I am not saying that, I am saying that the common stockholder received $1.50 plus one full dollar, making a total dividend of $2.50. He did not share any part of that additional dollar with the preferred.

The earnings that were shared were in excess of $1 from which the preferred received his participation, therefore, what I did was to calculate it on this basis. The additional dollar, the additional $1 to the 807,367 shares is $807,367 and the participation of the preferred, then, this [fol. 7464] would be in the ratio of one third that amount.

Q. Now, Mr. Coffman, that isn't the way the company figures it at all is it? Look at the year 1940, in which year the company paid $403,684, which covered the years 1939 to 1940 and included two such participating dividends and divide that by two and see what you get.

Then, you will have the method that the company, itself, uses.

The Witness: Will you please read that back?

(Whereupon, the pending question was read by the reporter.)

The Witness: What table are you looking at, Mr. Littman?

By Mr. Littman:

Q. I am looking at your table for Chart No. 18.

A. Yes. Well, the total of $600,000 plus the $403,684, if I understand you correctly, is $1,003,684. Then you say, divide that by two?

Q. No. I am confining my present line of inquiry to the $403,684 participating dividend paid in the year 1940.

Now, divide that by two, because that amount includes two years of participating dividends, and you will get a figure of $201,842.

A. By dividing by two, that is the figure.

Q. Now if you will take 25 percent of the $807,367 you will get the same amount, namely, $201,842. Is that correct?

[fol. 7465] A. By dividing the $807,367 by 4 you get $201,842, that is correct.

Q. Doesn't that indicate to you that that is what the company does when it computes the participating dividend, namely, it takes 25 percent of the dollar available for dividends over the $1.50, namely, the latter dollar of the $2.50 dividend on the common and takes 25 percent of that and distributes it to the preferred stockholders, which is the very method that you described before I called attention to your total figure?

A. Well, so far as the arithmetic is concerned, Mr. Littman, that may very well be the case, but so far as the calculation which I estimated for 1941 is concerned, I have described exactly how it has been arrived at and I believe that is very definitely in line with the provisions of the preferred stock.

[fol. 7466] In other words, in this case I did not have actual earnings to go on, so before I could make any division I first had to decide what would be a reasonable estimate over all for the common stock, and that total was $2.50. Then I merely assumed that the additional participation would have to be over and above that amount. I believe

that follows the provisions of the preferred stock. The mere fact that you can go back and divide the company's figures in the past year by something else, it seems to me, is a different calculation. There you have actual figures to work on and it can be worked out and divided any way you please.

Q. Are you stating, Mr. Coffman, that the Class A preferred stockholder is entitled to something more than 25 percent of the $1.50 dividend paid to the common stockholder?

A. No, that is not my intention. All I am saying is that the total amount paid to the common is net. In other words, it is $2.50 to the common holder, and in order, therefore, to have a 25 percent participation, if common is going to result with a $2.50 payment, that 25 percent will have to be calculated out of earnings over and above.

Q. Let me read from the Securities and Exchange Commission Release No. 3299, dated January 29, 1942, in the matter of Panhandle Eastern Pipe Line Company, File No. 70-447, Findings and Opinion, where it states at page 2, "The Class A Preferred Stock, in addition to a preferential cummulative dividend of $6 per share, [fol. 7467] is entitled to receive as a class one-fourth of all dividend distributions in excess of $1.50 per share on the common stock declared or paid in any one calendar year."

Now, is that your understanding of the preferential dividend to which the Class A preferred stockholders are entitled?

A. That is correct, but in this dollar that you get for common stock, you are not taking a part of that to give to preferred under the very stipulation that you read. If you did, you would not have $2.50 common dividend; you would have $2.50 minus the difference. How can you get around it?

Q. Now, how much did the company pay by way of a dividend on the common stock in 1940?

A. $1,200,684 were paid in dividends on the common stock for the year ended December 31, 1940.

Q. Well, how much was that per share?

A. Pardon me, I am giving you the figure for El Paso. I am sorry. The total dividends paid on common stock for

the Panhandle Eastern Pipe Line Company for the year ended December 31, 1940, was $2,422,101.

Q. How much was that per share of common stock?

A. That was equivalent to $3 per share on 807,367 shares.

Q. Now, what was the common stock dividend that was paid in the year 1939?

Mr. Cotton: You are satisfied with that calculation, are [fol. 7468] you not? It is the same thing he has been saying, it works out on the same principle.

Mr. Littman: Not at all, not at all. It simply cannot be.

The Witness: The total dividends paid on common stock by the Panhandle Eastern Pipe Line Company for the year ended December 31, 1939, was $1,132,336.

By Mr. Littman:

Q. Now, what does that amount to per share?

A. It is equivalent to about $1.04 per share. The same number of shares in 1939.

Q. Will you please recalculate that $1.04 per-share figure? That does not look right to me.

A. The amount of common dividends was $1,132,336, and the number of shares is 807,367. I think the machine is as bad as I am on the figures, this is $1.40. Wait until I check my figures. That is correct. I misplaced one digit. $1.40 is correct. I will go by the machine even though I think it is wrong.

Q. Well, we will check your calculations and come back to this subject after so doing.

At any rate, it is your testimony that the proper way of calculating the dividend to which the Class A preferred stockholders are entitled for participation purposes is as follows:

[fol. 7469] Assuming that the dividend paid to the common stockholders is $2.50 in a given year, you first deduct the $1.50, leaving $1 in which the Class A preferred stockholder is entitled to participate, and then divide that dollar by three? Is that your testimony?

168—12,466

A. What I say is, where you have to make an estimate as I did, as to a common dividend, the amount of money, which is here $2.50, all went as a dividend to the common stockholder. Now, obviously, following the provisions of the preferred stock certificate, the preferred are entitled to participate in such distribution over and above the $1.50. The common stockholder actually received $1; then the preferred participation must have been out of earnings over and above the $1. It did not come out of the dollar, because the common stockholder got it, so it could not have come out of the dollar.

Q. Mr. Coffman, I understand your position with respect to all that. But can't you tell me how you get at the figure, what calculation do you use? Do you divide the dollar by three or four?

A. I say, for the extra dollar that is available and above the $1.50, you figure that out on the basis of three, because for the amount over and above a dollar the common stockholder gets three times what the preferred holder gets, so it is three, not four, that we are talking about.

[fol. 7470] Q. In other words, you divide the dollar by three to get 33⅓ cents for each dollar by way of participation for the Class A preferred stockholder?

A. Or divide the $807,367, which is $1 per share, by three.

Q. By three?

A. That is correct.

Q. And that is your interpretation of the statement which I just read to you from the Securities and Exchange Commission, namely, that "The Class A preferred stock in addition to a preferential cumulative dividend of $6 per share is entitled to receive as a class one-fourth of all dividend distributions in excess of $1.50 per share on the common stock, declared or paid in any one calendar year"?

A. That is correct.

Q. Now, will you state whether or not that is the method used by the company, namely, the method of dividing the amount over and above the $1.50 by one-third instead of one-fourth? Now, you have told us that is your method. I want to know whether that is the company's method.

A. I have not investigated the company's method as such, as I have stated throughout my testimony, but I

believe that is the method as recorded and shown in the annual reports.

Q. Well, you are not prepared at this time to say that the company calculates the participating dividend in the [fol. 5471] way that you have calculated?

A. As such, I have never prepared it nor have I ever asked them for any calculations nor have I asked to see their books prior to determination of the dividend to see how they ascertain it, so I could not say, specifically, but I think they do follow that method.

Q. Well, why do you think that without having first made an investigation of whether they do actually calculate it in that way? What is the basis for your thinking?

A. Because I think it can be shown from the 1940 figures that that is what it amounts to, as shown by the figures given for dividends and participation.

Q. Well, suppose your make the calculation, let us say, during the noon recess, and satisfy yourself that that is the way they do it.

A. On the 1940 figure?

Q. Yes.

Mr. Wheat: I suggest we do it now. It is not a long job, is it?

The Witness: My associate already made the calculation, so I can explain what we did on the 1940 figures right now.

By Mr. Littman:

Q. All right.

A. The dollar and a half per share on 807,367 shares gives you $1,211,051.

[fol. 5472] Q. Will you read that back?

(The last answer of the witness, as above recorded, was read by the reporter.)

The Witness: Now, as I have already stated, the total dividends on common amounted to $2,422,101, which I calculated for you to be at the rate of $3 per share, so that means that there must have been $1.50 participation over and above the $1.50 as the starting base, so that would mean $1,211,051 for participation.

Mr. Culton: To the common stock?

The Witness: Yes, to the common stock.

By Mr. Littman:

Q. And that is for what year?

A. I am talking about 1940 altogether, so we can check this figure.

Now, the only way that you can get $403,684, as shown in my table for Chart No. 18, as reported, is to divide the $1,211,051 by three, and that is the way the company is doing it. Therefore, I say I think that must be the practice followed by the company, although I was not at the company's offices to check it and I have not asked them to give me any statement about it, but I do not know any other way to get that figure that they report.

Mr. Culton: And that would be a fourth of what aggregate dividend paid?

[fol. 7473] The Witness: Of the total participation to the preferred plus the total over to the common, that is the total common dividend.

By Mr. Littman:

Q. But if you will turn to your Chart No. 18 you will observe that the dividend paid in 1940 was paid out of 1939 earnings. Now, have you taken that into account?

A. Well, insofar as the indenture is concerned, it would not make any difference, Mr. Littman.

Q. Yes, but the earnings which you read on the common stock were for the year 1940.

A. Well, the total dividend paid in 1940 was such and such amount, so what difference does it make? The matter of when the dividend was paid has no bearing on this problem, so far as the calculation is concerned.

Q. Now, will you please—

Mr. Wheat: (Interposing) Pardon me, does this calculation now satisfy you?

Mr. Littman: I will have to check it a little further.

Mr. Wheat: Surely.

By Mr. Littman:

Q. I can see that the witness is convinced that he is right about it and apparently has a basis for it. I would

like to check the matter a little further, because it so happens that the $403,684 figure shown as the participating [fol. 7474] dividend for the year 1940, when divided by two, comes out to precisely the amount of $201,842, which is one-fourth of the $1 amount. In other words, it checks my figures on the subject, so I want to examine it further.

Mr. Wheat: It checks both ways.

Mr. Culton: A suggestion for you to consider is that it shows the relation of $1.50 extra dividend to a dollar extra dividend. That is the reason why the peculiar relationship exists.

Mr. Wheat: May I suggest, Mr. Littman, that possibly Mr. Dunn might check this for you and possibly, if there is still any question, they might discuss the matter with the witness so we will come to a conclusion. I think it is a simple matter eventually.

Mr. Littman: I think so. My only purpose, of course, is to make certain that the method used is correct.

Mr. Wheat: Oh, sure.

Mr. Littman: And once we are satisfied as to that, why, we will proceed with the matter no further. I am certain if there is an error in these figures, you will want them corrected too.

Mr. Wheat: Surely.

Mr. Littman: Very well, we will check the matter and report back on it.

By Mr. Littman:

[fol. 7475] Q. Now, will you please turn to your Chart No. 37? This chart reflects and shows the amount of dollars needed by Panhandle Eastern under the assumption that the company will continue to have outstanding its present Class A preferred stock?

A. Yes, that is the assumption on Chart No. 37.

Q. And the preferred stock requirement of $929,122, shown in your Chart No. 37, is based upon your estimated amount for the year 1941, or estimated cost of that preferred stock of 8.45 percent?

A. Well, and plus the consideration of a $2.50 annual dividend on the 807,367 shares of common stock. I mean,

if you refer in connection with that, Mr. Littman, to the table for that chart, you will see the point that I am making, about two-thirds of the way down in the right-hand column there is an item "Preferred Dividend Requirement Based on Maximum Participation of Class A Preferred Stock, $929,122." The explanation, therefore, is participation of the Class A preferred computed on the basis of a $2.50 annual dividend on 807,367 shares.

[fol. 7476] Q. Where do you find the word "maximum" in your table for Chart No. 37?

A. That is parenthetical in the explanation at the left-hand side where you see the item mentioned, "Preferred dividend requirement (based on maximum participation of Class A stock)".

In other words, I had to make some allowance, not only as to the actual dividend but as to a participation.

Q. Now, Mr. Coffman, this "based on maximum participation of Class A preferred stock" which is stated in your table for Chart No. 37 refers to $1,388,480, does it not, and does not refer to $929,000-odd?

A. Yes, I stand corrected on that. The $929,000 is based upon the $2.50 distribution of common which may or may not be maximum. I mean it could be more or it could be less.

Q. At any rate, the $929,122 of dividends paid to the preferred-stockholders reflects the regular 6-percent dividend and, in addition thereto, the Class A preferred-stockholders participation in a $2.50 annual dividend on the common stock, isn't that right?

A. No, we are getting back on the same confusion again. It represents the preferred-stockholders' participation in the amount properly calculated wherein common actually receives $1 over the $1.50 so we would not get the [fol. 7477] confusion of whether they are sharing in the dollar or sharing in something more than a dollar.

Q. This $929,122 amount to be distributed to the preferred-stockholders which is reflected in your Chart 37 is also shown in your table for Chart No. 18 for the year 1941, is it not?

A. That is the total, that is, $600,000 regular dividend and $269,122 participation.

Q. For the Class A preferred?

A. For the Class A.

Q. Plus $60,000 to service the Class B preferred stock?

A. Correct.

Q. Now, isn't that a rate of 8.45 percent which is the rate which appears in Chart No. 18 for the year 1941, estimated?

A. That is the percentage cost made upon the basis of that figure to the total amount of shares.

Q. And I believe that same 8.45 figure appears in some other charts?

A. That is correct.

Q. For instance in Chart No. 26?

A. That is correct.

Q. Is there any doubt in your mind, Mr. Coffman, that the $10,000,000 of outstanding Class A preferred stock can be refinanced today at more favorable rates than 8.45 [fol. 7478] percent which you have assumed for the purposes of your Chart No. 37?

A. Well, taking the cost to the company, I am not sure that that can be done.

Q. There is some doubt in your mind?

A. Yes.

Q. Is there some doubt in your mind?

A. Yes, there very definitely is.

Q. Is it your testimony that 8.45 percent is a reasonable cost of preferred stock money to Panhandle Eastern as of today?

A. Talking in terms of the cost, I am saying that that portion of the investing public who would have to be approached to supply this money would say that they would require approximately that percentage in order to be encouraged to supply money to this company on a preferred stock basis.

Q. That is your testimony?

A. That is my testimony, yes.

Q. Now, according to your Chart No. 18, the preferred stockholders received in 1940, 9.67 percent, did they not?

A. That is correct.

Q. And, in 1939, they received 6 percent and over the period 1937—withdraw—what does this weighted average of 8.02 on Chart No. 18 reflect? Does it include the year 1941?

A. Yes, it does, and that reflects each individual year [fol. 7479] shown in Chart No. 18 of Exhibit 65 but on a weighted-average basis wherein we give the greatest weight to the most recent trend so that the estimated 1941 figure would carry a weight of 5; the 1940 figure a weight of 4; the 1939 figure a weight of 3; 1938 figure a weight of 2; and the 1937 figure a weight of 1.

In other words, we give the greatest weight to the most recent trend.

Q. Now, what company has held all of the outstanding preferred stock of Panhandle Eastern through the years 1937 down to date?

A. The Columbia Oil & Gasoline Corporation, a subsidiary of Columbia Gas & Electric Corporation.

Q. Now, Columbia Oil & Gasoline Corporation also holds slightly in excess of 51 percent of the common stock of Panhandle Eastern, does it not?

A. Yes, that is correct.

Q. And inasmuch as this preferred stock is not in the hands of the public, you have no market quotations on it, do you?

A. That is right.

. . . . . .

[fol. 7480] Q. Mr. Coffman, I believe that you testified just before the recess that all of the outstanding preferred stock of Panhandle Eastern is now owned by Columbia Oil & Gasoline Corporation and that that situation has obtained for the past few years, back as far as 1937, is that correct?

A. Yes, that is correct.

Q. And Columbia Oil & Gasoline Corporation is the holder of slightly in excess of 50 percent of the common stock of Panhandle Eastern?

A. That is correct.

Q. Have you made any study of the history and background of this preferred stock, particularly the $10,000,000 of Class A preferred?

A. Well, only to the extent of knowing, generally, what type of preferred stock it is and the fact that Columbia Oil & Gasoline Corporation held it and the fact that there is at the moment and was a callable feature in there which

I believe was to become effective in June of 1941 which was recently waived.

As I recall it, it was a stock which could have been called at 110 up to that date and that provision has been temporarily waived in view of some present financing plans which are contemplated.

Q. You know, do you not, that this Class A preferred [fol. 7481] stock can be redeemed today at $100 par?

A. Since they waived the callable $110 price at or around June, 1941, that is correct.

Q. Now, do you know that in July of 1939 offers were made by banking groups to market a cumulative nonparticipating preferred stock for Panhandle Eastern bearing dividends of 4½ to 5 percent, the proceeds of which could be used to retire the Class A stock of Panhandle Eastern?

A. I remember something about those offers and, in connection therewith, I believe I also remember correctly that there were numerous qualifications and restrictions placed upon those offers so that one could not generalize about the situation unless you went into considerable detail in regard to those offers.

I have here, as you know, been talking about the present capital structure which means the present type of preferred stock outstanding and no others and any new offer would have to be considered in view of what ever restrictions were made.

In other words, I think I remember some offer that was made by Glore-Forg a as one banking group but, as I recall, the offer was co ched in very careful language in regard to certain provis ons which would have very definitely had a bearing upon an issue and would have to be considered in any analysis.

[fol. 7482] Q. Have you examined the offer?

A. I remember seeing some of the stipulations. I do not recall what they were but I do recall that I formed the opinion at the time that such stipulations were considerably restrictive and would change the nature of the new preferred and would have a very pertinent bearing upon any considerations.

Q. Are you saying that in 1939 it was impossible to refinance this $10,000,000 of Class A preferred stock at a cost slightly in excess of 4½ percent?

A. I say that to finance this preferred stock by an identical preferred stock at such rates as you mentioned would very likely have been impossible.

If you want to put out a different kind of preferred stock with various provisions for sinking fund and a number of other things whereby the new preferred would be more akin to bonds than the present preferred, that is an entirely new study.

It has no bearing directly upon the present preferred which we have been talking about, at least for all of this morning.

Q. Does it have no bearing upon the return to which this company is entitled?

A. Well, it has very definitely a bearing, the same as I have shown in Chart 36 of Exhibit 65 wherein I say that [fol. 7483] if you assume a refinancing of the preferred stock, the present preferred stock, partly with bonds and partly with common stock, the required amount for return of capital is less on my present approach as shown in Chart No. 36 than is the case for the requirement on the basis of the present capital structure as shown in Chart No. 37.

Q. Well, is it your testimony that your suggestion is the best that the company could do by way of refinancing this $10,000,000 of Class A preferred stock, your suggestion which is shown in Chart No. 27?

A. I say that my suggestion is one very definite reasonable proposal but, as I think I have already testified, after analyzing information shown in Chart No. 25 of Exhibit 65, I concluded if there was to be a change made for a company in an industry such as we are talking about, it might be preferable to perhaps eliminate a preferred stock altogether so that, on that basis, I had concluded if some arrangement could be made for refinancing the present capital structure perhaps some way could be worked out to have merely bonds and common stock as one method and I tried to apply that.

Now, there may be others. I really did not go through an entire explanation of them but in my approach here, I

think I have shown fairly clearly that if the suggestion of bonds and common stock is used as a new setup in com-
[fol. 7484] parison to the present, the requirement would then be as shown on Chart 36, namely, $4,993,511 required for what I call current capital requirements as against $5,064,821 for a similar requirement but based upon the present capital structure as shown in Chart No. 37 of Exhibit 65.

Q. There is not much of a saving there after your method is applied, is there?

A. Not so much saving on this basis, no.

Q. How much is it in dollars if your proposed plan of refinancing the present preferred stock by means of 50 percent bonds sold at 3.25 and 50 percent common stock sold at 12 percent?

Mr. Wheat: Fifty percent of the total amount of present outstanding preferred?

Mr. Littman: That is right.

Mr. Wheat: Not 50 percent over-all.

Mr. Littman: That is right. I am reading from the witness' Chart No. 27.

Mr. Wheat: Yes. Thank you.

By Mr. Littman:

Q. Now, what I want to know is, Mr. Coffman, what savings in dollars will result by the application of this proposed refinancing which you have suggested in your Chart No. 27?

A. $71,310.

[fol. 7485] Q. And the rate of cost of money would be 7.63 percent for the $11,000,000 of refinancing, would it not?

A. Where do you find the 7.63 percent?

Q. I obtained that figure in this way:

Refer, please, to your Chart No. 27. I take 3.25 percent which is the rate on the bonds and 12 percent which is your rate on the common stock, add the two, giving 15.25, and dividing by 2.

Do you follow me?

A. Yes, I see what your calculation is but I want to check a figure.

Q. What I am seeking is to have you express the cost of money in terms of percent so that it may be compared with the present assumed cost of preferred stock money of 8.45 to which we have heretofore referred

A. Well, I think that in answer to your question you would refer to Chart No. 28 because, if you finance on a 50 percent—that is, if you refinance the present preferred outstanding so that when you get through you had approximately a 60 percent common stock figure and a 40 percent bond figure, the percent would be 8.40 percent.

Q. I do not want an over-all cost including common stock and bonds and everything else. I merely want you to state the cost of money for the refinancing of the outstanding $14,000,000 of preferred stock under your as-[fol. 7486] sumption, which assumption is set forth in Chart No. 27.

A. I do not recall your figure. It would be about 7.86 even. I thought you said 56, did you?

Q. The figure I gave you was 7.63.

A. Well, I figure 7.86.

Mr. Wheat: Just what is that figure, Mr. Coffman?

Mr. Littman: Yes, state how you computed it.

Mr. Wheat: And what it represents.

The Witness: The figure I have given you is the total of the present capital structure which is $63,525,839 and applied against that the requirement of refinancing the preferred stock of $4,993,000.

By Mr. Littman:

Q. Well, isn't that the same figure which is shown in your table for Chart No. 27 at the bottom of the chart under the heading, "Yield rate" of 7.85?

A. Well, it so happens that the figures are the same.

Mr. Wheat: I thought you said one was 7.86?

The Witness: This is 7.85. I happened to carry it out one additional decimal point—it comes out 7.859 so I said, 7.86.

By Mr. Littman:

Q. The two figures are identical?

A. The two figures are identical but I did not arrive at this figure in the way shown here.

[fol. 7487] Q. At any rate, it is your testimony, Mr. Coffman, that if your assumed refinancing of the outstanding preferred stock were adopted and were to take place today, the cost of refinancing the $11,000,000 of outstanding preferred stock would be 7.86 percent, is that right?

A. Yes, based upon the calculation I have just given you.

Q. Whereas the present cost which you have estimated and included for purposes of your Chart No. 37 is 8.45 percent?

A. As against the preferred stock requiring 8.45 percent, that is correct, but one, however, is an over-all capital calculation and the other is a calculation directed to preferred stock only.

Mr. Culton: I think there is an unintentional misuse of the word "today". You do not mean on the market as of February 2, do you?

The Witness: No, I mean as of the date of this study, obviously. I have not made any study as of today.

By Mr. Littman:

Q. Now, what, in your opinion, would be the best terms under which Panhandle Eastern could refinance this $11,000,000 of outstanding preferred stock on the market today, and I mean today, February 2, 1942?

A. Well, as a matter of fact, I do not know exactly [fol. 7488] what it would be because I have not made the analysis as of yesterday or Saturday or as of this morning but, if refinancing were to take place as of today for a preferred stock exactly similar in all respects to the present preferred stock, I would say that it was someplace in excess of 8 percent and might well approach the 8.5 percent.

Mr. Chamberlain: May I ask whether that means that the participation in dividends would be carried with the new stock?

The Witness: I say, a preferred stock in all respects identical with the preferred stock now standing in the capital structure.

Mr. Chamberlain: That would be participating?

The Witness: Absolutely. It is the same kind of stock to a "T" or to the letter.

By Mr. Littman:

Q. Now, you are aware of the fact, are you not, that today Panhandle Eastern is receiving bids on a new issue of preferred stock, the proceeds of which will be used, among other things, for the purpose of refunding this $10,000,000 of outstanding Class A preferred stock?

A. Yes, I am aware of that.

Q. Are you familiar with the terms of that new issue of preferred stock?

A. Some of them. The new stock, among other things, [fol. 7489] is to be a sinking-fund preferred as against this. It is to be a non-participating as against this. When you look at the preferred stock, that is, this proposed new preferred stock, its stipulations and provisions are such that it brings the new preferred a little more in line toward the bond side, let us say, of the capital structure picture than does the presently outstanding preferred stock because of the sinking fund provision more than anything else.

Q. And there is not any question in your mind, is there, Mr. Coffman, that this new issue of preferred stock will cost the company far less than the 8.45 percent or the 7.86 percent which you have used for purposes of your Charts Nos. 37 and 36, respectively?

A. Well, if I can, in answer to your question, leave out the "far less" and just say it will be less, whether it is greater or less I am not prepared to say, but it will be less.

Now, how much less will remain to be seen. I would like to see myself what the figure is going to be.

Q. Now, the company and the rate payer are entitled to the lower rate if a lower rate is had today?

A. Yes, if they refinance and the new stock is sold and the cost on that new stock is less, why, then we will take that over-all figure into consideration, that is, that figure [fol. 7490] in conjunction with the common stock, obviously, and the bonds.

We will still have to talk about over-all capital structure but giving weight to the figure for the new preferred instead of the one used in this calculation.

Q. Now, suppose this new issue of preferred stock will cost the company 4½ percent. There isn't any question in your mind but that the company and the public and the rate payers are entitled to the benefit of that new rate?

A. No, I would not go quite that far because there is one thing, by your over-simplification, that you are leaving out.

Q. What is that?

A. The common stockholders of the company at the moment are also going to take a good look at this situation and when they find another security, in addition to the bonds which have sinking fund provisions which again is going to take a portion of the earnings, segregating it for the purpose, the common stock financing, if it is to be done, might cost more than I have been talking about.

In other words, the sinking fund provisions of the new preferred handicap the common stockholder to that great extent and you will still have to talk, so far as your customers are concerned, in terms of over-all capital cost and not in terms of one part of the component of the capital.

[fol. 7491] Q. You think, then, that the companies that hold 92 percent of the common stock are going to want more for their money than they have been getting heretofore just because of the refinancing situation that is present today?

A. The holding companies at the present time are not contemplating continuing holding this common stock. They are also having a problem as to what they are going to do so we cannot generalize on that without considering what the possibilities are.

Q. Now, this 12 percent that you have figured as the reasonable rate for common stock will not hold good after today, will it?

A. It may. I want to see the figures first because after you get the figures on the new preferred stock, I do not know what the over-all cost will be. It may be it won't be far out of line at all with this study.

Q. Well, is this study usable today or isn't it?

A. I think it is just as usable as your classical method, absolutely. As long as the results of the classical method will hold up, the results of this study will hold up.

Q. You do not think much of the classical method, do you?

A. Not in and of itself, no, I do not. I think you have to have something in addition to that to make a study.

Q. Can your rate of return be used today?

[fol. 7492] A. Yes, I think it can very definitely. I think if is a very good guide.

Q. What use can we make of this 12 percent that you have fixed for common stock?

A. I say that that is, as of the time of this study, the best appraisal I could make of what the common-stockholders would require and were requiring on the average for an investment of this kind which means should new equity money be sought, it would have to be sold on about that kind of earnings-price ratio.

Q. Can we rely upon this 12-percent figure today after the new financing?

A. I think generally you can but if you cannot rely on this, then I say the results you are getting from your classical method are equally at variance from the facts as this would be so you are up against the proposition of making a new classical method approach with all the costs involved or using this study of getting the costs which are involved which, I think, is less expensive and I think, in many respect, more appropriate.

Q. Now, Mr. Coffman, I simply want to know whether the 12-percent rate for common stock that you have used for purposes of this study may be applied today after the refinancing? Does it still hold good for all practical purposes?

[fol. 7493] A. I would want to check after the refinancing comes out to see. Why should I say that it will or won't when I can have a chance to check it? After all, one fundamental factor has been changed and when any fundamental factor changes it may change the results radically so if you will tell me this noon or this afternoon what the new financing did, it won't be much of a trick to tell you whether this still holds good after we find out what the new financing is.

Q. You are an expert who holds himself out to the public as an adviser in these matters and by your training and study you claim to know what the market conditions are, isn't that correct?

A. That is correct and one of the first fundamentals that I know is that if any fundamental economic factor or factors pertinent to the line of study you are using changes, maybe it won't, but if it does change that calls for a new study to find out and, after all, that is a basic principle with any analyst, it seems to me.

Q. Are you still sponsoring this 12 percent for common stock or are you not?

A. Under the conditions which existed at the this study was made and under all the factors taken together at the time they were so related, I stick to this 100 percent, yes, sir.

Q. You stick to the 12 percent 100 percent?

A. I certainly do, yes, sir.

[fol. 7494] Q. Have any conditions changed since you made this study that would warrant any change in the use of this 12 percent?

A. Up until this present moment, assuming that the refinancing is not consummated at the moment and a new figure that you might have this afternoon that would change it radically, I would say that this very closely approximates the conditions under which I made the study and the factors as related to each other.

Q. In other words, 12 percent still holds good at the present moment for the common stock assuming no change by reason of the refinancing?

A. And assuming that there has been no radical change in economic conditions which would alter the picture. To my knowledge, no such change at the moment, to date, from the date of this study, has taken place.

In other words, I think if I were to make this study as of today, covering the period from August of last year when the thing was made, I would get at or near the same figure.

Q. What is there about this new financing that might cause you to want to change that 12-percent figure for common stock?

A. I say that the new preferred which is now being offered, among other things, is a sinking-fund preferred [fol. 7495] stock in contrast to the present preferred which has no sinking fund requirement. The new preferred, therefore, so far as the sinking fund is provided, approaches more the classification of a bond and less the classification of a preferred stock.

Such provisions, therefore, create a greater drain on earnings, so far as providing the fund is concerned, to take up at a late date the preferred stock.

Therefore, the common-stockholder to that extent will feel that he is farther removed from a distribution of whatever earnings are left available to his stock.

Q. Now, will you tell us how a sinking-fund provision creates a drain on earnings?

A. Because a sinking-fund provision has to be provided for. In other words, your have to earn money to provide the sinking fund which can be used to apply against the preferred stock the same as you have to provide a sinking fund for the bonds.

For example, $1,200,000 odd, as I recall it, of bonds are due or rather $1,250,000 of serial notes are due November 1, 1942. The company, through earnings, must be able to provide that sum so at the due date those notes can be purchased.

Q. Well, your allowance for amortization takes care of all that, doesn't it? You so said in your exhibit.

A. Well, I have taken that into consideration but I [fol. 7496] also said that if earnings come into a company and are reinvested and put into bricks or mortar or otherwise dispensed and you do not get it because of a rate cut or something else and you do not get the cash, it is going to be a little tough to do it.

Q. Well, Mr. Coffman, did you or did you not make a provision for the sinking fund, bonds and preferred stock when you made your allowance of $2,551,000?

A. Yes, I took the provision into consideration.

Q. Now, in all of the earnings that you provide for in your Charts Nos. 36 and 37, they are earnings after the provision is made for sinking fund, isn't that correct?

A. That is correct.

Q. Now, will you state how the provision in the new issue of preferred stock, the sinking-fund provision in the new issue for preferred stock will affect the common-stockholder adversely?

A. It will affect it to the same extent. You have an additional sinking fund to provide for which I was not providing for when I was making this study.

Q. If you were making this study, do you mean to say you would provide for a sinking fund for amortization over and above the $2,500,000?

A. I say if the preferred stock comes out and it provides for a sinking fund, that has to be taken into con- [fol. 7497] sideration—

Q. (Interposing) How do you mean?

Mr. Wheat: He had not finished his answer.

Mr. Littman: Had you finished your answer?

The Witness: (Continuing) On the basis that I have to have enough in the way of capital requirements, as I see it, to provide the necessary funds so, at the due date of the sinking fund, the payments can be made.

By Mr. Littman:

Q. Will you please refer to a figure in your Exhibit 65 that would be increased by reason of the sinking-fund provision on new preferred stock?

A. The figure that finally would show the amount would be that related to the common stock if investors in the market, that is, common-stock investors in the market, giving full weight to the sinking-fund provisions in the new preferred stock should believe that that was an added additional requirement which might, in some way, enlarge the risk they already have in connection with the equity, if it did, it might be somewhat higher.

If they did not analyze it that way, all right, the figure stands as is. All I am saying is that before I gave the additional figure, I would want to make a calculation to see whether or not there was a change.

I see no difference, in other words, Mr. Littman, be- [fol. 7498] tween having a preferred stock as the present capital stock and issuing new preferred with sinking fund and perhaps enlarging the amount of bonds outstanding.

Now, in the particular case I have assumed refinancing the preferred stock with bonds and common and I have shown had that been done at what I thought were reasonable rates, the amount of money required would have gone down from $5,064,821 to $4,993,511, a saving of around $71,000.

Now, so far as this new preferred stock is concerned, when you make the calculation, it might work out at some saving or it might work out at about $5,064,000 and that all is due to the fact that certain rates changed as you change the type of security and the percentage in the capital structure represented by either one.

As I say, this afternoon when the rate is available, I think it would be pretty easy to tell whether any major change or material change was effected.

Q. Now, the common stockholders would get a considerable advantage by reason of the lowering of the cost of servicing the preferred stock from 8.45 percent, which is your estimate, down to something in the vicinity of, let us say, 4½ percent, wouldn't they?

There would be more earnings available to the common stockholders, would there not, under those circumstances?

A. Well, that will depend on the total number of shares [fol. 7499] that remain outstanding. If there were an equal number of shares and the cost was less than the present cost, there would be some saving to the common stockholder so far as the earnings' picture is concerned.

But I merely want to add again, on the other hand, that you have got more of a higher class, let's call it, of senior capital because of sinking fund and other protective provisions in the new preferred stock than is the case under the present.

Q. Why didn't you assume such a condition when you undertook to determine the cost at which this money might be refinanced? Weren't you interested in giving the rate payer the benefit of the best possible financing?

A. Sure, and, as I studied the facts, again referring to this exhibit which shows the various companies in the industry and those that have [preffered] stock outstanding

—I referred to that exhibit a minute ago, Chart No. 25—it seemed to me that the facts included in that exhibit, in the first place indicated that, in the natural-gas pipe-line business, it was not the practice to finance by preferred stock and; in the second place, I drew the conclusion from that that apparently the various natural gas pipe-line companies had found, after they had made various considerations, that it did not seem to be the best form of capital to sell.

[fol. 7500] Therefore, I concluded that if there was to be any refinancing of present preferred done, probably the most likely and best basis would be some combination of bonds and common to take care of it and I made that assumption.

Q. Now, Mr. Coffman, I want you to answer this question yes or no. When you made that assumption and when you provided a proposed plan of refinancing of the $11,000,000 of preferred stock, did you or did you not present the best and most economical refinancing plan that you could conceive of and imagine at the time you presented it? Did you or did you not?

A. I am sorry, I cannot answer that question as you put it.

Q. Do you have some doubts about whether you were doing your best to refinance at the lowest possible rate, Mr. Coffman?

A. I have not said that up to now, to my knowledge.

Q. If you cannot answer the latter question—

A. (Interposing) I can answer—

Q. (Interposing) Suppose you answer in your own way.

A. All right, I will be glad to do that.

As I told you, there have been statements repeatedly made by the S. E. C. in regard to the type of capital structures that ought to be in vogue in companies of this kind and I believe there are numerous references in S. [fol. 7501] E. C. literature to the effect that an ideal structure for this type of business would be one in which there are 40 percent of bonds, 60 percent of common, and that was why I took this particular ratio and also why I called it "ideal".

It was not because I necessarily thought it was the best nor did I make any other calculations to try it.

Q. It certainly was not the lowest cost of money that you could work out considering the market at the time, was it?

A. I would not say on that, Mr. Littman. I do not know. I would not say at all. It might be, it might well be. I do not know.

Q. You mean it is altogether probable that you could have worked out a lower cost of refinancing this $11,000,000 of preferred stock than that which you presented in your Exhibit 65?

A. I am not too certain of that for this reason:

That, in connection, for example, with the present financing, I have heard, just as hearsay from bankers, [they] they were a little dubious about this issue.

I could have gone on and taken different hypotheses and estimated it on preferred stock all the way from having all bonds down to having a common stock and worked out different figures.

I do not see where, for the life of me, they would have [fol. 7502] been helpful to the study or helpful to the Commission. It did not make them.

Q. You labored and labored and you brought forth the $70,000 figure?

A. I did not labor. I told you exactly what I did. I relied on the S. E. C. statements and took what they said was an ideal capital structure for this kind of company.

That was not much labor because they had laid it out for me, practically. I took their percentages and laid it out.

Q. Evidently, the company is not following your suggestion of refinancing the $11,000,000 of outstanding preferred stock by 50 percent bonds and 50 percent common stock and have already secured the Securities and Exchange Commission's approval of the plan of refinancing this preferred stock, by preferred stock, is that a correct statement?

A. The first part of it is correct, that they are obviously not following the plan as I calculated on a refinancing basis.

Secondly, in putting out the issue, they naturally must have had the approval of the S. E. C. and what the results of it will be, I do not know until we see what the market does.

Q. The company is following the plan that will cost them the least in the matter of refinancing this Class A [fol. 7503] preferred stock, isn't that correct?

A. They are hoping they are following that plan.

Q. And the dividend rate on that new issue of preferred stock is 4½ percent? A. That is correct.

. . . . . .

[fol. 7504] PAUL B. COFFMAN, a witness, having been previously sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

By Mr. Littman:

Q. Do you know, Mr. Coffman, that since April of 1937 various proposals and attempts have been made to refinance Panhandle Eastern's Class A preferred stock?

A. I know, generally, there has been such proposals but I have not analyzed any of them, Mr. Littman, nor am I prepared to say what one is against the other.

Q. But you do know that various proposals and attempts have been made since 1937 to refinance Panhandle Eastern's Class A preferred stock?

A. To say it differently, I know such matter has been under consideration, yes.

Q. Do you know that these attempts to refinance this Class A preferred stock have, from time to time, been blocked by Columbia Oil & Gasoline Corporation, the beneficial owner thereof and also because of certain disputes between Missouri-Kansas Pipe Line Company and Co- [fol. 7505] lumbia Oil & Gasoline Corporation, Panhandle Eastern's parents?

A. I do not know as to the fact that they may have been blocked but I know that there has been some dispute

over a period between the Mo-Kan and Panhandle Eastern.

Q. Let us be more specific with respect to the efforts to refinance this Class A preferred stock. I will read from Page 27 of Exhibit 14-A which is a release issued by the Securities and Exchange Commission, No. 2778 under date of May 28, 1941, the findings and opinion of the Commission in the matters of the Panhandle Eastern Pipe Line Company, Columbia Oil & Gasoline Corporation, Columbia Gas & Electric Corporation:

"Since April of 1937 various proposals have been made to refinance this Class A stock, all of which is held by Columbia Oil. These proposals and attempts to put through such a refinancing have failed—and the history of that failure is a significant indication of Columbia Oil's control over Panhandle Eastern.

"Proposals to refinance the preferred stock made in 1937 were met by Columbia Oil's insistence that the refinancing take place simultaneously with the refunding of Panhandle Eastern's bonds. During 1937 and 1938 it was believed by some of Panhandle Eastern's officers that the condition of the market made necessary a convertible issue of preferred to refinance the outstanding [fol. 7506] preferred. The Mokan interests refused to make any attempts to secure waivers from the minority common stockholders of pre-emptive rights to new common. This, it was claimed, made impossible the issuance of convertible preferred stock—and dampened efforts at refinancing. There was, however, no indication that Columbia Oil would consent to even a convertible issue during the early stages of the refinancing proposal."

Have your ever read that part of the Securities and Exchange opinion?

A. No, I do not recall that I have.
Q. And you were not aware of those facts?
A. Not specifically, no.
Q. I will read on:

"It will be recalled that pursuant to the settlement with the Mokan receivers, rights to 80 shares of Panhandle Eastern's common stock were to be distributed to Mokan stockholders. During the early part of 1939

hearings in the Delaware Chancery Court were being held on the question of this distribution. Because of the pendency of this proceeding the Panhandle Eastern Board, on January 25, 1939, abandoned plans for selling convertible preferred stock. The alleged reason was that the outcome of the proceedings 'had a vital bearing on the type of financing which it was possible to do at that time.'

"On June 21, 1939, the Delaware Chancellor ordered a [fol. 7507] distribution of the 80,000 shares of Panhandle Eastern's common stock to Mokan stockholders. The tension was broken. A substantial block of stock in the hands of an adversary had been smashed, and in July of 1939 the Finance Committee of Panhandle Eastern was ready to recommend continuation of negotiations with Kuhn, Loeb & Co. for a 4½% cumulative preferred stock without a conversion feature."

"Have you familiarized yourself with those facts, Mr. Coffman?

A. No, not for purposes of this study.

Q. I read on:

"It is apparent that up to this time the dominant factor in the timing of the action of the Panhandle Eastern Board was the relative control positions of Columbia Oil and Mokan. The distribution of a strategic block of stock was the 'vital' factor in 'the type of financing which it was possible to do at that time'. When the block was broken it became 'apparent', according to the testimony of Sperry, Treasurer of Panhandle Eastern 'that we could sell an issue without the conversion privilege attached'.

"But a new barrier was presented. On August 7, 1939, Creveling, president of Panhandle Eastern and chairman of its board, reported that Columbia Oil had determined that the pendency of the plan of divestiture before the Federal Court made plans for refinancing 'premature'." [fol. 7508] Have you familiarized yourself with those facts?

A. Not for purposes of this study, No.

Q. Did you know about these facts?

A. I knew generally about them, yes, but I made no detailed study nor gave weight to them because it was not pertinent for the study at hand.

Q. In your opinion? A. In my opinion, yes.

Q. I read on:

"Panhandle Eastern tried again, in what was deemed a reviving market, in November of 1939. This time negotiations were undertaken for a joint refunding of the bonds and refinancing of the preferred (the action previously recommended by Columbia Oil) with Kidder, Peabody & Company and Glore, Forgan & Company. On December 28, 1939, the Panhandle Eastern directors recommended to Gano Dunn a program of refunding and retirement. On January 19, 1940, Gano Dunn conveyed to the board of Panhandle Eastern the sentiments of Columbia Oil: Columbia was unwilling to consider, at that time, the refinancing of the preferred stock. This ended Panhandle Eastern's efforts at refinancing. Panhandle Eastern in the face of a market which it appears would have absorbed a refinancing at 4½% is still saddled with a 6% cumulative, participating preferred stock which paid in 1940 a dividend of 10%, and which, according to [fol. 7209] its terms, after June 1, 1941, would cost the company a premium of $1,000,000 should it attempt a refinancing."

Were you aware of these latter facts which I have just read? A. Generally.

Q. Did you give those facts any weight in the making of your study which is contained in Exhibit 65 for purposes of this proceeding?

A. No, I did not give those any weight, as I think I have clearly indicated in my testimony.

Q. You understand, do you not, that some nicknames are used for purposes of brevity in this opinion.

For instance, the name "Mokan" refers to Missouri-Kansas Pipe Line Company; the name "Columbia Oil" refers to Columbia Oil & Gasoline Corporation; and that "Panhandle Eastern" refers to Panhandle Eastern Pipe Line Company.

You understand that, do you?

A. I understand that, yes.

Q. And I believe you have already testified late this morning that the dividend rate on the new issue of preferred stock, the proceeds of which are expected to be used to refund the $10,000,000 of Class A preferred stock presently outstanding, is 4½ percent?

A. Well, I think, generally, that is the case although in the particular proposed financing, I think there was [fol. 7510] not an exact determination but the matter was to be determined in accordance with bids to be submitted.

Q. Well, of course, the bids in the ultimate will determine the actual cost of money? A. Yes.

. . . . . .

[fol. 7512] By Mr. Littman:

Q. Will you please turn to your table for Chart No. 37, Mr. Coffman. In your table for Chart No. 37, you show in the right-hand column the amount of $3,510,995 as "Balance for common stock (after participation of Class A preferred stock)", do you not?

A. Yes, I do.

Q. Now, that represents the 12-percent earnings-price ratio on common stock and surplus as of June 30, 1941, of $29,258,295, is that correct?

A. Yes, that is correct.

Q. Now, is my understanding correct that that is the amount which the common stockholders will eventually receive under your projected assumption which is headed at the top of the column, "Projected-assuming present preferred stock remains outstanding"?

A. Not just as you state your question, Mr. Littman. That is the earnings-price ratio that I say is required under conditions existing at the time of the study by the prospective investor and, as I have pointed out on numerous occasions, whether or not he receives that amount [fol. 7513] is going to depend upon dividend policy.

Q. Well, under the assumption that you make that conditions will not be changed, let's put that aside. How much of this amount would be paid in dividends over the life of the company to the holders of the common stock?

A. Well, it is difficult to answer that, because, as I have pointed out throughout, the earnings that the company makes or produces flow through the cash account

which is, in turn, reinvested and this being a growing company, it will be determined by the management what they believe they can reasonably pay out of these earnings, the remainder being retained in the business for operating purposes.

I do not know. If it were in the present status and in a liquidating process, if there was no drainage on those earnings, the entire amount should be available for distribution.

Q. Eventually to the common stockholders?

A. Well, if you will take the statement exactly as I have made it. The money is there but that is a hypothesis which does not exist because this is a going concern and as I have said, hour by hour these earnings are being reinvested in the business so whether or not they will be distributed, is quite a long-shot. I do not know.

This is a business with a wasting asset. If you continue to reinvest the money in that situation, I have not [fol. 7514] any idea but the common-stockholder will wind up with very little in this business before he gets through with it.

Q. Well, it is apparent, isn't it, Mr. Coffman, that under the assumptions which are shown in your Chart No. 37, if anything less than $3,510,995 goes to the common-stockholders of Panhandle Eastern, such stockholders would not receive fully 12 percent on the invested capital?

A. That is correct.

Q. So that in order to get the 12 percent that you say the common-stockholder must have, it would be necessary for Panhandle Eastern to pay out to the stockholders this $3,510,995, isn't that correct, under the assumptions that you have made for purposes of your study?

A. If the full amount of earnings available is to be distributed, the answer is yes, but the calculation here, you must distinguish on the basis that it is an earnings-price ratio and as long as the earnings are there, the management if efficient, all corporate policies are reasonable, he will take, in the meanwhile, something less in the way of dividends, not worrying about the amount that

is retained in the business if the conditions I have just enumerated hold true over the history.

Q. If it is plowed back in the business, it would merely enhance the common stockholder's equity to that extent, would it not?

[fol. 7515] A. That would be true providing all other things remain equal.

Q. But in order for the common stockholder to earn 12 percent, he would have to receive this amount of $3,510,995, is that right?

A. Well, no, your language is confusing there. The company can earn it for the benefit of the stockholders and it is 12 percent.

I did not say that he received it. All I said is that the earnings in that amount must be there. Whether or not the stockholder is to receive that remains to be seen and depends upon corporate dividend policy and we have got to distinguish between those two things.

He will never receive it until it is paid to him even though it is recorded on the books.

Q. Theoretically, it is going to be paid to him under your hypothesis?

A. It is presumed the money—no, I will retract that statement.

It is presumed that the earnings were made and they were converted into cash which, in turn, has been reinvested in the business.

Now, if the business continues on the same kind of earnings basis henceforth, that it was at the time, presumably that ratio will hold good but that is the hazard. [fol. 7516] Whether or not it will operate that way in the future remains to be seen because, as I have tried to point out time and again here, being a wasting asset, costs and other expenses go up and I do not know whether he will bail out or not and it is a fallacious assumption to assume any such thing.

Q. Assuming a static condition and no changing events in the future, under your study and your hypothesis and your assumptions, he would eventually get this $3,510,955 a year, would he not?

A. If all conditions remained absolutely the same, it will be in the company available to him. I want to draw that distinction.

When you get it you get the cash when it is earned. If it is retained in the business, it is available but until it is paid, the stockholder has not received it.

Q. How about 25 years hence when, according to your assumption, the business will be wound up by reason of the exhaustion of the gas supply? Will he get it then?

A. I doubt very much whether he will get it, Mr. Littman, and I will cite you a specific example.

The very thing you read to me sometime back on Southern Natural proves the point. Southern Natural, as I understand what you read, says that at the beginning of certain operations they estimated the length of life of [fol. 7517] reserves to be so many years.

Now, under a recent investigation, they find that at peak loads their present reserves will last four to five years. At the present time, instead of confessing to their stockholders who put in this original money to buy these reserves, that that particular phase of the business will be ended, according to best estimates now at the end of four and five years, and getting themselves into position so they can liquidate for whatever they can net, the management informs the investors and the public and also the Commission that it is now looking around for additional sources of gas supply and they admit that such gas is going to cost them about 1½ cents per M.c.f. more than their present gas reserves so they are taking earnings, such as they are, into cash, reinvesting that cash in a higher-cost reserve and gas supply, and so on, and I presume they are going to operate until there aren't any more available gas supplies and it is my contention if that company keeps on on that basis, there is no way that the company can possibly wind up at the end of time with sufficient money to pay off those securities and the same thing applies to the Panhandle Eastern Pipe Line Company.

Q. Let me be perfectly clear about this, Mr. Coffman. Is that what you had in mind when you fixed the 12 per-

cent rate of cost of money for common stock of Panhandle [fol. 7518] Eastern?

A. No, I did not say that. I have told you exactly.

Q. Why talk about it then?

A. Because it is a point in case in the question you asked me.

Q. Does your estimated cost of common-stock money reflect the situation which you have just described or doesn't it? It either does or it does not.

A. It represents just what I have stated it to represent.

Q. Will you answer my question? It either does or it does not, clearly.

A. I am sorry I cannot answer your question that way, Mr. Littman.

Q. You are stating now you cannot tell me whether or not your estimate does or does not reflect the situation which you have just described with respect to Southern Natural Gas Company?

A. I cannot answer that except in my own language and my language is this, if you want to have my answer:

That the 12 percent, as we know, was based upon an estimated life of 25 years for the reserves. As I have pointed out, that earnings ratio is for earnings solely. The dividend policy is something else.

To the extent that the earnings available under these [fol. 7519] calculations are retained in the business, they are reinvested there and to the extent, over the years, that the management of this company will feel called upon or believe it wise to make new contracts, new leases for acreage, they are going to find the same situation —

Mr. Wheat: (Interposing) The same situation as what?

The Witness: (Continuing) The same situation as Southern Natural Gas Pipe Line Company and that is a matter of business operations.

By Mr. Littman.

Q. In other words, you have provided a sufficient cushion with which to bail out Panhandle Eastern from the same kind of a jam in which Southern Natural now finds itself?

A. No, not at all, Mr. Littman, not at all. That is one question I can answer yes or no and the answer is no.

Q. Well, you said a moment ago, if I correctly understood you, that you expected Panhandle Eastern to experience the same type of difficulty that Southern Natural has experienced or didn't you say that?

A. No, I did not say that. I said if this company with these earnings finds, over the history, that they have the same kind of a situation before it and, therefore, take these earnings and reinvest them in the business, I do not see how even with this figure you can bail a security holder out because the money would not be there. That [fol. 7520] is all I have said.

Now, if we are going to provide for that, then I would have to make a further allowance so it is up to the management of this company to so conduct its business that it can, with these earnings, pay off.

Q. Let's have the amount of further allowance that would be necessary for the situation that you are either expecting or afraid of?

A. I do not need any allowance, Mr. Littman. I believe under the present intention even, that I understand you are making, that the only sound way that this could be done is to say to a company like Southern Natural Gas Pipe Line Company, "If you arrive at a point or are now at a point where you are telling the consuming public and the investors that you must go out and make a new deal, get new resources, you get new financing and set up a new separate organization to do that but do not confuse it with what you have already sold to the investing public and have told the customers you have."

On that basis, it may be we could get this thing straightened out.

Q. You certainly succeeded in confusing me and I would like to be cleared up on this. Let me put it this way:

Is it your testimony that the common-stockholders of Panhandle Eastern will not receive the $3,510,995 which [fol. 7521] is, under your Chart No. 37, available to the holders of the common stock for each year?

A. I say that if the company finds itself, over its history, in a situation such as Southern Natural finds itself

presently and this company follows exactly the same procedure as Southern Natural is following, the likelihood is that at the end of time on Panhandle Eastern, there just would not be enough assets there to pay this off. That is exactly what I am saying.

Q. Now, would you mind answering my question. I think it can be answered yes or no. If you cannot answer that yes or no, I wish you would please state so.

Suppose you read it back, please.

(Whereupon, the question indicated was read by the reporter.)

The Witness: I stick with my answer.

By Mr. Littman.

Q. You cannot answer that yes or no? A. No.

Q. Do you know what use this Commission can make of this figure if we do not know that assumption—

A. (Interposing) Yes.

Q. (Continuing) If we do not know the answer to that question? A. Very definitely.

[fol. 7522] Q. Suppose you tell us what use might be made of this figure of $3,510,995? What are we going to do with it?

A. You are going to add that to the other two items that I have referred to, one on preferred stock and the other on the bonds, to get the total of $5,064,821 as shown in Chart No. 37 of Exhibit 65 as the amount in dollars the company must receive for capital requirements if the market is to be forthcoming for public financing and under the conditions or conditions similar to what existed at the time the study was made.

Q. All right. How much of it is going to be received by the common-stockholder?

A. The amount that was allowed for common is $3,510,995.

Q. How much of that amount is the common-stockholder going to receive?

A. I do not know until they talk about dividends. I haven't the slightest idea.

Q. You cannot tell us, then, what the common-stockholder expects to actually receive?

A. That dividend policy is purely a management proposition.

Q. You cannot state what the common-stockholder expects to receive upon his investment in Panhandle Eastern Pipe Line Company?

[fol. 7523] A. No more than I have shown in the calculations I made in table to Chart No. 37.

Q. Where have you shown how much the stockholder is going to receive?

A. It is included in the $3,510,995.

Q. Well, let's get at it this way:

Are the common-stockholders going to receive $100 of that $3,510,995 a year? Are they going to receive $200, $1,000,000, are they going to receive $2,000,000? How much?

A. It is shown in the calculation where I have made an estimate for what the participations for the preferred stock was, based on a $2.50 annual dividend on the 807,367 shares of common stock.

Q. Is that the dividend which you expect—

A. (Interposing) That was the dividend I used for this calculation.

Q. You used it for a calculation but do you expect the common-stockholders to receive a dividend of $2.50 per share on their common stock?

A. Under the conditions that I analyzed here at the time, it seemed to me that was a reasonable expectancy.

Now, if there is a rate cut or if there is a substantial jump in some cost or some other factor, I do not know. The management will have to meet that as it comes and it seems to me the Commission will, too.

[fol. 7524] Q. What, in your opinion, is the common-stockholder going to require before he invests his money in the common stock of Panhandle Eastern?

A. At the time this was made, he required the earnings-price ratio of 12 and he received a $2.50 dividend actually.

Q. 92 percent of those common-stockholders were the two parent companies of Panhandle Eastern, namely, Columbia Oil & Gasoline Corporation and Missouri-Kansas Pipe Line Company, is that right?

A. Well, yes, the great majority of the common stock was split between Missouri-Kansas Pipe Line and the Columbia Oil and Gasoline Company.

Q. Now, you have in the left column of figures in your table for Chart No. 37 an amount of $1,388,480 which you term "Preferred dividend requirements (based on maximum participation of Class A preferred stock)".

Now, what is that?

A. Well, those figures in the left-hand column are the actual figures for the 12 months ended June 30, 1941. I mean I just took those right from the statement.

Q. Are you stating that Panhandle Eastern Pipe Line Company paid $1,388,480 to the preferred-stockholders for the year ended June 30, 1941?

A. No, I think that calculation is based upon allowing the maximum participation on the earnings available in [fol. 7525] order to see what would be left for common.

Q. That is not an actual figure at all?

A. That figure is not actual but that is to find out what share would be available to common if you distributed all of the earnings so that you had to work out your participation as between the preferred and common for everything over $1.50.

Q. What was the purpose of making that calculation?

A. Well, it is based upon your own question, I think, as to what earnings are necessary if you are going to calculate what the investor needs and add that into the other expenses to get a total dollar needed.

Q. You assumed, for purposes of your study, that the common-stockholders would receive a dividend of $2.50 per share on each share of common stock?

A. Yes, that is correct.

Q. And you consider that a reasonable assumption?

A. Under the facts at the date of this study, I thought that was a reasonable assumption, yes.

Q. What was the market value of Panhandle Eastern's common stock as of approximately June 30, 1941, per share? I believe that is shown in your table for Chart No. 20.

A. As I recall it, it was $36.50.

Q. Yes, that is the figure shown as the "average market price, January 1-August 31, 1941" in your table for [fol. 7526] Chart No. 20.

A. Yes.

Q. Now, on that basis, namely, the basis of receiving a $2.50 dividend per year, what would be the rate of earnings for the common-stockholder on each share of Panhandle Eastern's common stock?

A. You mean rate of dividend?

Q. Yes, the percentage rate of dividend. It is 6.85 percent, I believe.

A. It is about 6.8 percent.

Q. Under the assumptions that you have made for purposes of Chart No. 37, to-wit, the assumption of a $2.50 dividend per share of common stock, the yield to the common-stockholder would be 6.8 percent?

A. That is correct, on the figure we have.

Q. And he would leave the difference between 6.8 percent and 12 percent, namely, 5.2 percent, with the company?

A. Well, he is forced to leave it with the company if they do not pay it out, yes.

Q. In your opinion, under the conditions which you have assumed for purposes of your study, Exhibit No. 65, would the common-stockholders of Panhandle Eastern be satisfied with a yield of 6.85 percent?

A. They probably would so long as the earnings ratio remained at 12 percent.

[fol. 7527] Q. Now, in the David Young III, suit, to which reference has heretofore been made, you testified that 80 percent of the earnings available to the common-stockholders would be paid in dividends, is that correct, on the average?

A. Not quite that way. What I did, because of this participation feature, I had to take the earnings available to both preferred and common and took 80 percent of that.

In other words, since there was that participation feature, I had to first see how much was overall available so that the more accurate statement is the one I gave you rather than the one you used.

Q. Now, assuming that 80 percent of the earnings available for common stock may be properly distributable by way of dividends to the common-stockholders, then in order for the common-stockholders to get this 6.8 percent

yield, the actual earnings would be, under that assumption, 8.56 percent, wouldn't they, instead of 12 percent?

A. Well, I do not know. I have not made that calculation but that really does not mean anything.

Q. Suppose you make it. I am asking you to assume that you are setting aside 80 percent of the earnings for dividends which is what you did in the David Young suit and calculate for me and check my figure of 8.56 percent as the earnings that would be required to yield 6.85 percent to the investor.

[fol. 7528] Mr. Wheat: You are asking the witness merely to check the mathematics of your figures?

Mr. Littman: I am asking him to tell me whether the figure I gave him is correct under the assumptions that I made which are the assumptions which he made in the David Young III; suit.

Mr. Wheat: I am trying to get straight, Mr. Littman, on this. Did you say something about 80 percent of the common stock or 80 percent of net income?

Mr. Littman: 80 percent of the earnings available for the common stock.

Mr. Wheat: That is your assumption.

Mr. Littman: The witness does not seem to have any difficulty.

Mr. Wheat: Mr. Littman, I want to get this straight. You said to me, "I asked him to make an assumption which was an assumption in some other case".

I am asking you merely whether this is your assumption. You combined two things in that which I am advised are erroneous and I want the record to show it.

Mr. Littman: I think your confusion flows—

Mr. Wheat: (Interposing) I am not confused, Mr. Littman, at all.

Mr. Littman: (Continuing)—from your lack of knowledge of this witness' testimony in the David Young case.

[fol. 7529] By Mr. Littman:

Q. What do you find by that calculation?

A. I want to get you to say where you got that 5.8 figure. I have not yet gotten that figure.

Q. The figure I asked you to check was 8.56 percent.

A. No, that is not the figure you gave me first, is it? Let me have this read back. I do not remember that figure at all.

(Whereupon, the portion of the record indicated was read by the reporter.)

By Mr. Littman:

Q. You understand my question, don't you, Mr. Coffman?

A. As I understand it, you want me to take the earnings that I have here, assume a distribution of 80 percent and then calculate the amount, is that right?

Q. I asked you to state the percentage of earnings available for common stock that would be required to produce a yield to the common stockholder of 6.85 percent if 80 percent of the earnings available for the common stock were paid out in dividends.

I believe your answer will be 8.56 percent because 80 percent of 8.56 percent gives 6.85 percent which is the yield to the common stockholder based on an 80 percent of earnings yield.

[fol. 7530] A. I will grant you that 80 percent of 8.56 percent is 6.85 percent but until I went back and found out the earnings that were available and calculated the participation, I would rather see the dollar figure and see if that calculation gives 6.85 percent.

Q. Let me put it this way:

You have already answered my question but in order to clear up the record, I think it might be well to go over the calculation again.

Assume that a hypothetical company has earnings available for its common stock of 8.56 percent.

Mr. Culton: Is that a company that has no preferred stock?

Mr. Littman: I am asking him to assume a hypothetical company.

Mr. Culton: You said available for common stock.

By Mr. Littman:

Q. Suppose we continue. Assume that this hypothetical company is paying out 80 percent of its earnings available to common stock to its common-stockholders by way of dividends.

Query: What would be the yield to the common-stockholder on those assumptions?

A. Well, on that assumption which I indicate has no participation feature or anything else but is just straight [fol. 7531] common, then you could apply 80 percent of 8.56 percent which would be 6.848 percent.

Q. And that 6.8 percent is the amount with which you assumed the common-stockholder would be satisfied if he were a common-stockholder of Panhandle Eastern under the assumptions which you have made for purposes of your Chart No. 37 in your Exhibit 65, isn't that right?

A. No, I do not follow that. That was the assumption that I made in the David Young suit which was two or three years ago.

Q. Didn't you testify a few minutes ago, Mr. Coffman, that you assumed the dividend would be paid on the common stock of $2.50 a share?

A. Yes, I assumed that but I did not say that was 80 percent of anything.

Q. Now, let's go from there. That $2.50 dividend on Panhandle Eastern's common stock which had a market value as of the first 8 months of 1941 of $36.50 represented a yield to the common-stockholder of 6.8 percent, isn't that correct? You just said so a few minutes ago.

A. Maybe I did. I do not recall the figure. If that is what I said, it is correct, or I will recalculate it again.

Q. It is 6.8 percent.

A. All right. It is 6.85 percent.

. . . . . .

[fol. 7532] The Witness: Mr. Littman, I believe that there is a possibility here that on your question I misunderstood you in your last question.

If I understood what you said, I will stay by the answer I have given. On the other hand, if I did not understand it, I would like to make a further point, so may I have the question and answer read back to see if my understanding is correct.

(Whereupon, the portion of the record indicated was read by the reporter.)

The Witness: The only point that I want to get correct is that I had thought that someplace in the assumption Mr. Littman had then said that is what I did in the David Young suit.

Mr. Wheat: I think you will find his assumption in the first question involving it. That is when I interrupted, so to speak.

The Witness: Well, at that point I thought I had said that in the David Young suit I had taken 80 percent of the earnings available for both preferred and common because of that participation feature and that statement is correct, but if you are going to confine the situation to the [fol. 7533] common stock only and still talk about the David Young suit, the percentage was not 80 percent but for the common would have been figured at 74.8 percent because, in the David Young suit, my 80 percent applies to the earnings available for preferred and common.

If we are clear on that point, I will stick by my answer. It is perfectly accurate. I do not know whether I still get my point across.

By Mr. Littman:

Q. The last point just preceding the recess which I was endeavoring to ascertain was simply this:

Whether you considered the dividend payment of $2.50 per share on the common stock of Panhandle Eastern Pipe Line Company to be reasonable under the circumstances?

A. As of the date of this study and our present testimony, I assume that $2.50 was a reasonable dividend and so made my calculations upon that basis, so far as the common stock is concerned, yes, sir.

Q. It is clear that that $2.50 per share dividend on the common stock of Panhandle Eastern would be equivalent to 6 point—

A. (Interposing) —849.

Q. 6.849 percent?

A. On a price of $36.50 for the common stock.

[fol. 7534] Q. Which was the market price as of 1941?

A. Which was the market price as of 1941, yes, sir.

Q. That was what I wanted to make certain was clear in the record. A. That is all right.

Q. Will you please turn to Chart No. 30 of Exhibit No. 65.

In this chart, you have allowed for an increase in Federal taxes owing to the higher rates in the Revenue Act of 1941 over those in effect during the year 1940, is that correct?

A. Yes, sir.

Q. Now, that estimated increase owing to higher rates in the Revenue Act of 1941 is applicable wholly and solely to the rate itself, is that right, that is, the increase in the rate itself?

A. Well, it includes that. As I think I have explained earlier, I took the actual 12-months' figures ended June 30, 1941, which were $3,008,117 and allowed a 10-percent increase generally, and the way I arrived at that was a calculation I had made before which is shown in Chart No. 15 where, on the basis of the calculation I made, I applied to the same base the 1940 rate and then next the 1941 rate, indicated that the difference in dollars was about a million dollars in taxes by way of increase as against what you [fol. 7535] have at the present time.

In other words, what I was trying to ascertain was how much difference had been created by a change in tax rates with no other change.

Q. Now, on top of that, you made a further allowance of a 10-percent increase in Federal taxes to cover the projected period after June 30, 1941, as shown in Chart No. 30, is that correct?

A. That is correct, with the trend of taxes what they were, it was a reasonable expectancy that the increase would amount to at least 10 percent over-all.

Q. Now, you are speaking of a 10-percent increase in the tax rate?

A. Well there, I am speaking of 10 percent as applied to a dollar amount. In other words, I felt that the trend in tax rates was such that, in a reasonable period, a figure of 10 percent applied would give a close approximation of what the specific increase in rates would account for as taxes continue to go up.

Q. It was intended to cover an increase in rate?

A. That is correct without saying specifically the rate, because there again you have your access profits as well as your normal rate.

The two rates will be different so I talked in terms of aggregate dollar and said an allowance of 10 percent over [fol. 7536] all would closely approximate what you could reasonably see in the near future in the way of increase.

Q. And would take care of an increase in the rate?

A. That is correct, not saying what that particular tax rate might be.

Q. Yes. It was intended to give you a general approximation of the effect of an increase in tax rates in 1941 over those which were actually secured by calculating by the use of the 1941 Revenue Act rates, isn't that right?

A. Revenue Act rates plus expectancy and I tried to support that further by that supplemental Exhibit No. 152.

Q. Now, I would like to have you refer, Mr. Coffman, to Exhibit No. 147 which is the Securities and Exchange Commission's findings and opinion in connection with the financing by Panhandle Eastern.

I would like to have you turn to Page 17 of that opinion and refer to the present and pro forma consolidated capitalization of Panhandle Eastern as of September 30, 1941.

A. Yes, I have that.

Q. Do you find that? A. Yes.

Q. Now, you have been speaking from time to time throughout your testimony about changing conditions and the purpose of my present line of inquiry is to ascertain the [fol. 7537] effect of changed conditions, since you made your study, upon your conclusions reached in Exhibit No. 65.

Now, the first thing shown in this consolidated pro forma statement under the heading, "Funded debt" is the first mortgage, Series A, 1946-1950, in the "actual amount" of $6,250,000.

That represents the principal amount of the total outstanding bonds of that class as of September 30, 1941; does it not?

A. It does.

Q. On the pro forma side, you observe, do you not, that this amount will remain the same after the new financing, as well as before A. Yes, that is true.

Q. The second class of funded debt is called, "First mortgage, Series B, SF 3's, 1960, in the "actual amount" of $12,000,000 and in the "pro forma, amount" of $12,000,000. A. That is correct.

Q. You understand that represents the existing bonds of that class that are presently outstanding? A. Yes, sir.

Q. Now, thus far we have no changed conditions with respect to those bonds, have we?

A. That is correct, so far as the bonds are concerned.

Q. Now, let's skip the next one for the time being and [fol.7538] let's go down to the "serial notes, 1942-1945."

The actual amount outstanding before and after the financing is $5,000,000 principal amount, is that right?

A. That is correct.

Q. The last item under funded debt is "leasehold purchase obligation", $14,256 which is the same before and after the capitalization. Do you find that?

A. Yes, that is correct.

Q. Now, the total of those four items which I have read is $23,264,256 which is virtually the same as the total for the funded debt outstanding as of the time you made your study as of June 30, 1941, isn't that correct?

A. The amount outstanding as of the date of my study is shown in Chart No. 26, Exhibit 6, and is $23,267,544 which closely approximates the figure contained in Exhibit No. 147 to which you now have me refer.

Q. Now, the only change is a slight reduction in connection with the leasehold purchase obligation which, at the time you made your study, amounted to $17,544 and which, as of September 30, 1941, was $14,256. Isn't that the only item that accounts for the difference?

A. Yes, that is correct.

Q. Now, will you please refer to your table for Chart No. 26. In that table you show that the earnings requirement to service the outstanding long-term debt was $637,531, isn't that correct? A. Yes, that is correct.

[fol. 7539] Q. Now, in so far as that amount is concerned, there has been no change since you made your study, that is, there will be no change even after the refinancing?

A. Practically none because of the reason given that there has been a very slight change in the meanwhile.

Q. We may therefore conclude, for all practical purposes, that the earnings requirement for the four classes of funded debt to which I have referred and which will remain outstanding after as well as before the refinancing, will be $637,531, may we not?

A. So far as those particular issues are concerned; yes.

Q. All right.

Now, note on the pro forma side of the statement of the S. E. C. on Page 17 of its opinion that there is a new issue of first mortgage, Series C, sinking-fund bonds carrying a 3 percent coupon rate due 1962 in the amount of $10,000,000 which is proposed to be issued. Do you find that?

A. Yes, I do.

Q. Now, I believe Mr. Wheat has stated earlier this afternoon that the bid received in New York this morning on those bonds indicated that the cost or the yield would be 3 percent.

[fol. 7540] A. That is correct.

Q. Now, the capital requirements on that basis for the new $10,000,000 of first mortgage, Series C bonds, is $300,000 per year, is it not? A. That is correct.

Q. Now, that $300,000 added to your $637,531 produces a total earnings requirement for the outstanding funded debt after the refinancing, of $937,531 per annum, isn't that right? A. Yes, that is right.

Q. And thus far, we have taken care of the changed conditions with respect to the capitalization of Panhandle Eastern, have we not? A. That is correct.

Q. That is, so far as bonds are concerned.

A. So far as the bonds are concerned.

Q. Now, the next item on Page 1 of the Securities and Exchange Commission opinion, Exhibit No. 147, is preferred stock.

You will note that the second item, "Class B", in the amount of $1,000,000 remains the same after, as well as before, the refinancing, does it not?

A. It does.

Q. And that Class B Stock, as has been heretofore explained, carries with it a straight 6 percent cumulative [fol. 7541] preferred dividend, does it not?

A. Yes, it does.

Q. And the earnings requirement for that Class B preferred stock is $60,000 per year, is it not?

A. That is correct.

Q. So we have no changed conditions in so far as Class B preferred stocks are concerned, isn't that correct?

A. That is correct.

Q. I note under the heading, "Preferred stock", that the Class A preferred stock, concerning which we have had much comment this morning, in the principal amount of $10,000,000, is to be retired.

Do you see that?

A. That is correct.

Q. So we do have a changed condition with respect to the Class A preferred stock, isn't that right?

A. That is right.

Q. You understand, do you not, that a new series of cumulative preferred stock in the amount of $15,000,000 is to be issued and that out of the proceeds of that sale, the old Class A preferred will be retired. You understand that, do you not?

A. Yes, of course, we are talking about the same stock. The new stock is not only cumulative but it has a sinking fund, and so forth.

[fol. 7542] Q. It has a sinking-fund provision?

A. That is right and there is a new preferred stock to be issued to pay off or to refund the old preferred, and so forth.

Q. But the new preferred stock does not have a participating dividend provision, does it? A. That is correct.

Q. In other words, the holders of the new preferred stock will not have any right to participate in the dividends of the common-stockholders? A. Yes, sir.

Q. And you see that amount of $15,000,000 on the pro forma side of the statement, do you not? A. Yes, I do.

Q. Now, Mr. Wheat has stated that he was advised by telephone that the cost of that money was 5.6 percent. Accepting that figure, will you please compute the earnings-requirement annually to service the new cumulative preferred stock? A. That is $840,000.

Q. Now, so far, we have taken care of the changed conditions with respect to the preferred stock, have we not?

A. And the bonds.

Q. And the bonds. A. Yes.

[fol. 7543] Q. Now, let us go to the common stock and surplus.

Here, we have the same amount of common stock outstanding before, as well as after, the refinancing, namely, 807,367 shares, is that right?

A. That is correct.

Q. And the surplus is the same before and after refinancing, is it not, as shown on the Securities and Exchange Commission's statement? A. That is correct.

Q. Now, if you will refer to your table for Chart No. 26, you will observe that the total common stock and surplus outstanding as of June 30, 1941, there shown was $29,258,295 whereas, on September 30, 1941, the total had become $26,507,216 as shown by the Securities and Exchange Commission's opinion, is that correct? A. That is correct.

Q. So we do have a change in conditions between the date of June 30, 1941, and September 30, 1941, is that right?

A. That is correct, on that particular item, of course.

Q. Yes.

Mr. Coffman, if the common-stock holders of Panhandle Eastern will continue to be satisfied with a $2.50 dividend per share of common stock which, as you have testified, means a 6.8 percent yield to them, what would be the indicated earnings requirement for the common stockholders [fol. 7544] on that basis?

A. Well, in round figures it would be $2,522,897.

Q. May I have that figure again?

A. $2,522,897. That is in round figures.

Q. Will you please state how you obtained that figure?

A. On your statement of the problem, I took the 807,367 shares which were outstanding of common stock and multiplied that figure by $2.50 which is the dividend rate that you stated, which gave me $2,018,317.50 which is the dividend assumed to be paid and on the basis of the rate which you used which is equivalent to 80 percent, I assumed that that figure represented 80 percent of the earnings available

which would be $2,522,897 of the total earnings on your hypothesis.

Q. That would be the total earnings available or, stated in another way, that would be the total earnings-requirement if we were to use the method suggested by you in the David Young, III, suit, wouldn't it?

A. Jiminy Christmas, no, Mr. Littman!

I guess I still haven't got the point across because in the David Young case, I was talking about 80 percent of the earnings available from preferred and common.

I cannot state it any more clearly than that. It was not [fol. 7545] 80 percent of the earnings available to common. That, as I told you, was 74.8 percent so if you will stop confusing the David Young case, I might be able to answer you a little more directly.

Q. Well, at any rate, on the assumption that the stockholders of Panhandle Eastern would continue to be satisfied with the $2.50 per share dividend which was your own assumption in this proceeding and on the assumption that 80 percent of the earnings could be properly used for dividend purposes, you get an earnings-requirement of $2,522,897 under those assumptions?

A. Under those assumptions you get a total earnings available of $2,522,897, that is correct.

Q. Now, for purposes of your Exhibit No. 65, you use a 12 percent earnings requirement for both the common stock and the surplus, do you not? A. That is correct.

Q. And that would be the figure under your assumption to use for our purpose here, would it not?

A. Well, you still, on your basis in this particular case, have not considered the surplus figure at all.

Q. I am stating—

A. (Interposing) Excluding the surplus, your statement is correct but that is not the method that I used in this proceeding because, as you know, I took both common [fol. 7546] stock and surplus on the theory that the surplus available to the common remained invested in the business or otherwise it would not be on the books.

Q. Well, on your assumption, it would be fair, would it not, in your own mind, to use 12 percent as the basis of the determination of the earnings-requirements for the common stock and earned surplus shown in the Securities

and Exchange Commission's statement on Page 17 of its opinion?

A. Accepting the conditions in the investor market as shown in my present Exhibit 65, I would have to use 12 percent. If conditions presently in the market on the common stock of Panhandle Eastern should show a change because investors appraise this new situation which has just now come to light at 12 noon today, then I would have to take into consideration the changed price and see what effect, if any, that made and follow the same procedure in those calculations that I have here but not having those calculations at the moment, I would say that 12 percent still approximated the percent to be used.

Q. The 12-percent rate still represents your best judgment at this time?

A. It still represents my best judgment at this time, that is correct.

Q. That is to say, there have occurred no changes in [fol. 7547] the money market situation of which you presently have knowledge which would cause you to change the 12-percent figure now?

A. Generally, not that I know of, Mr. Littman, because the only way that I could ascertain the figure which would be, in all respects, comparable to the one used in this study would be to bring these calculations down to the present day and see whether or not the percentages are the same or somewhat different.

So far as I know, no major change in the money market has taken place to cause any such change.

Mr. Littman: May I have the last answer read?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. Now, Mr. Coffman, you would not consider it unfair to apply the 12-percent rate to the total of common stock and earned surplus shown in the Securities and Exchange Commission's statement on Page 17 of its opinion in the amount of $26,507,216 for the purpose of determining the earnings requirements for such common stock and earned surplus?

A. No, sir, I would not under the statements that have just been made.

Q. And to state it another way, you would consider it quite fair to do so?

[fol. 7548] A. I would say that it was fair to do so until and when such analysis as I have already made to determine a 12-percent basis should indicate a change in the money markets which would indicate that something other than 12 percent should be used.

Q. And you know of no such change at this time?

A. I know of no such change in the money market that has occurred to date that would cause it, although I have not made the new calculations as of today.

Q. Now, you speak of making new calculations. What do those comprise?

A. Well, as you know in this testimony and in Exhibits 63, 64 and 65, I have attempted to determine the investor's appraisal of the risks of capital by considering earnings on the one hand and prices of the various classes of securities of different companies as of August 31.

That was the date when my study came to a close. Now, were I to make a study today, I would bring those prices and earnings down as close to the date as the most recent figure would be available, go through the same procedure, calculate my ratios and so on and from those additional figures attempt to determine whether or not the judgment figure of 12 percent still seemed the reasonable one.

Q. In other words, you would use the same method that you used in your study contained in Exhibit 65 to arrive [fol. 7549] at the 12 percent shown in Exhibit 65?

A. Well, yes, or to broaden it a bit, in Exhibits 63, 64 and 65.

Q. You considered Exhibits 63 and 64 as well as Exhibit 65?

A. Yes, that is correct. I considered all three of them.

Q. Now, will you please apply the 12-percent rate for the earnings on the common stock and earned surplus to the $26,597,216 shown on the Securities and Exchange Commission's statement on Page 17 of its opinion, which is Exhibit No. 147. A. Yes, and that amount is $3,180,866.

Q. Now, will you kindly add the total earnings requirements which we have calculated and discussed heretofore which give effect to the changed conditions after the re-

financing of the bonds, preferred stock, common stock and surplus of Panhandle Eastern?

A. That total is $5,018,397.

Q. I want to be sure I have that figure. A. $5,018,397.

Q. In your opinion and to the best of your knowledge, would this amount of $5,018,397 represent a fair return to Panhandle Eastern Pipe Line Company on the pro forma amount of $75,771,472 of invested capital shown in the [fol. 7550] Securities and Exchange Commission's consolidated statement on Page 17 of its opinion?

A. Well, if you will pardon me again, I would say that the $5,018,397, without talking about fair return, is the amount the company would have to have to attract investors into this business under the pro forma set-up as shown in Exhibit 147.

Q. And is that amount of $5,018,397 comparable to the amount of $5,064,821 shown in your Chart No. 37 and there labeled "Current capital requirements" and "A fair return to investors"?

A. That is comparable with the figure you mentioned.

Q. Now, will you please state what the earnings requirement of $5,018,397 is when expressed in percent of the total invested capital indicated on the pro forma side of the Security and Exchange Commission's consolidated statement?

A. Well, if the machine is correct—and I have some doubt about it—it is 6.62 percent.

Q. Will you please state what figures you used so that we may check the machine?

A. I used $5,018,397 as the total required for the securities under the pro forma statement contained in Exhibit 147, and divided that by the total capital of $75,771,472.

Q. The 6.62 percent figure gives effect to the change in conditions which we have heretofore discussed in connection with the company's capitalization and refinancing, does it not? A. That is correct.

* * * * * * *

[fol. 7551] Redirect Examination

By Mr. Wheat:

Q. Mr. Coffman, I think, if I recall correctly, that Mr. Littman referred you, in his cross-examination at the outset, to your Chart No. 37 in Exhibit 65. Is that correct?

A. Yes, that is correct.

Q. As a matter of fact, he has referred you to that chart a good many times during the cross-examination, has he not? A. Yes, sir.

Q. I wish you would state briefly just what Chart 37 purports to show.

A. Chart No. 37 in Exhibit 65 purports to show, on the [fol. 7552] basis of the capital structure at the time this analysis was made, what, in my opinion, the company would have to have by way of dollars annually, that is, dollars of gross revenue annually, to enable it to pay for its operations and maintenance, taxes, allow for a return on capital when gas reserves are exhausted, and an amount in addition which would maintain the credit of this company on a basis so that the company could secure new capital when and if needed. It is presented in this fashion because I had in mind that one method of approach to this problem of rate of return was to consider specifically the dollars that a management would need, year in and year out, under whatever conditions were existent, and I took the conditions at the date of this study to use as the basis of my thought that the management would have to have to allow for all the things I have mentioned which, if you convert to different language, would be to enable this company to render its service properly to the public and maintain its credit position.

Q. I notice you state on Chart 37 that what you have had to say there in that chart is based on present capital structure. Do you note those words in that chart?

A. Yes, I do.

Q. I wish you would state why you used that expression, "based on present capital structure".

A. Well, at the time I made the study, the capital [fol. 7553] structure of the company included notes, bonds, preferred stock, and common stock, and although there was a possibility that some change might take place in the capital structure, I did not know at the time of the study what the change might be, specifically, and in order that the Commission could understand my approach and tie it up with figures that were available, I made the calculation on the capital structure then existent.

Q. Now, I believe also you did make an alternative study based on some change in the capital structure. That is correct, isn't it? A. Yes, that is correct.

Q. And does Chart No. 36, Exhibit 65, contain a similar summary of your conclusions based on that particular hypothesis?

A. I have followed the same method in my analysis which is portrayed on Chart 36 of Exhibit 65 as I did and as is shown on Chart No. 37, with the exception that I made the assumption there that the preferred stock which was outstanding at the time I made the study might be refunded on a basis of the preferred stock being paid off by an issue of 50 percent of the amount being in bonds and 50 percent being in common stock.

Q. Now, this has been a rather lengthy cross-examination and I am not sure that you have entirely given your reasons for that particular operation. I wish you would restate for the record what impelled you to make that [fol. 7554] particular study that you have just mentioned.

A. During the course of my examination, I reviewed the capital structure of a number of natural gas pipe line companies, and I found that, excluding the Panhandle Eastern Pipe Line Company, there was only one other pipe line company that had any preferred stock outstanding.

Q. Will you please refer to any part of your Exhibit 65, or your other exhibits where you show the results of that study?

A. I seem to have difficulty finding that one exhibit each time. It is Chart No. 25 in Exhibit 65.

In there, I reviewed the capital structure of the Cities Service Gas Company, El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company, Mississippi River Fuel Corporation, Northern Natural Gas Company, Southern Natural Gas Company, and Panhandle Eastern Pipe Line Company, and, as shown in Chart No. 25 of Exhibit 65, of all those companies, as of December 31, 1940, only two had preferred stock outstanding. The El Paso Natural Gas Company, of its total capital, had 6.85 percent represented by preferred stock, and the Panhandle Eastern Pipe Line Company, as of the same date, had 18.52 percent represented. All the other companies had no preferred stock outstanding at all, and I concluded from that analysis that these various natural [fol. 7555] gas pipe line companies had, for one reason or another, not found a preferred stock a most suitable vehicle of financing. I might say that in the case of El

Paso Natural Gas Company, that most of the preferred stock that had been outstanding had been recalled, and that portion represented by 6.85 percent, I believe, was merely those shares remaining outstanding which had not, to the date of this analysis, December 31, 1940, yet been turned in; but even that company was trying to eliminate its preferred stock.

Because of those reasons, I felt it a justifiable conclusion that preferred stock did not prove to be, in this industry, the most suitable means of refinancing or financing.

Q. Now, Mr. Coffman, I note in consulting Charts 36 and 37, that the total figure shown in the column at the left-hand side differs, to some extent, to the one on Chart 36, being $15,459,545, and the one on Chart 37 being $15,520,855.

Now, based on your previous answer, is it proper to say that these two figures represent, respectively, the total revenue which, in your opinion, would be required, based on your study; first, if the preferred stock were to be refinanced as you have just mentioned, and, second, if the present capital structure were to remain?

A. Yes, that is correct. Those two figures represent, [fol. 7556] in my opinion, the amount of dollars annually of gross revenue that the company would have to have to make allowance and cover the various expenditures which I have enumerated and maintain the capital requirements of the company, which, in turn, would enable the company to render its services properly to the public.

Q. Now, I think you have outlined it, but I would like to have you again restate your reasoning in reaching that conclusion.

A. Well, on each of the items under the caption of "Operations and Maintenance" on both Charts Nos. 36 and 37, Exhibit 65, I have a supplemental chart which shows how I arrived at those figures. On "Operations and Maintenance," for example, on both Charts 36 and 37, the amount which I have used in my calculations, to cover such items, was $3,516,000, and that figure is explained on Chart No. 29 of Exhibit 65, wherein I indicate that I took the most recent figures that were available to me at the time I made the study, that is, the actual operating results

for the 12 months ended June 30, 1941, which was an amount of $3,196,797, and that figure was made up of two items: operations, $2,902,353; and maintenance, $294,444; and, after an analysis of facts and data which I am following currently in line with my work with Standard and Poor's Corporation, which take into consideration the general trend of various important economic factors that have a bearing upon different operations, I thought it was rea- [fol. 7557] sonable to make an allowance for a 10 percent increase in such figure.

Applying the 10 percent to the over-all figure of $3,196,797 which was—

Q. (Interposing) When you say that you thought it was reasonable, do you also deem it conservative under the conditions which we now face in this country?

A. Yes, I feel it is conservative because, under the national emergency, I believe that until the war ends or the emergency is over this country is going to devote its entire attention to the war, and if that is true, there will be adjustments of all kinds in industrial operations, so that there will be shortages of material in numerous instances for non-defense work, as such.

There will also be demands on the part of labor for additional wages because of the times and the fact that their own living costs are going up, so that I felt that 10 percent was a very conservative figure and was reasonable, and applying that to the actual figure for the 12 months ended June 30, 1941, gave me what I term a projected amount of $3,516,000 for that particular division of the operations of this company.

Q. Did you have in mind an increase of exactly 10 percent in each individual item that goes to make up that total? [fol. 7558] A. No, as I think I have testified already, I did not have before me the breakdown of these various items and, therefore, did not consider each one individually.

What I did, because of knowledge of the general trends in the country and having merely a figure which was presented to me in the interim report of the company covering the actual 12 months period ended June 30, 1941, I applied an over-all percent of 10 percent to the figure.

Now, getting down to individual items, had I had those items before me and considered each one, some might have been higher than 10 percent, some might have been lower than 10 percent, but the over-all average, I think, would be reasonably and conservatively stated at 10 percent.

Q. Now, you have discussed previously this matter of operations and maintenance. That, in general, as you have stated, is what you did in order to get those figures, is it?

A. For that one item, which projected figure I used in both Charts Nos. 36 and 37 in Exhibit 65.

Q. Now, is it necessary for a company of the nature of Panhandle Eastern to earn a sufficient amount through the sales of its product to cover the cost of its operations and maintenance?

A. Yes, it is. Each day that goes by requires some operations in regard to this general classification, so that there are wages and other items of expense in that accounting classification which have to be met, so that you have a [fol. 7559] company which is paying out cash, day by day, as it goes along, and it cannot continue to do that unless it has income sufficient in cash to meet such payments. In other words, that is merely the operation of a going concern where you receive money in and pay money out and, therefore, if it is to be successful and the service is to be satisfactory to the customers, sufficient income will have to be forthcoming to meet the various items of expense.

. . . . . .

Q. All right.

Now, turn to your item of taxes. Quite a little discussion was had with respect to that item on cross-examination. I wish you would, in your own words, outline just what you did with respect to that item so we will have it all in one place.

A. In Charts Nos. 36 and 37 in Exhibit 65, I show an amount for taxes of $4,399,000, and the method whereby I arrived at such figure is shown in Chart No. 30 of Exhibit 65. Generally speaking, I followed the same procedure in regard to this item that followed in regard to the figure for operations and maintenance. In other words, I examined the figures for the 12 months period ended June 30, 1941,

[fol. 7560] which were the most recent and last available, so far as actual operations were concerned, and the total taxes amounted to $3,008,117, which total was comprised of two general classifications: $649,017 for State, local, and miscellaneous Federal taxes; and $2,359,100 for Federal income and excess profits taxes. Here again, having in mind the economic trends that were existing at the time of this study, I allowed for a 10 percent increase as a reasonable expectation for such items.

Q. Were those trends existent only at the time you made those studies or are they still existent?

A. No, they are still existent, and the same thing applies, as I have said before, so long as the war continues and the Government has to devote more and more of the various manufacturing and other equipment we have in this country to war purposes, and also has a larger amount of expenditures for war purposes, such moneys will have to be forthcoming from increased taxes and presumably from further Government financing, so that these conditions will continue in that general trend, I should presume, until the emergency is over, and it may continue, so far as taxes are concerned, after the emergency is over, if we expect sometime in the future to begin to reduce the public debt, which will be the largest we have ever faced in this country's history. It already is, as a matter of fact.

[fol. 7561] Q. Have you, in the course of your studies, discovered any indication that tax rates are going to be lower, at least during the present emergency?

A. No, they cannot possibly be lower. They will have to be considerably higher in order that the Government may have an opportunity to secure as much money as possible from taxes to help pay this defense bill, and that portion that the Government does not get from taxes will have to be forthcoming by increasing the Government debt. It will have to come from borrowings from the public.

Q. Would it be your view that the 10 percent allowance which you have made for any further increase in Federal taxes is too great a figure, based on your present knowledge since you made this study?

A. No, I think that the trend will continue in the general direction on the upward side; and, in support of the analysis that I showed in Chart No. 30 of Exhibit 65, I, at some request that was made, also prepared a supple-

mentary exhibit which is listed or recorded as Exhibit No. 152, to show just what the influence was of the increases that are taking place and, so far as I can see, will very definitely continue.

Q. Now, in that connection, Mr. Coffman, I do not believe that Exhibit No. 152 has been thoroughly explained [fol. 7562] in this record and I should like to have you state what is contained in that exhibit and explain it in some detail.

A. I attempted in this exhibit to supply data which had not been set forth fully in Exhibit 65 in regard to the tax figure, and Exhibit 152 contains four pages, three of which are calculations based upon the figures available and the trend of tax rates, and the last page, which has also been referred to, contains a statement by Mr. Morgenthau in regard to what might happen if this emergency continues and the cost thereof is greater than any of us now forsee.

On page 1 of Exhibit 152, I show under the caption "Estimate of Federal income and excess profits taxes," applying rates levied in the Revenue Act of 1941 to the net income for the year ended June 30, 1941, and the reason I did that is because the full year 1941 had not expired at the time I made the study.

Q. You did not, in other words, at the time you made the study, have available the revenues and expenses and, therefore, the net income for the entire year 1941, did you?

A. No, I did not, and as the annual report of the company shows, the full year 1940 taxes would have been calculated at the rates specified by the Revenue Acts of 1940, and there were two such acts, known as the First Revenue Act and the Second Revenue Act of 1940.

What I attempted to do here was to reconstruct the [fol. 7563] situation, showing what the tax would be if the taxable income were the same figure as shown for the 12 months ended June 30, 1941.

Q. I believe you stated also, did you not, that your made this study largely in response to a suggestion or request of the presiding Examiner? A. Yes, I did.

Q. Now, would you proceed to explain this exhibit? I believe it was also a request by Mr. Littman, was it not?

A. I think it was. I am not sure but I know that it was requested during the course of my cross-examination.

Q. Yes. Now, will you proceed with your discussion of Exhibit No. 152 in some detail, Mr. Coffman?

A. Exhibit No. 152 shows that the Federal income tax at the 1940 rate of 24 percent would have given a taxable income of $6,675,800, and the Federal excess profits tax of $756,900 indicates, at 1940 rates, excess profits of $1,605,800.

Q. When you say "excess profits," you mean that term, do you, as it is defined in the so-called Excess Profits Tax statute?

A. Yes. That, I believe, was called the Second Revenue Act of 1940, which was the Act which was to provide for a tax on excess profits as against our earlier revenue acts, [fol. 7564] Q. Yes. Now, will you proceed?

A. And applying the rates there, there would have been a tax of $204,000 on profits of $500,000, and there would have been a tax of $552,900, which represented a tax of 50 percent, indicating a total excess profit of $1,105,800 which was subject to that particular tax rate.

Q. That is the same figure, ~~is it not,~~ as the $1,605,800 minus the $500,000 item covered by your $204,000 tax?

A. That is correct.

Q. What total tax was shown?

A. The total tax for excess profits was $756,900.

Q. Yes. A. Now, coming down—

Q. (Interposing) Pardon me; what you have been saying is that the figures you have just been quoting are on the 1940 tax rate, is that true? A. That is correct.

Q. All right. Now, come to the year 1941 and state what you did with respect to that?

A. Well, I used the same figures but applied the Revenue Act of 1941 which contained increases in rates. The excess profits indicated by the tax reported for the year ended June 30, 1941, was $1,605,800. I added that to the normal tax which was not deductible under the 1941 Act of [fol. 7565] $1,602,200. The amount subject to the excess profits tax, therefore, was $3,208,000.

Q. Under the Revenue Act of 1941?

A. That is correct. So that taking off the tax first on the non-excess portion of $500,000, and then considering the new excess profits tax bracket in which this company

would now fall under the new Act, which was the 60 percent bracket, there would have been a tax of 60 percent on the differences between $3,208,000 and $500,000, or an amount of $2,708,000. Those were the base figures. So, if I took the amounts then to be taxed to make the overall computation for both the 60 percent and the amount taken out prior to the application of that portion of the Act, the total would have been $1,878,000.

Now, the taxable income indicated by the tax reported for the year ended June 30, 1941, was the figure that I have been using, namely, $6,675,800, and I deducted therefrom the excess profits tax of $1,878,800, leaving an amount subject to the normal and surtax rates of $4,797,000. The normal tax rate at the time was 24 percent, which gave me $1,151,280.

The surtax was 6 percent on the first $25,000, or was $1,500, and the remaining amount that was subject to surtax was $4,772,000, to which a rate of 7 percent was applied, giving a tax thereon of $334,040, so that the total normal and surtax amounted to $335,540.

[fol. 7566] Q. That is the total surtax, is it not?

A. That is the total of the surtax.

Q. Yes, not the normal and surtax?

A. No; the total of the normal and the surtax is $1,486,820.

Q. Yes.

A. So you add that figure to the excess profits tax of $1,878,000 and get a total of $3,363,000.

Q. Now, Mr. Coffman, will you glance at Chart No. 30 of Exhibit 65 and tell us if the item of $3,363,000 noted at the right of the column labeled "Projected" is a figure based upon calculations of some similar character to those shown in Exhibit 152?

A. In Chart No. 30 of Exhibit 65, the $3,363,000 which I have mentioned, which records the effect of the rates contained in the 1941 Act, is shown as a separate item.

Q. In the right-hand bar?

A. In the projected bars and in addition to that, I show $700,000 to cover State, local, and miscellaneous Federal taxes, and also an item of $336,000 which covers the 10 percent increase in Federal taxes, as such.

Q. Which you have mentioned just previously in your testimony?

A. That is correct, and the total of the three items just mentioned gave me the $4,399,000 which I used as the [fol. 7567] projected tax figure.

* * * * * * * *

[fol. 7570] PAUL B. COFFMAN, a witness, having been previously duly sworn, resumed the stand and testified further as follows:

* * * * * * * *

Redirect Examination (Continued).

By Mr. Wheat:

Q. Mr. Coffman, I think at the close of last evening that you had completed your discussion of Page 1 of Exhibit 152 which deals with the matter of Federal income and excess profits taxes. Is that a fact, had you completed your discussion of Page 1 of that exhibit?

A. Yes, sir, I had.

Q. I wish you would turn to Page 2 of that exhibit.

Mr. Wheat: These pages are not numbered, Mr. Examiner, but I am referring to the second page of the exhibit as clipped together.

By Mr. Wheat:

Q. The heading of that page is, "Summary of increases in Federal taxes on incomes for the years 1936 to 1941, both inclusive."

I would like to have you outline what you have included [fol. 7571] under that heading, Mr. Coffman.

A. Well, I have attempted to present additional data in regard to the over-all tax situation which would show why, in my opinion, I thought that the increase in taxes which I had projected for purposes of my analysis as shown in Exhibit 65 over and above the actual taxes reported by the company for the 12 months ended June 30, 1941, was a reasonable increase.

In this Page 2 of Exhibit 152, I make a comparison for the calendar years 1936 to 1940, both inclusive, of the

actual taxes, both normal and excess profits and the total, to see what the general trend was so far as the over-all tax payment was concerned.

In 1936, the company paid $230,000 of normal taxes. There were neither surtax nor excess profits tax at that time.

Q. Well that was before the company obtained the Detroit load, was it not?

A. Yes, that is correct. That change came in 1937.

Q. And simply reflects, does it not, in general, the lower scale of earnings at that time? A. That is correct.

Q. I was going to ask you whether, in general, there has been an increase in each year since then?

A. Yes, there has been an increase in each year. I [fol.7572] do not know as it is necessary for me—

Q. (Interposing) Yes, I think you should explain this in detail, Mr. Coffman.

A. Continuing with the specific figures then, in 1937, the normal tax was $492,000 which was the total tax for that year and figuring the increase of $492,000 over the $230,000 paid in the previous year represented an annual increase of 13.9 percent.

Q. And that also was without any surtax, was it?

A. Yes, that was also without any surtax.

Q. Would you say that that increase reflected increased net earnings on the part of this company?

A. For the most part, it did.

Q. Now, what happened in 1938?

A. In 1938, the normal tax was $513,426 which was the total tax, there being neither surtax nor excess profits and that increase represented 4.4 percent over 1937 taxes.

Q. A much smaller annual increase than the year before?

A. A much [small] increase, that is right.

Q. Then you began to hit real increases, didn't you?

A. In 1939, there begins to be a step-up.

Q. What happened then?

A. The normal tax was $820,286 in 1939. There was no surtax or excess profits tax but that increase represented [fol.7573] 59.8 percent over the 1938 level.

. . . . . .

Well, before I go on, I merely wish to point out that up to 1940, it has been a consideration of normal tax only and there was not any major change in the rates in that period, so that those percent increases, to a large extent, could be attributable to increased earnings which were subject to the tax but, in 1940, when the excess profits tax Act, known as the Second Revenue Act of 1940, was passed, the company has a step-up in normal tax and also an excess profits tax.

The normal tax in 1940 was $1,436,598.

Q. An increase of slightly over $600,000, is that true?

A. That is correct.

Q. In the normal tax? A. In the normal tax.

Q. In addition, did the company then, for the first time, have an excess profits tax?

A. Yes, and there was a change in the normal tax rate so that it wasn't all because of increased earnings but a change in rate and the excess profits tax was a new tax [fol. 7574] which had come through the second revenue act. That amounted to $561,000, making the total tax bill to the company $1,997,598, or the equivalent of the 143.5 percent increase in over all tax load in comparison with the 1939 total tax paid.

Q. As a matter of fact, that was over $1,100,000, was it not, the increase?

A. Yes, that is correct.

Q. Now, that is 1940. What happened with respect to the tax situation after December 30, 1940?

A. The company in its report covering the twelve months ending June 30, 1941 showed normal tax of $1,602,200 and excess profits tax of $756,900, or a total tax of $2,359,100 representing an 18.1 percent increase over the tax shown for the calendar year 1940. However, the company in computing this tax based it entirely upon the rates levied under the Second Revenue Act of 1940 and also made no provision for special non-recurring tax allowances that arose by reason of the refinancing in February, 1941.

Q. In other words, as of the end of the first six months of 1941, you already had 18.1 percent increase in Federal taxes based on the 1940 tax rates? A. That is right.

Q. Now, you also projected these figures for the year 1940-1941, that is, from July 1, 1940, to June 30, 1941, [fol. 7575] inclusive, on the 1941 tax rate, did you not?

A. That is correct.

Q. As you have formerly testified? A. Yes, sir.

Q. And what were the figures that you found when you did that?

A. Well, the normal tax and surtax amounted, on that basis, to $1,485,000 and the excess profits tax at the new rates stipulated in the 1941 Act totaled $1,878,000 or a total of $3,363,000, which is the figure that I have testified to and is included in my study, Exhibit 65.

Q. Now, when you speak of that, you speak of the item of $3,363,000 which appears on Chart No. 30 of Exhibit No. 65 in the right-hand bar, do you not?

A. That is correct.

Q. Now, I think you testified yesterday that that was increased by 10 percent, is that true?

A. That is correct.

Q. And that is the source of the figure of $4,399,000 appearing as the total of the right hand bar in Chart No. 30, Exhibit No. 65, and the same figure appearing in the bar covering taxes on Chart 36 and Chart 37 of that exhibit, is that correct? A. Yes, that is correct.

Q. Now, I note you have two figures for annual in- [fol. 7576] crease on the second page of Exhibit No. 152. I wish you would explain just what those are and how you arrived at them?

A. Those are explained in the footnote shown on that page. The 68.4 is based on an increase over total reported for the calendar year 1940 and the 42.6 percent is the increase over total reported for the year ended June 30, 1941.

In other words, having an interim report as of June as against a full year, I have looked at it both ways.

Q. As a matter of fact, the projected figure of $4,399,000 would represent a very much larger percentage increase, would it not?

A. Well, the only point about the $4,399,000 is that it includes another figure beside income and excess profits tax figures so that you cannot make a direct comparison.

Q. Yes. The figure you refer to is State, local and miscellaneous Federal taxes shown on Chart No. 30 of Exhibit No. 65 at the bottom of the right-hand bar in the amount of $700,000, is that correct?

A. Yes, that is correct and that is not a part of any calculations in this present Exhibit 152. I just want to be sure that is understood.

Q. What I wish to bring out is this, and I will ask [fol. 7577] you this question:

In any of the data contained on Page 2 of Exhibit No. 152, do you reflect the tax increases which may have been suffered by this company in the way of State, local and miscellaneous Federal taxes over and above or separate from the Federal income and excess profits taxes?

A. No, I do not show that on Page 2 of this exhibit.

. . . . . .

[fol. 7585] Q. And is Panhandle Eastern a growing company? A. Yes, very definitely.

Q. You understand, do you not, that it has been testified in this proceeding that it will require additional financing from time to time over the next few years?

A. Yes, I believe that that is true.

Q. Does that fact have any bearing upon the necessity for earning the cost of operation each year in the investor's appraisal of the situation?

A. It very definitely does because in any company [fol. 7586] that is growing and in a growing industry, there is a period usually in the early stages, where they may be a waiting period, so far as investors are concerned, speaking now in terms of an actual return that they get on their investment, in other words, dividends received and that is true in Panhandle Eastern.

There is a chart here in this exhibit which shows what the experience had been or was, at least, during the period 1934 through 1940, both inclusive.

Chart No. 12 in Exhibit 65 shows that, in so far as common stockholders were concerned during this early stage of the company's life, when it was just really beginning to get into large-scale operations, no dividends were paid in 1934, 1935 or 1936.

The dividend paid in 1937 was small—

Q. (Interposing) Well, it was about one-third of one percent, wasn't it?

A. That is correct. Then, in 1938, when the company had consummated its Detroit—

Q. (Interposing) I am sorry, I misled you on that. It was about one-third of a dollar. A. Yes, that is correct.

After it consummated its Detroit arrangement whereby it got into a much larger scale of operations, the dividends were then stepped up, but to me this experience [fol. 7587] represents the usual expectancy in a comparatively new company and a growing industry where the company is growing itself.

Investors, if they think the prospects for the company's success are good, are perfectly willing to invest money in it and wait for a period before they receive dividends so long as the success seems to be in the offing, but whenever the company arrives at a point where it is not necessary to reinvest all their earnings to finance the additional expenditures that are necessary for additional plant and so forth, they naturally expect to come into dividend payments, because that is the only way they can get their money back.

If, in other words, all the earnings, no matter how great, continue to be reinvested in the business and they continue to hold their stock, although the book value continues to go up, the fact is they receive no return of capital or any return thereon.

The only way they can possibly get that is either by a dividend from year to year or at irregular intervals or by a liquidation dividend.

Q. Now, in a growing company, a liquidation dividend would be an anomaly, wouldn't it?

A. In a growing company?

Q. Yes.

A. I do not ever remember having seen one. The only [fol. 7588] current practice in liquidating dividends, aside from an actual liquidating company, would be in cases like

the sulphur companies whereby they pay an annual dividend but break it into parts; one they say is in the nature of a return of capital and the other is in the nature of income, and the reason that that is done is because the sulphur is like the natural-gas business, it is a wasting asset and they have tried, in the sulphur business, to make estimates as to the length of life of a reserve and then they proceed to return the capital each year as they go, breaking it down into the two parts mentioned.

Q. In other words, instead of investing the reserve in additional property, as has been so commonly done in public utilities in this country, there is an actual liquidation on account of the wasting asset?

A. There is an actual payment on account of the wasting asset and then, if they wish to make any new managerial move in regard to new resources, they would set that up as a separate transaction.

In other words, if they can find more mounds of sulphur, they will make a new arrangement.

Q. We will come to that particular problem later, but is it also true that on Chart No. 23 of Exhibit 85, you have disclosed the apparent need of this company for new capital from time to time?

. . . . . .

[fol. 7589] A. (Interposing) I am sorry.

In Chart No. 23, the calculations there very definitely show there will be an annual amount necessary for increases in plant or plant expansions and the annual average over the past 5 years, 1936 through 1940, both inclusive, has been about $4,500,000, so if the company should continue to grow in about the same rate that it did in these years, the presumption is it will need at least that much per annum to continue such operations.

Q. And your studies did not include the amount of capital additions in the year 1941, did they?

A. No, they do not. They were not available.

Q. Now did you take into consideration the amount of capital additions which have been testified in this proceeding as being essential during the next five years?

A. No, sir, I did not have those figures, but coming back to Chart No. 12, if I may, there is one further item

that I would like to comment upon and that is the average figure which I calculated of the percent return to common-stockholders for the period 1934 to 1940, both inclusive.

Because of the period of waiting in the earlier years covered in this chart, the average over the period, even though the amounts have been larger in 1939 and 1940, the [fol. 7590] average only amounted in the entire period to 3.64 percent.

Now, it is my belief that any common-stock investor who has moneys to invest in a company would not wish to invest in a pipe-line or other company with similar risks if he thought that the best he was going to be able to average over the period was 3.64 percent.

In other words, that amount, as I can show from Exhibits 63 and 64, in comparison to investor's risks of capital, is not sufficiently large for the type of risk involved.

Q. Let's turn to Exhibits Nos. 63 and 64 and I wish you would explain what you have in mind.

We will go into some further detail on items which are contained in those exhibits later, Mr. Coffman, but for the moment, explain somewhat at length what you had in mind and what you said and cite the pages of the exhibit.

A. Well, in Exhibit No. 63 on Page 23, which gives a summary figure rather than getting into detail, I show there a 4-year average covering the period 1937 to 1940 for the investor's appraisal of capital risks in various divisions of the utility business and this particular table covers the over-all capital.

In other words, it does not at the moment confine the consideration to common stock alone but on the over-all capital, water companies averaged 5.38 percent.

[fol. 7591] Q. That is a 4-year average?

A. That is for the 4-year average. In other words, what I am trying to show is not a feature peculiar to any one-year because we can see that for a 4-year period which at least can be considered reasonable, the average has been 5.38 percent and the individual yearly figures show no wide variations, so that there is nothing unusual about this period that we are in.

It has been in existence now for at least 4 years.

Electric utility operating companies had 5.47 percent.

Q. (Interposing). These aren't dividends; they are investors' appraisals of capital risks, aren't they?

A. That is correct. These are the earnings-price ratios which are the figures I have been talking about throughout this hearing.

Q. Covering over-all capital?

A. Covering over-all capital, yes, that is correct.

Mr. Littman: Are these figures comparable to the dividend figures of Panhandle Eastern which you just read a few minutes ago?

The Witness: No. I just said these are not. I will come to that later. These particular figures are not.

Manufactured and mixed gas companies, 6.61 percent;

All natural-gas companies, 7.78 percent;

Natural-gas pipe-line companies, 9.38 percent; and

[fol. 7592] Panhandle Eastern Pipe Line Company, for the years in which data on prices were available to make the calculation, which cover 1939 and 1940, 9.15 percent, so that the average of 9.15 percent is a 2-year average, not a 4-year average.

By Mr. Wheat:

Q. Now, the details of the figures making up these averages that you have just read are shown opposite that chart and on Page 23 of Exhibit 63, are they not?

A. The chart opposite Page 23 in Exhibit 63 merely shows graphically what I have read from the statistics. The details actually are supplied in the appendices contained in the end of Exhibit 63. I did not refer to those.

Q. The individual figures from which these averages are calculated are shown on Page 23, are they not?

A. Yes, that is correct.

Q. Now, I know, by looking at that chart, that there seems to be a crescendo or an ascending percentage of investor's appraisal of capital risks. Did you find that to be continued during the year 1941 with respect to natural-gas pipe line companies and Panhandle Eastern over these

other types of public utilities that you have listed on those pages?

A. Well, there were some changes in the interim period January-August, 1941.

[fol. 7593] Q. But the relative relationships remain the same, do they not, and show a crescendo?

A. That is right. The relationships of one classification of company to the other remains about the same but even for the most part where there were changes in the figures for the interim period January-August, 1941, as compared with the four-year average, 1937-1940, both inclusive, the changes were not marked.

In other words, there had been nothing that had happened, so far as I can see, in that period, that interim period, which had changed either relationship from one class to the other or the investor's appraisal of the particular risk classification and, to make my point clear, water companies, for example, had a four-year average of 5.38.

Q. Percent?

A. 5.38 percent; and for the interim period had an average of 5.24 percent. Well, there obviously is some change there but it is still in about the same neighborhood.

The electric utility operating companies showed a four-year average of 5.47 percent and, for the interim period, 5.61 percent. There again, there was some fractional change but, so far as the relationship of investor's appraisal of the risk on electric utility operating companies, to water companies, the same risk seemed to exist as the [fol. 7594] investors appraised these two situations.

Q. You mean the same general appraisal of risk?

A. Yes.

Q. One against the other?

A. Yes, that is correct, but the reference which I made to the fact as stated at Page 23 of Exhibit 63 when I was talking about Chart No. 12 in Exhibit 65, was to indicate that investors do classify risks very definitely, and that natural-gas pipe-line companies have a higher risk factor in the minds of investors than do other branches of the utility industry.

Q. Would it be fair to say that natural gas pipe line companies show a reflection of investor appraisal risks greater than these other types of companies in each year of the four full years' study and also in the interim period January-August, 1941?

A. Yes, it would be and further, by making a direct comparison, so far as the figures show; the investor is saying, for all practical purposes, that the risk is sufficiently greater in a natural-gas pipe-line company over a water company, let us say, that he must have approximately 4 percent additional to compensate for that additional risk or he is not going to invest his money.

Q. That is, over-all?

A. Over-all, but coming from the over-all picture which [fol. 7595] I have discussed to Chart No. 12 where we are talking about the return, the percent return to common-stockholders only, I am just making the point that if the over-all capital appraisal by investors is somewhere in the neighborhood of 9 percent, as shown on Page 23 of Exhibit 63, so far as earnings are concerned, if they require over-all that percent, then when you get down to common stock which is the most risky of any portion of the capital structure, a 3.64 percent return for dividends would seem to be unusually low and I do not believe any investor would be willing, over a period of time, to invest his money in such risks unless he felt that, as the company arrived at an earnings position, a larger dividend would be paid which would give him a better percent return on his equity.

Q. Now, for the moment we got a little off the subject of taxes and before we get entirely off of that, there is one point I would like to clear up.

I think you testified on cross-examination that the current capital requirements based on the financing of preferred stock of Panhandle Eastern Pipe Line Company, which you have shown on Chart 36 of Exhibit 65, was a total of $4,993,511.

A. Yes, sir.

Q. That is based on your hypothetical refinancing of the present preferred stock of 550 percent of its amount [fol. 7596] in bonds and 50 percent in common stock, is it not?

A. Yes, that is correct.

Q. Now, I believe that on cross-examination you testified that that amount of $4,993,511, representing your estimate of current capital requirements under that hypothesis, was some $720,000 lower—the exact figure I have here which I believe is correct is $720,707 lower than the actual net operating income that the company reported for 1940 which, I believe, was $5,714,218. Is that correct?

A. Well, I made that calculation, I think, once for Mr. Littman, and that sounds correct. I do not have it here any more.

Q. I think I have the exact figures. In other words, that item of $4,993,000-odd was some $720,000 lower than net income shown for 1940? A. Yes, that is correct.

Q. Now, at my request, have you made a calculation to show what the net operating income would have been for 1940 had the 1941 Revenue Act been in effect?

A. I have made such calculation and I think that a good portion of the figure was absorbed and I think the actual amount was in the neighborhood of $600,000.

Q. In other words, you assumed that all other factors were unchanged but that the company had been liable for taxes under the Revenue Act of 1941 rather than under [fol. 7557] those established in the Revenue Act of 1940?

A. I believe the figure of increase for taxes would have been $613,358.

Q. And what would have been the net income, operating income after taxes?

A. The net income then would have been $5,100,860.

Q. On the basis of those figures, would it appear to you that if the net operating income for 1940 could, under any approach, be deemed excessive, the Treasury Department of the United States Government has already taken steps to correct any such situation?

A. Well, yes, very definitely. It has to the extent that the increase in taxes has absorbed already most of the $720,707.

Q. And there is no sign of any letting up in these increases in taxes?

A. Certainly not in any near term future.

. . . . . .

By Mr. Wheat:

. . . . . .

Q. Is it your point of view that so long as any moneys, however obtained, are used in the business rather than distributed in dividends or used to pay off debt capital, they remain as invested capital, and the investors expects a return. Would that be a fair statement?

A. Yes, that would be a fair statement, but I might, just to be sure that I am not misunderstood on that fact, add one further fact, that I say that the moneys coming into the business that are retained in the business are considered invested capital from the standpoint of the investors.

Now, so far as moneys not retained in the business are concerned, it must come about, it seems to me, by either a payment of a dividend, a return of capital or pay off capital or, obviously, it can come through suffering a loss. In other words, I merely add the loss factor to be sure I am not misunderstood, because if the company loses money in [fol. 7724] any one year, naturally that loss is carried to surplus and reduces the invested capital by that amount.

Otherwise, I say that all the moneys retained in the business which are remaining there are considered as invested capital from the standpoint of the investor.

* * * * * * * * *

[fol. 7729] Q. Now, turning again for a moment to your Chart No. 37 in Exhibit No. 65, and excluding from consideration in this particular question the item of current capital requirement, which is the righthand bar shown on that chart, do you wish it to be understood to be your testimony that the method which you have adopted of reaching the other item of (1) operations and maintenance, (2) taxes; and (3) return of capital when gas reserves are exhausted, are the only methods which can be used in that connection?

A. Now, I am not saying any such thing at all. What I have tried to say here is that the method that I have used to approach this problem is at least one realistic method and seems to me to be a necessary part of the overall study.

There may be any number of other methods. All I contend is that I think this method very definitely has a place

in such study and further than that is realistic in its approach.

Q. Now, looking at the lefthand bar in Chart No. 37, which is a summation of the four other items and is captioned "Total Dollars Needed," let me ask you whether that total amount that you have there shown allows for or contains any estimate of additional volume of business?

[fol. 7730] A. No, the lefthand bar as shown in Chart No. 37 of Exhibit 65 does not allow for an increase in business. What I attempted to do here was to show that economic conditions were changed to such an extent that if you took those factors into consideration alone, without the variable of an increase in business, it was changing the operating results, or they were changing the operating results of this company materially that allowance would have to be made in any consideration of this kind for those changes.

Now, whether or not the company increases the business, so far as I can see at the present time, these changes, economic changes are going to continue. In other words, I have cited the case that materials and labor and so forth which have been going up, and I think are going to continue to go up some time in the future.

Q. You are speaking of these sharp rises in the cost of doing business that you have mentioned before, is that correct?

A. That is correct, and the same is true of taxes, that the trend is such at the present time that one can anticipate further increases in tax rates and, therefore, further tax payments on the part of all corporations, as well as individuals.

[fol. 7731] Q. Did you relate these various facts to the latest date on which, at the time you made your study, you could find definite and recognized data?

A. Yes, I used the statement which was available of June 30, 1941, which was the most recent statement published by the company at the time I undertook this study.

Q. Now, as far as these items which lie below the item of current capital requirements are concerned, is it true to say that you would admit that if a detailed study of the company's operations disclosed that these facts were incorrect, you would still wait and stand upon them as such?

A. No, I have not made any such contention as that. What I have said was that I think the approach in and of itself has merit. I did not examine the books, as I have already testified, nor did I have any detailed figures flowing from any of the accounts kept in the company's offices.

What I used, because I was taking the investor's point of view, was statements that are available to him and all of my study, so far as the company is concerned, was based upon the figures contained in the interim report which was dated June 30, 1941.

Now, if a study were made which would indicate that any of the items reported therein were not proper [fol. 7732] and a proper figure were determined, I would substitute that in the approach and see what the new result was.

However, so far as the current capital requirements are concerned, that particular figure is based upon an analysis outside the company's figures altogether. As I think I have pretty clearly explained, it is based upon the method whereby I considered all of the quotations on the various securities relating to this or having relation to this particular business to ascertain what the investors were saying at the time I made the study and to what they required by way of an earnings-price ratio to increase capital in that business.

Q. Well, you understood that my question went to the other items?

A. I recall you did say something on that.

Mr. Littman: In order to clarify one point, Mr. Wheat, may I interrupt?

Isn't it correct that you used the actual figures of the company for the bonds and preferred stock, but you used the earnings-price ratios for the common stock? That is what I understood your testimony to be, and I wanted to call that to your attention, because I did not believe your statement was in accord with that.

The Witness: I am talking here about the equity common stock which is included in the over-all figure captioned, [fol. 7733] "Current Capital Requirement."

Mr. Littman: But my understanding is correct, is it not?

The Witness: Yes.

Mr. Littman: You used the actual earnings requirement paid on the bonds and preferred stock?

The Witness: Yes, that is correct.

By Mr. Wheat:

Q. But I understood you also to say that you used the earnings-price ratios on the common stock or equity items, because you felt that that was the only method by which you could get at the capital requirement for those items, is that correct?

A. Yes, and behind the whole study is the material that I analyzed which I have called the "Investor's Appraisal Of The Risk of Capital," which is presented in Exhibits 63 and 64, which is based upon an over-all capital consideration. I mean there the earnings-price ratios which are calculated are based upon bonds, preferred stocks, and common or all these securities of the companies listed where such data was available.

Q. Of course, I take it, Mr. Coffman, that in your statement to the effect that if someone brought in a better figure for these operations, maintenance, taxes or return of capital when gas reserves are exhausted then you may [fol. 7734] have been able to get—provided such thing would happen—I believe you have already stated that these fundamental economic trends of labor, material, and taxes would also have to be given consideration, isn't that true?

A. Yes, that is correct. So far as the economic conditions are concerned, which I have appraised to the best of my ability, and so far as trend is concerned at the date of this study, that would stand. In other words, if I made an over-all allowance of ten per cent for an increase in an item because I thought there was at least that much change due to changing conditions, I would still use that figure, but if the base figure to which it was applied should change, after a thorough study which would indicate that the figure I used and which is in the 1941 statement was wrong, I would be willing to use it, of course.

Q. In other words, I take it you went to the best information you knew how to get from the standpoint of the investors, is that correct?

A. That is correct. I went, as a matter of fact, to the same source that the investor goes to.

Q. And have you any reason to suppose that the amounts that you have included in your study for the item of changing price levels are too high?

A. I have no reason to suppose that. I can cite one [fol. 7735] example in regard to material costs.

As I recall it, the average of wholesale commodity prices, as reported by the United States Bureau of Labor Statistics for about the first eight months of 1941 was around 80 per cent, around 76 per cent, I guess it was, and, at the present time, I think it is around 95 or 96 per cent. As I recall it, it is something like 18 or 19 per cent greater as of this time, so that is just one item where there is definite evidence as to what the changing economic conditions are doing at the present time.

Q. Now, you cite that in connection with your ten per cent allowance. Is that true?

A. Yes, I made a ten per cent allowance over-all, and I have already testified that I did not have individual items, but if I had some might have been more than ten, others less than ten, but it seemed to me that ten per cent was a reasonable estimated figure over-all.

Q. Now, this morning you mentioned this map which is Chart No. 1, in Exhibit No. 65. I wish you would turn to the next six charts which appear as Charts 2 to 7, inclusive, and in the light of what you have been testifying, state what the purpose was of including those particular charts and, to your mind, what they show in this connection.

A. I think I have just said a few minutes ago that [fol. 7736] the natural gas industry and the Panhandle Eastern Pipe Line Company were growing enterprises and I thought that had a pertinent bearing upon such an analysis as this and to familiarize myself with the actual conditions over a period of time, I inserted Chart No. 2 in Exhibit 65, which is captioned, "Growth of Natural Gas Industry in the United States," covering the period of 1906-1940, both inclusive.

There are two sets of data shown graphically, one relating to the natural gas production and the other relating

to the domestic and commercial customers, and those data, shown graphically, indicate that over a period of years the natural gas industry has been showing a very marked growth factor, and the growth factor is particularly marked, beginning around 1932 and 1933, and continuing to date, so far as natural gas production was concerned.

The growth in domestic and commerical customers is also marked, but the line is not as sharp from 1931 to 1939, the last available figure at the time I made this study, as was the case in natural gas production. So I concluded from those data that they showed clearly that this industry was a growing industry. It was not a stable industry, nor was it a decadent industry. It is still in a growing trend.

Q. Well, if this concern you are dealing with were on [fol. 7737] a static basis, would you feel that the factors you have used would have to be reexamined?

A. Yes, very definitely they would have to be reexamined because at least one factor presumably would be somewhat changed, namely, that if there was no longer any growth of the company, I would not feel this need for further reinvestment of capital in this business. I would presume that their plant and equipment, and so on was sufficient to take care of the business under that static condition.

Q. When you said "reinvestment of capital," did you include investment of new capital?

A. Reinvestment of capital and investment of new capital.

Q. Did your study, however, shown in these charts, in Exhibit 65, convince you that new capital would be required?

A. Well, I think I referred this morning to Panhandle Eastern Pipe Line Company, indicating that the recent past history showed an average of about $4,500,000 of additional plant expansion on the average each year, and with the trend what it is in the industry, and the trend what it is at the moment for the company, I should suppose that continued plant expansion might be expected.

[fol. 7744] Q. Mr. Coffman, I would like to have you turn to your Chart No. 11 of Exhibit 65. On the lefthand portion of the chart, I note, and as brought out on cross examination, there is a portion of each column for each year shown as net property after reserves, and then another portion shown as net working capital and intangibles. Has there been any thought on your part in your study of amortizing working capital, as such, in this business?

A. No. That "as such" in your question is not what I was attempting to do. The view that I took on the business was that if, through earnings or otherwise, moneys were received by this company and retained in the business, so long as they were retained in the business they had to be considered as invested capital from the standpoint of the investor.

In a particular calculation which I made from the figures shown in the company's statement as of June 30, [fol. 7745] 1941, there was a figure for working capital including cash, and it was my contention that so long as that money remained in the business, the investor would require a return thereon. If it were not needed in the business, it then could have been used to pay off debt, thereby reducing the invested capital. If that were not done, it was still invested capital, and I believe the investor would require a return on it.

Q. As a matter of fact, it would be reinvested in the business, would it not?

A. So long as they kept it in the business and used the cash or other forms of working capital for other operating purposes, it would very definitely be used in the business.

Q. Now, I notice you have got a heading on the top of the lefthand chart on Chart 11, "Invested Capital," and you have the same heading, "Invested Capital," on the lefthand portion on Chart No. 10. Will you please explain the nature of these two methods of looking at invested capital?

A. I attempted, in chart No. 10 of Exhibit 65, to show invested capital when it is defined as being the net debt, the preferred stock and common stock, and surplus as shown in the balance sheet of the company.

That indicated that the figure for 1940 was $59,400,000 [fol. 7746] in round figures.

In Chart No. 11 I attempted to show the invested capital when such term is defined as net property and net working capital and intangibles, and on that basis, I found that 1940 figure to amount to $59,900,000. In other words, regardless of which definition of invested capital when used, it so happened that the figures for this company were approximately the same.

Q. In other words, you found a close correlation, did you, between the two? A. That is correct.

Q. By the way, on Chart No. 11, the basic portion of each column is net property after the reserves for retirement or depreciation, is it not?

A. Yes, that is correct.

Q. Now, I believe that in connection with the item of working capital on your cross examination you were confronted with a hypothetical balance sheet which showed something like this, I believe:

Property—	$33,000,000.00
Cash and Government bonds	30,000,000.00

Or a total of $63,000,000 of invested capital.

Now, I wish you would state whether it is customary for a corporation to carry on its balance sheet for any length of time cash and Government bonds totalling ap- [fol. 7747] proximately 50 per cent of its invested capital?

A. Well, if you say, "By any length of time, something beyond what would seem to be reasonable," I would say that there was no such practice. You might find at a given time, for example, that a company was accumulating considerable cash because it was about to retire a debt or you might find another situation in which some assets had been converted to cash and a decision had not yet been made as to what disposition of such cash would be or it might be another situation in which the company was contemplating the purchase of a new division of the business in which they had secured the cash to have it ready for the final transaction.

Q. Accumulation of purchase price, in other words?

A. Yes. I think, for example, if on Friday, in relation to this new acquisition that the Panhandle Eastern is contemplating in regard to Michigan Gas Transmission Corporation, they will receive some $25,000,000 from the sale of these securities we have been discussing, and that amount of cash will go into the bank and be there until such time as the checks are drawn to buy the assets that they are contemplating purchasing. Otherwise, I do not conceive of any company carrying such a high proportion in cash or the equivalent of cash in any going firm.

Q. It is possible, I take it from your answer, however, for a corporation to be fully justified at [fol. 7748] times, in having on its books what might, over any great length of time, seem to be excessive working capital?

A. Yes, very definitely.

. . . . . .

[fol. 7750] Q. We were discussing, Mr. Coffman, this hypothetical balance sheet with which you were confronted on cross-examination. Is it a fact that so long as the item of cash is on the books, it is invested capital from the investors' viewpoint?

A. So far as the investor is concerned, so long as the Company keeps his money, he considers it invested capital.

Q. Well, is it possible that that fact has something to do with your answer to Mr. Littman's question in respect to that balance sheet, as to whether you would apply the rate of return method which you have mentioned to the entire $63,000,000?

A. Yes, that is the reason it was, in view of the fact that that is exactly the way I have handled it in this approach which is contained in Exhibit 65. It is my contention that if the Company earns money or secures money by new financing and continues to keep that money, [fol. 7751] for varied purposes, so far as the investor is concerned, he cannot use it for any other purpose and, therefore, he requires a return because if he had kept it and placed it elsewhere, he would have at least have had the possibility of making a return thereon.

Q. That is not a contention. That is a fact?

A. That is a fact, so far as the investor is concerned.

Q. Now, I believe there was some question made of the $4,600,000 which you found on the books as cash at

the time of your investigation as compared with the study made by Mr. Sperry of the Company with respect to working capital for rate base purposes. What have you to say with respect to that matter?

A. It is my contention that so far as the $4,000,000 odd was concerned, which was on the books as of June 30, 1941, as contained in the report by the Company as of that date, that the Company still held the money. I presumed that the reason that the cash for working capital was retained in that amount was because the management believed they needed it in the ordinary course of their business, and so long as they retained it, the investor would feel that his money was invested in this business and therefore he should have a return thereon for the use or such use as the company might make of it.

[fol. 7752] If it should prove to be the case that over a period of time such money was not necessary in the business, then I contend that the investor would insist that such money be used to retire debt and thereby reduce the invested capital by that amount. So far as the figure of $1,500,000 was concerned, which I understand Mr. Sperry had mentioned, I did not know anything about that until informed of it in these hearings, and I do not know the particular purpose that Mr. Sperry had in mind when he talked about it.

I was looking at the thing purely from the investor's point of view and, therefore, concluded, as I have already stated, that so long as the money remained in the business, the investor considered it invested capital.

Q. Well, so long as any investment remains in a business, it is invested capital, is it not?

A. So far as the investor is concerned, I do not think there is any other way it can be considered. If they do not need it, they should use the money to reduce the debt or pay off the securities and thereby in that process reduce the invested capital.

* * * * * * * * *

[fol. 7758] Q. Your studies contained in Exhibits 63 and 64, I believe, were generally based on over-all investor-appraisal, including all forms of securities, were they not?

A. The material presented in Exhibits 63 and 64 cover the investor's appraisal on the risks of capital and therein are considered over-all capital and by that I mean the bonds, the preferred stock and common stock and surplus.

Q. During the interim between your direct examination and re-direct, you prepared Exhibit 151, did you not, which related to the earnings-price ratios of common stocks only, in various divisions of the utility business? [fol. 7759] A. Yes. I prepared that exhibit at the time you have mentioned.

Q. And in that particular exhibit, did you have occasion to determine the investor appraisal of this with respect to common stock as distinguished from the over-all?

A. Yes, that was the purpose of the preparation. During the direct examination, I was asked some question, as I remember it, about the investor's appraisal of common stocks in the various classifications contained in Exhibits 63 and 64, namely, water companies, electric utility operating companies, manufactured and mixed gas companies, all natural gas companies, natural gas pipe line companies and Panhandle Eastern Pipe Line Company, and at the time the question was asked I was unable to give a specific answer as to the earnings-price ratios to common stocks definitely because the material I had in Exhibits 63 and 64 was not broken down in that respect so I prepared Exhibit 151 as a special exhibit to give attention to the common stock phase of capital only.

. . . . . .

[fol. 7760] Q. Now, turning to Exhibit No. 151, in general what was shown by the studies which you undertook at the Examiner's request during that interim which resulted in Exhibit No. 151?

A. In the first place, so that I will be clear on what I did, I covered the same years in this study as were covered in the material shown in Exhibits 63 and 64, namely, the period 1937 to 1940, both inclusive; calculated the 4-year average for that period, and then brought the information down to date for the interim period covering January-August, 1941, on the same topics that I have listed earlier. The exhibit shows that the earnings-price ratios for common stocks, as distinguished from the earnings-price ratios for over-all capital, were higher.

Q. Now, I wish you would turn to your Exhibit 63 and advise us where the figures are obtained which are to be compared.

A. Well, the summary table of Exhibit 63 is shown on page 23, wherein the table there is in exactly the same [fol. 7761] form as the table on Exhibit 151.

* * * * * * * *

Page 1 of Exhibit No. 151. The figures contained on page 23 of Exhibit 63 represent the investor's appraisal of the risks of capital in the various utility businesses, and there, by "capital" I mean over-all capital, the bonds, preferred stocks, common stock, and surplus.

The figures shown in Exhibit No. 151 represent the earnings-price ratios of the common stocks for these same groups, but the common stock only. The comparison of the figures contained in the column captioned, "Four-Year Average, 1937-1940", in Exhibit 151, indicates that the earnings-price ratios of common stocks are higher in every instance than the earnings-price ratios for the same classifications for over-all capital. In other words, the first point that I noted is that the common stockholders ask for a higher earnings-price ratio than do all of the investors in the business, taking in the various classes of securities they might hold.

Q. You mean than do the total group of investors of all types, is that true? A. Yes, that is true.

Q. All right, proceed.

A. The second point to note is that, so far as relationship of risks are concerned, as classified by investors on the basis of an earnings-price ratio, it indicates that they, [fol. 7762] as common stockholders, appraise the risks in the same order as investors of the over-all capital appraise them. In other words, water companies are the lowest, electric utility operating companies are next, manufactured and mixed gas companies third, all natural gas companies fourth, natural gas pipe line companies fifth.

Q. Now, in what you have said there, you are not referring to particular years, are you, but to your average figure?

A. I am referring to the figures shown in the column captioned "Four-Year Average, 1937-1940" in both Exhibit 151 and Exhibit 63, page 23.

Q. And what is the order of the increase of investor appraisal in respect to common stocks and in respect to all types of capital?

A. It is in the order of water companies. That is going from lowest to highest—

Q. (Interposing) You have just stated that. Now, with respect to water companies, I note on page 23 of Exhibit 63 that the four-year average was 5.38 percent.

A. That is correct.

Q. Now, what was it for common stocks of water companies? A. Well, it was 6.50 percent.

Q. And what were the differences in respect to electric utility operating companies?

[fol. 7763] A. In electric utility operating companies, the investor's appraisal of over-all capital risks for the four-year average was 5.47 percent compared with the ratio for common stocks on a four-year average of 7.24 percent.

In the case of manufactured and [mix] gas companies, the over-all capital appraisal for the four-year average was 6.61 percent, and the four-year average earnings price ratio of common stocks was 8.85 percent.

The ratio for all natural gas companies on an over-all capital appraisal on a four-year average was 7.78 percent, and on common stocks on a four-year average was 12.08 percent, and natural gas pipe-line companies, on an over-all appraisal, was 9.3 percent on a four-year average.

Q. Nine point three, what?

A. 9.38 percent on a four-year average, and 13.52 percent for common stocks on a four-year average.

. . . . . .

Mr. Littman: On this new Exhibit No. 151, on the first page, where you show a four-year average for the various companies with respect to their earnings price ratios of common stocks, are those four-year averages straight mathematical averages or are they weighted averages?

The Witness: It is a straight arithmetical average.

Mr. Littman: Now, in your Exhibit 63, in the chart [fol. 7764] shown opposite page 23 to which reference has

just been made by you, showing the four-year average for the various companies, 1937-1940, are those averages straight mathematical averages or are they weighted averages?

The Witness: Those averages, where I have talked about over-all capital, are weighted averages.

Mr. Littman: That is, in Exhibit 63, they are weighted averages?

The Witness: That is correct.

Mr. Littman: And in Exhibit No. 151, they are straight arithmetical?

The Witness: Straight arithmetic, and that is for the reason I think I gave you in our earlier cross-examination where I explained that it was an easier matter to get an over-all capital appraisal on a weighted average basis than I thought it was on a common stock basis where you had variations in capital structure as between the individual companies shown in the individual exhibits and in the different utility classifications.

* * * * * * * *

[fol. 7768] Q. Now, I draw your attention, Mr. Coffman, to Chart No. 22 of Exhibit 65, wherein, on the left-hand bar, you show estimated current cost of financing common stock, a figure of 12.99 percent as the average of pipe line companies. Is that 12.99 percent the same 12.99 percent which is to be found in the last column on page 1 of Exhibit 151 for natural gas pipe line companies during the interim period January-August, 1941?

A. I want to call attention that the 12.99 is the identical figure, but the 12.99, as contained in Chart No. 20—

Q. (Interposing) Chart No. 22.

A. Yes, in Chart No. 22—is based upon the earnings-price ratio as presented in Chart 20 of Exhibit 65, whereas, in the Exhibit No. 151, as shown on page 4-A of Exhibit [fol. 7769] 151, the earnings-price ratios shown thereon for natural gas company common stocks for the interim period January-August, 1941, covered some additional companies that were not included in Chart 20 of Exhibit 65.

* * * * * * * *

[fol. 7772]. Mr. Wheat: Mr. Examiner, I should like to offer for identification and as the next exhibit, a copy of the purchase agreement in connection with the refinancing and purchase of property which has been mentioned on this record. This is a printed document.

Owing to the exigencies of time and getting it here from New York, leaving late last night Mr. Watkins was unable to get up a certification. I now represent it, however, to be a true copy of the purchase agreement dated February 2, 1942, addressed to Glore, Forgan & Co., and Kidder, Peabody & Co., as representatives of the respective purchasers signed by Panhandle Eastern Pipe Line Company by Louis F. Sperry, Treasurer, bearing on its 15th page a statement to the effect that the foregoing purchase agreement is hereby confirmed and accepted as of the date first above written, signed by Glore, Forgan & Co., and Kidder, Peabody & Co., acting on behalf of the several purchasers named in Paragraph 13 of the Agreement and including Glore, Forgan & Co., and Kidder, Peabody & Co., among such purchasers.

We ask that this be received as the next exhibit.

. . . . . .

[fol. 7773] Trial Examiner: The purchase agreement, which has just been identified as Exhibit 160, will be received in evidence without objection.

. . . . . .

Paul B. Coffman, resumed the stand, having been heretofore duly sworn, and testified further as follows:

Redirect Examination (Resumed).

By Mr. Wheat:

Q. Have you, during the overnight recess, been able to obtain data with respect to the price of Panhandle Eastern's stock on the market in New York?

A. Yes, I have the bid prices here from January 28, through February 3.

Q. I wonder if you will read them into the record.

A. Those prices were: January 28, 37⅜;

January 29, 37⅜; January 30, 37; January 31, 36⅞; February 2, 36½; February 3, 36⅜.

Q. That concludes the data that you were able to get as of this morning? A. Yes.

[fol. 7774] Mr. Littman asked that I might try, in addition, to secure the volume, the figures were not available on these days, and these figures that I have here came from the National Quotations Bureau, which sometimes show the volume on over-the-counter transactions, and sometimes do not.

Q. Well, Mr. Coffman, this stock is not listed on the New York Stock Exchange or the Curb Exchange, is it?

A. No, it is not.

Q. And the transactions in this stock are what is known, technically, as "over-the-counter" transactions?

A. That is correct. Sometimes on over-the-counter transactions you can get volume, and sometimes you cannot.

Mr. Littman: Mr. Wheat, may I ask a question of the witness?

Mr. Wheat: Surely.

Mr. Littman: May I ask whether the witness has the asked prices for these dates?

The Witness: The asked prices were—I had most of the prices, I do not know what I did with the sheet, but I can tell you they ran from 38⅞ to 37½.

Mr. Littman: Will you please endeavor to locate the exact ask prices and read them into the record?

Mr. Wheat: We will endeavor to obtain those, Mr. Littman.

[fol. 7775] Mr. Littman: I would like, also, to inquire on this thing subject, Mr. Wheat, whether any transactions were actually consummated on the dates that you mentioned, if you know.

The Witness: I do not know whether I can find that out. I could try, but when an over-the-counter transaction, the only way I could get it would be to canvass the brokers.

Mr. Littman: You do not know now whether any of these represent actual consummated transactions?

The Witness: No. As I say, I do not know of any way I could find this on the over-the-counter transactions unless I canvassed the brokers to get it.

Mr. Littman: I would, also, like to inquire whether you know, Mr. Coffman, whether any of these quotations involve common stock of Panhandle Eastern Pipe Line Company owned by Columbia Oil & Gasoline Corporation, or Missouri-Kansas Pipe Line Company, the two parent companies of Panhandle Eastern.

The Witness: May I have that read?

(Question read.)

Mr. Wheat: I do not know whether you mean just what you said, Mr. Littman. I thought you probably wanted to refer to them as the two major stockholders of Panhandle Eastern, did you not? I do not know that this company [fol. 7776] has been shown anywhere to have two parents.

Mr. Littman: I am referring to the two companies who, combined, own something in excess of 92 per cent of the outstanding common stock of Panhandle Eastern.

Mr. Wheat: Yes, I think that is probably the preferable way to put it.

The Witness: The answer to the question is that I do not know, Mr. Littman.

* * * * * * * *

[fol. 7785] Q. Now, when we concluded the hearing yesterday evening, Mr. Coffman, you were in the midst of a discussion of certain data contained, respectively, in Exhibits Nos. 151, 63 and 64, I believe.

I think there was some ambiguity in respect to a statement made concerning Table 4-A in Exhibit 151. Let me ask you whether you have included on that table certain natural gas companies in addition to those used in your study in Exhibit 65.

A. Yes, the items contained on Table 4-A of Exhibit 151 cover all natural gas companies' common stocks, which is

one classification that I used in Exhibit 63 and 64 and the content of Table 4-A covers the entire natural-gas companies which were included in the study.

Q. You mean covers all, the entire group?

A. It contains all that were included in the study on natural-gas companies.

Q. Thank you.

A. The figure referred to in Exhibit 65, Chart No. 22, first column, as "Average of Pipe-Line Companies, 12.99 [fol. 7786] Percent" is the identical figure with that shown on the first page of Exhibit 151, but the way that such figure would be determined from Page 4-A of Exhibit 151 would be to pick out of the natural-gas companies the five natural-gas pipe-line companies which were the basis of the calculations made for Chart 22, Exhibit 65, and those companies were shown on Chart 20 of Exhibit 65.

Q. Mr. Coffman, as a matter of fact, Table 4-A of Exhibit 151 shows an average of earnings-price ratios for all the natural-gas companies included in that table of 13.97, does it not?

A. No, the figure that I have used excludes the Consolidated Utilities Corporation and that is 13.14 percent which is shown on Page 1.

Q. I was about to come to that. First, will you answer this question: Does the average of all that you have used on that table, first, show 13.97? A. Yes, it does.

Q. And if you exclude the Consolidated Utilities Corporation, for the reasons stated on that page, do you reach the figure 13.14 percent?

A. Yes, and that is the figure shown on Page 1 in the summary of Exhibit 151.

Q. Yes.

Mr. Littman: The figures you just gave relate to common stocks, do they not?

[fol. 7787] The Witness: Yes, they are the earnings-price ratios of common stocks.

By Mr. Wheat:

Q. These are the data which you prepared at the request of the Examiner? A. That is correct.

Q. Well now, these are price ratios for common stocks only, as I understand it, whereas the data contained in

Exhibit 63 and Exhibit 64 include other types of securities, is that correct? A. Yes, that is correct.

Q. And would it be correct to say that Exhibits 63 and 64 show the difference in investors' appraisal of risk between various classes of companies including all of the securities which they have outstanding?

A. Yes, that is correct.

Q. Do those tables in those two exhibits, in your opinion, disclose that investors do carefully appraise the risks in these various types of companies?

A. I believe that the data show that.

Q. Is there anything that you would like to add in connection with that answer with respect to Exhibits 63 and 64 relative to such appraisal of risk by industrials?

A. Well, I do not know that there is, except the one [fol. 7788] observation which I think I have made.

* * * * * * * * *

Q. I will ask you whether in connection with Exhibit 150 this was also prepared pursuant to a suggestion made by the Presiding Examiner? A. Yes, it was.

Q. I do not believe you have yet started in detail what is shown on Exhibit 150. I think you should do that at this time.

A. Well, at the time of the direct testimony I was asked whether I had any information in regard to recent issues that might have been brought out to the public.

I answered that I had not tabulated such data because in my study I was considering stocks that were outstanding and the quotations thereon.

This tabulation on common stock was too—

Q. (Interposing) Exhibit 150?

A. (Continuing) —of Exhibit 150 was to bring out the experience on those new issues of electric and gas utilities which I could find that had come to the public during the years 1935 to 1940, both inclusive.

Trial Examiner: The inquiry about the cost of financing [fol. 7789] through the issue of common stock was, of course, prompted by certain data contained in your Exhibit No. 65 which contemplated the possible refinancing of the Panhandle Eastern Pipe Line Company on the basis of bonds and common stock?

The Witness: Yes. Well, the point was that I could not answer the question because I did not have such material in any of the three exhibits, 63, 64 and 65, so I tabulated this information.

By Mr. Wheat:

Q. On Exhibit 150?

A. On Exhibit 150 and believe that at least so far as our records are concerned that it is an all-inclusive list so far as the new issues of common stocks of Electric and Gas Utilities companies are concerned.

Q. Mr. Coffman, the data contained on Page 1 of Exhibit 150 is derived, is it not, from a publication of the Public Utilities Division of the Securities and Exchange Commission? A. Yes, that is correct.

Q. What about the data shown on Table 3 for the interim period 1941? Is that obtained from the same source or from other records and published data?

A. No, that information contained on Page 3 of Exhibit 150 is taken from the material which was in our files, which [fol. 7790] were prospectuses and our own records on such issues.

Q. Yes.

Now, during your cross-examination you were asked in respect to Chart No. 20 of Exhibit 63 why you included Southern Natural Gas Company and the Interstate Natural Gas Company.

Is it a fact, Mr. Coffman, that you took and included in that study all companies on which information was available by which you could make this study and the calculation?

A. Yes, sir, that is correct.

Q. And in that connection, did you find that information was available with respect to Southern Natural Gas Company? A. Yes, sir, it was.

Q. And with respect to Interstate Natural Gas Company? A. Yes.

Q. As a matter of fact, is the fact that Southern Natural Gas Company has encountered certain difficulties a fact in your estimation which should lead to its exclusion from such a study?

A. I did not think so. What I was attempting to do in this study was to get as broad a picture of the natural-gas pipe-line companies as I could.

Now, the mere fact that Southern has had some financial [fol. 7791] difficulties and some later difficulties, so far as gas reserves are concerned, was just as important to me, so far as viewing the hazards of the industry were concerned as to look at any other company that was having an entirely different and much more favorable experience.

In other words, I wanted to have an entire look.

Q. Well, is it a fact that the Interstate Natural Gas Company has 100 percent common stock?

A. Yes, that is correct. Its capital structure is entirely composed of common stock.

Q. And did you find that its over-all ratio was practically the same as the common stocks of the other companies on the average? A. On the average, yes.

Q. Now, would it be your view that if you were to leave out any of these companies you would distort the picture that you were able to obtain?

A. Well, the only factor that I considered was that the difficulties that have been encountered by Southern Natural, I believe, in large measure account for the fact that investors require a higher earnings-price ratio and yet if the hazards faced by that company are hazards that can be faced by any company in this industry as time goes on, it seems to me to represent a reaction at a given time where such conditions actually exist.

[fol. 7792] On that basis, so far as considering the industry as a whole is concerned, I see no more reason to eliminate Southern Natural from the comparison than I would to eliminate Interstate Natural which happens to be on the low side, because it is ideally situated from a capital structure and from an operating standpoint. They are both important.

Q. As a matter of fact, Mr. Coffman, a rough calculation which I have just made discloses that if you eliminate those two, you have an average of 12.75 as against the average, including them, of 12.99.

I wish you would check me on that and tell me whether that is correct.

A. I do not recall what figure you gave. I have taken here, if I understand your approach correctly, Memphis Natural Gas Company at 15.10, El Paso Natural Gas Company at 11.62 and the Panhandle Eastern figure of 11.53.

I totaled them and took an average.

Q. What did you get?

A. I got 12.78. I do not know whether that is the figure you got.

Q. I may have mistaken that last figure. I had 12.75, but it is close enough. In other words, it was 12.75 or 8 against the 12.99 that you found in using the five companies. Is that correct?

[fol. 7793] A. Yes, that is correct.

Q. Would you consider those two figures reasonably consistent with each other?

A. Yes, I think they are.

Q. All right. Now, there was some other question raised, I believe, with respect to the data contained on Charts Nos. 19 and 20 of Exhibit 65 about the use of simple averages as against weighted averages. Have your anything to say on that subject?

. . . . . .

"Did you use weighted averages?

A. In Exhibit 65 as related to common stocks, I used a straight arithmetic average.

Q. Why?

A. Because where you have different companies that you are considering, such as was the case in the material contained in Exhibit 65, companies of different capital structures, some with bonds and common stock, others with bonds, preferred stocks and common, others with common only, it was my opinion that the only place where [fol. 7794] a weighted average could be used would be where you are talking in terms of over-all capital because there you are considering all earnings available for capital and you are considering all capital.

In the case of common stocks, because of the differences in capital structure, I believe that the only way to get a fair comparison was on the basis of considering one share in each company and making a tabulation on that basis through an arithmetic average.

Q. What do you mean by considering one share in each company?

A. Well, I mean that what I did was to assume that if a company earned $3 a share and the price was a certain amount, I got an earnings-price ratio. I did the same on each of the companies. I totaled up those earnings-price ratios, which is a straight arithmetical average, which is assuming one share of each.

Now, if you wish to make a weighted average under such circumstances, then it seems to me that consideration should also be given weight to the differences in capital structure.

Up to the present time we have never been able to find out a satisfactory method of doing that; so I did not undertake to do it in this study.

Q. Do you feel that an attempt to get a weighted aver-
[fol. 7795] age here would have any particular signifi-
cance?

A. Well, if some suitable method could be worked out I would like to see the results of it wherein it takes into consideration a weight given to the differences in capital structure; so far we have not been able to get a satisfactory method, so the only one that I can use which is fairly satisfactory and simple is the straight arithmetic average and that is what I used in this case.

. . . . . .

[fol. 7797] Q. You were asked some questions about the outstanding common stock of Panhandle Eastern Pipe Line Company and the amount of stock with respect to which prices were obtainable for your figure of investor's appraisal of risk.

Is it your view that the Panhandle Eastern market figures are reasonably used in obtaining the investor's appraisal of risk?

A. Well, it is my contention that so far as the stock outstanding in the hands of the public is concerned, the
[fol. 7798] market quotations on such stock, whether it be 8 percent or a larger percent, are the only figures that are available to register such an indication.

In other words, they are all the quotations that were available through transactions in the market on such stock.

Q. And in your opinion, do they satisfactorily register such situations as you were attempting to determine?

A. For all those transactions they certainly do.

Q. Now, Mr. Coffman, during your cross-examination I believe that you were asked certain questions in which mention was made of a method of rate establishment which I believe was referred to by both Commission counsel and yourself as the "classical method."

Do you recall those references?

A. Yes, I recall them.

Q. As a matter of fact, I believe, you used that term, yourself, from time to time during your cross-examination. Is that correct?

A. I believe I did, yes, sir.

Q. In doing so you were glad to adopt Commission counsel's term?

A. Well, I think we were talking about the same thing.

Q. Well now in order that the record may be entirely clear in respect to what you were referring to, Mr. Coffman, I want to ask you at this time to state your under [fol. 7799] standing of the meaning of this term "classical method of rate making," as you used it in your answers to Commission counsel's inquiries.

A. Well, I understood it to be a method whereby an attempt was made to determine what is commonly called a "rate base" and, in addition, there was an attempt made to determine what was called a "rate of return" which would be a percentage figure and the multiplication of this percentage rate, so determined, against the rate base so determined was to lead to what would be considered a fair return which, presumably, would be sufficient to cover the various operating expenses, taxes, reasonable depreciation, and allow something over which would be equivalent to a return of capital and a fair return thereon and that, also, I believe takes into consideration any interest that may be taken into consideration on funded debt.

Q. In other words, I take it you believe that method includes a determination of the operating expenses, the

taxes, proper depreciation amounts and this item which you designated "fair return", is that so?

A. That is correct.

Q. And the latter item consists of the result of a multiplication of two figures, one of which you have mentioned as "rate base" and the other which you have mentioned as "fair rate of return"?

[fol. 7800] A. That is correct.

Q. Is the latter figure a percentage figure?

A. That is a percentage figure.

Q. Then, this figure of fair return, I believe you just stated that, under the classical method of rate making, that would include sums necessary to pay the fixed charges on net capital?

A. Yes.

Q. In your view would this method of determining a rate base and multiplying it by a percentage rate of return be an essential part of what you term the "classical method"?

A. Yes, it very definitely is.

Q. Now, when you in your answer a few moments ago used the term "rate base", did you mean to imply any special type of rate base or a rate base arrived at by any particular means or method of calculation?

A. No, there have been various approaches from time to time. I have no particular brief for one or the other.

There has been the original cost less depreciation, for example, and the reproduction cost new and prudent investments. There are a number of different approaches that have been made.

So far as I can see, the only point to be sure of is that [fol. 7801] if the base figure that you get actually represents or approximates the capital that was invested in the business, it seems to me any method, if properly used, would give you a satisfactory figure.

Q. When you say "properly used" what do you mean? A. I mean if properly determined.

Q. In other words, I take it you mean by your answer that you do not, in speaking of the classical method, limit your rate-base item to some particular type of rate base?

A. That is correct.

Q. Would that be true whether that rate base were called "fair value" or whether it was arrived at on an investment basis or otherwise?

A. Yes, I say that if the figure that is finally determined is as careful of approximation of the capital that has been invested in the business, that should be a satisfactory basis from which to work.

Q. Well, would you say that the ascertainment of such a rate base is an end in itself in this classical method of rate making, as you have used that term?

A. No, I do not see that it can be an end in itself.

Q. Why not?

A. Well, because, as I have just pointed out, you have to have in addition to that the determination of a return, [fol. 7802] that is, rate of return, which is the percentage figure to which I referred.

The rate base, in and of itself, without this other determination, would not get you any place. There are the two factors.

Q. Well, would the rate base, as such, and standing alone, have any significance at all in your mind?

A. Well, in and of itself I would not say that it did.

Q. Well, do you consider the determination of some rate base an essential in the classical method as you have used that term?

A. Yes, you have to determine a rate base in which to have a figure on which to apply this percentage, which is rate of return.

Q. Well then, I take it you, also, consider this element of percentage, a fair return, as essential in that method?

A. Very definitely as essential.

Q. And would the same statement you made with respect to rate base, standing alone, as being a figure without significance, apply, also, to this fair rate of return element?

A. Well, it seems to me so, because a rate by itself with no base to which to apply it is of no value. The two must be related together if you are to get the result that [fol. 7803] you are seeking.

Q. In developing a fair rate of return, what, in your estimation, would be necessary were you using the classical method of arriving at allowable rates?

A. Well, to determine the final amount of dollars, you have to have first determined the rate base and, secondly, to have determined the rate of return.

It is presumed when one is multiplied by the other that you will receive a dollar figure which should be sufficient to cover all of these items we just mentioned, namely, the operating expenses, the taxes and so forth and allow return of capital.

Q. Well, the return, as such, is the only item in that group that is arrived at by the multiplication of rate base by rate of return? A. Yes, that is correct.

Q. Now, will you proceed to answer my former question as to what would be necessary in your mind under the classical method to arrive at a proper fair rate of return?

A. Well, I do not know whether I just get the whole of your question.

Q. Or would it be necessary, Mr. Coffman, in your opinion, to make the same kind of a study as you have made here in order to arrive at a fair rate of return after you have got a rate base?

[fol. 7804] A. Well, I feel that so far as the objective approach is concerned that this method that I have used takes very definitely, a realistic approach to the problem and is one method of ascertaining the dollars needed to meet the requirements to return to cover all of the expenses and cover the depreciation and allow a return to the stockholders in the invested capital.

Q. Well, this dollars-needed figure is the result that you are after?

A. That is true, in either case. In the multiplication of the rate base against the rate you are attempting, by one method, to do that and the method I have used is just another approach.

Q. Well, do you know of any other objective method of obtaining a proper fair-rate-of-return figure than to multiply against the rate base in order to get this dollar-figure return, which would not be apt to take into con-

sideration the same type of things that you have taken into consideration in your direct approach to that return figure?

A. Well, it seems to me that it will be necessary in any event to ascertain what the investors say in regard to the securities in the particular branch of the business.

The purpose of my undertaking this study, giving attention to the investor's appraisal of risk was to ascertain to the best of my ability what the investor actually says [fol. 7805] he requires so far as his capital in this particular kind of risk is concerned.

It seems to me that in any approach, consideration would have to be given to those kind of data.

Q. Is there any other way that your know of, Mr. Coffman, under our present economy, to obtain financing for such a corporation as Panhandle Eastern Pipe Line Company, except going into the market and obtaining the funds necessary from the money markets?

A. Well, so long as various industrial and public-utility corporations are relying for their additional financial requirements on the [variour] private investors, then their appraisal of the risks must be taken into consideration.

In other words, if they are going to be the source of capital, then one must try to ascertain what they require by way of an earnings price ratio to see whether or not they would be willing to put in additional capital and at what ratio.

Q. Well, is there any other source of such capital except such private investors under our present economy?

A. There are not any other sources at the moment. There are some institutions buying securities, of course.

Q. Are they not private investors?

A. Well, they are private investors, but I merely want [fol. 7806] to draw the distinction between an individual that might buy 10 shares of something let us say, and an institution which would have far larger sums and could invest larger sums.

Q. Well, purchases made by these larger-sum investors go into the data which you use in such an earnings-price ratio study, do they not?

A. That is right. I think the same facts hold true and they are reviewing exactly the same data as the other investors.

Q. In order to obtain a fair rate of return to apply to any given rate base, whether it be low or high, do you know of any other method of obtaining the percentage except to look at what private investors will demand in the market?

A. No, I do not. I do not know any exception.

Q. Well, is it a fact, then, that regardless of whether you use a direct approach at the dollar figure of return or whether you use this classical method, as it has been termed here, of rate base times fair rate of return, you must ascertain these same facts?

A. It seems to me that you must.

Q. Do you believe that that is a necessary condition precedent to the obtaining of a proper fair-rate-of-return figure?

[fol. 7807] A. Yes, I do.

Q. Now, when you talked about fair rate of return, did you refer to any particular percentage rate of return which may have been used in any particular case, for instance?

A. No, I did not have that in mind. I have placed in this Exhibit No. 65 a short quotation from the Bluefield Case.

The reason that I made the reference to it was to see whether or not any factors had been listed as to the proper ones to be considered in a consideration of a rate-of-return case.

I was not interested in whether the rate was determined at one figure or another. I was trying to find a guide. It seemed to me that there were a number of items which were very specifically listed which were reasonable guides to this over-all problem. That was the purpose of the reference.

Q. Under your approach, could any specific percentage be made applicable to all cases?

A. I do not think it could. I think that it is determined by the facts in each situation as, I think, has been indicated in the cases.

Conditions may vary from one part of the country to another as between one company and another and those

[fol. 7808] various factors would have to be taken into consideration to arrive at what would seem to be a fair conclusion?

Q. Well, if a study of this objective data is made in order to arrive at a fair rate of return, are we to understand from your previous answers that you would, in your own mind, reject this so-called classical method?

A. Well, I do not think I have said that anyplace. I have merely made the contention that in this over-all approach it seemed to me that there was room for an additional approach of the problem and in the work that I have been doing on the subject it looked to me as if the approach I had used in Exhibit 65 was a helpful contribution to the general subject and, therefore, I made the study on that basis.

Q. Do you know of any other method, general method of obtaining the objective data which you believe to be necessary?

A. At the moment, I do not know of any. What I have attempted here was to approach the problem on the method described and make it as concrete as I could through the statistics and graphs which show exactly what I have in mind to get at an objective approach with a realistic result.

Q. Do you believe that an objective approach is necessary whether you use this direct approach method or [fol. 7809] the classical method?

A. I think it is, yes.

Q. Under your views of this matter, would it make any difference what particular type of rate base were adopted by a regulatory body provided the rate of return were developed on a basis of reasonable objective data?

A. Well, in my particular analysis I have not determined a rate base but if the figure that I have determined as the amount needed were correct; then, if someone would give me the figure for a proper determination of a rate base, it would be a simple matter to determine what the rate of return should be.

In other words, the rate base under my method could be one figure or another, but if the dollar amount that has been determined would prove to be accurate, then the

rate would be determined depending on which figure or which size of figure you had for the rate base.

Q. I believe you said a few moments ago that you did not cite this Bluefield Case because of any particular rate of return used there. What did you mean by that?

A. Well, the only thing that I wanted to get from any references was such indication as to the items that were believed to be necessary in consideration to treat this problem and the one reference that I made on Page 3 in [fol. 7810] Exhibit 65 I thought pretty clearly specified those various items that one had to take into consideration if they were going to deal with the problem of rate of return.

Q. Well, what were those items that you had in mind?

A. Well, for example, quoting from this quotation:

"A public utility is entitled to such rates as will permit it to earn a return on the value of its property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties."

Now, so far as that item is concerned, when I was looking at the investor's appraisal of the risks of capital, considering various classifications of the public-utility industry such as water companies, electric companies, manufactured-gas companies, natural-gas companies and natural-gas pipe-line companies, I thought in concrete form I was following exactly what that statement meant.

Q. Well, were you there searching for some source of data on what are the considerations in the market of corresponding risks?

A. Yes, I was trying to get at that very point on a statistical basis.

Continuing further, "but it has no constitutional right [fol. 7811] to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures."

Well, in my study, no such ventures were listed because I combined the analysis of investor's appraisal of risks altogether to the public-utility industry in its various classifications which I have already mentioned.

Continuing further: "The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate under efficient and economical management to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties."

Well, there again, speaking of efficiency of management, the purpose of Chart No. 8 in Exhibit 65 in which I made an analysis of the operating ratio and compared that with a similar figure for the industry was to get some idea of whether or not this company could be said to be an efficiently-managed company.

I thought in view of the comparison of ratio that there was some indication of that fact. So far as the financial soundness is concerned, I was attempting to get at that through the analysis of these figures in the June 30, 1941, statement and through an analysis of the operating figures as shown of the same date.

In other words, my whole approach as I have described, [fol. 7812] was based on those figures.

Q. And your approach was wholly an objective approach, was it not?

A. Yes, so what I did was to find in this Bluefield statement a number of items which had been found by experience, apparently, that should be taken into consideration to arrive at a sound conclusion.

Q. And you believe that they were taken into consideration through your study?

A. To the best of my ability I attempted to do exactly that, sir.

Q. Mr. Coffman, is there any way that you know to force investors to purchase the securities in such an enterprise as this and thus finance its operations?

A. No, I do not see that there is any way that you can force a person to invest money in anything. In other words, when you sell a share of stock or a bond you have a commodity which, for all purposes, is like any other. If it is priced right in view of the value you think you are getting, you are perfectly willing to make a purchase.

If you think it is overpriced, you will draw away from it and if it is underpriced you rush to get it if you have

funds for investment, but I do not know how you can force anybody to invest money in anything.

Q. Can you ascertain the behavior of investors by [fol. 7813] a study of the money markets?

A. Yes, I think you very definitely can.

Q. And is that what you have done?

A. That is what I have done in these three exhibits.

Q. Do you know of any other method which offers a similar opportunity to derive the earnings figure consistent with the statements mentioned and quoted by you from the Bluefield Water Works and Improvement Company Case?

A. I do not believe I do.

Q. You recognize, of course, don't you, that there may always be differences of opinion by honest men in respect to the use of any particular factor or elements in such a study?

A. Yes, I think I have indicated that in answers that I have given.

Q. And you recognize, also, that different investigators may give different weight to different elements?

A. Yes, that is correct.

Q. In the absence of obtaining objective data in at least some degree approximating what you have tried to obtain, do you believe that there is any basis for use of judgment in arriving at the rate-of-return figure?

A. Well, I do not know exactly what you have in mind there, but I think it is commonly believed, today, that there has been a substatntial decline in interest rates and [fol. 7814] if one studies indexes, particularly in regard to absolute money rates,—I mean by that something in the way of a call loan or a short-term commercial paper, or even the rate on Government bonds,—they will find that over a period of years there has been a substantial decline in interest rates.

From that knowledge, if they did not go on and make the checks that I have tried to make, you might well conclude that that was true, right across the board, of all investments.

What I tried to do in Exhibit 63 and the supporting material in Exhibit 64, was to ascertain whether, in view of

this decline, investors, when it came to corporate funds, were still analyzing these various securities on the basis of the risk-factor.

It seemed to me that coming right down as close as I have, that is, August, 1941, in spite of a down trend on all of these items, there is still an investor's appraisal of the risks of capital as demonstrated by the capital that I referred to yesterday on Page 23 of Exhibit 63, wherein, for the four-year period that I have there, although each of the items over a period of years might have gone down as between water companies, electric-utility companies, and so forth, nevertheless, as of today investors are still contending and requiring that the natural-gas pipe-line [fol. 7815] companies on the average have about 4 percent more risk than water companies.

The reason, presumably, for that is that investors feel that there is a greater hazard to an investment in the natural-gas business than there is in the water companies, so that unless a person reviewed that they might conclude that this decline in interest rates, just as I say, applied generally right across all securities.

I wanted to ascertain as a matter of fact whether that is true or whether investors right today are saying that if you want their money on corporate securities they require more on one kind of risk than they do on the other and, therefore, it seemed to me that an objective study was the only way to ascertain whether that was true or not.

Q. Well, would you say that your study is based primarily on an objective investigation of what such a company needs to earn and must earn as contrasted with an examination of what it might be merely entitled to earn?

A. Yes, that is correct.

* * * * * * * * *

[fol. 7816] Q. Mr. Coffman, I think from your statements this morning that investor's appraisal of business varies, not only between classes of companies, but between companies of the same classes.

* * * * * * * * *

The Witness: Yes, I think that is right.

Q. And varies also with time?

A. That is correct.

Q. Why does that investor's appraisal vary?

A. For one reason it varies because of changes in economic conditions as between one time period and between another time period. I have tried to make it clear that, so far as my own opinion is concerned that in one particular period, if economic conditions are on such a level that investors appraise the risk at a certain rate, that rate will hold good so long as there is no major change in any fundamental economic condition.

Now, if you come into a new period where there has been a change of a fundamental economic condition, such as [fol. 7817] in the present situation where we have, among other things, this emergency condition, a major change is taking place and investors, therefore, are going to appraise that change in economic conditions to the best of their ability because they believe thereby that the risks of their capital have changed to whatever extent they may appraise the hazard connected with this particular change in economic conditions.

Q. Do you believe that the method which you have adopted is a reasonable method of evaluating these changes in investor appraisal because of economic conditions?

A. Well, I think I make the statement a little stronger than that. What I say is that, so far as the investors are concerned, you have to study some particular phases wherein you can get an appraisal that they are making of the conditions at the time and in the investor's appraisal of the risks of capital, the only way I know that can be done is to see what actually is happening to the securities in the market by way of price changes.

That registers, on one basis I have used, namely, the earnings-price ratio, what the investor says is happening so far as the risk to his capital is concerned and that is appraised in these various earnings-price ratios that I have given in Exhibit 63 and have used in Exhibit 65.

Q. Without some such objective study as that, either on this method that you have used or on what you have called

[fol. 7818] the classical method, if you do not have some such study as that, do you believe you could reach the proper reflection of the economic situation except by pure accident?

A. No, I do not think you can. I say that regardless of which method is being used, if the particular analyst, to the best of his ability, will try to ascertain what the condition is as the investor is appraising it, they can take care of it perfectly all right.

I have got this statement here which I have written out which summarizes the thing about as good as I can state it and that is when the classical method is used, the same kind of an examination of surrounding facts is made as I have tried to make in this particular case—

Q. (Interposing) You mean "if that", "unless that is made"?

A. (Continuing) Unless this is made. I do not care whether it is my method or the classical method or what method is used. It makes no difference but I say it has to be done.

The mere multiplying of any given rate base by any given rate of return will produce a money figure equal to the economic necessities of the enterprise in question only by accident.

In other words, if you go on and arrive at the figure for your percent which does not take into consideration the [fol. 7819] investors' appraisal as they see it, then I do not see how you can arrive at a figure that is accurately appraising these changes in economic conditions, unless it should be accidental that the figure will come out on the same plane.

Q. Why do you say that?

A. I say this because it is not possible to know what the economic need is except as the result of some such study as I have made in this case, as represented by my three exhibits, Nos. 63, 64 and 65.

What I have tried to do is to attempt to develop adequate statistical measures of the factors influencing needed return. Now, if that is also done under the classical method, the result would be the same but, if it is not done,

then I say if the figure comes out to the same level, it is a matter of accident rather than a matter of examination.

. . . . . .

[fol. 7820] Recross-Examination

. . . . . .

[fol. 7850] Recross-Examination (Farther)

By Mr. Littman:

Q. Will you please turn to Your Chart No. 8 of Exhibit No. 65?

Now, during the course of your somewhat lengthy redirect examination I believe you stated that this chart [fol. 7851] indicated to you that Panhandle Eastern Pipe Line Company had a more favorable operating ratio than other natural-gas pipe-line companies. Is that correct?

A. Yes, I believe I said that.

Q. And I believe somewhere in your testimony you stated that that indicated to you that Panhandle Eastern Pipe Line Company was efficiently managed. Is that correct?

A. Well, I do not recall as I said it that way. What I remember saying is that in comparison with the other pipe-line companies I thought there was an indication here that the operating ratio showed that the management of the Panhandle Eastern Pipe Line Company was more efficient than the average [eas] compared with this other index.

Q. In other words, in your opinion, the better the operating ratio of a company, the better its management?

A. Not altogether, because there are various ways of determining the efficiency of management, but from a statistician's point of view the operating ratio is one convenient method where you have only figures to go on as in contrast with making the examination of a plant and seeing just how it is run from, let us say, an engineer's point of view.

I will say that it is one guide, it is not the sole guide, but it is one indicator that can be used.

Q. So that this chart called "Chart No. 8" of Exhibit [fol. 7852] 65 indicates to you that Panhandle Eastern Pipe Line Company is efficiently operated as compared with other natural-gas pipe-line companies?

A. That is one indication and I say that not altogether because of the comparison but more because of the trends shown in the period of years covered, 1935 through 1940.

In other words, the decline in ratio of 58.2, let us say, to 38.5 would indicate to me that the management had been able to accomplish certain things by way of efficiency.

Q. Have you made any other investigation into the efficiency of the management of Panhandle Eastern Pipe Line Company?

A. Well, Mr. Littman, I, also, would include the facts shown in Exhibit Chart No. 16, for example, as, also, an indication that the management have been alert.

In Chart No. 16, Exhibit 65, showing historical cost of debt capital of the Panhandle Eastern Pipe Line Company from 1930 through 1941, there has been a decline in historical cost of debt and in 1941 that cost has been reduced to 2.74%.

I think that indicates the alertness of management in adjusting itself to changed financial conditions and I think that is a part of efficiency.

Q. And I presume, likewise, you would refer to the [fol. 7853] recent refinancing program put through by Panhandle Eastern Pipe Line Company in which it has reduced its over-all cost of money as is shown in the Securities and Exchange Commission's opinion which is Exhibit 147 in this proceeding, as a further indication of the efficiency of the management of the company?

A. I would say that that is a further indication of the alertness of the management, yes.

Q. And, as you testified the other day, the over-all cost of servicing all of the outstanding debt and securities under the pro forma statement, after the refinancing, related to the total capitalization is 6.6 percent.

Wasn't that the figure you used?

A. That was the figure I calculated for you, I believe.

Q. Yes.

A. Yes, I remember the figure.

Q. Now, adhering for the moment, however, to Chart No. 8 of Exhibit 65, in your judgment one company that has a better operating ratio than another company would, in your opinion, have better efficiency of management than the one with the higher operating ratio?

A. I would not restrict my answer quite that way. What I have in mind here is the trend, as much as anything.

In other words, it is not altogether a relation of 38.5 in [fol. 7854] 1940 for Panhandle Eastern Pipe Line against 51.3 that has significance, altogether; it is also the trend that you find from 58.2 in 1934 to 38.5 in 1940.

Q. Well, you state in the text according to Chart No. 8, after making reference to the rising taxes, that "it is obvious that the rising tax burden is tending to offset benefits of efficient operation", do you not?

A. Yes, that statement is there.

Q. So that from that statement would it be proper to conclude that you consider the favorable-appearing operating ratio of Panhandle Eastern over that shown by other pipe-line companies to be an indication of efficient management?

A. Well no, I do not quite see that line of reasoning from that statement. What I am attempting to point out in Chart No. 8, Exhibit 65, in the box containing "After Taxes", that beginning in the year 1937 that exhibit indicates to me that the increases in gross operating revenue were not entirely sufficient to take up increases in taxes.

Had it have been, the Panhandle Eastern Pipe Line Company would not have shown a change in direction and that is the only point I really had in mind on that exhibit so far as reference to taxes is concerned.

Q. Well, aside from the reference to the taxes, did you or did you not state in your redirect examination that the [fol. 7855] favorable operating ratio of Panhandle Eastern Pipe Line Company, as compared with other pipe-line companies, was an indication to you of the efficiency of the operation of Panhandle Eastern Pipe Line Company?

A. Well, as I say, I do not recall, but I say that plus the trend of the operating ratio for Panhandle Eastern, itself, indicates the fact.

Q. That is, they both indicate it?

A. They are a statistical method, but not the sole one, as I have said. There are many other ways of checking efficiency of management.

Q. But it is one of them?

A. From the statistical standpoint it is used by every investment analytical service.

Q. I hand you a written illustration for the purpose of enabling all present to follow the next few questions.

Now, Mr. Coffman, I want you to assume that we have two natural-gas pipe-line companies, "A" and "B", respectively. Company "A" has a total gross revenue for a given year of $1,000,000 and Company "B" has a total gross revenue in the same year of $1,500,000.

Notwithstanding the fact that both of these companies sell the same volume of gas, I want you to assume that Company "B" earns $500,000 more revenue than Com- [fol. 7856] pany "A", simply because its rates are exorbitant.

Now, I want you further to assume, as shown on the sheet which I just handed you, that the operating revenue deductions before taxes for each of these companies is $500,000, leaving net revenue before taxes of $500,000 for Company "A" and $1,000,000 for Company "B".

Now, what is the operating ratio before taxes of Company "A", the one that has the reasonable rates?

A. Well, on this sheet, which is shown here, the Company "A" operating ratio before taxes is 50 percent.

Q. And what is the operating ratio before taxes for the company that has the exorbitant rates, namely, Company "B"?

A. Well, that is 33⅓ percent.

Q. In other words, Company "B" has a much more favorable ratio than Company "A", does it not? Is that right?

A. That is correct.

Q. Now, right there, a company that has exorbitant rates would have a tendency to show a more favorable operating ratio than a company that does not have such exorbitant rates? Is that correct?

A. Oh, in any of these comparisons where you are using a gross-revenue figure, if you change the two figures, you will get that difference in percent, surely.

[fol. 7857] Q. Well, it is a mathematical fact, isn't it, that the higher your revenue occasioned by high rates, why, the better-looking operating ratio you are going to have. Isn't that right?

A. Sure, occasioned by anything. You do not have to mention rates, occasioned by another fortunate circumstance, certainly.

Q. Now, after taxes we have, as shown in this illustration, for Company "A", the company with reasonable rates, a net operating income after taxes of $400,000, whereas Company "B" after taxes of $300,000 has a net operating income of $700,000. I want you to assume those facts as shown in this illustration.

Now, is it correct that under those assumptions that Company "A" has a 60-percent operating ratio after-taxes?

A. Yes, it is.

Q. And that Company "B" has a 53⅓ percent operating ratio after taxes?

A. That is correct.

Q. Now, of course, the company that has exorbitant rates has to pay higher taxes, Federal income and Federal excess profits taxes than does Company "A", which has the lower rates. Isn't that correct?

A. Well, that is correct only under your assumption.

Q. You mean to say that a company earning exorbitant [fol. 7858] rates and exorbitant profits flowing therefrom will not have to pay more taxes, all other things being equal, than a company that does not have such a favorable situation?

A. No, you have corrected your first statement by saying "all other things being equal". The point I wanted to bring out was that the company could have higher rates and if the costs were higher it would have no higher tax because net income was high, because the costs offset the higher-income revenue rate.

Q. Well, of course, we are showing here what is shown for Company "B", namely, that the rates are, in truth and fact, exorbitant.

A. I do not mean to fuss, except that I thought that what you asked in your question was not confined to this example and I wanted to qualify my answer.

Q. I see. Well, we are still talking about the illustration. A. All right.

Q. Now, you notice the trend that results after the payment of these taxes, do you not, Mr. Coffman? You see, do you not, that the operating ratio of Company "B" has now gone up to 53½ percent and very closely approximates and comes much closer to the operating ratio, after taxes, of Company "A"? Do you see that?

A. Well, for this given example that is correct, but [fol. 7859] that is not in line with what I am talking about in Chart No. 8.

Q. Well, let us confine ourselves, for the moment, to the illustration. It is a mathematical fact, is it not?

A. Absolutely.

Q. That a company that is earning exorbitant rates will, because of that fact, pay more Federal excess-profits and Federal income tax than a company that, all things being equal, does not have exorbitant rates. Is that correct?

A. Yes, that is right.

Q. And, consequently, there comes a point after taxes where the two operating ratios will come pretty close together, notwithstanding the fact that one company has the exorbitant rates and the other company has not. Isn't that generally true?

A. Sure, that, mathematically, could be true.

Q. Yes. And what we have said, for purposes of this illustration, would be true even though both companies had exactly the same management? Isn't that true?

A. Both companies had exactly the same management?

Q. Yes.

A. Yes, that would be true. That is still talking under your hypothesis, of course.

Q. Now, I believe you made the statement this morning or possibly yesterday that Panhandle Eastern's common- [fol. 7860] stockholders are not so well situated after the

recent refinancing than they were before. Is that or is that not a correct interpretation of your remarks on that subject yesterday?

A. Well, not quite. I think I know the matter you are referring to. In discussing the percentages which were shown in the Securities and Exchange Commission's release containing actual consolidated capital figures in the pro forma, it was pointed out that on the pro forma—I do not recall the exact percentages at the moment—but the pro forma was 34 percent as against 43 percent.

It showed common stock and surplus to be 34.99 as against the actual of 43.62.

Mr. Wheat: Mr. Littman, I did not recall the witness said anything about favorable or unfavorable. Was that your question, more favorable or less favorable?

Mr. Littman: Yes.

Now, I gave the witness the opportunity and I want him to state whether or not that is a correct interpretation.

Mr. Wheat: I did not recall that and I wonder—

Mr. Culton: (Interposing) My recollection is that he said "further removed."

The Witness: Further removed is what I said, if you will look at the record, I think. I will be glad to discuss it with you again if you wish to have me do so.

[fol. 7861] By Mr. Littman:

Q. Right there, I think maybe you have cleared me up. You did say yesterday that after the refinancing, as shown in Exhibit 147 on Page 17, by the pro forma statement the common stockholders' equity represented 34.99 percent of the total capitalization, whereas before their equity represented 43.62 percent.

Now, you stated that, didn't you?

A. Yes, I did.

Q. Now then, you made some remark with respect to the fact that the common stockholders were further removed from the—well, suppose you tell us what you did say on that.

A. What I said was that with this shift in the common stockholders' position under the pro forma as against the

actual, there were now more senior securities ahead of their equity, therefore, they were further removed.

What I meant was that increasing the senior capital first by way of debt to 43.90 percent as against the present of 32.28 percent and in the preferred stock, which now carries a sinking fund, so I put it over in senior capital classification, to 21.12 percent against 18.10.

It seemed to me that the investor looking at these additional senior securities going out, all, now, providing for sinking funds, would feel he was further removed than heretofore, so far as his position was concerned. In other [fol. 7862] words, more preferences are now outstanding against him, either in case of liquidation or otherwise than were before in the case of these percents.

Q. Now comes my question: Do you mean by that to infer that the common-stockholder is not so well situated after the refinancing as he was before?

A. Not necessarily. I would say that that will be a matter of appraisal on the part of the common-stockholder for this reason, it may be that advantages will flow from the new financing from an earnings standpoint.

Q. Well, you know that will be a fact, don't you?

A. Well, just a moment. I do not know anything until it happens, really, but to continue in answer to your question, the common-stockholder will try to ascertain whether or not, because of earnings coverage, he will still have sufficient advantage so that even though risk and liquidation are now larger and senior capital is larger than before, he will not, over the period, be seriously handicapped.

That will be a matter for him to appraise.

Q. Well now, Mr. Coffman, I take it from the answer which you just made that you are not prepared to state at this time whether the common-stockholders of Panhandle Eastern Pipe Line Company were better situated before than after the refinancing.

[fol. 7863] In other words, you are unable to state whether there has been any change in the situation.

A. Well, to take all factors into consideration, I would not want to say at the moment, but if you will specialize on a few factors, you now have more bonds outstanding

carrying a sinking fund and you, also, have a preferred stock out now for the first time that carries a sinking fund.

Now, so far as the common stockholder is concerned, he does not like to see too much of this but that is one factor.

Now, if, on the other hand, from the earnings standpoint, by savings in financing, he would get an offsetting factor, well, maybe the things will balance out.

That is the reason I said yesterday that I would like to wait and see what the investors in the market say about this. I do not know at the moment.

So far, outside of those bid prices I gave you this morning, the price has not changed much. Maybe it will change more, maybe they will say it is even.

Q. In other words, you would not want anyone to construe your remarks on this subject as meaning that you consider the refinancing as having adversely affected the common stock of Panhandle Eastern?

[fol. 7864] A. No, I do not believe so. As I remember, when I made that statement baldly, I thought Mr. Wheat interrupted to ask whether I was meaning to imply that because of the fact that the S. E. C. had permitted this registration I was in some way condemning the plan.

All I say is that any security, any capital setup wherein you get less and less equity, other things being equal, you get into more of what is called a leverage situation and taking the S. E. C. statement from time to time that they thought in many of these companies there should be more equity capital, it seemed to me, for the moment, this was a little in the other direction, but I do not believe I implied, nor did I say that it had worked a hardship on anybody.

* * * * * * * * *

By Mr. Littman:

Q. In other words, Mr. Coffman, there are favorable aspects and some unfavorable aspects, probably, in your opinion and the two may counter-balance each other.

A. That is right, and I believe that on that score the S. E. C. in its own release made some comments that there were a few things they did not like so well but under the

[fol. 7865] circumstances seemed it to be a perfectly reasonable plan.

Q. With respect to the common stock?

A. Yes, surely.

Mr. Lee: I just wanted to ask you, Mr. Coffman, if as an investment counsellor you would not have given a great deal of consideration and emphasis in your analysis of the size of the common-stockholder after the consolidation as against before, whether or not you would not have given great consideration to the tremendous improvement in the Panhandle Eastern Pipe Line Company in so far as it was becoming a continuous system owned and operated by one management, and that this bottle neck that has existed for some years between the terminus of Panhandle at Dana, Indiana, and the Detroit market was being eliminated.

Didn't you consider that tremendous advantage that ought to result in increased earnings and ought to make a big appeal to the common-stockholder as against the other situation that you mentioned?

The Witness: Well, I think those factors, Mr. Lee, very definitely would be taken into consideration and weighed. I, at the moment, for this particular study, did not do it. The same would go in the change in capital structure, for instance, on the participation feature.

I mean, here is another factor that has been changed as [fol. 7866] between the common and preferred, so I could not say at the moment the relative weights of either. The observation I was trying to make was merely the one that in reducing the percentage and having more senior capital ahead with sinking funds, the common-stockholder was somewhat more removed.

Mr. Lee: Yes, but being somewhat more removed, any detriment that he may suffer by reason of that statement, wouldn't you in all fairness have to consider the benefits that offset that further removal?

The Witness: Oh, very definitely. I have no argument on that, because I have not weighed those various things and I say the common-stockholder will consider all of them as well as the investment analyst and that is the reason I raised the question as to whether there had been a change in price of common stock in the quotations.

Maybe when they get all through with the analysis the benefits will outweigh any detriments or maybe they will do better than that. I merely wanted to wait and see what the market actually said and the mere fact that it is down two points does not indicate to me at the moment one way or another on that, because it will take a little time for them to assimilate these various factors and perhaps make a new appraisal as to the way they see the consolidated company and the new capital structure.

* * * * * * * * *

[fol. 7877] By Mr. Littman:

[fol. 7878] Q. Mr. Coffman, just before recess, we were discussing the changed situation of the common-stockholders of Panhandle Eastern after the refinancing.

Now, isn't it a fact that before the recent refinancing which is reflected in the Securities and Exchange Commission opinion, Exhibit No. 147, the common-stockholders had to give up one-third of all earnings in excess of $1.50 per share before those earnings could be distributed as a dividend to them?

A. There was the participating feature in which part of the earnings were distributed to the preferred and the remainder to common over and above the $1.50 on common.

Q. In other words, the old preferred-stockholders, that is, the Class A preferred-stockholders, were entitled to receive one-third of the earnings in excess of $1.50 per share on the common stock?

A. That is correct.

Q. Now, that feature is no longer present in the preferred stock of Panhandle Eastern under the new refinancing, isn't that right?

A. No, that is correct, but there are other features, of course.

Q. But confining ourselves for the moment to this feature, the holders of the new preferred stock which will supplant the old Class A preferred stock are no longer [fol. 7879] entitled to participate in the dividends of the common-stockholders, isn't that right?

A. That is correct.

Q. And, of course, that factor places the common-stockholders in a better position than under the situation where there existed a participating preferred stock?

A. Yes, so far as that one stipulation is concerned, it is a benefit to the common-stockholder.

Q. I believe you stated this morning on redirect examination that you could determine what the proper rate of return should be if you were furnished with the proper rate base. Is that correct?

A. Well, not exactly, Mr. Littman. What I think I said was that if, by my approach, it were found that all the figures used therein were correct, then my resultant figure, if I knew or were given a rate base, could be used to determine the rate.

In other words, if it were granted or found to be correct that a certain sum of money, $5,064,000 were correct, I merely say that dividing that figure which I find by my approach by whatever rate-base figure is given me will enable me to tell whether it is a 6½, 7 or 5½ rate.

Q. You have faith in the accuracy of your figures, have you not?

[fol. 7880] A. Yes, based upon my calculations as considered in Exhibit 65, I have made a calculation which I think is necessary for the management to have by way of earnings.

Q. Will you please refer to the figure or figures in your Exhibit No. 65 that can be relied upon as the figure to be used to compute a percentage rate of return in connection with a given rate base?

Mr. Wheat: Did you refer to Chart 36 or Chart 37?

Mr. Littman: I began to refer to Chart No. 36. I think he will probably want to refer to one figure in Chart No. 36 and possibly to one in Chart No. 37.

The Witness: Well, the figure in the chart would be $15,520,855 which, applied to whatever the rate-base figure is, would give me a percentage so that that percent times the rate base would give me the total operating revenue.

By Mr. Littman:

Q. I think you probably misspoke yourself. Don't you mean to say you would use the figure of $4,993,511 shown in your Chart No. 36?

Mr. Wheat: Or the $5,064,821 shown in Chart No. 37?

The Witness: Yes, I beg your pardon.

By Mr. Littman:

Q. In other words, the latter two figures would be the ones that would be used in making such a calculation for the purpose of securing a percentage rate of return?

[fol. 7881] A. Yes, that is correct.

Q. In other words, if I correctly understand you, if the Commission were to make a determination of a certain rate base, then you would divide that rate base into the $4,993,511 figure referred to in Chart No. 36 of Exhibit 65 as "a fair return to investors" and obtain in that manner and by that calculation, a fair percentage rate of return under your method?

A. Yes, that is right, under my method.

Q. And under the assumption shown in Chart No. 36?

A. Yes, that is correct.

Q. And you would do the same if you wanted to follow the so-called actual figures which you used for Chart No. 37?

A. Yes, that is correct.

Mr. Wheat: May I ask just to clarify that, what you mean is that you would use your item of over-all current capital requirements as the dividend in that mathematical computation?

The Witness: That is the figure into which I would divide this figure that would be determined as a fair rate base.

By Mr. Littman:

Q. Mr. Coffman, I have before me a photostatic copy of an exhibit which was prepared by you and presented [fol. 7882] before the Public Utility Commission of Pennsylvania in a rate hearing involving the rates of Pennsylvania Power & Light Company.

I hand you a copy of this exhibit and ask you whether it is what I have just described, subject, of course, to check?

A. Yes, it is.

Q. I refer you to Page No. 53 of your exhibit in the Pennsylvania Power & Light Case and I read you the following statement:

"It is assumed here that the capitalization of the company is properly related to the rate base or fair value. If 'prudent investment' had been exercised by the company at the time the properties were acquired, then it must follow that the capitalization presently outstanding would coincide with a fair rate base or fair value on which the company is entitled to earn a fair rate of return."

Have I read correctly from Page 53 of the photostatic copy of your exhibit? A. Yes, you have.

Q. That was your testimony in the proceeding before the Pennsylvania Utility Commission, was it not?

A. Yes, that is correct.

Q. Incidentally, your study which was presented before the Public Utility Commission of Pennsylvania, to [fol. 7883] which I have just referred, is similar to the one which you have presented in these proceedings in Exhibit 65?

A. It is in most respects similar, yes.

Q. When was your testimony presented to the Pennsylvania Public Utility Commission, approximately?

A. About three or four months ago.

Q. At any rate, it was within the past six or seven months?

A. Yes, that is correct.

Q. Now, during your redirect examination, you made numerous references to earnings by other utility companies. I would like to ask you whether you agree with the following statement which appears on Page U1-3 of the August 29, 1941, issue of Standard & Poor's Industry Survey—Utilities:

"The natural gas industry is probably the best situated of the various divisions of the utility industry at this time. It will benefit materially from rising general industrial activity and operating expenses are largely fixed. Thus, even with heavy excess profits taxes, any decline in profits should be held to moderate proportion."

Do you agree with that statement?

A. Not all of it, no.

Q. What part of it don't you agree with?

A. May I see it, please?

Mr. Littman: Yes. (A document was handed the witness.)

[fol. 7884] Mr. Wheat: Did that say "natural gas distributors" or "natural gas pipe line companies?" I was talking at the time and did not hear.

Mr. Littman: I thought I read it exactly as stated.

Mr. Wheat: Would you mind reading that?

The Witness: This particular statement applies to the whole industry with no attention whatsoever given to distribution companies or transmission companies or anything else.

By Mr. Littman:

Q. But it includes, of course, natural-gas pipe-line companies?

A. It is talking about the industry, over-all, that is correct, but no particularizing on pipe-line companies at all.

Q. And the Federal Power Commission Annual Report to which you referred in connection with a purported 27-year life of reserves was also referring, was it not, to the over-all natural-gas industry?

A. Yes, it was. In this particular statement, as I say, from an over-all standpoint wherein it refers or makes this remark:

"It will benefit materially from rising general industrial activity and operating expenses are largely fixed", I, so far as discussing a natural-gas pipe-line company, would (fol. 7885) not agree with that latter statement.

For the industry as a whole, including all divisions, it is a generality.

Q. What natural-gas companies do have fixed expenses, Mr. Coffman?

A. I do not know that any of them do.

Q. Then if that is a fact, that part of the statement to which you just referred is entirely erroneous, is it not?

A. As I say, I do not agree with it.

Q. You are Vice President of Standard & Poor's, are you not, that publishes this document to which reference has just been made?

A. Yes, I am.

Q. And it is published for the consumption of investors and persons interested in making investments?

A. Well, it is a publication which, I say, is available to the public regardless of whom they may be. They may be investors, business men or any other person who has the price to buy the service.

Q. When you put this industry survey out on the market and sell it to the investing public, you, as Vice President of Standard & Poor's, fully expect investors to rely upon it, do you not?

A. I would not say we expect them to rely upon it. [fol. 7886] It is just one source of information like a newspaper. We do the best we can in publishing information, in tabulating it and correlating it. We expect the investor to use his best judgment in view of the information supplied to him.

Q. Do you mean to say you expect the investor to make his own investigation?

A. It is his own money so he certainly should use his own judgment.

Q. Does your company, Standard & Poor's, operate under the Investor's Advisory Act?

A. Yes, it does.

Q. However, you do agree with the balance of the statement other than that part which you read in connection with the fixed expenses?

A. Yes, for the industry as a whole, not making it definitive as to various divisions of the gas industry.

Q. But including, of course, natural-gas pipe-line companies?

A. It is looking over the entire group, the entire industry.

Q. Including natural-gas pipe-line companies?

A. That is correct.

Q. You also testified in redirect examination with respect to your reliance upon the Ralph E. Davis statement [fol. 7887] of "more than 25 years" in fixing a term of years over which you were going to amortize the fixed capital of Panhandle Eastern, a period over which you expect the gas reserves of Panhandle Eastern to be exhausted, is that correct?

A. Yes, that is right.

Q. Now, did you make any investigation of the opinion of Panhandle Eastern Pipe Line Company's management with respect to the life of its properties?

A. No, as I think I have stated, the information that I had so far as the company was concerned, came from its published reports and so far as information otherwise is concerned, it came from our files and public information.

Q. Now, Mr. Coffman, you are [no] so greatly wedded to that 25 years that you would not change your mind about it if someone would present you with cogent proof that the company itself proposes to operate beyond 25 years and could, if it wanted to, operate beyond 25 years?

A. Well, if any engineering study can be developed, so far as that particular invested capital is concerned, which would show that 25 years was inaccurate, I would assume that was a new fact that had come to light and would be taken into consideration.

Q. And you would be glad to revise your estimate to that extent, would you not?

[fol. 7888] A. That is correct.

Q. If the President of Panhandle Eastern Pipe Line Company had testified before the Securities and Exchange Commission to the effect that the general Hugoton area includes the counties of southwestern Kansas and, in addition, Texas County, Oklahoma, and parts of Sherman and Hansford counties, Texas, and with that definition of the Hugoton area, it is his judgment that if he were assigned the problem of obtaining additional gas reserves to meet the present indicated requirements of this company for 30 or 35 years, it could be done on a favorable and economical basis, what would your answer be?

A. Well, I think, Mr. Littman, we are talking about two different things there.

In this particular instance, I am talking about the reserves presently owned by Panhandle Eastern which are presumed, until a different study proves a different result, to last 25 years.

Now, if in the general vicinity of their reserves, there are other reserves which would last longer and such other reserves are acquired and the geologists agree that 30 to 35 years on those new acquisitions will work, I should sup-

pose that was the figure to use on those new acquisitions but I draw the distinction between that and the reserve the company has at the present time.

[fol. 7889] Q. In other words, you confine your amortization period to the life of the reserves presently owned and controlled by Panhandle Eastern Pipe Line Company?

A. Yes, very definitely, for the reason that I think I gave you earlier that although there may be some reserves available in this general area, if they are not now acquired by Panhandle, they may be acquired by competitors so that it is not certain a few years hence that one could acquire anything.

Maybe they can but after all, there are competitors in this business. There is no assurance because someone says they are there and available that they will be there next week, it seems to me, unless they are actually acquired right now.

. . . . . .

[fol. 7897] By Mr. Littman:

Q. If I correctly understand your testimony, you use as the period for amortization, not the life of the gas fields or the gas supply in any given field, as such, but the reserves on hand and owned and controlled presently by the utility, is that correct?

A. Well, to make it a little more accurate, there was an investment here of some $63,775,000 and taking the estimate that I used of 25 years, I apply it against that investment as the best judgment I had at the time, yes, sir.

That is, talking in terms of the investment as against a reserve. Reserves are included in that but what I am interested in still is what the investor has in this business and that I amortize over 25 years.

Q. You amortize the pipe line over 25 years too, do you not?

(fol. 7898) A. That is included in the investment, yes, sir.

Q. Now, assuming that the life of the field in which this company operates is something in excess of 25 years, is it your opinion that the proper amortization period to

be used for this company is the 25 years which reflects the life of the presently-owned and controlled reserves as distinguished from the life of the entire field?

A. So far as this investment is concerned with the 25-year life, I stick with the computations that I have made.

Now if the company can go out or does go out and reinvests money in some reserves that will last 30 years, you have a new investment and I will use the 30-year period but, for the present investment, it seemed to me a conservative figure to use in view of all that had been said about the reserves in the immediate vicinity of the company's present plant and facilities.

Q. I would like to know the basis of your theory and I would like to have the record clear on this subject, Mr. Coffman, so I shall put a hypothetical case, to make it clear.

Assume that we have a company whose presently-owned and controlled reserves will last for a period of 25 years. Assume that that company operates in gas fields whose over-all life will extend over a period of 50 years.

[fol. 7899] What term of years, under your theory, would you use for the purpose of amortizing the invested capital of that company, the 25-year period or the 50-year period?

A. For that particular investment, we are talking about 25 years.

Q. I call your attention to the statement at the bottom of Page 116 of Exhibit 147, which is the Securities and Exchange Commission's opinion to which reference has heretofore been made, with respect to the recent refinancing.

"An independent geologist has estimated that the minimum life of the reserves is 25 years. It was testified that the company could, without difficulty, acquire reserves sufficient for 30 to 35 years after allowing for a greatly expanding market in Michigan."

I take it that, under your method, that statement would not affect the term of 25 years which you used?

A. No, for the reason that I have given, that the 25 applies to the present investment and a new investment would be made to get the 30 to 35 year reserves.

Q. Mr. Coffman, in your opinion, is Panhandle Eastern Pipe Line Company entitled to earn a fair return on anything other than the prudent investment in its property presently used and useful in the public service, less depreciation?

The Witness: May I have that read, please?

[fol. 7900] (Whereupon, the pending question was read by the reporter.)

The Witness: Well, if you mean by "prudent investment", actual capital that went into the firm, I think that is the figure.

By Mr. Littman:

Q. Let me state the question in another way in order to avoid the difficulty that I see we are about to get into.

In your opinion, is Panhandle Eastern Pipe Line Company entitled to earn a fair return on anything other than the original cost of its property presently used and useful in the public service, less depreciation?

Now, when I speak of "property", of course I mean just that, physical property and intangible property used and useful in the public service.

Mr. Wheat: You mean as a rate base?

Mr. Littman: Yes, as a rate base.

The Witness: My answer, Mr. Littman, has to be based pretty much on the statement I made before.

By Mr. Littman:

Q. Can't you answer this particular question yes or no first, and then explain? I think it would be helpful for the record.

A. I do not believe I can for this reason, maybe I am wrong. If you have a situation where the original cost of the company is a certain item and that company has been [fol. 7901] acquired by another company someplace along the line for which the company actually paid for earning capacity that had been built up and cash actually changed

hands or capital does, I say that that, as distinguished from your aboriginal cost, is the cost of the company, is a part of invested capital.

I include it and that is the reason I can't answer your question directly.

I will answer your question directly if you will say that cash was put into the original property and there was no further investment; yes.

If there was any further investment by reinvestment of earnings, then that still is invested capital and I want to amortize that.

Q. Now, you understand I am now speaking of return, not amortization, Mr. Coffman?

A. Yes, I understand.

. . . . . .

[fol. 7903] By Mr. Littman:

Q. Assume we have a natural-gas pipe-line company such as Panhandle Eastern that owns a pipe line and certain other physical property and certain intangible property used and useful in the service of the public.

Now, what I would like to know is whether, in your opinion, and under your theory, that company is entitled to earn a fair return on anything other than the actual original cost of its property presently used and useful in the public service less depreciation.

Trial Examiner: In other words, are you asking this witness to state whether or not his views take into account other factors than are expressed in the Statute?

Mr. Littman: That is right. I would like to know whether this witness is allowing in his "dollars needed" something more than that which the Statute says the company is entitled to, in fact, much more.

By Mr. Littman:

Q. Now, are you prepared to answer this question?

A. I do not know as I can answer it any differently than I did.

[fol. 7904] If the sum total of that represents invested capital, the answer is yes, that is the figure I am using.

Q. Now, Mr. Coffman, in other words, under your theory, every dollar that the investor has invested in the business, as represented by the total outstanding common stocks, preferred stocks, surplus and bonds, is that upon which the investor is entitled to earn a return for rate-making purposes?

A. That is correct.

Q. Even though a large part of those dollars are not actually invested in property, isn't that right, devoted to public service?

A. If they are still invested capital, I use it.

Q. In other words, if a natural-gas pipe-line company has $20,000,000 of actual property, both physical and intangible, and needs $1,000,000 actually for working capital, $21,000,000 in all,—I am speaking of net property when I speak of $20,000,000,—and has $20,000,000 of cash in the bank, you would, under your method, allow a return upon that $20,000,000 of cash over and above the working capital?

A. So long as it is invested capital and remains in the business. Otherwise, I say that it should be distributed to the capital holders.

[fol. 7905] Q. In other words, your answer is yes?

A. That is correct with the additional statement I made.

Q. And you would also amortize the same, to-wit, the total invested capital?

A. That is correct.

Q. I would like to discuss the subject of taxes with you, Mr. Coffman. Will you please refer to your Exhibit No. 152—withdraw that.

Before discussing Exhibit No. 152, I would like to discuss another matter, namely, your Chart No. 29 of Exhibit 65 which is also related to taxes.

Now, you have estimated, as shown in Chart No. 29 of Exhibit 65, a 10-percent increase for higher wage and materials cost for the projected period beyond June 30, 1941, have you not?

A. I have projected the over-all figure by 10 percent, yes, which allows for variations in labor and material costs.

Q. The amount of the increase is $319,000-odd, is it not?

A. That is correct.

Q. Now, each dollar of increased expenses will reduce taxable net income by $1, will it not?

The Witness: Will you read that, please?

[fol. 7906] (Whereupon, the pending question was read by the reporter.)

The Witness: Yes, that is correct.

By Mr. Littman:

Q. And each dollar of reduced taxable income will reduce the company's liability for Federal income taxes and excess profits taxes by 72.4 cents, as you have heretofore testified?

The Witness: I must be a little tired, will you read that question, please?

(Whereupon, the pending question was read by the reporter.)

The Witness: I think that is about right, yes.

By Mr. Littman:

Q. That is, provided, of course, that that dollar falls in to the top bracket?

A. In the top bracket, yes.

Q. Now, since you estimate increased expenses of $319,000 for your projected period as shown in Chart No. 29, isn't it a fact that taxes will be reduced by 72.4 percent of that $319,000 amount or by approximately $230,956?

A. If the tax remained the same, it would be, if the tax rate remained the same but that was not the analysis that I made.

Q. Of course, if the tax rate goes up 10 percent in the projected period as you have shown it in Chart No. 30—

[fol. 7907] Mr. Culton: (Interposing) He did not say the tax rate would go up 10 percent.

The Witness: No, I said that I applied the 1941 rate and allowed 10 percent additional, not the tax rate.

By Mr. Littman:

Q. For an increased tax rate, didn't you?

A. No, an increase in taxes, not the tax rate.

Q. Very well, but if it is a fact that the taxes will increase an additional 10 percent in the projected period, the savings in taxes would be even greater than the $230,956 which I have indicated, isn't that right?

A. I do not know what the amount would be but that is included in any calculation to get taxes.

Q. What is included in your calculation?

A. I have allowed for this increase in operations and maintenance so if it makes a saving, I have made this comparison with what it was before.

Q. Mr. Coffman, I would like to have you point out to us in your exhibit where you have made any allowance in your estimate of taxes for the projected period by reason of the increased expenses which you show in Chart No. 29.

A. Well, it is automatic when you rebuild the profit and loss statement and apply the new rates.

Q. Can't you show us how you took care of that? We [fol. 7908] have been unable to find it. Your table for Chart No. 13, I believe, shows your calculation, shows the amount of taxes allowed for the year ended June 30, 1941, as reported by the company and, secondly, as adjusted by you to reflect the 1941 increased tax rate.

A. I guess I do not follow you, Mr. Littman, because, if you look over to table for Chart No. 29, you see there in that column the projected figures for the new allowance in the amount of $3,516,000 and that item was considered in the calculation to get the final result.

The only purpose that I had in the other exhibit of showing the comparison was to indicate on the same income basis that the tax rate alone made a difference of $1,000,000 in cost to the company which was just part of my argument to show why it seemed to me to be reasonable that an increased rate should be allowed.

Q. You still have failed to show where, in your exhibit, you reduced the taxes by reason of the increased expenses that you have allowed for your projected period. Where have you done that?

Mr. Wheat: Mr. Examiner, there seems to be some calculation necessary here. Everyone is fatigued after a long day and we are approaching within two or three minutes of the time of adjournment.

[fol. 7909] I am confident we cannot finish tonight and I suggest we go over to a short session tomorrow morning.

Mr. Littman: I do not believe this requires a calculation. Does it? Of course, I appreciate your position.

Mr. Wheat: I think everybody is tired out.

Mr. Culton: Frankly, we concede he made no calculations based on the increased taxes in 1941.

Mr. Littman: If counsel will concede there is a saving coming of the figure which I named of—

Mr. Culton: (Interposing) I stated he made no calculation based on the increased cost in 1941.

Mr. Littman: And gave no credit in his exhibit—

Mr. Culton: That is all I said. That is what you asked him to show, where he gave that in the showing for increased taxes.

There has been no calculation made of increased taxes. There has been no calculation put in evidence showing the amount of taxes based on increased expenses.

Mr. Littman: You see, this witness, Mr. Culton, has a 10 percent increase in expenses.

Mr. Culton: But you keep quoting a 10-percent increase in tax rate and he never has said anything about 10-percent increase in tax rate.

Mr. Littman: Now, Mr. Culton, I gave that up a long time ago. We passed that bridge away back yonder.

[fol. 7910] Now, he allows an increase in taxes.

Mr. Culton: All right.

Mr. Littman: He allows an increase in expenses. He has given no credit in his exhibit for the increased expenses.

Now, I do not pay very much in taxes but I know when my expenses go up in a given year, my taxes go down, all other things remaining the same.

Now, he has not shown the corresponding saving in taxes.

Mr. Wheat: Are you able to answer the question now?

The Witness: The answer is the same as on some of the other detailed items, that I did not breakdown the individual items so I could say one was 10 percent, one 5, another 20 and another nothing.

I allowed for an over-all increase in taxes and that is the reason I have not been able to get your point. I admit I am a little thick this afternoon.

By Mr. Littman:

Q. We can finish this point, at least, before we quit tonight and I think this will clear it up.

You allowed for a 10-percent increase in expenses, didn't you? A. That is correct.

Q. For your projected period? A. That is correct.

[fol. 7911] Q. But you did not reduce the taxes by reason of that increased expense, did you?

A. No, and on the same theory I used in certain other cases, whereas you had that change in the one instance, there might be something that would offset it otherwise so that, on the average, a 10-percent increase over-all for taxes would be a reasonable ultimate figure.

Q. You do not pay taxes on that basis, do you, Mr. Coffman, nor does anybody else pay Federal income taxes on any such basis as that?

A. No, that is correct, but it was an over-all figure because I could not tell, as a matter of fact, what the ultimate result would be.

Q. Well, you knew what your net income was going to be, didn't you, under your theory?

A. I can calculate that, yes, I have it.

Q. But you have not done it in this Exhibit 65, have you? A. That is correct.

Q. That is, you are saying you have not done it?

A. That is correct, I have not made the calculation, that is right.

Q. Nor have you done it in Exhibit No. 152 in that way?

A. No, the purpose of 152 was for a different matter.

* * * * * * * *

[fol. 7935] GEORGE S. YOUNG, a witness, having been previously sworn, resumed the stand and testified further as follows:

* * * * * * * *

Cross-Examination.

By Mr. Littman:

Q. Mr. Young, you have prepared and submitted in this proceeding an exhibit which has been designated as Exhibit No. 77, "Michigan Gas Transmission Corporation-Description of Physical Property", have you not?

A. I have.

Q. In this exhibit, you describe the lines owned by Michigan Gas Transmission Corporation, do you not?

A. I do.

Q. Mr. Young, you are the Vice President and the General Manager and a Director of Michigan Gas Transmission Corporation?

A. That is correct; until February 6 that was the case.

[fol. 7936] Q. You have resigned certain of these positions?

A. I am Vice President only at the present time.

Q. When did you first become General Manager?

A. When I first came to Detroit, June 1, 1936, I was designated General Manager.

Q. When were you elected a Director?

A. In May, 1940, I was elected a Director.

Q. And when did you first become Vice President?

A. In December, 1936.

Q. So that you have occupied the position of Vice President and General Manager from 1936 to February of 1942?

A. Except for a brief period which I have mentioned here when I was on active duty in the Naval Service.

Q. That was in what year?

A. That was in the year 1941.

Q. How long a period were you away from your duties as Vice President and General Manager?

A. From February 1, 1941, until September 1, 1941.

Q. Would you please give us at this time a brief description of the main transmission lines of Michigan Gas Transmission Corporation?

A. As they exist at the present time?

Q. Yes and, if you wish, you may refer to your map, Exhibit No. 78.

A. The Michigan Gas Transmission Corporation main [fol. 7937] line pipe system starts at the Illinois-Indiana State line or very near the Indiana-Illinois State line and runs eastward from there for about 72 miles and is composed of a 20-inch pipe line and a 24-inch pipe line.

Q. May I interrupt to ask whether the starting point is at Dana, Indiana, and the terminal point for the line which you have just described is at Zionsville, Indiana?

A. That is correct, at a point near Zionsville.

Q. That is what is known as a loop line, is it not?

A. That is correct.

Q. Now, will you continue your description?

A. From Zionsville, a main pipe line continues in a northerly direction to Muncie, Indiana. This is an 18-inch pipe line. At the terminus of the loop pipe line which we have mentioned and which is near Zionsville, Indiana, there is a 22-inch pipe extending in a northeasterly direction about 230 miles to Detroit.

Q. What is the length of the 18-inch line running from Zionsville to Muncie?

A. That is about 52 miles, approximately 52 miles.

Q. In addition to the lines that you have mentioned, is it not a fact that Michigan Gas Transmission Corporation also owns certain lateral lines?

A. That is correct.

Q. Will you please describe those, briefly?

[fol. 7938] A. There is a 6-inch line extending from a point on the loop line to Crawfordsville. That is a 6-inch line. Do you wish me to give the length of it?

Q. Approximately.

A. I can only give the footages as I read them off here. That line is approximately 98,000 feet.

There is another lateral line, A-107, extending from the loop line to Lebanon. I read from the map that that is 69,598 feet.

From the pipe line extending from Zionsville to Detroit which is designated at this point as Line C, there is a lateral pipe line C-104 extending to Tipton, Indiana, which is 69,774 feet. Also from Line C to Fort Wayne, there is a later line designated as Line C-101, 66,104 feet. This lateral pipe line is partially looped, I believe, to the extent of about 60,000 feet. It is not indicated on this map.

Those are the principal lateral lines which belong to the Michigan Gas Transmission Corporation. There are a few very short lines tying on to measuring stations which are adjacent to the main pipe line.

Q. When did Michigan Gas Transmission Corporation begin operating these lines that you have described?

A. As of June 1, 1936, or shortly thereafter. I came to Detroit on June 1, 1936, and it was shortly thereafter we picked up the operation on them.

[fol. 7939] On June 1, 1936, we had only the pipe line extending from Dana to Muncie. Line C, the 22-inch line, had not been completed as of that date but we immediately picked up the operation of the 22-inch line when it was completed.

Q. In addition to the lines that you have just described, Michigan Gas Transmission Corporation has been operating certain other lines, has it not?

A. That is correct.

Q. Will you describe those lines?

A. One of those lines extends from Muncie in a southeasterly direction a distance of about 30 miles. It is a 16-inch line which, until February 6 of this year, belonged to the Ohio Fuel Gas Company.

Q. Now, what other lines belonging to Ohio Fuel Gas Company has Michigan Gas Transmission Corporation been operating?

A. The line which I have just described as designated on the map as Line D and from that line there is a lateral line designated D-172, a 6-inch line extending to Winchester, Indiana.

Q. That line is, in reality, a lateral line, is it not?

A. That is a lateral pipe line.

Q. Will you continue your description of the Ohio Fuel Gas lines which your company has been operating?

A. Since about October 6, when the Richmond market was connected, we have also been operating that part of the 16-inch line which extends into Ohio to a point where [fol. 7940] the line connecting Richmond takes off. We have also been operating that lateral line there which connects Richmond and prior to the time that the Richmond market was connected, we maintained that section of pipe line down to Richmond which was within the State of Indiana.

Q. What is the size of the line running from Richmond north to the junction with Line D?

A. It is indicated as being 10-inch.

Q. Now, has your company also been operating that portion of the Ohio Fuel Gas line which is not colored on this map, Exhibit No. 78, which extends into Ohio?

A. Yes, since the Richmond market was attached which, I believe, was October 6, 1941.

Q. Now, how far does that line extend into Ohio?

A. I do not have that figure.

Q. Just approximately.

A. I would say approximately 2 miles.

Q. And does any of Michigan Gas Transmission Corporation's gas pass beyond that point eastwardly?

A. No, it does not.

Q. But the line itself physically does extend further east, does it not?

A. Yes, there is a continuation of that Line D further east. It is indicated on this map as Z-50.

Q. Is there a break in that line at the point where [fol. 7941] Michigan Gas Transmission ceases to operate the line?

A. There is not. It is continuous.

Q. It is a continuous line?

A. Yes.

Q. There is a valve shutting off the flow eastward?

A. That is correct.

Q. And from that point, the gas flows due south and somewhat to the west to Richmond, Indiana?

A. That is correct. The valve that I speak of, that is, the block valve in that Line Z-50, is not exactly at the point of take-off but it is very close.

Q. How long has your company been operating this Ohio Fuel Gas Line?

A. That is, all of the Ohio Fuel Gas lines that I have described?

A. Yes.

The operation of those lines was picked up shortly after June 1, 1936. I do not remember just exactly when it was but it was shortly after that time.

Q. When were those Ohio Fuel Gas lines that your company has been operating constructed?

A. The information I have with regard to Line D is that it was constructed in 1913. As to the other two, that is, the line which is designated D-178 and the Richmond line, I have no information as to when those were constructed.

[fol. 7942] Q. Isn't the correct number D-172?

A. D-172 is the lateral I do not know about.

Mr. Baldridge: Mr. Young, did you mention the little stub of lateral that goes to Lynn?

A. I have not mentioned that, no. That is a very short lateral.

Mr. Baldridge: That comes off the line you described as being D?

The Witness: That comes off the Line D as indicated on this map.

Mr. Baldridge: These lines that you described as belonging to Ohio Fuel Gas Company were sold by Ohio Fuel Gas Company to Panhandle Eastern Pipe Line Company on February 6, were they not?

The Witness: Yes, that is correct.

By Mr. Littman:

Q. Can you state the price at which these lines which you have described were sold by Ohio Fuel Gas Company to Panhandle Eastern Pipe Line Company?

A. I have read the agreement under the terms of which these lines were sold and my recollection is that these pipe lines to which you have referred were sold for $439,000 in round figures.

Q. $439,326.08 is the figure to which you refer?

A. I do not remember the dollars and cents. I just remember the round figure.

[fol. 7943] Trial Examiner: Are counsel in agreement that that is the figure?

Mr. Culton: Yes, sir. That appears in the S. E. C. statement, Exhibit 147, I believe.

Mr. Littman: The figure which I read was taken from the Securities and Exchange Commission's opinion which is in evidence as Exhibit 147.

By Mr. Littman:

Q. Under what arrangement has Michigan Gas been operating these Ohio Fuel Gas lines which you have described?

A. There has been no written contract covering their operation. The Michigan Gas Transmission Corporation has operated the pipe lines and received the revenue from the sale of gas sold from these pipe lines, but it has not paid the Ohio Fuel Gas Company anything during the period that I speak of for the use of these lines.

Q. No rental was paid?

A. No rental was paid.

Q. For the use of the line?

A. That is correct.

Q. The Ohio Fuel Gas Company is a wholly-owned subsidiary of Columbia Gas & Electric Corporation, is it not?

A. I believe it is. I am not sure of that. It is a Columbia subsidiary. I do not know whether it is wholly-owned or not.

[fol. 7944] Q. Who bore the expenses of maintenance and operation of these Ohio Fuel Gas lines?

A. The Michigan Gas Transmission Corporation.

Q. So that your operating statements in the past few years, at least since 1936, reflect the operations and maintenance costs of those lines, do they not?

A. That is correct.

Q. What of the depreciation expense and cost of replacements? Who has borne that?

A. I am not sure about that, Mr. Littman. I think the Ohio Fuel Gas Company has borne that.

Q. Will you please try to ascertain that for us and report back?

A. I shall.

Q. Did Ohio Fuel Gas Company either directly or indirectly derive any revenue from these lines which you have described during the period 1936 to date?

A. Not to my knowledge, no.

Q. That is, that situation obtained during the time that you operated the lines?

A. That is correct.

Q. What cities are now served by these Ohio Fuel Gas lines?

Mr. Baldridge: May I inject something there. You mean by "these lines", all of the Ohio Fuel Gas lines?

[fol. 7945] Mr. Littman: Yes. I have been describing them as the Ohio Fuel Gas lines. I think the record now shows they have been sold to Panhandle Eastern Pipe Line Company.

The Witness: Michigan Gas Transmission Corporation has sold gas to Indiana-Ohio Public Service Company, which distributes gas in the Towns of Winchester, Portland and Union City. It also has sold gas to Lynn Natural Gas Company and, since October 6, 1941, it has delivered gas to Richmond for the account of Panhandle Eastern Pipe Line Company.

In addition to that, there has been a sale made to the Indiana Gas Distribution Corporation for ultimate resale to the Anchor-Hocking Glass Company which is located near Winchester, Indiana.

By Mr. Littman:

Q. What do you have to say with respect to the physical condition of these lines formerly owned by Ohio Fuel Gas Company?

A. I would say that the condition of the lines is only fair.

Q. What causes you to make that statement and what facts lead you to that conclusion?

A. The leakage which we have been able to determine from that line and the amount of maintenance work which we have had to do on the line. I am speaking particularly of Line D. Line D-172 has not required a great deal of maintenance.

Mr. Littman: Will you please read that answer back?

[fol. 7946] (Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. What has been the recent experience of the company with respect to leakage on Line D which is the 16-inch line extending from Muncie to a point a little beyond the Ohio-Indiana State line?

A. I do not have those figures here, Mr. Littman. I could produce them.

Q. But you do know that the leakage is abnormally high?

A. That is correct.

Q. Will you please secure the leakage figures on that line?

A. I will.

Q. And report back later?

A. All right.

Q. What has been the extent of the leakage on the line running north from Line D, namely, the Line D-172 running to Winchester, Indiana?

A. The leakage on that system east of Muncie has been determined as a whole. That is, we have taken the sum of the measurements of gas taken from that line and subtracted it from the delivery of gas into that pipe line so that the leakage figures which I will present reflect the leakage from the entire system.

Q. You are referring to points east of King measuring [fol. 7947] station?

A. East of King measuring station.

Q. Which is to the east of Muncie?

A. That is right, and the figures that I would present, at least for the years 1940 and prior thereto would only cover down to the State line.

Q. What has been the maintenance experience of Michigan Gas Transmission Corporation in operating Line D extending from Muncie to the Ohio-Indiana Line and slightly beyond it east?

A. We have had a considerable amount of maintenance on that pipe line. By that I mean that we have had to repair a considerable number of leaks on the pipe line and recondition the couplings between that pipe line.

Q. What type of couplings are on this line?

A. Well, they are the Dresser type of couplings. I do not know whether these were manufactured by Dresser or by another manufacturer, but they are the Dresser type.

Q. Are you prepared to state the maintenance figures for the years during which Michigan Gas has operated Line D?

A. I am not sure about that. I cannot at this moment. I am not sure whether they can be segregated or not.

Q. Will you please ascertain that fact and, also, see if you can get us the maintenance figures for the lateral line extending north to Winchester?

A. Yes.

[fol. 7948] Q. Can you give us a description of Line D in the same detail as that which you have given for Michigan Gas Transmission lines in Exhibit 77?

A. Do you mean as to length, Mr. Littman?

Q. I mean particularly as to the type of pipe and the type of couplings, river crossings, the same information which you have with respect to the other lines in Exhibit 77.

A. The 16-inch line is a coupled line and, as far as I know, the points at which lengths of pipe are coupled, I do not believe that double random lengths or 40-foot lengths of pipe were available at the time that pipe line was constructed.

Q. This is steel pipe?

A. It is steel pipe.

Q. Are there any river crossings?

A. There are no multiple river crossings, there are some stream crossings there but no multiple river crossings.

Q. What is the wall thickness of the pipe?

A. I do not know.

Q. Has your company ever made any pipe inspections on that line? By that I mean have they dug any holes along the line and made reports?

A. No, they have not. Of course, they have dug a great many holes to make inspections and have noted the conditions, not to make inspections but to make repairs at points where leakage was indicated, and they reported the condi-

[fol. 7949] tions found when they dug down but we have not made any investigation of this pipe line.

Q. Are the reports that were made at the time each of these repairs was installed with respect to the condition of the pipe line filed and are they on file at your offices here in Detroit?

A. They are. They report the repair work undertaken on the line. I do not believe they express any information as to the condition of the pipeline or anything like that.

Q. Have you personally ever observed any of the pipe on this line?

A. I have not. Well, I have observed it where it has been exposed where it passes through creek beds, but I have not observed any of the buried pipe.

Q. Has Michigan Gas Transmission Corporation followed the practice of making routine pipe inspections on its lines?

A. Oh, it has not made routine pipe inspections but several pipe inspections were made prior to the time that the inspection was made which was presented in connection with this rate proceeding.

Q. You were referring to Mr. Riddle's inspections when you referred to those that were made for the purposes of this proceeding?

A. That is correct.

Q. Will you tell us something about the prior inspec- [fol. 7950] tions, who made them and how often were they made?

A. I cannot give you much detailed information. Copies of those were referred to your engineer, Mr. Bodner. I think there were either three or four of them.

Q. What do you mean by three or four of them?

A. Three or four reports.

Q. Reports?

A. Made at different times.

Q. Do they cover a number of different inspections?

A. They cover a number of different inspections.

Q. Has it been the practice of Michigan Gas to have reports made as to the condition of pipe when pipe is uncovered during the course of repair or other work?

A. If conditions were found when the pipe was uncovered that were not entirely satisfactory, it has been a matter for discussion, but I do not recall that any formal reports have been made covering that.

Q. You mean you have nothing in writing with respect to the condition of the pipe observed at these points when uncovered for purposes of repair or other work?

A. No, not that I can recall.

Q. Can you state how many leaks which were caused by corrosion have been repaired on the main transmission lines of Michigan Gas Transmission Corporation system since you came with that company in 1936? I am excluding the lines formerly owned by Ohio Fuel Gas Company from [fol. 7951] my question.

A. You are referring now to leaks through pitting in the pipe?

Q. Caused by corrosion.

A. I cannot recall any at this moment.

Q. Let us take the past year, do you recall any in the past year?

A. Well, I would say within the last few days, I have had a report with regard to one leak due to corrosion in Line A, I believe it is designated on this map. That is the 20-inch line.

Q. That is the line running from Dana to Zionsville?

A. That is correct, and it is the 20-inch part of that loop.

Q. Where was that leak discovered in the line?

A. I cannot tie that down very definitely, Mr. Littman. It was some place on the 20-inch line.

Mr. Littman: Will you please read the answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. Will you ascertain the point and report that information to us during the course of this hearing?

Mr. Culton: Mr. Young, that is the old portion of the line?

The Witness: That is the 20-inch portion of the loop, the other portion of the loop is 24-inch.

By Mr. Littman:

[fol. 7952] Q. And that latter line, which you have just described, on which the leak occurred was installed in what year?

A. In 1931.

Q. Now, do you know of any other leaks which have been discovered on your main transmission line, since 1936?

A. I know of no others resulting from corrosion. There have been other leaks in couplings.

Q. What caused those?

A. Well, the rubbers in the couplings leaked or the center ring in the coupling failed.

Q. What do you mean when you say, "the center ring failed"?

A. The center ring is welded. If is a ring seven inches wide which is welded and, in some cases, there have been failures of that which have permitted leakage.

Q. That is mechanical failure?

A. That is correct.

Q. Has any pipe been replaced in the main transmission line of Michigan Gas Transmission Corporation since they were first installed for any reason?

A. Yes, at the time the breaks occurred in the pipe line in January 1937, some of the pipe which was blown out of the ground at that—

Q. (Interposing) I believe you have described that in your Exhibit 77.

A. I do not know that I have stated there that any pipe [fol. 7953] was replaced. I have described the breaks.

Q. How many lengths of pipe were replaced by reason of those breaks which are described in Exhibit 77, Pages 15 to 17?

A. Well, I believe that about four or five lengths were replaced. I am not sure of that.

Q. Now, does that constitute all of the replacements of pipe in the main transmission system of Michigan Gas since the lines were originally installed?

A. To the best of my knowledge that constitutes all of the replacements since 1936. There may have been replacements in pipe line extending from Dana to Muncie prior to that time and I would not know about that.

Q. Michigan Gas Transmission Corporation did not own these lines prior to 1936, of course?

A. No, that is correct.

Q. Do you have an opinion as to the probable life of the main transmission lines which were installed in 1930?

A. No, I have not.

Q. Do you have any opinion as to the probable life of the main transmission lines which were installed in 1936?

A. I have not. I have not given any thought to that subject.

Q. You are an engineer, are you not?

A. I am an engineer, yes.

Q. Do you know what amount has been accumulated in [fol. 7954] the depreciation reserves of Michigan Gas Transmission Corporation at the end of 1941?

A. I do not know exactly, Mr. Littman. I believe, from an examination of financial statements, in the neighborhood of $2,000,000.

Q. Do you have copies of the 1941 financial statement?

A. No, I do not have that with me.

Q. Does anyone here have a copy of it?

A. I will get one.

(A document was handed the witness.)

The Witness: On page 2 of the financial statement for the period ended December 31, 1941, it is indicated that the reserves as of December 31, 1941, were $2,212,098.76.

By Mr. Littman:

Q. Now, will you please state how much of that represents the reserves for depreciation?

A. Well, I am not a accountant, Mr. Littman, and I do not know that I can clear that matter up. I am reading from Page 2-A of the financial statement for the period ended December 31, 1941, and it states that the reserves for retirement and depletion as of that date were $1,697,894.03.

Q. In your opinion as the manager of the property of the Michigan Gas Transmission Corporation, is this reserve an adequate, reasonable and proper reserve for the depreciation and amortization which has accrued on this [fol. 7955] property to December 31, 1941?

A. The reserve that has been accrued for amortization and depreciation of the property was based on an estimated life of the field, that is the field which supplies these pipe lines and I am not in a position to say at this moment whether that is adequate or not. That is something that was not within my province to determine.

Q. Well now, what was the life of the gas field upon which the depreciation rates that went to make up this reserve were charged in the past?

A. Well, as of 1936 when we started to charge 3 percent for this account, it was estimated that the life of that field was about 33 years. That figure was given to me at that time and on that basis we proceeded to charge 3 percent.

Q. And you think that on that basis, on that assumption, the reserve is adequate?

A. Well, if the life of the field is, as it has been reported, reasonable, I believe I could say that it was adequate as a figure to cover amortization on a straight line basis, but whether is is adequate to cover other things, I am not sure at this time.

Q. What part, if any, did you have to play in the determination of the depreciation rates which have been applied in the past years for depreciation and amortization?

A. None whatever.

[fol. 7956] Q. You did not have anything to do with it?

A. No, I was simply told what to do.

Q. Who told you what to do in that regard?

A. The management of the Michigan Gas Transmission Corporation which is located in New York.

Q. And what was the name of the individual who told you?

Mr. Beckjord, who was President of the Michigan Gas Transmission Corporation.

Q. Now, the rates that have been charged in the past for depreciation and amortization are shown in Exhibit 99, Page 3, are they not?

A. I am not familiar with the details of this statement, Mr. Littman. It was prepared by Mr. Spitznagle.

Q. Well, the heading of Page 3 reads "Depreciation Provisions Per Books for the Years Ended December 31, 1936, to 1940, Inclusive, and Six Months Ended June 30, 1941."

Don't you recognize these depreciation rates as the rates which are shown on the books of your company?

A. I do not recognize them as such, but I presume that they agree, however, that is, I do not have the figures that were actually charged to this account in my mind.

Q. You mentioned something about a 33-year life of the gas supply. You see, do you not, the rate of 3 percent on Line 4 which has been applied to most of the property of Michigan Gas Transmission Corporation? Do you recognize that?

[fol. 7957] A. Is that on Page 1, Exhibit 99?

Q. Page 3.

A. Excuse me. Yes, I see that.

Q. To the best of your knowledge, Mr. Young, as the operating manager of this property, would you state that the depreciation rates which have been applied by this company since 1936 have been adequate, reasonable and proper and are adequate, reasonable and proper for the purpose of providing annual allowances for depreciation and amortization?

. . . . . .

[fol. 7959] The Witness: Well, I do not know anything about the theory of accounting, understand that, Mr. Littman, but I would say that if the life of this field which has been reported or was reported as of the date that we started to charge 3 percent is correct, that, in my opinion and again understand I am not an expert in these matters—that would probably be adequate.

By Mr. Littman:

Q. And reasonable?

A. Yes, and reasonable.

. . . . . .

The Witness: Mr. Littman, I failed to mention some other pipe lines which are owned by other companies and operated by the Michigan Gas Transmission Corporation. One is a pipe line belonging to Public Service Company of Indiana extending from Crawfordsville to Lafayette.

By Mr. Littman:

Q. What is the distance of that line?

[fol. 7960] A. It is not indicated here but my recollection is that that is about 23 miles.

Q. That is not colored on map, Exhibit 78, is it?

A. No, it is indicated as a dotted line on Exhibit 78.

Q. How long has Michigan Gas Transmission Corporation been operating that line?

A. Since 1937, I believe, since the date the contract was made with the Public Service Company.

Q. Will you describe, generally, the arrangements under which that line is operated?

A. It is a contractual arrangement.

Mr. Baldridge: Isn't that set forth in a contract filed with the Commission?

The Witness: That is right. It is part of the contract covering the sale to this company.

Shall I proceed?

By Mr. Littman:

Q. Yes.

A. And in addition, the line extending from the one just described to Attica which also belongs to the Public Service Company of Indiana and is a 4-inch line.

Q. Now, is the contract under which that line is operated by Michigan Gas also on file with the Federal Power Commission? A. Yes, it is.

Q. What other lines did you want to describe?

[fol. 7961] A. The line belonging to the Toledo-Edisen Company supplying Defiance.

Q. Defiance, Ohio?

A. Defiance, Ohio. My recollection is that about 5 miles of 3-inch pipe line owned by the Toledo-Edison Company is operated under the terms of the lease agreement by the Michigan Gas Transmission Corporation.

Q. Is that agreement on file?

A. I do not know, Mr. Littman.

Mr. Littman: Do you know, Mr. Baldridge?

Mr. Baldridge: Which agreement was that?

Mr. Littman: The agreement with reference to the Defiance line, the lateral line.

Mr. Baldridge: I know the agreement for the sale of gas to Toledo-Edison is on file. Whether the agreement for the maintenance of the line is on file, I rather doubt, because it did not appear to be—as I recall it and I am speaking from recollection now and I may be wrong—it did not appear to be anything that affected the rates and may not be on file.

By Mr. Littman:

Q. Can you state, Mr. Young, whether Michigan Gas bears all of the operation and maintenance expenses of these lines which you have just described?

A. It bears the operating and maintenance expense but does not bear the tax cost.

[fol. 7962] Q. Are you speaking now of the ad valorem taxes?

A. I am speaking of all taxes.

Q. Federal, as well as State and local?

A. All taxes, I would say. We pay no taxes on those properties. Of course, we will pay an income tax to the extent that we profit from the sale to the customers served by those lines.

Q. That is, you pay the Federal income tax and excess profits tax on the revenue derived from these lines as well as other lines? A. That is right.

Q. But all other taxes are borne by the companies that own these lines in fee?

A. Of course, the people who are engaged in operating these lines are our employees and we have to pay certain taxes on those people, Social Security taxes and things of that sort, but we do not pay any property taxes.

Mr. Baldridge: May I interrupt to say that the contract with the Public Service Company of Indiana which has been referred to and under which the seller, that is, Michigan Gas Transmission Corporation, agrees to operate a certain line or lines as Rate Schedule No. 17.

Trial Examiner: When was that filed, Mr. Baldridge? It was filed with the Federal Power Commission on what date?

Mr. Baldridge: It was filed with the Federal Power [fol. 7963] Commission, I think about September 1, 1938, at the time when all the contracts were required to be filed. There have been one or two supplements to that contract but those do not affect the lines in question, as I recall. Those lateral lines were provided for in the original contract which is dated October 1, 1936, and, as I say, was filed, I think, around September 1, 1938.

I am not sure just exactly about the date but it was at the time when the companies' contracts were filed or rate

schedules were filed pursuant to Order No. 53 of the Federal Power Commission.

By Mr. Littman:

Q. What company bears the depreciation cost for these lines, that is, which company carries the depreciation reserve? A. The company owning the pipe lines.

Q. That is not Michigan Gas Transmission Corporation?

A. They are not a part of our property account.

Q. Does that complete your description of the lines?

A. Yes, sir.

Mr. Baldridge: May I inject another question, Mr. Littman. I do not like to interrupt but I think we may get along faster. None of these lines operated by Michigan Gas Transmission Corporation belonging to other companies are carried in any way in the Michigan Gas Transmission Corporation's plant account, are they?

[fol. 7964] The Witness: No.

By Mr. Littman:

Q. Mr. Young, are you generally familiar with the major sources of natural gas in the United States within, let us say, a radius of a thousand miles of Dana, Indiana?

A. Only in a very general way. I have not had any reason to investigate them personally. I have read about them, that is all.

Q. You know, generally, where the major sources of supply are located? A. Yes, I do.

Q. Will you name the major sources of natural gas supply in the United States west and south of Dana, Indiana, which are within approximately a thousand miles of Dana?

Here is a map of the United States which may help you.

(The map indicated was handed the witness.)

A. The major sources that I know about are in the Hugoton Field and the Texas Panhandle fields which are, so far as I know, the major sources. Then I believe that the Gulf Coast area is a major source of supply which, I think, is within a thousand miles of Dana and west.

Q. You are referring to the southeastern part of Texas, are you not? A. That is correct.

Q. And the southern part of Louisiana?

[fol. 7965] A. That is correct.

Q. There is a very extensive gas field down there, isn't there?

A. I understand that there is, yes.

Q. Where is the Monroe Gas Field located?

A. I understand that that is in northern Louisiana.

Mr. Culton: Do you know if that is the field that Southern Natural is having to abandon and get gas somewhere else?

The Witness: I do not know, Mr. Culton.

Mr. Culton: There was some testimony about that a few days ago.

The Witness: I only know it by name. I do not know the condition of it.

By Mr. Littman:

Q. I will not ask you, Mr. Young, to confine yourself to 1,000 miles. You might go out 1,500 miles if required to embrace some of the larger fields of the country.

There is another large field in Texas, is there not?

A. There is the Texas Panhandle, West Texas, which I have mentioned.

Q. Where is the Waskom Field located?

A. I do not know.

Q. Dana, Indiana, is a point close to the Indiana-Illinois State line at which point your lines join those of Panhandle Eastern, isn't that correct?

[fol. 7966] A. That is correct.

Q. And isn't it a fact that the lines of Michigan Gas Transmission Corporation could be used to transport gas from these Gulf fields which you described and from the Louisiana gas field?

A. Physically, yes, if the gas was piped to Michigan Gas Transmission Corporation from the Gulf Coast area, our pipe line could deliver that gas provided they are not prevented from doing so by reason of contracts in existence.

Q. Will you please turn to Exhibit No. 79, Mr. Young.

Before passing to Exhibit No. 79, Mr. Young, I would like to ask you this: If and when the Panhandle Field

of Texas and the Hugoton Field of Kansas and Oklahoma are exhausted, isn't it a fact that the Michigan Gas Transmission lines could be used, in all probability, to carry natural gas from the Gulf gas fields and the Louisiana gas fields, assuming that that could be done economically, isn't that correct?

A. Physically, I would say that the lines would be available to transport gas if they are in condition to do so.

Mr. Baldridge: I did not hear that. Will you read the answer?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. That is to say, the Michigan Gas Transmission lines are in a direct route between markets presently served, [fol. 7967] such as Detroit, by your lines and these fields that you have mentioned, isn't that correct?

A. The Gulf Coast fields are to the southwest of Dana and they are more or less on the route of a pipe line which might be built from that source.

Q. You are familiar, are you not, with the fact that the Hope Natural Gas Company proposes to build a line extending from the Louisiana gas fields northward into the Appalachian district, particularly into the State of West Virginia?

A. I have no first-hand knowledge of that. I read about it in the trade papers and that is the extent of my knowledge with regard to it.

Q. Let's look at your Exhibit No. 79, sir.

A. All right, sir.

Q. This exhibit is entitled, "Comparison of Daily Provided Capacity to Deliver Firm Gas with Maximum Daily Delivery of Firm Gas from System of Michigan Gas Transmission Corporation".

Were all of the pipe lines of Michigan Gas which are shown on your map, Exhibit No. 78, in service on March 18, 1941, the date of the highest demand in the winter of 1940-41?

A. I was not on the job at that time, Mr. Littman, but I understand that they were.

Q. If your impression is erroneous, you will correct the record in that regard, will you not? A. I shall.

[fol. 7968] Q. What was the total horsepower of the main compressor engines at each of the three compressor stations operated by Michigan Gas on March 18, 1941?

A. At Montezuma compressing station—7800 horsepower; at Zionsville compressing station—6500 horsepower, and at Edgerton compressing station—3900 horsepower.

Q. What additional pipe lines and horsepower have been added since March 18, 1941?

A. The partial looping of the Fort Wayne lateral has been carried out and two additional 1300 horsepower gas engine compressing units have been installed at Edgerton compressing station.

Q. What is the "provided daily capacity to deliver firm gas in M.c.f."; as that phrase is used in your Exhibit 79, for the winter period 1941-1942?

I have in mind that you should supply for me a column in the same detail as shown in Column K in your Exhibit 79.

A. I shall do that.

Q. You can do it now?

A. I can tell you in a general way the additions.

Q. Can you give me the total?

A. The additional markets which have been added are Richmond and Greenfield, Indiana, which would only increase the amount shown there under Column K, that is, the total shown under Column K by 1,500,000 or 2,000,000 per day.

[fol. 7969] Q. You are now speaking of a million or a million and a half cubic feet? A. That is correct.

Q. That is in addition to the 159,850 M.c.f. figure which appears as the total at the foot of Column K?

A. That is correct.

Q. Will you now please supply the information that I have requested, in the same detail as shown in Column K, for the winter 1941-1942? A. I will.

Q. What has been the "maximum daily delivery of firm gas in M.c.f." to date during the present winter of 1941-1942?

A. The maximum delivery of firm gas for the period that you have mentioned—excuse me, Mr. Littman, I cannot give you that figure at this time. I have here a figure of the total gas delivered by our system, that is, by the Michigan Gas Transmission Corporation system during the cold period, January 6, 7 and 8, but I do not have the daily measurement of certain interruptible customers for those days to substract from these so that I can give you delivery of firm gas on those days.

Q. Will you please supply that information in the same detail as in shown in your Column L of Exhibit 79 for the maximum daily delivery of firm gas in M.c.f.?

A. I will.

Q. Mr. Young, I would also like to have you supply [fol. 7970] along with this latter information the total deliveries of gas on that date of maximum demand in the winter 1941-1942 thus far.

A. That would be the total including interruptible gas?

Q. Yes.

A. I can give it to you now.

Q. Very well.

A. For January 6, 1942, the total delivered, including the company use, was 176,347 M.c.f.; January 7, 178,937 M.c.f.; January 8, 177,447 M.c.f. All of the figures which I have given you include the requirements for company use.

Mr. Culton: That also includes certain interruptible customers, as I understand.

The Witness: That includes all of the interruptible customers who are being served at that time.

By Mr. Littman:

Q. And were not interrupted at that time?

A. Some were interrupted, not interrupted, to curtail.

Q. But you did interrupt some customers on January 6, 7 and 8, 1942?

A. There was some curtailment.

* * * * * * * * *

[fol. 7971] Q. Mr. Young, has Michigan Gas Transmission Corporation prepared an operating budget for the year 1942?

A. Yes, the Michigan Gas Transmission Corporation did prepare an operating budget for the calendar year 1942 in the month of December, 1941.

Q. Where is that budget located?

A. It is in the Michigan Gas Transmission Corporation's office.

Q. Here in Detroit?

[fol. 7972] A. That is correct.

Q. What is the form of that budget? Is it a bulky document? Perhaps you had better describe it.

A. I would say it is quite a bulky document, probably 40 pages of certain forms taken from the financial statement which show the estimated net income and net operating income for the year 1942. It also contains statistical data as to estimated sales and statistical data as to taxes and so forth.

Q. And revenues and so forth? A. That is correct.

Q. What part did you play in the preparation of that budget?

A. The budget was prepared under my supervision by several people, several persons employed by the Michigan Gas Transmission Corporation.

Q. And it represents the best judgment of yourself and the management with respect to the revenues and expenses and other items shown therein for the year 1942, does it not? A. That is correct.

Q. Will you produce a copy of that budget for our examination today?

Mr. Baldridge: May I ask a question there, Mr. Littman?

Mr. Young, has this budget been approved by the Board of Directors?

The Witness: No, it has not been. It is submitted as a [fol. 7973] routine matter by us.

Mr. Baldridge: So that it has not yet been adopted by the Corporation as such, either by the former Board of Directors or the new Board?

The Witness: Of course, it was submitted to New York.

Mr. Baldridge: You did not answer the question, it has not been approved either by the former Board of Directors or by the new Board?

The Witness: Not to my knowledge.

By Mr. Littman:

Q. Has it been submitted to either the new Board or the old Board of Directors directly?

A. Not to my knowledge.

Q. Has it been submitted to the management?

A. The routine in connection with submitting those operating budgets is to submit them to the accounting department or the Columbia Gas and Electric Corporation in New York.

Q. That has been done?

A. That has been done.

Mr. Baldridge: Don't you mean Columbia Engineering Corporation?

The Witness: I do.

By Mr. Littman:

Q. Suppose you tell us to whom this budget has been submitted.

[fol. 7974] A. I do not know, I do not believe I can name the person at the present time. It is one of the treasurers in the Columbia Engineering Corporation. There are several of them over there and I cannot name the specific one at this time to whom it was submitted.

Q. And it is a routine matter to submit the budget for each year to the Columbia Engineering Corporation?

A. To a person employed by the Columbia Engineering Corporation.

Q. And that is the company, namely, the Columbia Engineering Corporation, which passes upon the budget on behalf of the management, to-wit, on behalf of Columbia Gas & Electric Corporation?

A. I do not know exactly what use they make of it after they receive it, Mr. Littman. I presume they use it for the purpose of making forecasts, but exactly what use they make of it I do not know.

Q. Is it routine for the Board of Directors of Michigan Gas Transmission Corporation to approve these budgets each year?

A. I do not know whether it is routine or not. At no time while I was a Director of this company was an operating budget submitted to the Board of Directors for approval.

Q. So the fact that the Board of Directors of Michigan Gas Transmission Corporation has not approved this budget is not any different than the situation that has ob-
[fol. 7975] tained in the past years?

A. Well, I was lately made a member of the Board of Directors. Now, it might have been the intention to submit that for the approval of the Board of Directors at a later date, I do not know that.

Q. And it might not?

A. It might not. I do not know what the procedure is.

Q. And the Michigan Gas Transmission Corporation has been operating under and in accordance with the 1942 budget since January 1, 1942, has it not?

A. Well, I would say yes, up until the time of the transfer.

Mr. Baldridge: Mr. Littman, may I interrupt with a question there? I do not like to keep interrupting, but I think we make better progress in this way.

Mr. Young, when was the budget sent to Columbia Engineering Corporation?

The Witness: I think that the date of it is early December and just when it was sent I do not know.

Mr. Baldridge: Of course, the functions of Columbia Engineering Corporation as to matters of Michigan Gas Transmission Corporation would be terminated as of February 6?

The Witness: Yes.

Mr. Baldridge: Except for a few odds and ends necessary in order to provide a smooth transfer from one management to another?

[fol. 7976] The Witness: As I understand it, there will be adjustments made as of a certain date.

By Mr. Littman:

Q. You cannot tell us what they are, can you?

A. No, I cannot. I think they are adjustments which will result from things that might be done between now and the date set to make that final adjustment, such as bills for services incurred prior to February 6 and things like that which have been paid subsequent to February 6.

* * * * * * * *

[fol. 7984] By Mr. Littman:

Q. Mr. Young, in your testimony this morning, you referred to a company called Columbia Engineering Corporation, did you not? A. That is correct.

Q. Does that corporation render services to Michigan Gas?

[fol. 7985] A. It does.

Q. What is the nature of those services?

A. It did render services prior to February 6. The nature of the services was largely auditing, tax, engineering service.

Q. Has that company been rendering management services to Michigan Gas Transmission Corporation?

A. There is a contract, or there was a contract, rather, between Columbia Engineering and Michigan Gas Transmission Corporation, and if I recall correctly, the services of certain people in New York who rendered management service to the Michigan Gas Transmission Corporation were billed at cost.

Q. In other words, it has rendered management services to Michigan Gas Transmission Corporation?

A. Only in the person of Mr. Beckjord, I believe.

Q. What position does Mr. Beckjord occupy in Columbia Engineering Corporation?

A. He is President.

Q. That corporation is what is known as a mutual service company, is it not?

A. I am not familiar with the designation.

Mr. Baldridge: I object to that, Mr. Littman, because that is asking for a very technical designation. It is a service corporation—

Mr. Chamberlain: (Interposing) Isn't that the legal [fol. 7986] terminology for it?

Mr. Baldridge: No, I think not, because the service company's stock is held by Columbia Gas and Electric Corporation and the service contracts and the revival of Columbia Engineering Corporation were approved by the Securities and Exchange Commission.

It is a service corporation as that term is generally used but I do not think it is fair to say it is a mutual service company because the stock is all held by the holding company in this particular case.

Mr. Littman: Does it render management services to Michigan at cost?

Mr. Baldfidge: It does.

Mr. Littman: Is that your understanding, Mr. Young?

The Witness: Yes, that is my understanding.

By Mr. Littman:

Q. Will you please turn to Exhibit No. 95, entitled, "Estimated Cost of Completing Work in Progress at June 30, 1941, and Estimated Gross Income to be Derived from the Completed Projects".

In this exhibit, you have listed a number of projects that were in the process of construction as of June 30, 1941, have you not? A. That is correct.

Q. Will you state how much of this construction was [fol. 7987] completed as of December 31, 1941, or perhaps you might state what remains uncompleted as of that date.

A. I can give you the figures, Mr. Littman, that is, the total estimated project expenditure and then the amount expended during 1941. Will that be adequate.

Q. Very well.

A. The first item, routine minor additions to transmission system property as of December 31, 1941,—$17,086 had been expended;

On the next item, routine minor additions to general property—$6,169 had been expended;

On the next item, expenditures applicable to 24-inch loop line construction in 1940, recorded on the books in 1941,—$74,063;

The next item, expenditures applicable to construction of Edgerton compressor station in 1940, recorded on the books in 1941,—$24,866 were expended;

Construction of central warehouse near Bluffton, Indiana—$26,438 were expended;

The next item, construction of measuring and regulating stations near Monroe, Michigan,—$6,065 were expended.

Q. Apparently you expended more than you had estimated?

A. In some cases, we overran our budget, that is correct.

Q. This is one of those instances?

A. That is correct.

[fol. 7988] The next item, construction of measuring and regulating station near Elwood, Indiana—$4,818;

The last item; installation of two additional units at Edgerton compressor station—$302,102.

I have a total here which I have not personally checked myself, of $461,607.

Q. Can you advise us which of these projects had been completed at December 31, 1941? The reason I ask is because some of these figures which you have given exceed the total estimated project expenditures shown in Column B of Exhibit 95 and others are slightly under the amounts shown in that column. In other words, we could not tell from the figures which you have just read into the record whether the particular project was completed:

A. All of the projects have been completed except the last one, installation of two additional units at Edgerton compressor station.

Q. You have expended $302,102 for that, have you not?

A. That is correct.

Q. Down to December 31, 1941?

A. That is correct.

Q. Now, how much of that project remains to be completed?

A. I do not have the exact figure, Mr. Littman, but possibly $30,000 remains to be paid to the contractor to complete that project.

[fol. 7989] Q. Has the contractor completed the project to date?

A. Except for some minor items, yes.

Q. But $30,000 of the total cost of this project called "Installation of two additional units at Edgerton compressor station", was not recorded on the books of Michigan Gas as of December 31, 1941?

A. That is my understanding, yes. That is an approximate figure.

Q. Now, we may conclude from your testimony that with that single exception, all of the projects set forth in Exhibit 95 have been completed and the amounts which you have read into the record are now recorded in the capital accounts of the company and were so recorded at December 31, 1941?

A. That is my understanding, yes, sir.

Q. Will you please turn to Exhibit No. 96 entitled, "Estimated Costs of Rate Case Proceedings before Federal Power Commission."

Now, this exhibit shows that at the time it was presented, you estimated the cost of the rate case proceedings before the Federal Power Commission to be $57,900, is that correct?

A. That is correct.

Q. Are you now in a position to state how much of this amount has been actually paid?

A. No; I am not at this moment, Mr. Littman.

Q. Will you please ascertain for me the amount of these rate case expenses that have ben paid by Michigan [fol. 7990] Gas to December 31, 1941, and is recorded on the books of the company? A. I shall.

. . . . . .

[fol. 7991] Q. Mr. Young, is it a fact that Michigan Gas Transmission Corporation paid dividends on its common stock of $649,600 in the year 1941 which amounts to 29 percent of the book value of that common stock?

A. I do not know that that is the correct figure. I know [fol. 7992] that dividends were paid but I do not know what the correct figure is.

Q. Does that sound about right to you?

A. $629,000, you say?

Q. $649,600.

A. $649,000—subject to checking the record with regard to one particular dividend that was paid, that sounds approximately correct. There was a dividend paid then that was under circumstances which I am not entirely familiar with at the present time.

Q. Is it a fact that Michigan Gas Transmission Corporation has $2,240,000 of common stock outstanding?

A. That is correct.

Mr. Wheat: You mean par value?

Mr. Littmann: Stated value.

The Witness: Of stated value, yes.

By Mr. Littman:

Q. And that has remained constant from 1936 down to date? A. That is correct.

Q. That is the paid-in value, is it not, $2,240,000?

A. I believe that is, yes.

Q. The dividend of $649,600, of course, represents 29 percent of that paid-in value?

A. That sounds approximately right, if my mental arithmetic is correct.

[fol. 7993] Q. Isn't it a fact that Michigan Gas Transmission Corporation has, since the year when it began to operate its transmission lines down to date, paid the sum of $1,993,600 in dividends or 89 per cent of paid-in value of its common stock?

A. I do not know whether that is correct or not.

Q. I presume Mr. Spitznagle, the accounting witness, will be more familiar with those facts?

A. Yes, I believe that he would.

Q. They do not sound far off to you, do they?

A. The latter one covers four or five years and I cannot give you an answer to that without checking it.

Q. I might state that that is what our investigation of the books shows. We shall interrogate Mr. Spitznagle further on that subject.

Mr. Young, you also testified on direct examination with respect to an allowance annually to be made in rates in the amount of $38,000 for what you have termed "extraordinary or abnormal maintenance", did you not?

A. That is correct.

Q. You did not submit an exhibit on that subject, did you? A. I did not.

Q. Is my understanding correct that $30,000 of this amount is for pipe line maintenance, $6,000 is for extraordinary or abnormal maintenance of compressor stations and $2,000 is for renewals in measuring and regulating stations and on field equipment? Is that right?

[fol. 7994] A. That is my recollection.

Q. How much of this so-called extraordinary or abnormal maintenance expense did Michigan Gas incur in the year ended June 30, 1941?

A. I think that I put in my testimony that it occurred as an item of expense in that period of about $4,500 for the repair of a slip on a bank.

Q. I believe your testimony was $4,572. A. Yes.

Q. Now, with respect to the $38,000 claim for extraordinary or abnormal maintenance, so-called, am I correct in understanding that this is the total amount that you anticipate will be required in each of the succeeding years?

A. I feel that as this property grows older more money will have to be spent upon it to keep it in condition and that in my judgment is a reasonable figure to cover those expenditures, yes.

Q. Now, do you expect the amount of $38,000 to be spent in the year 1942? A. It may not be.

Q. How about the year 1943?

A. It may be twice as much in the year 1943.

Q. And it may be nothing?

A. It may be nothing, it is a judgment figure.

[fol. 7995] Q. Now, a while ago you mentioned that the sum of $4,572 had been expended for so-called extraordinary or abnormal maintenance for the year ended June 30, 1941. A. Yes.

Q. How much was expended in the last six months of 1941 for this character or maintenance?

A. To my knowledge, nothing.

Q. Will your state when this item of $4,572 was incurred? A. In the fall of 1940, as I recall it.

Q. That money was spent to repair and reinforce a steep bank where a slip had occurred. Is that correct?

A. That is correct.

Q. Where had that slip occurred?

A. It was on the 24-inch line, western Indiana, at a point near Route 36.

Q. About how many miles east of Dana?

A. I would judge about five miles east of Dana.

Q. Did this slip occur on the new loop line or on the old line? By "old line" I mean the one that had been constructed in 1930.

A. I am quite sure that occurred on the 24-inch line, which was the new pipe line.

Q. And when was that pipe line constructed?

A. In 1939.

Q. Will you describe the nature of this slip of the line?

[fol. 7996] A. When that line was constructed we had built concrete breakers there. I will explain it this way: Bags filled with cement and sand were piled up at intervals along the pipe line on this steep bank.

Q. When?

A. 1939, when this line was constructed. Those breakers were put in there for the purpose of preventing the cover from washing off the pipe lines. However, in this particular case the breakers did not serve that purpose. They collapsed, evidently, by reason of the head of water which stood behind them and they were not serving the purpose for which they were intended, so we had to resort to other means in order to prevent the erosion of the covering of the pipe line.

Q. Did you have a break in the line?

A. No, no break.

Q. What type of work was done for which the amount of $4,500 was expended?

A. We did an unusual type of work there; not so unusual for this kind of a job. We engaged a landscape gardener to sow this bank or this hill,—and it was quite sizeable,—with trees and plants so that there would be roots from these trees and plants which would prevent the erosion of the soil there.

We gave up the idea of trying to construct these breakers, which I have mentioned, in this particular location.

Q. Was any work done on the line itself?

[fol. 7997] A. None.

Q. So this amount was expended for what you might call protection against erosion?

A. That is correct.

Q. How was this sum of $4,500 charged on the books of Michigan Gas Transmission Corporation?

A. It was charged to maintenance.

Q. As an operating expense?

A. As an operating expense.

Q. In the year 1940 was there any other so-called extraordinary or abnormal maintenance expense incurred other than the $4,500 amount that you just described?

A. Not to my recollection, no.

Q. And there was not any in 1941, was there?

A. No.

Q. Was there any in 1939?

A. No.

Q. 1938?

A. No.

Q. How about 1937?

A. Yes, there was an item of about $7,000 charged to expense at that time, resulting from the repair of these pipe line breaks at the end of January 1937.

Q. Those are the breaks in the line that are described in your Exhibit 77, Pages 15 to 17, inclusive, is that correct?

[fol. 7998] A. That is correct.

Q. Your company has never budgeted itself for any such item as "Extraordinary or abnormal maintenance" in the past, has it?

A. It has not.

Q. As a matter of fact, no such item appears on the books of your company as such?

A. No.

Q. Does your 1942 budget include any such item?

A. No, I do not recall that it does.

Q. Mr. Young, referring to the two breaks that occurred in Line A in 1937, which you are describing in Exhibit 77, isn't it a fact that those two breaks were occasioned by reason of overloading the line?

A. I think in this exhibit here—

Q. (Interposing) You refer to Exhibit 77?

A. Referring to Exhibit 77, that subsequent to the time that those breaks occurred I learned the line had been constructed for a working pressure of 325 to 350 pounds and at the time the break occurred, the first break occurred at 440 pounds on the outlet of Montezuma compressing station.

Q. In other words, at the time the break occurred, Michigan Gas Transmission Corporation was operating at a pressure in excess of that for which the line was originally designed?

A. That is correct, although my understanding at the [fol. 7999] time was that the line was good for 450 pounds.

Q. But subsequent tests showed that not to be the fact?

A. Well, of course, this experience demonstrated that, and in addition to that I had occasion to go over the line with the person who built it, after these breaks occurred, and he told me that the line had been built for 325 to 350 pounds.

Q. Well, don't you state at pages 15 and 16 of your written testimony in Exhibit 77, "The construction superintendent in charge of the 20-inch pipe line east of Raccoon Creek with whom the construction was discussed at a later date stated that the pipe line had been constructed for an operating pressure of from 325 to 350 pounds per square inch gauge"?

A. That is a fact.

Q. Well, it is a fact that you were operating that line at pressures in excess of 350 pounds?

A. Yes. At the time the breaks occurred the pressure out of Montezuma station was 440, that is, the first break the pressure out of Montezuma station was 440 pounds.

Q. And what was it when the second break occurred?

A. That is shown on Page 15 of Exhibit 77. The pressure when the second break occurred was 375 pounds.

Q. Well, does your allowance of $38,000 contemplate the operation of your lines at pressures in excess of those for which they are originally designed?

A. No, not at all.

[fol. 8000] Q. Now, if the Commission were to allow for operations and maintenance for the year 1942 and 1943 and in the future the same amount as that which was recorded on the books of your company in 1940, there would be automatically included at least the sum of $4,500 for extraordinary maintenance, would there not?

A. That is correct, that was included in the pro forma statement that was put in before-hand.

Q. What was included?

A. This $4,000.

Q. Yes. To the extent that it was included in the operations and maintenance expenses in the pro forma statement, there is a duplication in your extraordinary or abnormal maintenance?

A. I believe I stated in my direct testimony that the amount was to be $43,500, if I recall correctly. I gave consideration of that, I recall, but I do not recall just how it was covered in my previous direct testimony.

Q. I have no recollection of any such figure as $43,000 in your previous direct testimony. I understood you to say a moment ago, Mr. Young, that $38,000 was all that was required for extraordinary or abnormal maintenance.

A. Over and above what was included in the pro forma, year ending June 30, 1941.

Q. Well then, in reality you are asking for an allowance of $42,572 per year for this item, are you?

[fol. 8001] A. That is what it amounts to, yes.

Q. Now, I would like to discuss with you for a moment the $30,000 per annum for the so-called extraordinary and abnormal maintenance on pipe lines.

A. Yes.

Q. Is it contemplated that that character of expenditures are those which will be charged to expense as maintenance?

A. Unless some of these repairs that have to be made would be in the nature of renewals. In that case they would be handled in another way.

Q. Well, you have given a list of items on Page 1872 of the transcript which is comprehended by your estimate of abnormal and extraordinary maintenance for pipe lines.

A. What number was that, please, Mr. Littman?

Q. 1872. Now, the first of these is repair of large washouts caused by high water and heavy rains. What do you mean by a "large washout"?

A. Well, I would say that that would be the type that we had at this hill that I mentioned a few moments ago. There was a considerable washing away of the soil covering the pipe line by reason of heavy rains.

Q. You are here speaking of the washout of the earth above the pipe?

A. That is correct.

Q. Not of the pipe, itself?

[fol. 8002] A. Well, it might be the pipe, itself.

Q. Well, suppose you had a washout of the soil or erosion of the soil which does not entail any replacement of pipe. Would all of those costs be included in this $30,000 figure?

A. That does not involve any replacement of pipe, did I understand you to say?

Q. My hypothetical example did not involve any.

A. If there was a washout which does not involve any replacement, I would say that that should be charged to maintenance, yes.

Q. And you in your $30,000 item include such an item?

A. It is intended to, yes.

Q. Now, suppose you have some replacements in addition to that. Let us suppose one length of pipe is required to be replaced by reason of a washout. Would your estimate cover such an item?

A. Yes, it would. That is, if that is a renewal and I do not know whether it is or not. That is something that I have not checked in the record to find out.

Q. Suppose you have two lengths of pipe that are washed out and are required to be replaced. Would your allowance cover such an item?

A. It is intended to, yes.

Q. You would say the same for three, four, five or six lengths, would you?

[fol. 8003] A. If those are renewals, yes. I do not know whether those are property units or not, but if so I would say that this contemplates covering that.

Q. What do you mean by a "renewal"?

A. Well, again, I am not an accountant, but my general understanding of a renewal covers the replacement of some item of equipment or material which is listed in the classification of accounts as a property unit.

Q. You mean a replacement?

A. Yes.

Q. If you have a length of pipe that is taken up and replaced by reason of corrosion, do you call that a renewal?

A. If the length of pipe is a property unit.

Q. Your allowance then covers not only renewals but the other character of expense known as maintenance?

A. That is correct. I think that Mr. Spitznagle amplified that later.

Q. What size of renewal is contemplated by your $38,000 estimate? Suppose you give us the largest one that you had in mind when you made this estimate.

A. Well, this was a judgment figure, Mr. Littman. I do not think that I could put my finger on anything that would cover this situation.

Q. You cannot name any such item?

A. Well, any items that are defined as units of prop-
[fol. 8004] erty in the Classification would be covered by this item.

Q. Any items that are not called a unit of replacement are also covered by the item?

A. I have termed those "maintenance". That is as an engineer and not as an accountant I have said that this amount of money which I have asked for here is what, in my judgment, I think is necessary to cover these—

Q. (Interposing) I recall your testimony to that effect on direct examination and that is why I am asking you to describe the items that you had in mind rather than to tell me precisely how it is to be charged.

A. I see.

Q. Now, you cannot tell me or describe for me the largest item comprehended by your entire estimate, can you?

A. No, I do not believe I can. It is whatever is defined in the Classification of Accounts as units of property which apply to this property.

Q. Now, this allowance also covers repair of pipe line and river crossing breaks, does it not?

A. That is right.

Q. According to your testimony at transcript 1872, is that right?

A. Will you state that again, please, Mr. Littman?

Mr. Littman: Read the question, please.

(Whereupon, the pending question was read by the reporter.)

[fol. 8005] The Witness: That is correct.

By Mr. Littman:

Q. Now, what is the smallest item of repair of pipe line that is comprehended by your estimate?

A. Well, any item of pipe line repair is comprehended by necessity.

Q. Suppose you have an ordinary leak caused by corrosion that requires merely a repair by a leak clamp. Would that be included within this estimate?

A. No, that would not be included in this estimate because we have had repairs of that nature to make right along. I would say that our record of maintenance cost heretofore would reflect the cost of making such repairs as that.

Q. What kind of repairs to pipe lines are comprehended by this item "Repair of pipe line",—well, "Repair of pipe line and river crossing breaks"?

A. Well, I would say that that comprehends major pipe lines, perhaps, involving a renewal of some pipe.

Q. Well, a repair is not a renewal, is it?

A. Well, I have so termed it. I do not know whether that is a correct terminology.

Q. You have also included here the cost of applying cathodic protection where the nature of the soil and inspection of the pipe indicates that the pipe is being actively corroded and might corrode to a serious extent if [fol. 8006] any corrosive measures are not taken. Does your estimate contemplate covering that situation?

A. There is some difference of opinion as to the proper method of charging that item. I would say that this amount of money which I have asked for at least contemplated the renewal of cathodic protection. There is a question of whether it is required to cover new installations by cathodic protection.

Q. Does Michigan Gas Transmission Corporation have any cathodic protection on its lines now?

A. Yes, it does. There is an experimental cathodic protection installation at the present time. It is not of the conventional type. Yes. There is just the one.

Q. Just the one?

A. One installation, that is correct.

Q. How much did that installation cost?

A. My recollection is that it cost between $3,000 and $4,000.

Q. Well, since it is an experiment it may or may not be successful, depending on the outcome of the experiment, is that correct?

A. That is correct.

Q. Nonetheless, your estimate covers it, does it?

A. As I say, there is some question with regard to how these new cathodic protection installations should be charged and there is a question in my mind at this time

[fol. 8007] as to whether a new cathodic protection installation should be charged to this amount of money which I have asked for to cover special situations.

Q. How is this particular cathodic protection charged on the books of Michigan Gas Transmission Corporation?

A. It has not been charged as yet. We are holding that in an account or will be holding it in an account pending a ruling as to the method by which it should be charged.

Q. Well, if it is charged to capital, what effect would that have on your estimate?

A. I do not think it would have any effect on the estimate because there should be some provision in this account to take care of the renewal of that cathodic protection or, at least, the parts of it that need to be renewed.

Q. Well, you take care of that out of your depreciation reserve for short-time property, wouldn't you?

A. I do not think so.

Q. $6,000 of the $38,000 is for "extraordinary or abnormal maintenance" of compressor stations, is that correct?

A. That is correct.

Q. Now, will you name the items that are comprehended by this estimate?

A. Well, I can name a number of items that might be comprehended in that $6,000.

Q. Well, you are not sure about whether they are or are not.

[fol. 8008] A. I am not sure what they will be. A power cylinder, compressor cylinder, connecting rod, crank—

Q. (Interposing) A what?

A. A crank.

Q. What is that?

A. An engine crank, crankshaft.

Q. Crankshaft. What else?

A. Well, I could go on, perhaps, and name a hundred parts of the engine that might be covered by this item which I have referred to.

Q. Those items are the ones which immediately come to mind?

A. Those are major items that come to mind. There are a great many renewals which are not units of property and which would be handled as maintenance items.

Q. Would it cover a cylinder liner?

A. If that is,—well yes, it would cover a cylinder liner; whether it is a renewal or main item it is intended to cover that, however, at least, most or some of our engines do not have cylinder liners.

Q. Would it cover the building up of a piston rod?

A. We do not build up piston rods. We do not believe it is good practice.

Q. What do you do?

A. We replace them.

[fol. 8009] Q. What is "abnormal or extraordinary" about these items of maintenance at a compressor station which you have just mentioned?

A. They are items which have not occurred thus far in the life of the property which I feel, as an engineer, will occur during the balance of the life of the property and some provision should be made to take care of it.

Q. With respect to your depreciation allowances which you have set up on the books of the company, haven't you set up depreciation allowances to cover items of replacement? You call it a depreciation and depletion reserve, do you not?

A. That is the terminology used in the financial statement, I believe, but I do not believe that that checks with the presentation of this case for rate making purposes. That is, we have set up a fund intended to amortize the property over its finite life and this amount of money which I am asking for is to cover renewals and maintenance which have not occurred heretofore but which, in my judgment, will occur in the future.

Q. In other words, your estimate was made for purposes of this proceeding so as to tie in with the allowance for amortization which has been set up in the pro forma statement, isn't that right? A. That is correct.

Q. And was not intended to be used in connection with the company's own depreciation figures?

[fol. 8010] A. No, the system—and again, I am not an accountant, understand—but the system of bookkeeping prescribed for this company I do not believe would reflect that sort of thing as it was set up in this proceeding for the rate case.

Q. Then I understand your testimony to be that if the company's depreciation allowances were made in this

proceeding, then there would not be any necessity or need for an inclusion of this $38,000 estimate, would there?

A. Will you please read that question?

(Whereupon, the pending question was read by the reporter.)

The Witness: Provided the allowances which are ordinarily made are adequate, yes.

By Mr. Littman:

Q. And, in your opinion, they are adequate, are they not?

A. I made the statement this morning that they were based on certain conditions existing, that is, they were, in my opinion, based on certain conditions existing.

Q. In other words, this $38,000 estimate was made for rate case purposes to be synchronized and tied in with the claim in this proceeding for amortization as set forth in the pro forma statement. Is that right?

A. It was made to be used in the pro forma statement in conjunction with the amortization which was set up in that statement.

Q. And that amortization claim which appears in the [fol. 8011] pro forma statement was presented for purposes of this proceeding by Mr. Spitznagle and Mr. Green, was it not? A. That is correct.

Q. And does not reflect the system which has been set up on the company's own books?

A. I do not believe that it does.

* * * * * * * *

[fol. 8018] Mr. Littman: If your Honor please, I should now like to take up Mr. Young's exhibits. Mr. Young's Exhibits 77 and 78 had heretofore been admitted in evidence, I believe. Is my understanding correct, if your Honor please?

Trial Examiner: That is the record as it appears in my minute book. These exhibits marked for identification Exhibits Nos. 77 and 78 were received in evidence on November 18.

[fol. 8019] Mr. Littman: We have no objection to Exhibit No. 95 entitled, "Estimated Cost of Completing Work

in Progress at June 30, 1941, and Estimated Gross Income to be Derived from the Completed Projects".

I might state in that connection that we have requested Mr. Young to supply us with a copy of the company's 1941 financial statement which we propose to offer in evidence. That financial statement will show the company's plant down to December 31, 1941, and will, therefore, include all except approximately $30,000 of these projects that were in the course of construction at June 30, 1941, and which have since been virtually completed.

Trial Examiner: What have you to say with reference to the exhibits marked for identification as Nos. 79 and 96, both of which appear to have been identified by Mr. Young?

Mr. Littman: We have no objection to Exhibit No. 79 but we do have an objection to Mr. Young's Exhibit No. 96. We have heretofore made an objection to Exhibit No. 96 which contains an estimate of rate case expense.

The reason for our objection is we believe that rate case expenses may not be used in testing the reasonableness of existing rates. We object to this exhibit for the reasons stated by Mr. Justice Cardoza in the West Ohio Case.

Trial Examiner: Have you your citation handy, just for the record, to make the reference complete?

[fol. 8020] Mr. Littman: I am sorry, I do not have it with me.

Mr. Wheat: I may be able to give it to you, sir.

In that connection, if I may be indulged for a moment—

Trial Examiner: (Interposing) You can supply that reference?

Mr. Wheat: I can supply it and will supply it in a moment.

It has been noted that Mr. Littman indicated that he would register an objection to Exhibit 96 and he stated the nature of his objection on transcript Page 1871. He said:

"This is rate case expense. We would like to reserve an objection to this exhibit on the ground that rate case expenses are not to be considered in this case, at least

for the purpose of testing the reasonableness of the present rates."

I understand that is the ground upon which he has made his objection for the first time.

Mr. Littman: That is one of the grounds.

Mr. Wheat: Presumably, Mr. Littman's objection will extend to the allowance of rate case expense to Panhandle Eastern as well and for that reason, I think if it meets with your approval, we might go into that matter.

Trial Examiner: Very well.

Mr. Wheat: The allowance of proper rate case expense has been so uniformly upheld by commissions and courts that I think it is unnecessary to cite the many decisions on the subject. Sometimes the question arises as [fol. 8021] to the proper period of amortization of such expense, but that such expenses are allowable has been reiterated time and again.

Now, we suppose that Mr. Littman may have in mind, as the basis for this objection, to claim that the investigation by the Commission, itself, in this proceeding will show that present rates are unreasonable and that, therefore, expenses incurred by the companies to defend unreasonable rates are not allowable. Of course, no one can possibly know, until the decision of the Commission is actually rendered in writing, whether this Commission will hold the existing rates are reasonable or unreasonable, and certainly we do not believe that it is counsel's function to attempt to pre-judge that question.

In any event, the decisions of the Courts do not sustain that theory and, as a matter of fact, are directly to the contrary. I would like to cite, for example, Driscoll, et al. v. Edison Light & Power Company, 307 U. S. 104, in which the Pennsylvania Commission had disallowed rate case expenses on the ground that, as it had found the rates to be excessive, the company should not be allowed the amount incurred in defending them. This holding was specifically overruled by the United States Supreme Court for it said:

"Even where the rates in effect are excessive, on a proceeding by a commission to determine reasonableness, we

are of the view that the utility should be allowed its fair and proper expenses for presenting its side to the Commission."

[fol. 8022] Now, Mr. Littman may perhaps seek some support for his contention in an earlier decision of the Supreme Court, namely, in West Ohio Gas Company vs. Public Utilities Commission, at 294 U. S. 63. I think that is the one he probably had in mind. That case, however, is also contrary to his contention.

In that case, the Court found that, although the Commission and the Court below had intended to allow rate case expense, they had not, in fact, done so, and the Supreme Court said that this constituted error, observing, in respect to the company there involved, that:

"The charges of engineers and counsel, incurred in defense of its security and perhaps its very life, were as appropriate and even necessary as expenses could be."

Not only that, but the Supreme Court in this west Ohio case declared that: "A different case would be here if the company's complaint had been unfounded, or if the cost of the proceeding had been swollen by untenable objections." Of course that may be seized upon, that particular sentence might be seized upon to indicate some support for its contention similar to that which counsel has apparently made.

Mr. Littman: That is what I am seizing on.

Mr. Wheat: But a reading of the entire opinion, as well as a comparison of the West Ohio Case with the later Edison Case, we think, conclusively demonstrates that this dictum in the West Ohio Case does not support a conten-[fol. 8023] tion that, where existing rates are found unreasonable, rate case expenses should not be allowed.

In the West Ohio Case, the company involved appealed from a rate-fixing ordinance of the City of Lima, Ohio, to the Ohio Commission. The Ohio Commission prescribed a schedule of rates higher than that fixed in the ordinance, but lower than that requested by the company. The company's complaint to the Commission was, as the

Court held, at least in part justified. In the Edison Case, the Pennsylvania Commission had disallowed rate case expense because it had found existing rates unreasonable, and this action was set aside by the Supreme Court. I think that case has been entirely overlooked by counsel.

The opinion in the Edison case appears to confine the remarks of the Court in the West Ohio case concerning "a different case" which I have just read to your Honor, where a company's complaint was held "unfounded" to litigation in the Courts for in the Edison Case, which is subsequent, as you will recognize, the Supreme Court said:

"We do not refer to expense of litigation in the courts. 'A different case would be here if the company's complaint had been unfounded or if the cost of the proceedings had been swollen by untenable objections.'" (Citing in a footnote the West Ohio Gas Company v. Commission (No. 1), 294 U. S. 63, 74, Case of Wabash Valley Electric Company v. Young, 287 U. S. 488, 500.)

Now, that case was a case where that portion of the com- [8024] pany's claimed rate case expense was disallowed which was incurred for purposes extraneous to the proceeding under consideration, and that supports the contention which we are now making that proper rate case expenditures are properly allowable.

I think I should add that when the Edison Case reached the Pennsylvania Commission again, after it had gone through the United States Supreme Court and after the United States Supreme Court had issued this strong decision, which is directly contrary to the suggestion made by counsel for the Commission, that Commission, to-wit, the Pennsylvania Commission, reversed its former action in disallowing rate case expense incurred in the Commission proceeding, and, in obedience to the decision of the Supreme Court of the United States on that question, allowed that expense and I refer now to the decision to be found at 40 P. U. R. (N. S.) 146, the discussion being at Pages 169 to 172.

We submit that rate case expense is, in every sense, a proper and necessary allowance and that an exhibit showing estimated rate case expense is, of course, a proper portion of the testimony in a case such as this.

Mr. Littman: May I inquire, Mr. Wheat, is it necessary to take rate case expense in consideration in testing whether the rates are reasonable?

Mr. Wheat: Precisely. That is just what the United States Supreme Court said in the opinion which you ap- [fol. 8025] parently overlooked entirely.

Mr. Littman: If you Honor please, I have not ever looked a thing as counsel says. Perhaps my position might require some further comment, in view of the decisions that Mr. Wheat has read.

Now, in the West Ohio case the ordinance fixing the rates at Lima was held by the United States Supreme Court to be unreasonable and confiscatory. In that event it has always been the law that rate case expenses are allowable, because, obviously, the amount that the company had expended in defense of its life, so to speak, was allowable to it where its contentions had been found to be justly made and reasonable and where the expenses were not found to be swollen with untenable amounts. So that case is no authority for the proposition cited by counsel because there we had an unreasonable ordinance. We had there a finding that the rates of the company were reasonable.

Now, the law has always been, at least up to the time that the Driscoll Case was decided, that you never include rate case expenses for the purpose of determining, in the first instance, whether the rates are reasonable. Now, that must necessarily be so because the first inquiry that we have is this: Are the rates of the company reasonable?

Now, if by the expenditure of large and vast sums of money in connection with rate case proceedings, the com- [fol. 8026] pany should expend large sums, you certainly cannot include those in their operating expenses for the purpose of determining, in the first instance, whether their rates are reasonable or not.

What you do is, first, determine whether the rates are reasonable and then, if it is found that the rates are reasonable, an allowance is made for rate case expense to be amortized over a reasonable period in the future. However, if the rates are found to be unreasonable, then the costs, incurred in connection with stalling and delaying

and fighting an investigation instigated for the purpose of determining whether or not those rates are reasonable, are not allowable. I say that in the face of the Driscoll decision.

The Driscoll decision is one which, to my mind, is wholly untenable and I hope some day that I will be accorded the privilege of asking the United States Supreme Court to reconsider the position it took in the Driscoll case.

Mr. Culton: Meanwhile, do you think we should pay any attention to the Supreme Court of the United States?

Mr. Littman: Just a minute, Mr. Culton, I will make myself entirely clear.

I hope it will also be accorded my privilege to assist in asking the United States Supreme Court to overrule such cases as Smythe against Ames and perhaps some others, but that is beside the point; but what I want to do here is to preserve the Commission's objection to this exhibit so that [fol. 8027] later on it may not be said that we sat idly by and let it go in.

Mr. Wheat: Well, we will stipulate to that, that you did not do that, Mr. Littman.

Mr. Littman: That we did not do what?

Mr. Wheat: That you did not sit idly by.

Mr. Littman: This is the reason for my objection: I simply want to preserve the question for reconsideration. It has always been the law, if your Honor please, that the man who loses the lawsuit bears the costs and if the Commission should ascertain in the final instance,—and we are not prejudging that at this time,—if the Commission should ascertain in the final instance that these rates are unreasonably high and are unconscionable and that the reasonable rates are considerably below those which are now being charged, I then say in that event I hope I shall be given the privilege of arguing that the costs incurred in connection with a futile attempt on the part of the company to keep those rates high and unreasonable should be disallowed and I think that the matter can be presented some day soon to the Supreme Court in that light and that they will reconsider their decision in the Driscoll case. I

merely say that we wish to preserve the question here and we, therefore, object to this exhibit.

Trial Examiner: Let me ask, Mr. Wheat, whether it is your view that the Commission is bound to take any action whatever concerning rate case expenses in its decision in this case?

[fol. 8028] Mr. Wheat: Why, certainly, we think it is.

Trial Examiner: In what way?

Mr. Wheat: We believe that rate case expense is necessarily allowable as a part of the cost of doing business. It has been so held by courts and commissions over many years and the dictum in the West Ohio case, as I have already shown at length, has no significance whatever at the present time. The Supreme Court has specifically overruled it, with respect to Commission cases and investigations by Commissions.

Trial Examiner: Your legal expense of the rate case investigation would either be operating expense or income deduction, would it not?

Mr. Wheat: It is operating expense, your Honor. It might be, of course, amortized over a period of years. Commissions have usually held where a large amount of rate case expense is involved that an amortization over three or five years or some period such as that is a proper way to handle the accounting for it and, of course, no objection could be made to proper methods of accounting, but what we are objecting to is the fact that counsel stands here with a decision of the United States Supreme Court flying in his very teeth and makes the statement that he does not like what the Supreme Court has said.

Well, a good many of us, possibly, have not entirely agreed. Sometimes we have not, when we were on the side of the minority, with the Supreme Court of the United States but, nevertheless, we are bound by the decisions of [fol. 8029] the Supreme Court so long as they remain the decisions of the Supreme Court.

The soundness of this entire determination seem too clear to us that we don't feel we need to argue it any longer. Counsel has admitted that the Driscoll case in con-

trary to his contentions and I, again, wish to read one sentence, "Even where the rates in effect are excessive, on a proceeding by a commission to determine reasonableness we are of the view that the utility should be allowed its fair and proper expenses in presenting its side to the commission."

Citing from the West Ohio case, there is this statement:

"The charges of engineers and counsel, incurred in defense of its security and perhaps its very life, were as appropriate and even necessary as expenses could be."

That is all we need to say on an objection such as that.

Mr. Littman: Well, it might be quite a bit of encouragement to these companies to spend sums of money unjustly and continue—

Mr. Wheat: (Interposing) Mr. Littman, that has been a situation which has faced commissions and both regulatory bodies and the regulated entities during the entire history of regulation in this country since it began many years ago and I have not burdened this record with the hundreds of decisions of State Commissions that have, as a matter of course, allowed rate case expense. I felt merely that we ought to bring the Commission's attention, how- [fol. 8039] ever, to the fact that the United States Supreme Court, itself, has definitely ruled upon this matter and we believe that this exhibit or any exhibit in a case like this, dealing with the rate case expenses is, of course, allowable.

I am not saying, Mr. Examiner, that this Commission cannot determine what is a reasonable rate case expense. Of course, it may. But that reasonable rate case expense is proper has been held so many times that we think the matter is finally determined.

Trial Examiner: I would like to inquire, if your view were accepted, if you would consider an estimate made evidently some time early in 1941 would be considered the most satisfactory evidence as to the cost of a rate case.

Mr. Wheat: Not at all.

Trial Examiner: We are now approaching March of 1942.

Mr. Wheat: Not at all, your Honor. The facts as to the actual expenses are, of course, the facts which the Commission will finally wish to have, but the estimate of what those expenses are to be, the best estimate of what those expenses are to be, the best estimate that can be made at the time the testimony is being given, is not inadmissible because it is an estimate, because throughout the proceedings we deal with estimates.

Mr. Lee: Now, your Honor, that was what I was going [fol. 8031] to ask Mr. Wheat. Isn't it inadmissible on the ground that it is not best evidence?

At the time it was submitted, it was an estimate. Now, they have actual costs, at least down to date. Also, in the production of those actual costs, wouldn't the Power Commission desire testimony that could be interrogated so as to aid them in arriving at the reasonableness of the charges?

Trial Examiner: Exhibit 96 for identification bears at the foot a note which says: "As of June 30, 1941, none of the above fees and expenses have been set up on the company's books."

Mr. Lee: That is right. Now, is it not objectionable at this point because it is not the best evidence?

Trial Examiner: We will receive in evidence at this time the exhibit presented by Mr. Young marked for identification as Exhibit 79 and we will defer the ruling as to exhibit marked for identification 96.

(Exhibit No. 79 Was Received in Evidence.)

* * * * * * * *

[fol. 8032] (Exhibit No. 95 Was Received in Evidence.)

* * * * * * * *

Mr. Baldridge: I do not think I have much to add in addition to what Mr. Wheat has said, but I should like to point out that when Exhibit 96 for identification was offered in evidence it was certainly the best evidence obtainable at that time.

Now, it may be true that we may desire to supplement that in the light of experience. For one thing, this rate

case has lasted longer than was expected at that time, certainly longer than was expected by us, but at the same time it seems to me that for the time being it is subject to being modified by definite expenditures as they can be determined.

Since the exhibit was offered in evidence and ruling was deferred pending cross examination it seems to me that it should be accepted at this time and put in evidence for what it is worth.

Now, one further word in connection with some of the [fol. 8033] matters that Mr. Littman stated. I should like to point out the difference between the cases arising in Ohio and the cases arising in the way that this case arose. The practice in Ohio is for a municipality to pass a rate ordinance which becomes prima facie the rate to be charged. That rate is attacked affirmatively by the utility if it is not satisfied by filing a complaint and an appeal within a certain length of time.

Mr. Littman: With the Ohio Public Utility Commission?

Mr. Baldridge: With the Ohio Public Utility Commission. If that is a complaint appealed as filed, it might well be said that the utility is, in a sense, the aggressor and is commencing the action and, to that extent, may not be defending itself, but in a proceeding such as this which was commenced by the City of Detroit and the County of Wayne by bringing adversary proceedings against the two defendant companies and, on the other hand, by investigation commenced by the Commission itself, it certainly cannot be said that the companies were the aggressors and they are certainly in the position of defending their rates and, in a sense, their very lives.

Mr. Littman: What would you say, Mr. Baldridge, if the utility—

Mr. Baldridge: (Interposing) Just let me finish, Mr. Littman. I do not want to interrupt you.

Incidentally, these rates were filed with the Federal Power Commission and presumably, are reasonable as a [fol. 8034] general rule as to rates because no other rate

can be charged under the law until they have been changed. There, again, the companies in defending those rates are in the position of defending their rates as they exist at this time. They have to defend.

Mr. Littman: They do not have to defend them, Mr. Baldridge.

Mr. Baldridge: You have to defend them if you believe in them.

* * * * * * * *

[fol. 8037] HENRY C. LEHN a witness, having been previously sworn, resumed the stand and testified further as follows:

Cross-Examination.

By Mr. Littman:

Q. Mr. Lehn, you have presented Exhibit No. 80 entitled "Report of Inspection by H. C. Lehn in Equipment of the Compressor Stations of the Michigan Gas Transmission Corporation", have you not? A. I have.

Q. Will you briefly state what equipment is covered by your Exhibit 80?

A. The main compressor units in each station, the [fol. 8038] auxiliary units furnishing the power for lights, power, pumping, the pumps, for furnishing the jacket water, the heating system, the water treating.

Q. Now, this equipment is located in three compressor stations? A. It is.

Q. Those are the only three compressor stations operated by Michigan Gas Transmission Corporation. Is that right?

A. That is right.

Q. Those are Montezuma compressor station, the Zionsville compressor station and the Edgerton compressor station. Is that right?

A. That is right.

Q. At Page 1 of your exhibit 80 you make the following statement: "The Worthington Pump and Machinery Corporation received a request from the Michigan Gas Transmission Corporation to furnish the services of an engineer for the inspection of the equipment in their compressor stations to determine the ratio between the value of the

equipment when installed and its value as of June 30, 1941". Is that correct? A. Correct.

Q. And is that what you have done?

A. That is what I did, yes.

Q. And the results of that study are shown in Exhibit 80? A. They are.

[fol. 8039] Q. Now, do you mean by the statements which I have read that you have determined the ratio between the value of the main compressor equipment at Montezuma compressor station when installed and its value as of June 30, 1941?

A. Well, not to be strictly exact, whether there would be any difference or not as of the date when I examined it, which, of course, is somewhat later. The request specified June 30.

Q. Well, aside from that point?

A. Aside from that—

Q. (Continuing) I am going to ask you this: Do you mean from the statement which I read you, for example, that the ratio between the value of the main compressor station at Montezuma compressor station when installed and its value as of June 30, 1941, is 96 percent?

A. That was the figure that I read. That was on the basis of my considered judgment.

Q. Your answer to my question is yes?

A. Yes.

Q. And the same is true with respect to the other compressor stations, is it not?

A. It is.

Q. Except that you found a different percent in each?

A. That is correct.

Q. In other words, are you stating that the main com-[fol. 8040] pressor equipment at the Montezuma compressor station, for example, has a present value equal to 96 percent of the value of that equipment when originally installed? A. Yes.

Q. In short, the present value is equal to 96 percent of its original cost?

A. Of its original value to the company. Its present value to the company I consider as 96 percent of its value to the company when installed; to the purchaser.

Q. When installed?

A. When installed or put into operation.

Mr. Lee: Pardon me. That value at that time was determined by the book cost?

The Witness: I gave no consideration to the book cost; it was the value to the company as equipment for delivering gas.

Mr. Lee: Do you mean to say that, if you will pardon me—I do not want to interrupt Mr. Littman there, but it was so unusual—your idea, at least I think it was, that the value originally was 100 percent to the company and the value now is 96 percent but neither the original nor the present has any relation to what the company paid for the equipment?

The Witness: Not from my viewpoint. I considered only the physical deterioration.

Mr. Lee: But before there was anything, it was 100 percent. It had that value, 100 percent value to the com-
[fol. 8041] pany and no relation to the cost to the company?

The Witness: Not from my standpoint, no.

Mr. Lee: Isn't that most extraordinary?

The Witness: I do not know.

Mr. Lee: You are the fellow that sold it, aren't you?

The Witness: Yes, I assisted in it.

By Mr. Littman:

Q. Now, you sold a number of these compressor engines to Michigan Gas Transmission Corporation, did you not?

A. The Corporation has sold a number, all of these in question at the two stations, Montezuma and Zionsville.

Q. Now, they are all Worthington machines, aren't they? A. At the two stations.

Q. And most of them are Worthington machines at the other stations?

A. No, the main units are not.

Q. Well, confining ourselves to the main units which are Worthington units, your company sold these machines brand new to Michigan Gas Transmission Corporation?

A. Yes.

Q. Is that right?

A. That is right.

Q. And they paid you a certain sum of money for them, didn't they? A. They did.

[fol. 8042] Q. And were they worth what the companies paid you for them?

A. We considered them so at the time.

Q. And you consider that they paid you their value at the time, right? A. Yes.

Q. And you say that you have made a determination of the ratio between the value of the equipment when installed and its value as of June 30, 1941, have you not?

A. Yes, that is correct.

Q. So that if a machine is, today, in 96 percent condition, according to your estimate, then its value today is 96 percent of its value when installed. Right?

A. On whatever basis you want to take that value when installed, whether it be purchase value or any other value.

Q. Well, what value would you say these machines had at the date they were purchased other than that which is represented by their purchase price?

A. Well, I do not know just what basis it would be put on, except that I did not consider any money value of the engines in making these figures. I gave no consideration to that. I would consider that beyond my province in what I am supposed to do.

Mr. Lee: If you will pardon me, didn't you predicate your 100 percent value upon the cost?

[fol. 8043] The Witness: No, I did not predicate it on any cost.

Mr. Lee: Well, shouldn't you?

The Witness: I shouldn't?

Mr. Lee: In common sense, shouldn't you do it?

The Witness: Well, let me put it this way, they have a certain value in delivering a certain amount of gas.

Mr. Lee: That is what they are made for, that is what you are paid for, aren't you?

The Witness: That is what we are paid for and at the time I examined them, as far as I know, and I believe it is true, they were delivering the same amount of gas. On that basis they would be 100 percent.

Mr. Lee: I am not questioning you on that. I am just asking you why don't you relate your 100 percent, identified with the cost of the equipment? You say you do not do that.

The Witness: I did not in this particular case.

Mr. Baldridge: May I interject? Perhaps this might be shortened a little bit.

Mr. Littman: Just a minute. We are cross-examining this witness. If you have any objection, I wish you would state it.

Mr. Baldridge: I will. I think you are cross-examining him on something I do not think he testified to at all.

Mr. Littman: That may be your opinion, but I would like to have this witness' opinion on his exhibit.

Mr. Baldridge: After all, we have to get the facts, Mr. [fol. 8044] Littman. There is no use playing on words.

Mr. Littman: We are not playing on words. Let me ask you this, Mr. Lehn: Assume that the value of a main compressor engine, when originally installed, was $100,000. Assume that you have placed a 90 percent condition on that engine by your method described in Exhibit 80.

Is it your testimony that under those facts the value of the machine today is $90,000?

The Witness: On the assumption that the value to the purchaser was $100,000, my figure of 90 percent would be $90,000.

Trial Examiner: You are making a difficulty out of this examination. Exhibit 80 seems to indicate that Mr. Lehn's testimony is based solely on the physical condition of the property.

Mr. Baldridge: That is what he said.

Trial Examiner: Page 7 reduces that to a tabulation which indicates that at the time of the inspection the depreciation or the deterioration of the property was indicated by a certain percentage.

Mr. Baldridge: That is right.

Trial Examiner: Irrespective of amount. If you want to apply this to your purchase price or present day cost, why, that is your starting point.

Mr. Baldridge: That was his testimony on it and that was the purpose of my objection, that we were going afield.

[fol. 8045] Mr. Lee: Yes, but your Honor, everything that you have just stated he understands correctly, but aren't we allowed to ask him if the percentages are applicable to the cost price? That is all we are doing. He says, "No, it has no relation to the cost price."

Mr. Baldridge: He said not quite that.

Mr. Lee: He said that. I will ask him the question.

Have your percentages as to the condition of this equipment as set forth in the exhibit any relation to the cost price of the equipment?

The Witness: They would be applicable to any value which the customer might put on them and that would be included, yes.

Mr. Lee: That is what we are shocked at. He is trying to create a value to the customer and we are contending that he is bound by the value of the cost to the customer. Haven't we got a right to examine him on that?

Trial Examiner: Well, the Examiner just naturally assumed your starting point was the actual cost in this case, because you have a recorded cost and a present state of preservation or service.

Mr. Littman: That is what I understood the testimony to be, that the 96 percent, for instance, which he found today represents 96 percent of the cost when originally installed. Was that your testimony?

The Witness: It can be applied to any value which you [fol. 8046] wish to put on them.

Mr. Wheat: I think all he has said is that if somebody wanted to start with something else he still would go on with 96 percent.

Mr. Baldridge: Mr. Examiner, this testimony must be taken in relation with other testimony and that is this: All that Mr. Lehn is testifying to is that he is a man who knows engines, and he went down and looked at these engines from a physical standpoint and saw what percent of condition those engines were in. That is all he has testified to.

Mr. Lee: If you will pardon me, he has gone one step further. If you will just pardon me, he says that the original 100 percent valuation is not confined to the original cost.

Mr. Baldridge: That is where it ties in with the rest of the testimony.

Mr. Lee: Didn't you say that, Mr. Witness?

Mr. Baldridge: You will find that this is carried on further. If his percentages are applied, when we got down as far as our pro forma statement, they apply to the original cost of property.

I mean what Mr. Lehn has testified to has nothing at all to do with valuation, has nothing at all to do with original cost, it has to do with physical machines. He went in and looked at the machines, they were practically new, but not quite new, so he said that they are not 100 percent [fol. 8047] new, they are 98 percent new, 96 percent new.

Now, it seems to be making a lot of difficulties about something that just is not in there. If there are any words which mislead anybody, we can readily stipulate those out.

. . . . . .

By Mr. Littman:

Q. Mr. Lehn, will you define the word "value" as it appears in the first paragraph of your Exhibit 80?

A. The worth of the property to the owner.

Q. I am sorry?

A. The worth of the property to the owner, that is my idea, on whatever basis he wished to evaluate it and whatever basis he did, its value now, in my judgment, is 96 percent, its value or its worth.

Q. Well then, your 96 percent could be applied to almost anything, couldn't it?

A. Yes; I leave that to somebody else's judgment.

Q. Were you making any effort to determine the value in dollars of these machines?

A. I was not.

Q. Mr. Lehn, will you please turn to Pages 4 and 5 of Exhibit 80? Am I correct in understanding that two main [fol. 8048] units were installed in the Montezuma station in 1936 and two in 1937 and two in 1940?

A. That is correct.

Q. You found an over all depreciation of 4 percent on those six machines; did you not? A. I did.

Q. Will you state the depreciation which you found on each of the two units installed in 1936?

A. I did not make the extensions of my figures in that way. I added up the total hours and took the average of the total for the station as a part but not the entire basis of the figure which I stipulated. It had a bearing on it but not an exact numerical bearing.

Q. Now, suppose you describe the method that you used in arriving at these condition percentages. Let's take the Montezuma station as an example.

A. I found no physical depreciation or deterioration present which would permit of any figure being allotted to it.

Q. So you did not deduct anything for any observable physical depreciation, is that a correct statement?

A. Not quite.

Q. Well, you did not observe any depreciation?

A. I did not observe any depreciation.

Q. Since you did not observe any depreciation, that would leave the machines in 100 percent condition?

[fol. 8049] A. It would.

Q. In so far as those factors were concerned?

A. It would. I gave consideration to other factors involved in, you might say, a qualitative sense, not a quantitative sense. I did not numerically weight them. In all the factors qualitatively involved, I arrived at this figure of 96 which is my considered judgment.

Q. Now, let's go back over that for a minute and see if I understand what you did. You went to these three compressor stations and you looked at the main engines. There was nothing that you could see and there was noth-

ing that you did see that would cause you to place any depreciation on those machines for those factors?

A. That is correct.

Q. Now, you did, however, arrive at a percentage of depreciation for the machines in each compressor station, did you not? A. I did.

Q. What factors did you take into consideration in arriving at the percent of depreciation which you did, in fact, deduct?

A. In addition to the observed physical condition, I did consider, and to almost completely dismiss it, the possible life of the engines of this type, the operating life and for the reason that in spite of my rather lengthy experience with compressor stations or perhaps in spite of [fol. 8050] it, I am not able to arrive at any basis of depreciation based on the life of the engines.

Q. And you did not use the life of the engines as a basis?

A. I considered it, as I say, qualitatively and arrived at a judgment figure but not a numerical figure. For example, along this line I took occasion to inquire into the situation with regard to our first engines built in 1902 which are still in operation. I was advised that those engines are in service daily as required and for the same period as any of the newer engines at the particular station and just as much is expected of them. Their delivery in gas is just as great and just as much as when installed. So on that basis, what are we going to take for the life of the engine?

Q. Did you or did you not consider the life of engines in arriving at your condition percents?

A. I considered it to this extent and I state it somewhat similarly in the exhibit. A station obviously will not go forever. It has already run and time has elapsed so, therefore, there must be some time deducted for the time it has run. I am at a loss to pin it to any definite numerical basis.

Q. Did you base it in part on operating efficiency?

A. I did in part on operating efficiency and the general condition of the engines and what I know of the main- [fol. 8051] tenance and back of that, the manner in which

these engines have been erected at Montezuma and Zionsville.

Q. Well, the condition of the engines, so far as you have observed, were 100 percent? A. They were.

Q. So you did not deduct anything for that. Now, you deducted something for age? A. Yes.

Q. How did you arrive at the amount that you deducted for age?

A. As I say, not by any numerical computation but simply as a matter of judgment. I cannot very well go back of that or beyond it.

Q. Well, did you make a computation to relate the expired hours of service for each machine to the total hours of life that you would expect?

A. I started to but, as I say, confirming my idea of what the engines will do, long life and the information which I got from our first engines, I abandoned it as a basis for computation.

Q. Why did you abandon it?

A. Because there is no life that I know of that has been determined. These 40-year old engines, from all accounts, will go on just as well for another 40 years. You can be assured, if I could find a satisfactory method to [fol. 8052] calculate this on a strict mathematical basis, I would be about the first one to do it.

Q. No one knows how long these machines will last?

A. I do not think they do.

Q. You have been in this business all your life, have you, Mr. Lehn?

A. Practically.

Q. That is, with the Worthington Pump Company?

A. Yes.

Q. And you are unable to give us any estimate of the life of the type and character of the machines that are now installed in the main compressor stations of Michigan Gas?

A. Well, reverting again to these original engines, if the wearing parts are replaced and that, I understand, is not to be considered here, simply the maintenance, I cannot see why they would not go on for another 40 years, again not considering the question of obsolescence or exhaustion of the field or the fact that they are of no further use to the operator.

Q. That would put a life figure on these machines of approximately 45 years, would it not?

A. I do not understand where you get the additional 5 years.

Q. You say that these machines that were originally installed in compressor stations can run for another 40 years?

A. No; I meant the original engines that had run for [fol. 8053] 40 years.

Q. The original engines installed?

A. In 1902 or 1903.

Q. I see.

Mr. Wheat: On some other company's property?

The Witness: Some other company's, yes. I cite those and they are engines that followed along in successive years that are operating under the same conditions.

By Mr. Littman:

Q. You have no opinion as to the life of the main Worthington compressor unit, such as that which is installed on Michigan Gas Transmission Company's lines, have you?

A. By that you mean useful life at reasonable efficiency?

Q. Yes, in service.

A. No, I have not, providing they are maintained, the wearing parts are replaced. Of course, we could take the 40 years that these engines have run as a limit but that is simply an assumption. You might just as well take 30 or 50.

Q. You cannot state the life of Worthington machines of the character owned by Michigan Gas?

A. No.

Q. Expressed in engine hours either, can you?

A. No, I cannot for the same reason.

Q. And why is it that you cannot prescribe an age to these machines?

[fol. 8054] A. Because up to the present time, engines of practically the same type are still in service and delivering 100 percent capacity and 100 percent of hours as are required. At the same time, they would not endure forever but what their limit is, I will not attempt to say.

Q. Do you know an engineer by the name of P. McDonald Biddison?

A. I know him, yes.

Q. Do you know that he has estimated the life of the main compressor units in this proceeding?

A. I believe he has, yes.

Mr. Baldridge: But not of Michigan Gas Transmission Corporation.

Mr. Littman: No, of Panhandle Eastern.

The Witness: Yes.

By Mr. Littman:

Q. Do you know the method he used?

A. I read some of his testimony.

Q. Do you agree with the method he used?

A. He has made an assumption which may or may not be true. I do not know.

Q. What do you think about it?

A. I think not.

Q. You do not agree with Mr. Biddison?

A. I do not agree in that respect on that point.

[fol. 8055] Q. Am I correct in understanding that your 100 percent represents the value to the owner on the date when it is installed new?

A. Yes.

Mr. Wheat: When this engine is installed new?

Mr. Littman: I was referring, of course, to the compressor engines.

By Mr. Littman:

Q. What is zero percent condition under your theory?

A. I cannot conceive of zero percent if the engine is still in existence and operative. If it is entirely destroyed, it would be zero, of course.

Mr. Littman: Will you read that answer back?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. I do not believe you answered my specific question, Mr. Lehn. I want you to define zero percent condition as you understand it.

A. I can hardly carry these numerical percentages down to that extent. Any engine which is running at all, I would say, would be at least 75 percent or no gas company would operate it. To my way of thinking, we cannot extend it down to zero.

Q. You do not believe that a compressor engine can go down to zero percent condition?

[fol. 8056] A. It would still have scrap value.

Q. When is zero percent condition reached?

A. From the standpoint of the operator, if he has no further use for the engine, I might consider that zero percent.

Q. You might, but you are not sure about it?

A. No, not too sure. As I said before, I have attempted, to the best of my ability, to give a quantitative value to what I consider a qualitative question and it cannot be consistently carried too far.

May I amplify that a little bit?

Q. Yes.

A. I could give what I have considered definite percentages to the value of an engine if it were on the assumption that the amount of gas that it was delivering had gone down from the amount guaranteed due to poor operation or poor adjustment or something of that sort. If it were delivering 75 percent of the guaranteed amount, I would say without prejudice to the fact that it could still go lower at that particular time, the engine would be in 75 percent condition. On that basis, I would feel justified in giving exact and rigorous mathematical percentages to the value of the engine. That is one basis which occurs to me.

Q. Have you ever seen a compressor station at zero percent condition?

A. No, I have not.

[fol. 8057] Q. How about one out on the scrap heap?

A. It would still have scrap value.

Q. Now, excluding the scrap value or salvage value from consideration, when is zero percent condition reached on a compressor engine under your theory?

A. When it would no longer be capable of operating or delivering gas and could not be rehabilitated to the extent of being operative and delivering gas.

Q. That is when it is retired from service because it no longer serves its useful purpose?

A. That might be zero value to the owner at that time under those conditions.

Q. And it might not?

A. It might not have a resale value at that time.

Q. I was excluding salvage.

A. I meant beyond salvage or scrap.

Q. Have you ever seen an engine in 50 percent condition?

A. Again, I would not know how to determine an engine in 50 percent condition except under the condition which I have described of its ability to deliver the amount of gas proportional to the guaranteed quantity. That, I think, would be a rational basis for naming a definite percent of a low value.

Q. What would you expect the salvage value of the compressor station equipment of Michigan Gas Transmission Corporation to be 24 years hence expressed in per [fol. 8058] cent of the present worth?

A. It would depend entirely on the market; how anxious Michigan Gas was to sell and how anxious a customer could be found. I do know of some of the old engines which have changed hands recently at what I would consider low figures, possibly 15 or 20 percent of their initial value or the value of what they would cost at the present time.

Q. What is your best judgment of the salvage value of compressor equipment of Michigan Gas Transmission Corporation 24 years hence?

A. I would hesitate to state an opinion.

Q. Can you give us a general idea? Fifty percent, 40 percent?

A. Any figure I would name would be just a pure guess. I would be as well satisfied in my own mind with one as another so I do not see how I can give you a figure.

Q. In other words, it would be pure speculation, wouldn't it?

A. I think it would be.

Q. Will you please turn to Page 6 of Exhibit 80. You state on that page "The company which I am connected with has built in the past 40 years over 530 units of this type totaling over 500,000 horsepower. With few excep-

tions these engines are all running at the present time. Some are out of service by reason of gas becoming exhausted at their original location and not being required [fol. 8059] elsewhere. A number have been moved to different locations, in some cases two or three times. To my knowledge, none have been abandoned due to their being worn out."

Do you have records showing where these 550 units are installed and now located?

A. We have complete records of where they were originally installed, and in the majority of cases, where they are now, that is, those which were moved but not complete records.

Q. Do you have complete records as to where they were originally installed?

A. Yes, sir.

Q. And you have incomplete records as to where they are now located?

A. We have partial records of some that were moved but some were moved without our knowledge.

Q. Do your records show the date of original installation?

A. They do.

Q. And in instances where they have been removed to new locations, you know the date of their most recent installations?

A. In some cases.

Q. Do you have records of the number of hours that each unit was operated in the year 1939-1940?

A. No, we have not.

[fol. 8060] Q. You do not keep any records—

A. (Interposing) No, we do not keep records like that.

Q. Do you know how many hours these machines were operated?

A. No, I do not, except in some special cases where we have contact with a particular customer and have access to their records.

* * * * * * * *

[fol. 8062] Q. Mr. Lehn, in arriving at your estimate of depreciation on compressor station equipment of Michigan Gas, did you give consideration to wear and tear?

A. By wear and tear, you mean deterioration which is recovered by renewal of parts?

Q. By wear and tear, I mean depreciation which is caused by wear and tear.

A. No, I did not. If I understand your question correctly, that is, for example, wear of piston rings, packing, cross head guides which are periodically renewed, restored.

Q. In other words, you would consider those items as maintenance?

A. Yes.

Q. And therefore, exclude—

(Continuing) Any depreciation that you observed on those items from your determination?

A. I excluded them.

Q. What about decay? Did you give consideration to decay?

A. Well, I hardly think there is such a thing as decay of cast iron, steel. There is rust, of course, if it is idle and not properly protected, but with an engine in operation, I do not think we could consider that decay occurs.

Q. You did not see any?

[fol. 8063] A. I saw none.

Q. Did your give consideration to inadequacy?

A. If by inadequacy you mean the inability to perform the service expected, that was 100 percent.

Q. Did you give any consideration to obsolescence?

A. Not in a tangible form, I considered it in allotting that 4 percent, for example, to the 96 percent. There might be such a thing as obsolescence but there is no evidence of it yet in this type of engine.

Q. Did you consider the possibility of future obsolescence?

A. To some extent, but there, again, the length of time hich the engine will be in the service of the company ters and that, again, is also beyond my province.

Q. Well then, you say you considered it and made some allowance for obsolescence?

A. I considered it, to some extent, possibly intangibly, in the allotting of that 4 percent. I cannot segregate the 4 percent, as I have explained before. I cannot break that down into the various factors.

Q. As a matter of fact, one of the major causes for replacement of these machines is obsolescence, isn't it?

A. Well, to my knowledge, none have ever been replaced with another type. The type, itself, has not become obsolete, that is, has not been substituted exclusively in [fol. 8064] any case by another type.

Q. Well, they may keep them on the line and running, but they are not as good as the new ones that come out, are they, by reason of design or improvement?

A. There are very minor improvements made every few years, but they are not of such a type that they affect the efficiency of the engines. For example, we have rearranged the piping to make them more convenient, to make the maintenance and overhauling simpler. Beyond that there have not been any major changes. Material has been improved, of course, due to the advance of the art of metallurgy.

Q. Did you consider the element of changes in the art?

A. That is what I had in mind, yes.

Q. That is, you considered that along with the element of obsolescence?

A. To a very limited degree, yes.

Q. Did you consider that because of changes in demand and the requirements of public authorities?

A. No, I cannot say that I did.

Q. You did not consider it at all?

A. Not from that phase. I do not at the moment just see what bearing that would have.

Q. Well, you did not consider it? A. No.

Q. Did you consider the possibility of exhaustion of the [fol. 8065] natural gas resources of this company?

A. Not in my determination of the figure. That, also, is beyond my province which was only to examine and determine upon the mechanical condition, the physical condition of the unit.

Q. You did not consider any of the functional causes of depreciation but purely the physical causes?

A. Purely the physical.

Mr. Wheat: Pardon me, Mr. Lattman. I wonder if the witness understood your technical term "functional causes". May I ask if you included in that term and placed such causes as obsolescence? Various people in

clude different things under the term "functional causes". If you did, I wonder if the witness understood you.

Mr. Littman: I understood the witness to say that he considered, to some degree, the possibility of obsolescence and so when I used the term "functional" I mean the cause by reason of the claimed exhaustion of the gas and, possibly, the changes in the demand and requirements of public authority.

By Mr. Littman:

Q. Would the testimony that you have given thus far with respect to compressor engines apply equally to those manufactured by companies other than the Worthington Pump Company?

A. Yes, they would. In this respect I would make no distinction between them.

. . . . . .

[fol. 8069] Trial Examiner: The exhibit [market] for identification as No. 80, offered in connection with the testimony of Mr. Lehn, will be received in evidence as Exhibit 80 without objection.

. . . . . .

[fol. 8070] F. S. Haberly a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination

By Mr. Littman:

Q. Mr. Haberly, we will first take up your Exhibit No. [fol. 8071] 82 entitled "Accrued Depreciation on Compressor Structures, Measuring and Regulating Structures and Equipment, Other Transmission System Structures and General Equipment as of June 30, 1940."

Will you state what property of Michigan Gas Transmission is covered by your study of accrued depreciation in Exhibit 82?

A. The property covered by Exhibit 82 includes the property in Account 352.1, compressor station structures and improvements; property in Account 352.2, measuring and regulating station structures and improvements; Ac-

count 352.3, other transmission system structures; certain property in Account 354.1; compressor station equipment, namely, the water tanks and their foundations, and the cooling towers and their foundations; also the property in Account 354.2, measuring and regulating station equipment; and the general equipment in Accounts 372, 373, 374 and 377, namely, office furniture and fixtures, transportation equipment, stores equipment and tools and work equipment.

Q. What is the original cost of the gas plant exclusive of working capital and materials and supplies?

A. The original cost, exclusive of working capital, material and supplies and any cost of developing business or going value, is $12,261,260.55.

Q. As of June 30, 1941? A. As of June 30, 1941. [fol. 8072] Q. I should like to have stated on the record, Mr. Haberly, approximately the original cost of that part of the gas plant which you inspected and made a determination of accrued depreciation covered by Exhibit 82. Can you state the original cost of the items of property which are embraced by your Exhibit 82?

A. Yes, sir. Account 352.1, compressor station structures and improvements, original cost was $446,260.40 as of June 30, 1941. For Account 352.2, measuring and regulating station structures and improvements, the original cost as of the same date was $48,566.40. For Account 352.3, other transmission system structures and improvements, the original cost as of the same date was $27,992.58.

There was a small part of Account 354.1, compressor station equipment, [amade] up of the water tanks and their foundations and the cooling towers and their foundations. I cannot, at the moment, find the original cost of the water tanks and the cooling towers but their cost was a small part of that account which, in total, was $1,800,000-odd. It was not more than 10 percent of that account which I depreciated.

Q. Let's pass that for the moment.

A. I can find those figures but it will take a few minutes.

Q. I do not think it will be altogether necessary for our purpose at this time.

[fol. 8073] A. There were three water tanks that ran from three to five or six thousand dollars and I do not remember what the cooling tower cost was.

Then, there was Account 354.2, measuring and regulating station equipment, the original cost of which was $125,826.02 as of June 30, 1941.

There was also Account 354.3, other transmission system equipment, with an original cost as of the same date of $121.09; office furniture and fixtures of $14,879.76; transportation equipment in an amount of $33,837.47; stores equipment in the amount of $1,609.47, and tools and work equipment in the amount of $13,454.07.

Those original costs are as of June 30, 1941.

Q. Have you completed your answer?

A. Yes. I inadvertently included $121.09 for Account 354.3, other transmission system equipment for which depreciation was not determined in Exhibit 82.

Q. Mr. Haberly, the total of the figures which you have read covering all of the structures and equipment upon which you determined accrued depreciation as shown in Exhibit 82 is, in round figures, $712,000, exclusive of the water tanks and foundations and cooling towers and foundations, is that right?

A. I would say that is approximately correct. I have not added it up.

Q. And it is apparent, is it not, that the structures and [fol. 8074] equipment which you examined and upon which you made a determination of accrued depreciation in Exhibit 82 represent approximately only 6 percent of the entire gas plant?

A. Yes, I would say it was somewhat less than 10 per cent. I have not made the calculation. If you have figured it out as being 6 per cent, I will accept that.

Q. In other words, while we have a good many accounts covered by Exhibit 82, the amount in dollars, as compared to the entire gas plant, is not very large?

A. That is correct. The larger amount of money is in the maintenance and compressor station equipment accounts.

Q. And Mr. Riddle has taken the responsibility for determining the accrued depreciation on the mains, has he not?

A. That is right

Q. And Mr. Lehn has taken the responsibility for determining the accrued depreciation on the compressor station equipment, at least the major part of it?

A. Major portion of it, yes.

Q. One of the accounts covered by your Exhibit 82 is measuring and regulation station structures and equipment. Is that right?

A. Yes, sir, that property is included in two accounts.

Q. By the way, these account numbers that you have read, are those the account numbers of the company or are they the account numbers of the Federal Power Commission?

[fol. 8075] A. I think these are the Federal Power Commission account numbers.

Q. Did you inspect all of the measuring and regulating station structures and equipment of Michigan Gas?

A. No, I did not see all of the measuring and regulating structures. I saw the larger ones at the three pumping stations. I saw the two large ones in Detroit, the one in Fort Wayne, and seven or eight of those which were adjacent to the main transmission line. Those at some distance from the main line I did not see.

Q. Which ones did you not observe?

A. I do not have a complete list of the ones that I either saw or did not see. There are some 40 or more stations and I saw the larger ones of those but, as I previously said, those at some distance from the main transmission line, I did not see.

Q. Do you have a record here in Detroit showing the list of stations and those which you did not examine?

A. I am not sure whether my working papers show that information or not and I do not have my working papers. They were turned over to the Federal Power Commission. I have not received them back yet.

Q. I understand they were returned to Mr. Baldridge.

A. I am not sure whether those working papers show the stations we examined or not.

[fol. 8076] Q. Will you check your working papers this noon and advise us whether you can supply the information?

A. I will.

Q. I would also like to ascertain the same information with respect to the equipment in the measuring and regulating structures which you did not inspect. I presume that the same list would apply to both the structures and equipment?

A. Yes. If I did not see the regulator station building, I naturally did not see the equipment therein.

Q. How much time did you spend in making the inspections on property covered by Exhibit 82?

A. Three days.

Q. Will you briefly describe what you did and the method used by you in determining the depreciation of the structures and equipment which you examined?

A. At each location we visited, we made a general inspection of the property and then, in more detail, examined the building or the equipment, looking for signs of wear and tear, decay, or any other factor which might contribute to its depreciation.

Q. And what did you do with the data which you saw?

A. We made notes so that our memory would be refreshed when we returned to the office to develop them into condition percent figures.

Q. Now, will you describe the method used to translate [fol. 8077] the data which you observed into condition percents?

A. As my direct testimony explains, we endeavored to reflect loss of value due to various factors, such as wear and tear, decay, obsolescence, inadequacy, loss of serviceability, and any other element which would contribute to depreciation and, after considering what we had seen and after considering the age of the property, a figure was placed on the various items which, as Mr. Lehn explained yesterday, was more qualitative than quantitative in consideration of the various elements contributing to depreciation.

Q. Mr. Lehn took no part in your determination of accrued depreciation, did he?

A. No, I merely state that he expressed quite well, I thought, the mental gymnastics one goes through in determining depreciation, that it is a consideration of the various elements rather than a mathematical working out of a final figure.

Q. Mr. Lehn testified, as I recall it, that he did not observe by eye any depreciation. Is that true so far as you are concerned?

A. No, I saw some physical depreciation, minor physical depreciation.

Q. You gave the so-called minor depreciation which you actually saw some weight in arriving at the condition percents?

A. I gave it consideration, yes sir.

Q. And then did you add something to that, something else?

[fol. 8078] A. Not necessarily added something to it. I gave consideration to the other factors.

Q. Now, what factors other than those which you observed by the eye did you give effect to?

A. In our physical inspection, we were looking for signs of age, wear, weathering, state of maintenance, reaction to the elements, degree of serviceability, state of maintenance, obsolescence and to the extent that any of these factors were apparent to us, they were given consideration.

Q. You mean apparent to you by the eye?

A. Yes.

Q. And that which was not apparent to you by the eye, you did not reflect in your condition percents?

A. No, I would not say that. The condition which we placed upon the property was less than was visible by eye, was lower than that which was visible by eye.

Q. In other words, you determined more depreciation in your final answer than that which you actually observed by the eye?

A. Yes, I would say that that was true.

Q. What I am endeavoring to get at is what elements did you consider in that process?

A. I would say that the one factor contributing to the figure which we placed on the property for condition percent that is not visible to the eye, is age.

[fol. 8079] Q. You gave effect to age? A. Yes.

Q. You mean you gave effect to expired life and remaining life?

A. Yes, a reflection of that ratio.

Q. Would you say that your method is the straight observation method? A. No, I would not.

Q. It was the observation method plus something else?

A. Plus consideration of age and life and functional depreciation.

Q. Would you say that your estimate of accrued depreciation reflects and includes all elements of depreciation which bring about the eventual retirement of the property from service?

A. That is exactly what I attempt to determine in placing a condition percent on property.

. . . . . .

Q. Are you familiar with the claim that is being made in this proceeding that this project is to be abandoned in December of 1965?

A. Yes.

Q. Did you give consideration to that element of depreciation?

[fol. 8080] A. No, I did not give consideration in my determination of condition percent to the possibility of abandonment in 1965. That I considered to fall within the determination of amortization and I was striving to get the condition of the property in normal service and throughout a normal life.

Q. Would or would not the normal life of this project extend beyond the year 1965 if it were not for a purported claimed abandonment of the project in 1965 by reason of the failure of the gas supply?

A. In its present location it would not extend beyond that date if the property were abandoned at that time, however, if the property were not abandoned then the property would have value and could carry on for a great number of years thereafter.

Q. Well, the factor of the abandonment of a project, as claimed here, by reason of the exhaustion of the natural gas supply, is a very important factor of depreciation, is it not?

A. I would say, rather, of amortization.

Q. You do not call that depreciation?

A. Not in the sense that I was determining depreciation here.

Q. Well, are you familiar with the Federal Power Commission's system of Accounts?

A. To some extent, yes.

Q. Do you know that the Federal Power Commission's Uniform System of Accounts prescribed for natural gas [fol. 8081] companies states that among the causes to be given consideration in the determination of depreciation is, "In the case of natural gas companies, the exhaustion of natural resources"?

Mr. Wheat: Well, you are speaking, Mr. Littman, aren't you, from the standpoint of the accounting for depreciation now, or are you?

Mr. Littman: I am speaking here, I am reading from the Federal Power Commission's Uniform System of Accounts.

Mr. Wheat: Yes. Well, I did not understand that the Power Commission had essayed to pass a rule to the effect that all persons shall use the word "depreciation" and all its aspects only in compliance with this particular statement. I understood that that was for the purpose of determining the accounting method of handling the accrual for depreciation. I just was merely asking to be sure that I got you straight on this.

Mr. Goodman: I am very well satisfied with Mr. Wheat's statement and I want to emphasize it, because there is, clearly, a vast difference between the fact of depreciation and the particular mode under which it may be accounted for.

Mr. Wheat: Precisely.

Mr. Goodman: After all, accounting merely has the function of making a record on books without regard to what the facts will be. In other words, the facts may be consistent or inconsistent with the particular mode of accounting and since I will argue that in the briefs in this case, I [fol. 8082] want to make clear that I want the benefit of Mr. Wheat's concession in this regard.

Mr. Wheat: I do not regard this as a concession.

Mr. Goodman: I do.

Mr. Wheat: I think it is perfectly clear in the Commission's System of Accounts that it is dealing with accounting

matters and I just wanted to make sure that Mr. Littman did not include all of the possible meanings of the word "depreciation" when he was asking this question.

Mr. Littman: If your Honor please, I think I can clarify my position by saying that the Commission has stated in the Chicago District Electric Generating case that "the true conception of depreciation leaves no room to doubt that annual depreciation expense and actual existing depreciation must be harmonized. Annual depreciation measures the diminution in service life capacity or utility in one year—actual existing or accrued depreciation is the total diminished service life capacity or utility to the date of inquiry. To accept the one while denying the other is to be illogical and guilty of employing dual standards with resulting injustices to the public or the utility."

Now, what I am undertaking to ascertain is whether or not there has been a consistent policy here in the determination of depreciation both for that which is being claimed on the annual allowance or expense side and that which is being claimed on the rate base side as the amount to be [fol. 8083] deducted.

I believe this witness has stated,—I wanted it to be stated even more clearly,—that he did not take into account the very important element of the claimed exhaustion of the gas supply.

Mr. Wheat: I just want one thing added to Mr. Littman's statement, and that is, of course, the case which recites that the Commission was not dealing with a company of finite life. That is the basic difference, of course, between natural gas pipe line companies' operations and those of an electric generating or distribution company.

Trial Examiner: At least, you have stated a contention.

Mr. Wheat: I have stated a fact, Mr. Examiner.

Mr. Littman: You see, if your Honor please, they are claiming a huge annual allowance here with which to amortize the property by reason of the claimed exhaustion of the gas supply over a remaining period of 24 years, but they do not want to deduct anything for accrued depreciation on that account.

Mr. Baldridge: Well, may I say there, this witness has not testified as to the policy of making annual accruals. He has simply testified as to the peculiar condition of the property. Because of the fact that this company has a finite life, it is necessary, of course, that the investment be returned at the end of that finite life in order to avoid confiscation of property.

[fol. 8084] At the same time the property depreciates physically and when we come to the question of accruals for depreciation or for maintenance, ordinary or extraordinary, it is necessary to keep the property in full operating condition during the full period of the life, so that the service will not fail.

However, what this witness has been testifying to is what he actually saw in the property in its present condition.

Mr. Goodman: Now, I want to underline that too, as a concession, as well. It is exactly the way I understand this witness' testimony.

He is here for the purpose of hypothetical exercise, namely, to ascertain how the particular items compared with new items, apart from their use in the business and wholly apart from the question that they would be totally useless when and if the gas supply were exhausted.

Mr. Baldridge: It is apart from the fact that this business has a limited life because of the prospective failure of gas supply which, according to our best information will be around December 1965.

Mr. Goodman: You concede, Mr. Baldridge, do you not, that this witness in putting a condition upon property, a percent condition or a percent value took into consideration a hypothetical consideration contrary to the facts and the evidence in this case, namely, the assumption that the particular items of property would remain in existence and [fol. 8085] would have a separate value apart, from the business, at the time when they would be retired in 1965?

Mr. Baldridge: No, I do not think that you have paraphrased accurately what was said, Mr. Goodman. You have stated what was in my mind. What this witness has done is to look at physical property. He has determined that because of the wear and tear the amount of uses under-

gone and for the other reasons he stated there had been some diminution in condition of this physical property from its condition when new. He was asked to [stated] the amount of that diminution. It is not a hypothetical situation; it is an actual situation because we are dealing with actual property.

Mr. Goodman: I do not want to argue with you at this time and I will content myself with just this statement: I understood him to say and I understand you to mean that the question of whether the property will be retired in 1965 is not material to this witness' testimony. He predicates his valuation or percent condition or whatever you call it in complete neglect of that fact, in complete absence of any retirement date on the property predicated on the exhaustion of the gas.

Now, the age of the property then which he does consider is that age which buildings or structures would have apart from any necessity for retiring them in 1965 by reason of the exhaustion of the gas supply and, therefore, the age which he considers, which is a hypothetical physical age, is [fol. 8086] the age that the property would have if permitted to remain in existence until it wore out.

Now, isn't that right, Mr. Baldridge?

Mr. Culton: Mr. Examiner, may I move the previous question?

Mr. Baldridge: I would just like to have this in the record.

Mr. Culton: I think we have had a good deal of discussion, showing our different philosophies. As a matter of fact, I believe, Mr. Examiner, we have all been discussing philosophies here for quite a while rather than cross-examination.

Mr. Goodman: I said I would have nothing further to say beyond that.

Mr. Baldridge: I do not like to accept all his words. I did not like the word, "neglect" and I did not like the word "hypothetical", but I do not believe it will serve any useful purpose in prolonging this discussion because I think, in substance, Mr. Goodman has about the same thing in mind that I have.

Trial Examiner: We are in a very important aspect of the issues of the hearing, of course, and it is entirely proper to consider and understand each other's position as we proceed.

By Mr. Liftman:

Q. Mr. Haberly, did you determine the accrued depreciation on this property in any different manner than the method that you would use on a property that had an inexhaustible gas supply?

[fol. 8087] A. No, I did not.

Q. In other words, you used the same method here as you would if you were making a determination on a property that had what Mr. Wheat has defined as a finite life?

A. I gave no consideration to any finite life. It was my understanding that the determination of amortization rates would be made by other and I was simply finding the physical condition of the property as at the moment without regard to any finite life.

Q. I should have said infinite life instead of finite life in my question, but I believe your answer has clarified your method. In other words, you gave no effect to the factor of the claimed exhaustion of the natural gas resources in this proceeding?

A. No, I did not. An entirely different method would have had to be used in that case.

Q. When you find a structure or certain equipment in 50 percent condition, does that mean that 50 percent of its life is gone and that 50 percent of its life remains?

A. Not precisely. That element is considered. A property, 50 percent of whose life is gone, might be in less than 50 percent condition or it might be in greater, depending upon how well it had been maintained, how well it was serving, the amount of necessary repairs, how well it was operating, a number of other factors have to be taken into age to life.

[fol. 8088] consideration in addition to a strict ratio of

Q. How much weight did you give to life?

A. I do not think I can answer that question directly. I give consideration to age and life but not in a mathematical weighting.

Q. Well, did you know the average age of every item of property that you inspected?

A. Yes. I know when it was installed.

Q. You had that in the back of your mind and then you had an age and then you had a physical life figure in your mind as you made these inspections, did you?

A. I did.

Q. And you translated the remaining age and reflected that in your percent condition, did you?

A. Yes, I think that is shown on Page 4 of Exhibit 82 where the condition of the measuring and regulating station structures and equipment—

Q. (Interposing) What page?

A. Page 4.

(Continuing)—is listed by years. It can be seen there that, reading from the bottom of the page up, the condition of the structures and equipment in the measuring and regulating stations is 99 percent for the years 1940 and 1941 and constantly decreases as you go up the page for some ten or twelve items, so that the condition percent of [fol. 8089] the measuring and regulating structures installed in 1931 is 77 percent.

Q. You would expect that same condition to prevail whether you gave consideration to age or not, wouldn't you?

A. No, I do not think it would. If you ignore the age completely, you might have a structure built in 1940 that was in no better physical condition than one built in 1930 but, giving consideration to age, the one built in 1931 would necessarily be somewhat lower in condition.

. . . . . .

[fol. 8090] By Mr. Littman:

Q. You are unable to state quantitatively how much you added at any particular inspection point by reason of age?

A. I do not think I can say what weight I gave in a quantitative measure.

Q. I want you to assume, Mr. Haberly, that you are looking at a structure that is ten years old and has a life of 50 years. You know those facts when you make the inspection. I want you to assume that this structure, in so far as your visual observation is concerned, is just as good as new. That is, it is, in so far as observation is concerned, in excellent, brand new physical condition. What would be your percent condition on that structure?

A. Well, that is a hypothetical question and more or less difficult to answer. On a pure straight line basis, that structure would be in 80 percent condition. If it were in 100 percent condition physically and for all other aspects of condition, such as the building lacked any obsolescence, it was perfectly well maintained, perfectly serviceable, I would place a condition on it something in excess of 80 percent, possibly ranging between 80 and 90.

Q. Why would you do that?

A. Simply because you might have another structure built at exactly the same time with the same average life [fol. 8091] that was in, we will say, 50 percent physical condition. That would not be in 80 percent condition even though the pure straight line basis of depreciation would indicate that. It would be, in my estimation, in 50 percent condition. You could ignore life completely and the physical condition would rule entirely in that case.

Q. But I am giving you a hypothetical case where you have 100 percent physical condition, so far as observation is concerned, but you know that 20 percent of its life is gone. You say that you would not put that property in 80 percent condition?

A. No, because life is an average figure. When one speaks of 50-year life, one means that a group of property may live for 50 years. Actually, some units of it may go out in 30 years, some in 40, some in 50 and others in 60, 70 or 80 years, and a piece of property that was in 100 percent condition, when it is ten years old, could be expected to live somewhat beyond the average life and would, therefore, at the age of 10 years, have a condition percent somewhat in excess of that indicated by normal straight line depreciation.

Q. But, Mr. Haberly, I am asking you to assume that this structure is 10 years old and definitely has a remaining life of 40 years. You seem to inject in your answers something that I am not assuming.

A. Are we putting a finite life on that building because [fol. 8092] it has to go out of existence at that time or that it will wear out at that time?

Q. It will wear out at that time.

A. We never know how soon it will wear out, only through averages.

Q. I am asking you to assume the wearing out forty years after you make the examination. You see, I want to ascertain how your mind worked and how you arrived at these percent conditions and, in order to do that, I must make certain assumptions to get the pure theory that you applied.

A. All right. Accepting the stipulation that it must wear out at the end of 40 years more of life and is in 100 percent condition after 10 years of life, I still feel it would be or would have a condition at the end of 10 years of something in excess of 80 percent.

Q. Now, when you place a structure or equipment in 50 percent condition, do you mean that 50 percent of its reproduction cost remains?

A. I mean it has a then value on a reproduction cost basis of 50 percent.

Q. Would you also mean that 50 percent of its original cost should be deducted for rate making purposes?

A. That is getting into the accounting aspects of the management of the property.

. . . . . .

[fol. 8094] By Mr. Littman:

Q. Did you at any time suggest to the accountants of Michigan Gas Transmission Corporation or those accountants representing Michigan Gas Transmission Corporation that your condition percents were properly applicable and referable to original cost?

A. No, I did not suggest that to them, other than that if they were going to make a finding of original cost less depreciation as I have determined it, the percentages which I had determined would apply to original cost as well as to reproduction cost.

Q. To my mind, that kind of begs the question and I do not mean any improper inference by what I say.

In your opinion, is it proper to apply your condition percents to original cost?

A. Yes, they are just as applicable to original cost as to reproduction cost.

Q. Well, are your condition percents applicable to any other kind of valuation or cost however arrived at?

A. As of June 30, 1941, I would say yes.

Q. You can apply your percents to anything you want to apply them?

A. The only two values that I would know of as of that date would be the reproduction cost and the original cost but if there were another basis of value, I would think [fol. 8095] they would apply equally well.

Q. To which valuation or cost did you apply your condition percents?

A. To reproduction cost.

Q. You personally had no part to play in applying your condition percents to original cost, did you?

A. I do not recall at this particular moment, Mr. Littman, whether we made any application of them to any original cost figures or not. We may have done so for a reweighting of the conditions in their application to original cost. However, I am not sure. I do not recall.

Q. Whom do you mean by "we"?

A. Myself and my staff.

Q. You have no recollection of doing that, however?

A. A vague recollection that we may have made some such calculation.

Q. But you have not put any such calculation in evidence?

A. No, I have not.

Q. In this proceeding?

A. That is correct.

Q. Have you ever, in your experience as an engineer, applied your condition percents to original costs for rate making purposes?

A. Whether or not it was for rate making purposes, I cannot now state but I do know definitely that we have [fol. 8096] applied condition percents to original cost.

Q. Now, where original cost is used, Mr. Haberly, you would feel that it was proper, would you not, to make a deduction for depreciation that has accrued by reason of the claimed exhaustion of the gas supply?

. . . . . .

The Witness: It would depend on whether the reserves for depreciation were being accrued on a straight line or sinking fund basis.

By Mr. Littman:

Q. Assume that the company in question is one which is accruing its reserves for depreciation on a straight line basis.

A. My own personal feeling in that case is that the depreciation should be deducted.

Q. For the assumed exhaustion of the gas supply so as to reflect that element, is that right?

A. Yes.

. . . . . .

[fol. 8098] By Mr. Littman:

Q. Will you please turn to Page 3 of your Exhibit 82, Mr. Haberly?

On this page you show the compressor station structures and improvements upon which you determined the percent condition listed according to the year of construction, do you not?

A. That is correct.

Q. What is the probable future life of the compressor station structures and improvements constructed at the Montezuma station?

A. I would say in the neighborhood of 50 to 60 years.

Q. Can you be any more definite than that?

A. I think not. I did not make a more detailed study of mortality of that type of structure other than my general knowledge as to the age of similar structures that have lived 40 or 45 years and are still in very serviceable condition.

Q. What is the probable future life that you had in mind for the compressor station structures and improvements in Account 352.1, the 50 to 60 years which you just mentioned?

A. As I recall, that was about the figure that I had in mind in determining the condition percent.

Q. What would you say with respect to the compressor station structures and improvements at Zionsville compressor station?

A. About the same life.

[fol. 8099] Q. The same is true of the Edgerton compressor station?

A. Yes.

Q. Is the same true of the structures in Account No. 352.23, "Other transmission system structures at Montezuma, Zionsville and Edgerton"?

A. Well, the life of those, I believe, would be somewhat shorter.

Q. What probable future life did you have in mind?

A. As I recall, I think that we had considered the entire life, the total life to be 40 to 50 years, so that the probable future life would be that figure less the expired age in each case.

Q. Now, the 50 to 60 year figure which you gave a minute ago for compressor station structures and improvements, Account No. 352.1, was that the over-all life or was that the future probable life?

A. That was the over-all life.

Q. The over-all life?

A. Yes.

Q. What is the over-all life that you used for Account No. 354.1, "Compressor equipment", shown at the top of Page 4 of Exhibit 82, and will you please give us the figure referable to water tank and foundation as distinguished from cooling tower and foundation?

A. As I recall, I think that I considered the water tanks [fol. 8100] as having a probable life of about 50 years and of the cooling towers about 30 to 35 years.

Q. Now, those lives apply to the property which you just described, located at the Montezuma station, the Zionsville station and the Edgerton station?

A. That is correct.

Q. You, also, found a percent condition for Account 352.2, "Measuring and regulating station structures." Will you state the over-all life that you used in connection with those structures?

A. The structures in that account vary considerably, one from another, and some would have considerably shorter life, in my judgment, than others.

As I recall—

Q. (Interposing) Pardon me. Suppose we take the details of those structures shown at the bottom of Page 4 of Exhibit 82, starting with the Fort Wayne measuring and regulating station.

A. That is a brick structure. As I recall, I made the plans for that building myself in working for the Street

Railway years ago. That building is probably some 20 years old now and, in my estimation, should have an over-all life of 40 or 50 years.

Q. What do you say about the Detroit measuring station which was constructed in 1936? What is its over-all life?

[fol. 8101] A. I thought of that as about a 50-year life.

Q. What do you say is the over-all life of the Detroit regulating station?

A. Well, that station and those at all other locations, my recollection is that we considered those as having a probable over-all life of possibly 35 years.

Mr. Littman: Will you please read back the last answer?

(Whereupon, the last answer was read by the reporter.)

The Witness: Perhaps I should amplify that slightly. By "all other locations", I mean those other than the Detroit measuring station and the Fort Wayne station.

By Mr. Littman:

Q. You mean those that are shown at the foot of Page 4 of Exhibit 82?

A. Under the heading, "All other locations".

Q. Will you describe the types of construction for those regulating stations?

A. The majority of them are sheet metal structures on concrete foundations.

Q. What kind of frame?

A. In some cases, wood frame and in other cases, steel frame.

Q. What causes you to assign a 35-year life to those regulating stations as compared with the 40 and 50 year lives which you have heretofore given for other stations? [fol. 8102] Is that because of the nature of the structure?

A. The nature of the structure and the nature of the materials used in its construction.

Q. What is there about the nature of this latter class of structures that causes you to assign a smaller over-all life than to the other structures?

A. I think that those structures would require replacements of certain portions in a shorter period than the buildings at the pumping station locations or the brick buildings at Detroit.

Q. What is the size of these regulating and measuring stations?

A. They vary considerably in size but I would judge that the average size was from 8 to 12 feet wide and from possibly from 15 to 25 feet long, 6 to 8 feet high at the eaves.

Q. What over-all life did you use for Account No. 354.2, "Measuring and regulating station equipment"?

A. I used the same life for the regulating station equipment as I did for the structures, that is, I considered about the same life.

Q. Wouldn't the equipment outlive the structures?

A. Actually, I think it might to some extent.

Q. Will you give us a brief description of the equipment that is comprehended by Account No. 354.2, "Measuring and regulating station equipment"?

[fol. 8103] It consists of pipes running through the regulator structure coming up through the floor and running across the interior of the building at a level of about two or three feet off the floor and then down and out again and the measuring meters and shut-off valves and regulating equipment are interposed in the pipes going through the building.

Q. Those pipes are all painted, are they not?

A. Yes, they are all painted, protected from the weather.

Q. Protected from the weather by the structure, yes. You do not think those pipes would wear out in anything like 35 years, do you?

A. Actually, the pipe would last a much longer time but the necessity of rearrangement or the installation of new meters and governors would, in my estimation, make an average life of about 30, 35 years for that equipment about the figure to use.

. . . . . .

By Mr. Littman:

Q. Will you please turn to Page 3 of Exhibit 82; you show on that page that the compressor station structures and improvements in Account No. 352.1 that were installed [fol. 8104] at Montezuma compressor station in 1940 have a percent condition of 98.1 percent.

A. That is correct.

Q. And that the 1940 construction at Zionsville has a percent condition of 97.9 percent and the 1940 construction at Edgerton has a condition percent of 97.7 percent, do you not?

A. That is correct.

Q. Now, that indicates for the 1940 construction, a percent depreciation of 1.9 at Montezuma, 2.1 at Zionsville and 2.3 at Edgerton.

A. That is correct.

Q. Now, with respect to this 1940 construction, what conditions did you observe on the structures and improvements at Zionsville and Edgerton which caused you to place them in a lower percent condition than that which you placed on similar construction at Montezuma?

A. As I recall, that is due to the weighting out of the conditions placed upon various individual structures or portions thereof which varied somewhat in condition, one from another.

Q. What did you observe that caused you to place different condition percents at the various stations?

A. I would say, from my recollection now that the physical condition at the three places covering the 1940 construction was generally the same but the resulting con- [fol. 8105] ditions shown here, varying somewhat as they do, are due to the type of construction at the three locations. In other words, there may have been a building at Edgerton in 1940 that I had thought of as having a somewhat shorter life than the majority of the buildings at Montezuma in 1940 which would necessarily result in a somewhat lower condition.

Q. You have testified on direct examination, Mr. Haberly, that the condition in which you found this property offers strong evidence that well maintained property does not depreciate on a straight line [bases] but depreciates less rapidly during its early life than it does in later years.

A. That is true.

Q. That is your testimony?

A. Yes.

Q. Do your condition percents on compressor station structures referred to on Page 3 of Exhibit 82 indicate the depreciation accrued less rapidly during the early life than during the later years?

A. I do not consider that there is any property at the compressor station which is in anything but its early life. It was all property of from less to a year old to about six years old.

Q. All of that property falls within the meaning of the term "early life", as you have used it?

A. Yes.

[fol. 8106] Q. Taking the compressor station structures shown on Page 3 and looking at your condition percents, it is obvious, is it not, that the rate of depreciation in these five years at least, that is, in the first five years of their lives was greater in the first portion than in the latter portion of those five years?

A. I think that is due to the type of structures included in the various years. My recollection is that the 1940 construction at Montezuma consisted of smaller buildings, more or less of the nature of the regulator station buildings than large pumping station buildings.

* * * * * * * *

[fol. 8107] (Exhibit No. 82 was received in evidence.)

Mr. Littman: If your Honor please, in line with our program of taking up the exhibits in consecutive order as presented by each witness, I would like to next take up Exhibit No. 83 entitled, "Michigan Gas Transmission Corporation Reproduction Cost New of Plant and Property as of June 30, 1941, Exclusive of Working Capital, Materials and Supplies, Cost of Developing Business or [fol. 8108] Going Value".

I wish to make an objection to this exhibit. I propose to follow the plan here of making a motion to strike certain portions of this exhibit which, to our mind, are highly objectionable rather than to object to the exhibit in its entirety.

We move to strike the letter which appears on the first unnumbered page of this exhibit which is addressed by Mr. Haberly to Mr. G. S. Young, Vice President of Michigan Gas Transmission Corporation, dated October 27, 1941. This letter contains certain reproduction cost figures which we deem highly objectionable.

Mr. Goodman: Both the plaintiffs in this case are in complete harmony with Mr. Littman's objections and motions in connection with Exhibit 83, this one and those which are to follow.

• • • • • • •

[fol. 8111] Trial Examiner: The Trial Examiner will just interject at this point to say that however erroneously counsel may feel the rulings have been that have been made, there will be at least consistency between the pending ruling and the rulings heretofore complained of, namely, the exclusion of reproduction cost now tendered by the Michigan Gas Transmission Corporation will, by the previous ruling with reference to a similar exhibit offered by the Panhandle Company, be excluded and, of course, we all have in mind that not only exhibit marked for identification as No. 83 but also exhibit marked for identification as No. 84 and apparently Exhibit 87 at least are subject to similar objections.

• • • • • • • •

[fol. 8112] Trial Examiner: Let me ask just generally, what part of it you are moving to strike?

Mr. Littman: The page to which I have already referred, namely the first unnumbered page containing the letter of Mr. Haberly. We have no objection whatever to the statement of education and experience of Mr. Haberly which is [fol. 8113] set forth in Exhibit 83 from Pages 1 to 7, inclusive. We object and move to strike Pages 8, 9 and 10. We object to and move to strike all of the figures appearing in the columns throughout this exhibit commencing from page 11 to the end of the exhibit headed, "Reproduction cost, June 30, 1941".

We have no objection to the listing of the account numbers and the names of the accounts and the original cost figures which are shown in the columns throughout the exhibit headed "Original cost".

With respect to Page 12 we object to the columns designated "Reproduction cost". That embraces the five columns at the right-hand side of the page. I believe that my objection is now specific enough to cover each and every item of reproduction cost.

In order to make it very clear, I will state, again, that on Page 11; that is with respect to Page 11 we object to the column headed, "Reproduction cost new, 1931" and with respect to all pages commencing with Page 13 and ending with the last page of the exhibit, namely, 64, we object to the figures and move to strike all of the figures shown in the column headed "Reproduction cost, June 30, 1941."

Trial Examiner: I think you inadvertently said, "Commencing with Page 13", did you not?

Mr. Littman: I made a specific motion with respect to Page 12 and, therefore, out of an abundance of precau-[fol. 8114] tion I mentioned Page 11, which is similar to Page 13 and all pages subsequent thereto.

. . . . . .

[fol. 8116] Mr. Littman: Yes, your Honor. We have certain objections to Mr. Haberly's Exhibit No. 84 entitled "Michigan Gas Transmission Corporation Reproduction Cost New Less Depreciation as of June 30, 1941, Exclusive of Working Capital, Materials and Supplies, Cost of Developing Business or Going Value".

With respect to Page 1 of this exhibit, we move to strike the column headed "Reproduction cost new, June 30, 1941", and the column headed "Reproduction Cost Less Depreciation".

. . . . . .

(Continuing) which columns are, together, headed "Cost of Gas Plant Exclusive of Working Capital, Materials and Supplies, Cost of Developing Business or Going Value."

In response to Mr. Culton's inquiry we have no objection to the listing of the account numbers under the heading "Accounts".

. . . . . .

Mr. Littman: With respect to the remaining pages of [fol. 8117] this exhibit, commencing with Page 2 through Page 8, we move to strike all of the figures shown in the

column headed "Reproduction Cost New, June 30, 1941" and all of the figures on the column headed "Reproduction Cost Less Depreciation".

We have no objection to the descriptions of the items for the columns headed, "Condition Percent."

Mr. Culton: There is nothing stricken on Page 2?

Mr. Littman: Yes, that ought to be stricken because of the "reproduction cost new, June 30, 1941," and, also, the same is true of the footnote on Page 4.

There was another exhibit presented by Mr. Haberly to which we wish to make objection. That is Exhibit No. 97 entitled "Michigan Gas Transmission Corporation, Variation in Purchase Power of Dollars as Related to 'Gas Plant' ". We object to this entire exhibit and move that it be excluded from evidence for the reasons which I will now state.

Your Honor has excluded reproduction cost evidence in this case. This exhibit, namely, Exhibit 97, endeavors to do by indirection what your Honor has ruled cannot be done by direction. Reproduction cost evidence in this case was tossed out the front door and here we have an effort to get it in through the back door.

If this Exhibit No. 97 is admitted in evidence, your Honor will have before him the precise effect and result as though he had included all of the evidence on reproduction cost.

[fol. 8118] Mr. Culton: Do you think it would be contaminated?

Mr. Littman: Yes, I think it would be contaminated, I think it is an infectious exhibit.

* * * * * * * * *

[fol. 8119] F. S. Haberly a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued)

By Mr. Littman:

Q. Mr. Haberly, do you have Exhibit 83 before you?

A. That is the reproduction cost new?

Q. It is your exhibit entitled, "Reproduction Cost New of Plant and Property as of June 30, 1941?"

A. Yes, I have that.

Q. In this exhibit, you show the original cost of the various accounts, do you not?

A. That is correct.

Q. What is the source of those original cost figures which appear throughout this exhibit?

A. They are taken from our analysis of the books and records of the Michigan Gas Transmission Corporation.

Q. You stated that this was "our analysis."

A. Analysis of myself and my staff.

Q. I see. Do you take responsibility for the original cost figures shown in your Exhibit 83?

[fol. 8120] A. Not entirely. We analyzed them sufficiently to permit us to determine the reproduction cost and then finally adjusted our total analyzed figures to the original cost as determined by Mr. Spitznagle, so, on page 11 of Exhibit 83, the totals there shown are actually the totals for the various accounts as determined by Mr. Spitznagle.

Q. In other words, Mr. Spitznagle made the original preliminary report on original cost which is identified in this proceeding as Exhibit No. 91, did he not?

A. Yes.

Q. And you took his work and made a rearrangement of the original cost items in the various accounts?

A. Yes. We analyzed his totals by accounts sufficiently to give us a basis for the application of indexes.

Q. You did not disturb his figures at all, in toto, did you?

A. No, sir, we simply further analyzed his figures for our purpose.

Q. What was the purpose of that?

A. For the determination of the reproduction cost by trending original cost.

Q. The first step you did was to take Mr. Spitznagle's original cost figures and analyze them and put them into the various accounts?

A. Put them into the various accounts and classifi-

[fol. 8121] cations which we needed for our purpose.

Q. Would you explain how you did that, I mean, how did you analyze Mr. Spitznagle's figures? Did you make

changes from the account numbers that appear in the company's books or what?

A. The company's books, as I recall, were kept under a different system of accounts than were Mr. Spitznagle's final figures, although the property was classified in the same groups and the sole use we made of Mr. Spitznagle's figures was to have a total account figure to check to. My engineers made the analysis of the figures as shown in the company's books and endeavored to check out as closely as possible with Mr. Spitznagle's totals without going to more work than was necessary for the purpose for which we needed the figures.

Q. Did you have to make certain allocations in your analysis of original cost which appears in Exhibit 83?

A. Yes. As I recall, we made a number of allocations to the groupings which we were using for grading purposes.

Q. Let's look at page 14 of your Exhibit 83. On that page you show the 1936 construction of the Montezuma compressor station and you have various figures showing the details with respect to the original cost for foundations, floors, super-structure, lighting, heating, miscellaneous, labor, construction overheads, do you not?

[fol. 8122] A. That is correct.

Q. Where did you secure those figures, directly from the company's books?

A. Yes, those were secured from the company's books.

Q. Were they shown in that detail on the company's books?

A. Such items as foundation, floor, super-structure, lighting and heating under the item of material are as shown by the books. There may be a possible slight adjustment of a few dollars. Labor is shown on the company's books. Then, under the heading of "Heating," there are two items, unit heaters and other material. The other material was not analyzed except to get some idea of what it consisted of and then into construction overhead was thrown the various overheads and charges of an overhead nature. The items are not set up on the books. This is not a copy of the books in any sense of the word.

Q. Is there an item on the books called "Construction Overheads," $3,185.00, which relates to the main compressor building at the Montezuma compressor station?

A. I would say that there was. I do not have the working papers with me to determine exactly, but I do not think that was an allocation of cost to that building. I think it was a totalling up of the various overhead charges charged against the main compressor building.

[fol. 8123] Q. Does the testimony which you have given with respect to the 1936 construction at Montezuma compressor station apply with respect to the balance of this Exhibit 83?

A. Generally I would say that it did, yes.

Q. Your total original cost figure is the same total as that which is presented by Mr. Spitznagle in Exhibit 91, is it not, in total?

A. I think it is.

Q. That is, you made no deductions from or additions to Mr. Spitznagle's over-all figure, did you?

A. No, our endeavor was to use the same original cost as he did as representing the same property.

Mr. Littman: If Your Honor please, we have no further cross examination with respect to Exhibit 83.

Trial Examiner: Have other counsel questions concerning Exhibit 83?

Mr. Goodman: No, Your Honor, we have none.

Mr. Littman: If Your Honor please, did you expect to rule on these exhibits as we went along, or did you propose to defer your ruling?

Trial Examiner: The ruling with reference to the evidence on reproduction cost will be deferred to give counsel further opportunity to consider the effect of the motion pending, also to supplement any previous statements with reference to the record as it is before the ruling.

[fol. 8124] Mr. Baldridge: May I say in that connection, Mr. Examiner, that Exhibit No. 97 stands on an entirely different basis from the other exhibits objected to in that it does not relate to reproduction cost?

Trial Examiner: Yes, I think that is true, and the ruling with reference to Exhibit 97 will also be deferred so that it may be discussed later if you prefer.

Mr. Baldridge: Yes, that is what I desired.

By Mr. Littman:

Q. Mr. Haberly, in the morning session I requested you to furnish certain information with respect to the structures which you did not examine. Are you prepared to give me the information at this time?

A. Yes, the working papers which are here in Detroit do not show specifically the stations examined and not examined but I think I can answer your question in this way: Looking at page 26 of Exhibit 83, there is there listed the various measuring and regulating station structures by name, having a total original cost of $48,566.00. The Detroit measuring station and the Detroit regulating station, the Fort Wayne measuring and regulating station, the Montezuma measuring and regulating station, and the Zionsville measuring and regulating station were examined and, to the best of my recollection, some seven, eight or nine other regulating stations were also examined.

[fol. 8125] Q. How about the balance of them?

A. The balance were not examined.

On page 1 of Exhibit 82, a statement is made that in addition, measuring and regulating station structures and equipment were inspected aggregating in excess of seventy-five per cent of the investment in structures, and sixty-five per cent of the investment in equipment, and I recall now that in calculating those percentages, we added up either the original cost or the reproduction cost of those which were inspected.

Q. Do you have any working papers outside the city that will state and show which stations were not examined?

A. The only sheets that would show which were examined would be those on which we made notes, and it may well have been that, as the computations for depreciation were made from the date on these sheets were checked off and the sheets thrown away. I am not positive of that.

Q. Will you please make a check of your working papers and ascertain whether you have preserved your original notes and, if so, will you make a list of the stations which you did not observe?

A. Yes, I will endeavor to do that.

Q. Of course, if you have destroyed your notes, in that event you could not give us that information and you may so advise us.

[fol. 8126] A. I believe that by discussion with my staff I could determine what buildings were inspected, which would naturally result in giving us those that were not.

Q. I note at the foot of page 26 of your Exhibit 83 there is an item called "Not Analyzed," in the amount of $887.00 of original cost. What does that mean?

A. That covers small charges scattered through the construction costs of the company which may have been credits or adjustments or such small charges that it was not worth while to investigate what they covered.

Q. That same term is used elsewhere in this Exhibit?

A. Through most of the accounts you will find a certain amount of property made up of quite small items, adjustments and credits which we did not deem desirable to examine because of the time it would take.

Q. That is, you felt where the item was not sufficiently large in dollars to warrant the time, that it would be best not to pursue the matter and spend your time on it?

A. That is correct. There were many items of $1.00, $2.00 or $5.00 that would not materially affect the final answer.

Q. Now, will you please turn to your Exhibit 84? I will, of course, confine my questions to the column entitled "Condition Percent" and to no other figures shown in this Exhibit, inasmuch as there is a motion pending to [fol. 8127] strike all other figures.

A. Yes, I understand.

Q. Is my understanding correct that the condition percents shown in this Exhibit, which relate to the depreciation of mains were not determined by you, but were determined by Mr. Riddle? Is that correct?

A. That is correct. Those figures were furnished to me by Mr. Riddle.

Q. And you take no responsibility for them?

A. None whatever.

Q. Now, the condition percent figures which appear in this exhibit apply to compressor station equipment or, at least, most of the compressor station equipment? I have in mind by that the compressor engines. Those percents were determined by Mr. Lehn, were they not?

A. Yes, that was shown, I think, best on page 6 of Exhibit 84. At each station you will find an item there for main compressor units. The condition percent applied

against the reproduction cost of such property was determined by Mr. Lehn. The condition percentage applied against the elevated water tanks and the cooling towers was determined by myself and the condition percent applied against auxiliaries was determined by Mr. Lehn.

Q. So that what you have done is to take the various condition percents of Mr. Riddle and Mr. Lehn and yourself [fol. 8128] and summarize them in this Exhibit?

A. Yes, to bring them all in one place.

. . . . . .

By Mr. Littman:

Q. Will you please refer to Exhibit 85, which is entitled "Michigan Gas Transmission Corporation, Average Age at June 30, 1941, Estimated Remaining Life and Estimated Salvage Value of Short Life Property?" Is my understanding correct that the original cost figures shown in the first column for this property in the total amount of $13,400.51 were derived from Mr. Spitznagle's preliminary original cost study?

A. They were either taken from his preliminary figures or from the analysis which we made of the books. I do not recall at the moment, but I do think they checked out with Mr. Spitznagle's figures.

Q. Am I correct in saying that the "percent condition" which you show in the second column was derived by you in the manner set forth in Exhibit 82?

A. Yes, in Exhibit 82.

Q. And did you make the determination of the "aver- [fol. 8129] age age" of this property shown in the third column?

A. Yes, that is my determination.

Q. And, also, of the "remaining life" column and the "salvage value?"

A. Yes, those are my figures.

Mr. Littman: If Your Honor please, we have no objection to Exhibit 85.

Trial Examiner: The computation marked for identification "Exhibit 85" may be received without objection.

(Whereupon exhibit 85 was received in evidence.)

Trial Examiner: This Exhibit is supplementary to Exhibit 82, if I recall correctly.

Mr. Littman: Suppose we ask the witness that question. I rather doubt that it is supplementary. It does contain certain information contained in Exhibit 82.

By Mr. Littman:

Q. Will you please state whether your propose to offer Exhibit 85 as supplementary to Exhibit 82, Mr. Haberly?

A. In a measure yes. It breaks down certain figures a little further and develops the remaining life and the salvage value, and the Exhibit was prepared from Mr. Spitznagle's use in one of his exhibits.

Q. Well, perhaps I can clear up the matter this way: The condition percents shown in Exhibit 85 were not derived wholly by the application of the ratio between the [fol. 8130] average age and remaining life, were they?

A. No, they were derived in the same manner as those in Exhibit 82 and took into consideration salvage.

Q. Now, this exhibit was prepared, primarily, for the purpose of enabling Mr Green to determine his estimate of annual amortization for short life property, is not that correct?

A. Yes, I believe that is right.

Mr. Littman: If Your Honor please, it forms the basis, as I understand it, in part, of Mr. Green's testimony.

By Mr. Littman:

Q. Will you please turn to your Exhibit 86 entitled "Michigan Gas Transmission Corporation, Estimated Salvage upon Exhaustion to the Gas Supply of 'Gas Plant' as of June 30, 1941?" Do [you] estimates contained in Exhibit 86 reflect the dollar amounts which, in your opinion, will be recovered by way of salvage in the year 1965?

A. Yes, the exhibit was made in order to estimate as well as could be the probable salvage which might be realized upon dissolution of the company.

Q. You are not taking any responsibility for the claim that the Michigan Gas Transmission Corporation's project and property will be abandoned in the year 1965, are you?

A. No.

Q. As I understand your testimony, you were given the [fol. 8131] problem of determining what the salvage value would be at December 31, 1965, were you not?

A. That is correct.

Q. You testified on direct examination, Mr. Haberly, that you first determined your percentages of salvage and then applied them to reproduction cost new to secure the amounts which are shown in the column headed "Net Salvage," is that correct?

A. That is generally true where a percentage is shown. There were some items where no percentage was determined, and the net salvage figure was shown. There [there] was simply an estimate made of the possible salvage which might be realized without going through the mathematics of setting it up, percentagewise.

Q. But the major items, that is the items of large amounts, were determined by the application of a percentage to reproduction cost new, were they not?

A. That is correct.

Q. Is it your testimony that the total net salvage of $663,165.00, shown on page 1, is the proper salvage value of all the property of Michigan Gas recoverable as of December 31, 1965?

A. That is so, provided the assumption is made that the entire amount of the pipe in the mains could be sold for re-use in another location. I doubt whether it would [fol. 8132] not be unwise to go upon the assumption that there would be a market for that price for re-use.

At the foot of page 1 on Exhibit 86, there is a note to the effect that if no prospective purchaser could be found, then the pipe could only be sold as scrap and there would be no salvage on the mains because the cost of removal would exceed the amount which could be realized by selling the pipe as scrap. I personally believe the proper figure to use as salvage value would be the $663,165.00 less the estimated salvage for mains of $537,019.00, which is based upon the assumption that the entire amount of pipe could be sold for re-use.

Mr. Littman: Will you please read that back?

(Whereupon, the last answer was read by the reporter.)

By Mr. Littman:

Q. Well, then, your actual salvage value is not any $663,165.00, is it?

A. No, that would be, in my estimation, the maximum salvage which could be obtained provided you could sell the pipe for re-use.

Q. What is your estimate of the minimum salvage which could be obtained?

A. About $127,000.00.

Q. I take it, from your testimony, that you do not consider it likely that the amount of $537,019 could be ob- [fol. 8133] tained for mains?

A. I doubt it.

Q. In other words, it is your best judgment at the time that Michigan Gas Transmission Corporation will not be able to salvage one cent for its mains?

A. Well, it would depend entirely upon the conditions in 1965.

Q. Well, suppose you tell me what you considered would be the conditions that would be found to exist in 1965, upon which you now base your conclusion?

A. Well, I have worked it out on two bases, one, upon the assumption that the pipe could be sold for re-use, and the other upon the basis that it could not. I would lean very strongly toward the assumption that the pipe could not be sold for re-use, that is, that there is no certainty that it could be.

Q. There is no certainty that it could not be, either?

A. That is perfectly true.

Q. What prices did you use for salvage, those which were prevalent as of June 30, 1941, or those which you expect to prevail at December 31, 1965?

A. Well, I would hesitate very strongly to estimate what the salvage value of the pipe might be in 1965, and the entire estimate of salvage is predicated upon percentages of the reproduction cost and salvage values of [fol. 8134] pipe on June 30, 1941.

Q. Well, suppose the Commission were to use original cost as a rate base for the purpose of testing the reasonableness of the rates. Would it be proper to apply your percents of salvage to the original cost?

A. Yes, that could be done, although, as I recall, I made a statement in my direct testimony to the effect that the

amount of salvage, as determined in this exhibit, could be used on either a reproduction or original cost basis.

Q. Well, if you used it on the original cost basis, you would get even less salvage than you found, would you not?

A. It would be somewhat less, yes, not materially so.

Mr. Culton: May I ask a question to get my own mind clear?

Does this show what that salvage would, today, be worth in your judgment as of June, 1941?

The Witness: Yes, it was predicated upon the fact that the prices prevalent at June 30, 1941, would be prevalent in 1965.

Mr. Culton: In other words, this page 7 in Exhibit 86 represents what you considered that salvage could be sold for as salvage net as of June 30, 1941?

The Witness: Yes.

Mr. Culton: Irrespective of what it originally cost?

[fol. 8135] The Witness: Irrespective of what it originally cost, because it was here computed on a reproduction cost basis.

Mr. Culton: By "it" I meant irrespective of what the property originally cost.

The Witness: Yes.

By Mr. Littman: In other words, you are standing on the dollar value of salvage here and not so much on the percent figure?

A. Well, I think it would be equally correct to take the dollar figure here as applying to original cost rather than to recompute it, because it is hypothetical as to what the actual salvage in 1965 will be. The only basis for it is an estimate using today's prices and when none of us know what the price level will be in 1965. It may be considerably higher or considerably lower.

Q. In other words, you would have no objection and it would not be improper to use the dollar figures of salvage which you have set forth in Exhibit 86, regardless of what rate base is used?

A. That is correct, except that in my own judgment the lower of the two figures I testified to would prevail.

Q. I understand the one qualification that you have made very clear on the record. Well, as I understand your testimony, you have determined in this exhibit the salvage value today of the property when sold in 1965?

[fol. 8136] A. Yes. I have maintained the present price level up to 1965 and assumed that we are then at the same price level salvaging the property.

Q. What conditions did you assume, those that exist today or those that exist in 1965?

A. I do not know what the conditions in 1965 will be, so I assumed market conditions as of 1941.

Q. If this property were to be abandoned tomorrow, would it be possible to sell the pipe for re-use in another location?

A. I think it would be very possible to sell the pipe. I do not know whether it would be good for use in another location, but steel is valuable today.

Q. The probabilities are that it could be sold as pipe?

A. It could be sold and well used for some purpose. I think it would probably be up to the Priorities Board as to what use would be made of it.

Q. It would not be sold as scrap today, would it?

A. I doubt it.

Q. And your answer would be the same, even though the pipe in this system were thirty years old today? Is that correct?

A. I think if the pipe were thirty years older today it would not be materially less valuable.

[fol. 8137] Mr. Goodman: Would not be materially what?

The Witness: Less valuable.

By Mr. Littman:

Q. Why don't you assume that condition which exists today in arriving at your total salvage value rather than to assume scrap conditions which you have assumed?

A. Well, in the first place, the determination was made before the war started.

Q. You mean your exhibit was prepared before the war started?

A. Yes, I do not think the war is going to last until 1965, so I do not think I would want to maintain that position at thirty years hence.

Mr. Culton: At least you hope that?

The Witness: I certainly do.

By Mr. Littman:

Q. You certainly went to a good deal of trouble to ascertain what the salvage value of these mains would be if they were sold for re-use in another location, did you not?

A. Yes.

Q. You thought enough of the possibilities to go to that trouble, did you not?

A. I started out both ways so that whichever one the Commission desired could be used.

Q. As far as you are concerned, the Commission could [fol. 8138] use either one?

A. There is nothing I can do about it.

Q. Well, I would like to know what you think about that. You put it in this exhibit. Now, if it does not belong in here, we would like to know it.

A. If it were my own property, I think it would be slightly over optimistic to count on selling the property for re-use in 1965.

Q. Why did you put this figure in here if you did not intend that anyone should use it? We get very optimistic when we see $63,000 salvage and then later on we learn, when we look at Mr. Green's exhibit, that we only have $126,000 of salvage in his pro forma statement and then we are not so optimistic.

A. Well, I set it up in both ways, one assuming that it could be sold for re-use, and one assuming that it could not. I lean more strongly to the second.

Q. In other words, your forecast of things to come in 1965 is not any better than mine or anybody's else, is it?

A. I think that is probably true.

Q. And you would not consider the use of the entire figure of $665,165 as erroneous if it were used in its entirety?

A. No, I do not think it would be erroneous. It would be, in my opinion, the more optimistic view of what you [fol. 8139] might obtain for salvage.

Q. In your estimate of salvage for Account No. 353, "Mains," summarized on page 1 of your Exhibit 86, in the amount of $537,019, what average price per ton did you use in arriving at that figure?

Now, before you answer that question, I presume I am correct in assuming that that is the amount you would expect as salvage in 1965 on the assumption that the pipe would be sold to a purchaser who would have occasion to re-use the pipe at another location. Is that correct?

A. That is correct.

Q. Now, let us have the answer.

A. The average price is one-half of the reproduction cost of the pipe. I do not know exactly what the average price per ton is. The figure for the total reproduction cost includes pipe at several various prices because of the price differential as to size.

Q. You are speaking of the cost of the pipe alone?

A. Yes, so I cannot answer the question specifically without making an analysis to find detail price.

Q. Do you have those figures in your working papers, Mr. Haberly?

A. I believe you have the working papers, and I do not recall now just exactly the detail in which it is set up.

Q. We hand you a copy of your working papers and [fol. 8140] ask you to read into the record the price per ton.

A. I do not believe, Mr. Littman, that I can answer your question much better than I just did. Apparently the material cost on the pipe was added up exclusive of the river crossings and exclusive of the fittings of that type was at various prices due to different prices on different sizes of pipe.

Q. Can you give us an approximation?

A. I would say that in the neighborhood of $30.00 to $32.00 a ton was considered as gross salvage.

Q. Thank you. Have you made any estimate of the salvage value of this plant, assuming that its component parts would be replaced by reason of physical deterioration before the gas supply is exhausted as claimed in this case?

The Witness: May I hear that question?

(Whereupon the pending question was read by the reporter.)

The Witness: As I understand your question, I have assumed that the property would be maintained in adequate working condition, operating condition, up to the time it went out of service and, therefore, that the necessary replacements would have been made from time to time and it would be that property which was being salvaged in 1965.

Q. You have told me what you did. Now, I want you to tell me whether or not you ever made another type of [fol. 8141] study of salvage on the system, namely, a determination of the salvage that would be recovered from this system if the gas supply were ample for a long period in the future?

A. No, I do not believe I have.

Q. You are sure you understand my question—I am referring to the salvage that you would obtain year in and year out by replacing pipe and renewing pipe and then—

Mr. Culton: (Interposing) You mean annual salvage? I am trying to get my own mind clear is the reason for this question.

Mr. Littman: That might be one way of expressing it, that is, assuming at the end of its life the entire property had been replaced with new parts. You answered my question wholly understanding what I have in mind?

The Witness: No. If I still understand your question, I do not think I have made any such determination.

By Mr. Littman:

Q. You know whether you did or not, don't you?

A. If I understand your question, I did not.

Q. You did not make any other type of salvage study than that which is contained in your Exhibit 86, did you?

A. Except in our determination of the percent condition, we kept in mind possible salvage at the end of its natural life which was not as much as I have considered here. For instance, I would not consider that the structures [fol. 8142] would have any net salvage.

Q. Did you consider that the pipe would have any net salvage?

A. I did not make a determination on percent condition on pipe so that question did not come up.

Q. Have you made any estimate of the salvage value of the main transmission line of Michigan Gas upon the basis of its re-use in place in 1965 for purposes of carrying oil or artificial gas or perhaps water?

A. You mean in the same location?

Q. Yes.

A. The question of salvage would not arise if it were going to be re-used beyond that date.

* * * * * * * * *

[fol. 8143] By Mr. Littman:

Q. You made no estimate of salvage or sale of this pipe line system in its present location as of December 31, 1965, did you?

A. In its entirety, a sale in its entirety?

Q. Yes.

A. For re-use for another purpose?

Q. That is right.

A. No, I did not make any such determination.

Mr. Littman: If Your Honor please, we would like to make an objection with respect to this exhibit.

Mr. Goodman: I would like to ask just one question which will complete my cross examination. This might be a good time.

Trial Examiner: Proceed.

Mr. Goodman: In your last answer, do you mean that you excluded consideration of the possible use of the pipe line facility as it exists at the termination or rather at the exhaustion of the gas wells as estimated to take place in 1965?

The Witness: That is correct. I did not assume that the property could be re-used in its present location.

Mr. Goodman: That does not answer my question. You excluded the element of such use from consideration?

The Witness: That is correct.

[fol. 8144] Mr. Goodman: All right, that is all.

Mr. Baldridge: May I inject one question? In that case, it would not be salvage, would it, Mr. Haberly?

The Witness: No, it would not be salvage.

Mr. Littman: Before entering my objection, I would like to ask Mr. Haberly one more question.

By Mr. Littman:

Q. In the footnote on page 1 of Exhibit 86, you state that, "No. 1 heavy melting scrap as of June 30, 1941, ranged in price from $18.25 to $20.00 per gross ton which is less than the cost of removal, including damages and freight to the steel mills."

Will you state the salvage value of the mains if the amount of $18.25 per ton were secured?

A. I would have to calculate it, but it would be a red figure. If the pipe were salvaged and sold as scrap, the net salvage would be a loss.

Q. Not asking you the net salvage. I am asking you to tell me how much money would be secured for this pipe if it were sold for $18.25 per ton.

A. Excluding the price of removal?

Q. Yes.

A. I think about the best way I can answer that, Mr. Littman, is I believe I stated that the gross salvage, assuming it could be resold for use in another location, was [fol. 8145] probably about $30.00 or $32.00.

Mr. Wheat: Per ton?

The Witness: Per ton; and if sold for $18.25 to $20.00, it would be a little better than half of what they would have obtained by selling it for reuse in another location, that is, sold for scrap. That would be, however, exclusive of the cost of removing.

Q. Suppose you tell me the total tonnage of pipe in the system and then we will do our own multiplication and get the figure we are seeking.

A. I do not know the exact total tonnage, but I would judge it was in the neighborhood of about 80,000 tons.

Q. Eighty thousand tons?

A. Yes, that is quite approximate.

Q. The amount covered on the basis of $18.25 per ton would be $1,500,000. Does that sound about right to you?

A. That would be approximately correct. That would be gross without giving consideration to the cost of getting it out of the ground before selling it at that price.

Mr. Littman: If Your Honor please, I wish to move to strike from this exhibit, Exhibit 86, all the figures shown in the column headed "Reproduction Cost New June 30, 1941." We have no objection to the other figures in the exhibit.

Mr. Culton: Mr. Littman, don't you think the Commission might be contaminated by the fact you could apply your percent salvage to the net salvage and get back ap- [fol. 8146] proximately what is in the first column anyhow?

Mr. Littman: If you want to have a good time doing that, you certainly are welcome to enjoy yourself. I do not think anybody else would want to do it.

I might say we want to be entirely fair about this matter. This witness has testified, and we gave him every opportunity to do so, that the dollar figure of net salvage are the dollars that he expects to recover at the end of the purported life of the project. I feel, in view of that testimony, notwithstanding the fact that this witness used a percentage applied to reproduction cost new, that the figures are not objectionable on that basis.

I wanted to state clearly on the record why we make no objection to the net salvage value or the percentage of net salvage value.

. . . . . .

[fol. 8153] By Mr. Littman:

Q. Mr. Haberly, you applied a salvage value of 4 percent on all of the main compressor units, did you not?

A. That is correct.

Q. And that represents junk value at December 31, 1965? A. Yes.

Q. As distinguished from resale salvage value?

A. Well, we gave consideration to possible resale of, say, one out of five units and the junking of the rest.

Q. How much are you getting for the one that is being resold? A. About 15 percent of its original cost.

Q. And that 15 percent was applied on one out of every five of the main compressor units? A. Yes.

Q. Does that contemplate the resale as at December 31, 1965?

A. Of one out of five, yes, at about 15 percent of its original cost.

Trial Examiner: May I ask, Mr. Haberly, are these compressors, in general, of a type similar to the compressors used for ventilating large mines?

The Witness: I really do not know. I doubt it.

[fol. 8154] Trial Examiner: I assume they would not be limited to gas transmission, would they?

The Witness: Yes, I believe they would be confined entirely to the transmission of gas.

Trial Examiner: And they could not be used for air compression?

The Witness: I do not believe so. I am basing most of my statements on discussions with Mr. Lehn.

By Mr. Littman:

Q. Mr. Haberly, you heard Mr. Lehn testify yesterday did you not? A. Yes.

Q. You heard him say he would not even want to venture a guess as to what the salvage value of these compressor engines would be in 1965. Did you hear him say that? A. Yes.

Q. You do not agree with Mr. Lehn, do you, on that subject?

A. Yes, in a measure I do. It is problematical as to what can be obtained for these engines in 1965 but, predicating it upon what he told me of the sale of a number of engines some years ago and the probabilities of how many could be sold were some nine or ten put on the market at once and the probable scrap value that could be obtained for the others, I worked out a figure of 4 percent.

[fol. 8155] Q. Did Mr. Lehn tell you that any of his Worthington engines had ever been scrapped? A. No.

[fol. 8156] By Mr. Littman:

Q. Mr. Haberly, you also heard him testify that machines that had been in operation for 40 years were expected to last another 40 years. Did you hear him testify to that effect? A. Yes, I heard him testify to that.

Q. That would give a life of approximately 80 years on these machines, would it not? A. Yes, it would.

[fol. 8157] Q. In 1965, the oldest of these machines will have reached an age of only 30 years, approximately?

A. Something like that, yes.

Q. And according to Mr. Lehn's testimony, they would be fully expected to last another 50 years?

A. If you can find someone who can use them.

Q. Now, assuming that you can find someone who can use them in 1965 when they are something less than 30 years of age, on the average, you say that only 15 percent of their value would be recovered?

A. Yes, and that figure was based upon conversations with Mr. Lehn and I think he repeated that statement in his testimony yesterday.

Q. Did Mr. Lehn tell you what might be expected by way of resale of these machines in 1965?

A. No, I discussed the matter with Mr. Lehn and, as I recall the conversation, he was of the opinion that there would be little likelihood of disposing of eight, nine or ten machines at one time to a prospective purchaser.

Q. Well now, you confine the 15 percent to only one out of five engines in 1965? A. That is correct.

Q. And 4 percent on all the other engines.

Mr. Chamberlain: It would be much less if he got 15 percent out of one. He only assumes to recover 20 percent [fol. 8158] out of five which would leave 5 percent to be recovered out of four or 1¼ percent salvage.

By Mr. Littman:

Q. Is it correct to state that your salvage on the remaining four machines out of the five is 1¼ percent?

A. I did not approach it that way although it works out to about that, yes.

Q. And that is simply because you say you doubt whether a purchaser could be found in 1965?

A. If the gas field was exhausted, it would probably throw quite a number of engines on the market in addition

to those on this property. Probably all of those on the Panhandle system and other systems which were supplied from the same field. I am of the opinion that it would be very difficult to dispose of more than one out of five for reuse in another location.

Q. Well, if they were all sold in 1965, you would expect to receive 15 percent salvage on them?

A. If you could find a [purchases] for each and every one, you probably could realize 15 percent.

• • • • • • • • •

[fol. 8159] Mr. Littmans: I propose next to take up Exhibit No. 87 entitled, "Michigan Gas Transmission Corporation, Materials and Supplies, Statement of Cost of [fol. 8160] the Major Items at Prices as of June 30, 1941."

• • • • • • • • •

By Mr. Littman:

Q. In this exhibit you show the total cost of materials and supplies per books as of June 30, 1941, in the first column, do you not? A. That is correct.

Q. And that was in the amount of $93,413?

A. That is right.

Q. Now, you made a certain adjustment with respect to the book figures and made an upward revision, did you not?

A. Yes, of about 58 percent of that $93,000.

Q. No, you mean 58 percent of $54,000, do you not?

A. No, it is about 58 percent of the $93,413.

Q. Oh, I see. That is the 58 percent of the $93,000 is the amount of materials and supplies, on whose costs you made a revision? A. That is correct.

[fol. 8161] Q. Now, what is the total amount of your revision? A. $7,311.

Q. And so the upshot of this exhibit is that you added $7,311 to the book cost of materials and supplies at June 30, 1941, of $93,413 to obtain a total claimed amount for materials and supplies of $100,724. Is that correct?

A. That is correct.

Q. Now, pages 2 to 8 show the details of the manner in which you arrived at the additional $7,000?

A. Yes. Opposite each item will be shown the original cost and then its approximate present cost.

Q. You took $54,211 of the materials and supplies on the company's books at June 30, 1941, and repriced that

amount of materials and supplies to reflect present-day prices, did you not?

A. Yes, we priced it by the application of indexes.

Q. Well, how much time did you spend on this job?

A. Personally, about a half-hour and one of the engineers probably spent about two or three hours digging up the indexes and setting them down opposite various items and then it went to a comptometer girl for calculation.

Q. Well, how did you determine how much of these materials and supplies required repricing?

A. It was not a matter of determining how much, it was [fol. 8162] done in this way: We were given a list in detail of the items of materials and supplies, the larger items. No detail lists of the smaller items aggregating about 62 percent of the materials and supplies was furnished to us. That 62 percent we made up from myriads of small items.

Mr. Baldridge: Did you say "62", Mr. Haberly?

The Witness: Yes. No, 42 percent it should be, I am sorry.

Trial Examiner: You are referring now to the—

The Witness: (Interposing) Complement of the 58 percent.

Trial Examiner: (Continuing) —percentage computation appearing on Page 1 of this exhibit?

The Witness: Yes.

By Mr. Littman:

Q. What was your assignment in regard to materials and supplies? Was it to determine the amount of materials and supplies required by this company for purposes of this proceeding or was it purely a repricing?

A. It was a repricing, what would be their value at June 30, 1941.

Q. You are not taking any responsibility then for estimating the amount of materials and supplies actually needed or required by way of working capital by Michigan Gas Transmission Corporation?

A. No, I am simply putting it in present-day values.

[fol. 8163] Q. You went to quite a bit of trouble here to arrive at this additional $7,000, did you not, Mr. Haberly?

A. Well, it may appear to be quite a bit of trouble but actually the indexes had been worked out for purposes of the reproduction costs of the property and the same indexes were applied to these various items, that is, the index indicating the increase in the price of a certain size of steel pipe from 1936 to June 30, 1941, was applied to that same size of pipe both in 1936 for materials and supplies purposes.

. . . . . .

[fol. 8165] Q. Mr. Haberly, I would like to have you turn to your Exhibit 97. In this exhibit you have worked out a factor which you called "Purchasing Power at June 30, 1941, of Actual Dollars Spent on Gas Plant", have you not? [fol. 8166] A. Yes.

Q. Now, you derived that, that factor is shown and I shall not read it into the record because I am going to ask that this exhibit be excluded. You have shown it in the right-hand bottom corner of the page of this exhibit, have you not? A. Yes, double-underscored.

Q. Now, this factor was derived by the application of certain indices which you have worked up from time to time? A. Yes.

Q. And these are the same indices that you have used in arriving at your reproduction cost estimate which is shown in Exhibit 83. Is that not correct?

A. In part, yes.

Q. How much part? A large part or a small part?

A. The major part.

Q. That is, you used the same general method in Exhibit 97, for the purposes of arriving at the factor, as that which you used in Exhibit 83 in arriving at your reproduction cost?

A. That particular figure was arrived at in that way, yes.

Mr. Littman: We have no further cross-examination with respect to Exhibit 97 and we, again, move that Exhibit 97 be excluded from evidence in this case.

. . . . . .

[fol. 8172] FRED A. SPITZNAGLE a witness, having been previously sworn, resumed the stand and testified further as follows:

. . . . . .

Cross-Examination

By Mr. Littman:

Q. Mr. Spitznagle, you are an employee of the Central Service Corporation? A. That is correct.

Q. What position do you occupy with that corporation?

A. An accounting position.

Q. You have presented the accounting exhibits in this proceeding in so far as they relate to Michigan Gas Transmission Corporation? A. That is correct, yes.

. . . . . .

[fol. 8173] By Mr. Littman:

Q. Do you have before you Exhibit 88 entitled, "Michigan Gas Transmission Corporation—Comparative Balance Sheets Per Books as at December 31, 1936 to 1940, inclusive, and June 30, 1941", Mr. Spitznagle? A. I do, yes, sir.

Q. Does this balance sheet correctly represent the true financial condition of Michigan Gas Transmission Corporation as of the dates shown?

A. I think I so testified on direct examination, Mr. Littman, that it does represent the financial condition of Michigan Gas Transmission Corporation at the respective dates shown in the exhibit.

Q. As a matter of fact, Mr. Spitznagle, you have made an actual audit of the books of the Michigan Gas Transmission Corporation, have you not?

A. No. In the direct testimony, I stated specifically [fol. 8174] that no detailed audit of the books was made by myself or anybody under my supervision.

Q. But you did make an investigation of the books?

A. Yes, we examined into the property and plant account in connection with the original cost determination and examined the accounts in a generalized way.

Q. Do you have a copy of Exhibit 146 which is the prospectus of Panhandle Eastern Pipe Line Company dated January 21, 1942, relating to the issue of $10,000,000 of first mortgage and first lien 3 percent bonds and 150,000 shares of cumulative preferred stock?

A. I have a copy of the prospectus to which you refer. I do not know it as Exhibit No. 146.

Q. Suppose you refer to that document.

A. I am afraid I misspoke myself, I do not have it here.

Q. I hand you a copy of Exhibit No. 146 and refer you to Page 74 thereof which contains a copy of balance sheets of Michigan Gas Transmission Corporation as of December 31, 1940, and September 30, 1941. I shall refer in the questions to follow only to the figures at September 30, 1941, on this balance sheet.

Will you state from this balance sheet the total of the outstanding long-term debt, common stock and surplus accounts of Michigan Gas Transmission Corporation as of September 30, 1941?

[fol. 8175] A. The long-term debt is denoted in this balance sheet that you have referred to as notes and loans payable to Columbia Gas & Electric Corporation and are in the amount of $8,320,500.

The capital stock and surpluses appearing in this balance sheet of September 30, 1941, are stated as follows:

The common stock, no par value, authorized 60,000 shares, outstanding 44,800 shares—$2,240,000;

Surplus with a reference to the statement of surplus accounts contained in the prospectus, special capital surplus—$139,500;

Capital surplus prior to January 1, 1938—$26,662.76;

Earned surplus since December 31, 1937—$54,177.83;

Making a total of capital stock and surplus of $2,460,340.59.

Q. Am I correct in stating, by way of summary, that the total of the common stock, long-term debt and surplus of Michigan Gas Transmission Corporation at September 30, 1941, was $10,780,840.59? A. Yes, sir.

Q. Is it correct to say, Mr. Spitznagle, that this amount of $10,780,840.59 represents the total actual investment as of September 30, 1941, of Columbia Gas & Electric Corporation in Michigan Gas Transmission Corporation with the exception of an item of an inter-company fee of $139,423.73 plus interest of $2,200 or a total of $141,157.73?

[fol. 8175-a] The Witness: I would like to have the question read to me, Mr. Littman, please.

(Whereupon, the pending question was read by the reporter.)

The Witness: You asked me if it is the amount of money invested by Columbia Gas & Electric Company. Actually, I do not know how much Columbia Gas and Electric, as such, has invested.

I can say that the amount that you have quoted is the amount that has been paid in for the items that I have enumerated in my testimony, so-called long-term debt and capital stock and surplus. Whether it was all paid in by Columbia Gas & Electric Company, or not, and whether they paid more for their investment in those items, I do not know, Mr. Littman.

By Mr. Littman:

Q. Would you say that the sum of $10,780,840.59 represents the total actual investment by the investors in Michigan Gas Transmission Corporation as of September 30, 1941, with the exception of the $141,157.73 which I mentioned?

A. My difficulty is with the investment and investors. It is the amount of money that has been paid into the Michigan Gas Transmission Corporation, without question.

Q. By whoever paid it in?

A. That is right, by whoever paid it in.

Q. Don't you know that Columbia Gas & Electric Corporation has always owned Michigan Gas Transmission Corporation? A. I do.

[fol. 8176] Q. From the inception down to the date in February of 1942 when the corporation was sold to Panhandle Eastern?

A. Yes, I think that is my understanding.

Q. You know that they owned all of the outstanding common stock and all of the long-term debt, do you not?

A. They made all of the advances that resulted in the long-term debt, that is correct, yes, sir.

Q. And being the owner of the common stock, they owned the surplus, didn't they? A. That is correct.

Q. I might say, Mr. Spitznagle, that if you are finding any fault with language, it is not with my language. It

is with the language of the Securities and Exchange Commission and shall read from Page 12 of the Securities and Exchange Commission's opinion which is in evidence as Exhibit 147 as follows:

"With the exception of one item, the record indicates that the figure stated in the application of $10,780,840.58 as constituting the investment of Columbia Gas in Michigan Gas, plus surplus, at September 30, 1941, constitutes actual system expenditures and is equal to the plant account after depreciation less the excess of current liabilities over current assets."

Does that comport with your understanding of the situation?

A. Yes, it does.

[fol. 8177] Q. Now, are you familiar with the fact that the Securities and Exchange Commission at Page 12 of its opinion which is in evidence as Exhibit No. 147 concluded that the undepreciated portion of this intercorporate profit to which I have just referred a moment ago of $141,157.73 was $104,924 as of September 30, 1941?

A. I need to correct what you have just said before agreeing with your statement in this respect. The amount of $141,000 odd that you referred to also includes, in addition to intercompany profit, an item of interest capitalized on that same amount of some $2,200.

Q. That is a small amount, isn't it? A. That is right.

Q. But you do know that the Securities and Exchange Commission concluded as I have just stated?

A. That is correct, yes sir.

Q. And you are in substantial agreement with that conclusion, are you?

A. I have no reason to disagree with them at all, Mr. Liftman.

Q. Incidentally, the interest item to which you refer amounts to something like $2,200, doesn't it?

A. That is correct, yes, sir.

Q. Now, after deducting this item of intercorporate profit, there is left a balance of $10,675,916.57 which rep-

[fol. 8178] resents the total actual investment in Michigan Gas Transmission Corporation as of September 30, 1941. Is that correct?

A. I think that is correct, subject to checking your subtraction of the figure. I could not follow you to do that.

Q. If you should find any error in the figures which I am reading and which are, of course, always subject to check, I wish you would report back on the record and correct me. A. I shall do so.

Q. But that figure sounds correct? A. It does, yes sir.

Q. Now, Mr. Spitznagle, let us see what assets this sum which I just named of $10,675,000-odd was invested in as of September 30, 1941. I now refer you again to the balance sheet which appears on Page 74 of Exhibit No. 146 and ask you whether you find the total current and working assets as of September 30, 1941, to be $1,673,533.50?

A. Yes, sir, I do.

Q. Now, what were the current and accrued liabilities as of that date? I mean the total, just give the total:

A. The amount is $1,596,340.50.

Q. Now, subtracting the latter from the former gives you what amount as net working capital as of September 30, 1941?

Mr. Baldridge: May I interject a question there? I may have some objection to your question, Mr. Littman, but I do not want to unless I have to.

[fol. 8179] In what sense are you using the word "capital"? Is that the use of the word in this statement or is that a term of your own?

Mr. Littman: I am using the term "actual net working capital" as that term was used by Mr. Coffman who testified on behalf of Panhandle Eastern.

Mr. Baldridge: I think, of course, this witness is not bound by Mr. Coffman's definition. I think we ought to know what we are talking about.

Mr. Littman: I think we can clear that up, Mr. Baldridge, to your complete satisfaction.

Mr. Baldridge: Thank you.

By Mr. Littman:

Q. Mr. Spitznagle, before you answer this question, will you define the term "actual net working capital"?

A. It is generally considered, Mr. Littman, as being the net of current assets less current accrued liabilities.

Q. It is so defined in the Accountant's Handbook, is it not? A. I think so.

Q. Now, will you give me the figure which represents the actual net working capital as of September 30, 1941, reflected by the balance sheet?

Mr. Baldridge: May I suggest one change? May I suggest "net working capital" as so defined.

[fol. 8180] Mr. Littman: Of course.

The Witness: The amount that you have asked me to determine is $77,193.

By Mr. Littman:

Q. Another item on this balance sheet which represents assets in which money is invested by the owners is referred to as "deferred charges". Will you please read into the record the amount of deferred charges as of September 30, 1941?

A. The amount appearing on this balance sheet as of September 30, 1941, is $12,418.89.

Q. There was accumulated in the reserve for "reserve for contingencies", "reserves for injuries and damages" and "Other reserves", the amount of $319,749.39. Is that correct?

A. I will have to check to see if that is the amount, Mr. Littman. $319,749.39 is the correct amount.

Q. That is a red figure, isn't it, so far as assets are concerned?

A. That is correct. It is on the liability side of the balance sheet.

Q. This makes a total net deduction of $230,137.50, does it not, for other assets and liabilities and so forth? That is to say, the net asset amounts to a red figure, doesn't it?

A. The net assets other than property and plant and equipment and the reserve for retirements is the amount you [fol. 8181] have just stated subject to my checking the actual amount in dollars. I presume you have deducted the $12,418.89 of deferred charges from that same amount?

Q. Yes. What I am seeking to do here is to eliminate the small items and get those out of the way so that we can discuss the gas plant and investment in gas plant. Now, the only remaining figures on the balance sheet pertain to the gas plant accounts, do they not?

A. That is correct, yes, sir.

Q. Those are "Gas Plant in Service" in the amount of $12,617,352.68? A. That is correct, yes, sir.

Q. And from that you would deduct contributions in aid of construction in the amount of $9,342.96. Is that right?

A. That is correct, contributions in aid of construction, for construction appearing on the balance sheet in a reserve account, yes, that is correct.

Q. You would have to deduct that $9,000 item in order to secure the actual net investment, would you not?

A. That is right, because the amount was contributed by someone other than the company.

Q. And you would, also, have to deduct from the gas-plant-in-service figure of $12,000,000-odd the inter-company-profit figure which we referred to a few minutes ago in the amount of $104,924, would you not?

[fol. 8182] A. Yes, after netting the plant account by the application of retirement reserve. If you are going to apply gross you would have to take out the $141,000 and then take something off of the reserve to compensate for it.

Q. Now, we are coming to the reserves. And you would, also, have to deduct from gas plant in service the reserves for depreciation in order to get the net investment, would you not? A. That is correct.

Q. And what amount had been accumulated in the reserve for depreciation at September 30, 1941?

A. Well, the caption on this balance sheet is "Reserve for Retirements" and that amount is $1,597,031.63.

Q. Now, on the books of the company what is it called?

A. I think on the books of the company, Mr. Littman, I do not recall right off but I believe it is "Reserve for Depletion."

Q. Very well, we are talking about the same thing, are we not? A. Yes.

Q. Now, that leaves a net investment in gas plant of $10,906,054.09 as of September 30, 1941?

A. It must be approximately that amount, but I have not been able to make the computation here, Mr. Littman. I will make it, if you like.

[fol. 8183] Q. I think perhaps you had better do that before we get too far afield. A. What is that figure?

Q. $10,906,054.09. Now, that represents, does it not, Mr. Spitznagle, the net investment in the gas plant of

Michigan Gas Transmission Corporation as of September 30, 1941?

A. On the basis of the method of computing this amount, yes, that is true.

Q. Well, are you talking about the $2,200 item now, again?

A. No, I am talking about the allocation of dollars that were invested in this business. On the balance sheet they are offset, the aggregate dollars are offset by the various items that you have just enumerated to me and on the basis of the process of elimination that we have gone through, it indicates that of the dollars invested, $10,906,054.09 are responsive to the net plant account.

Q. And represent the net investment in gas plant at September 30, 1941? A. That is correct.

. . . . . .

[fol. 8184] By Mr. Littman:

Q. Now, you remember the negative or red figure that I read of $230,137.50? A. Yes, sir.

Q. Now, you would have to subtract that from the $10,900,000-odd figure that you would have to have to get the total over-all figure, would you not?

A. That is correct, yes, sir.

Q. Now, making the deduction, there is a total over-all investment, as of September 30, 1941, in the plant property business of Michigan Gas Transmission Corporation of $10,675,916.59, isn't that correct?

A. That is correct, yes, sir.

Q. And that is the amount that Panhandle Eastern Pipe Line Company paid for Michigan Gas Transmission Corporation, is it not?

A. I do not know that as a fact, Mr. Littman.

Mr. Culton: I think we have so proven.

Mr. Littman: Is that the figure? Is there any question about that?

Mr. Culton: That is the figure that shows in the Securities and Exchange Commission report, is it not?

By Mr. Littman:

Q. That is the figure, do you recall?

A. I recall the figure in the release of the Securities [fol. 8185] and Exchange Commission, yes, Mr. Littman, but, as a fact, I do not know actually.

Q. And that amount represents the prudent investment in the enterprise as of September 30, 1941, does it not?

A. Mr. Littman, I do not think that is the question that runs to me, I just do not.

Q. You cannot answer that? A. No, sir.

* * * * * * * * *

[fol. 8229] Trial Examiner: The motion specifically is stated as to the exhibit marked for identification Exhibit [fol. 8230] 83 commencing at page 8109 and is more fully defined at page 8113. That is a four-page introduction. Pages 8, 9 and 10 of proposed Exhibit 83 are stricken and all of the figures appearing in the columns throughout the exhibit commencing from page 11 headed, "Reproduction Cost, June 30, 1941," on page 12 the five columns relating to reproduction cost are stricken, and commencing with page 13 and thereafter throughout the exhibit to its end, page 64, the column at the right headed, "Reproduction Cost New, 1941," or "Reproduction Cost, June 30, 1941," wherever they occur, will be stricken. With this revision, the exhibit is received.

(Whereupon exhibit 83 was received in evidence as above.)

Mr. Littman: If Your Honor please, what is your ruling with respect to the letter of Mr. F. S. Haberly, dated October 27, 1941?

Trial Examiner: That was overlooked and because it does include a reproduction cost figure, that, also, will be stricken.

The motion, which is sustained, with reference to the revision of Exhibit 84 is stated on page 8116 of yesterday's transcript and we will now strike from proposed Exhibit 84,—this is Mr. Haberly's Exhibit 84 entitled "Reproduction Cost New Less Depreciation as of June 30, 1941," et cetera,—the column headed "Reproduction Cost New, June 30, 1941," and the column headed "Reproduction Cost Less [fol. 8231] Depreciation" on page 1.

The columns headed "Reproduction Cost New, June 30, 1941," and "Reproduction Cost Less Depreciation," are stricken wherever they occur in the exhibit, leaving only for effective evidence the column captioned "Condition Percent," reflecting an estimated physical condition of the properties listed.

As to Exhibit 86, the motion to strike was made at page 8145 of the record and is sustained, so that there will be stricken from this exhibit all of the figures shown in the column headed "Reproduction Cost New, June 30, 1941."

The exhibits marked for identification as 84 and 86, as so revised, will be received in evidence by corresponding numbers.

* * * * * * * *

Trial Examiner: The exhibit marked for identification as 97 will be excluded and it is excluded primarily because the Federal Power Commission will gain very little information of value from a consideration of mere graphs. The record in this case already contains statistical data, which this exhibit tends to illustrate, covering all of this ground and much more.

The exhibit marked for identification as 96, which was [fol. 8232] under discussion at page 1871 of the transcript and, again, at page 8020, being Mr. Young's estimate of the cost of this rate proceeding, will be excluded because it is not the best evidence at this time of the matter therein contained.

Now, exceptions will of course be noted for all parties against whom the ruling is made.

* * * * * * * *

Trial Examiner: It is, of course, understood that the Trial Examiner was trying to exclude from this record all evidence which might sustain a reproduction cost estimate.

* * * * * * * * *

[fol. 8235] Fred A. Spitznagle a witness, having been previously sworn, resumed the stand and testified further as follows:

Cross-Examination (Continued).

By Mr. Littman:

Q. Mr. Spitznagle, the accounting exhibits which you have presented in this proceeding reflect the annual period for the year ended June 30, 1941, do they not?

A. That is correct, yes, sir. I might correct that slightly. It reflects the 12-months' period ended June 30, 1941, as distinguished from "Annual" usually related to calendar years.

Q. If the 1941 revenues and expenses of Michigan Gas Transmission Corporation had been available for the full calendar year ended December 31, 1941, when you prepared your accounting exhibits, would you have presented them for that period rather than for the 12 months ended June 30, 1941? A. Yes, I think that is true.

Q. There are certain advantages in using figures for a full calendar year, are there not? A. There are, yes, sir.

Q. What are some of those advantages, briefly?

[fol. 8236] A. Well, the books of the company operating on a calendar year basis are always closed as of the end of the calendar year. Certain adjustments are made because of the necessity of using estimates for interim periods. Consequently, the interim period 12-months' reports do not always reflect the same information that you would get on a calendar year basis.

Q. And, as a matter of fact, figures for the latest full year would be more comparable with those on the books for previous years?

A. For previous calendar years, that is correct, yes.

Q. So that you would have a better basis of comparability? A. That is correct, yes, sir.

Q. Of course, when you prepared these exhibits, the figures for this full year 1941 were not available?

A. No, sir, because they were prepared before the end of the year 1941.

Q. The figures for the full year 1941 are now available, are they not? A. That is true, yes, sir.

Q. Are those figures fully reflected in the financial statement for the year 1941 of Michigan Gas Transmission Corporation? A. Yes sir, they are.

Q. Do you have a copy of that financial report with you?

[fol. 8237] A. Yes, sir, I do.

Q. It goes without saying, does it not, that the books of Michigan Gas Transmission Corporation have been closed for the year 1941?

A. That is my understanding, Mr. Littman.

Q. You have caused sufficient copies of this 1941 financial statement to be distributed to counsel and to be made an exhibit in this case, at my request?

A. I did not but the officials of Michigan Gas Transmission Corporation did, Mr. Littman.

Q. Do you have those copies with you?

A. Yes, sir, we do.

Mr. Littman: Mr. Examiner, I would like to have marked for identification as Exhibit No. 163, the document to which the witness has just referred entitled, "Columbia System—Financial Statement of Michigan Gas Transmission Corporation (Unassigned)" for the period ended December 31, 1941.

Mr. Wheat: Mr. Littman, I wonder if you would let me ask this. I have no record of Exhibits marked 160 and 161. I may just have an incomplete record.

Mr. Littman: You may or may not recall that at the very close of the last session held in Washington, I offered two exhibits, namely, Exhibits No. 161 entitled, "Estimated Main Line Sales and Revenues—Years 1941-1946, Inclusive", and Exhibit No. 162 entitled, "Estimated Sales to Detroit, 1941-1951, Inclusive".

[fol. 8238] Mr. Wheat: What about Exhibit No. 160?

Mr. Littman: Exhibit No. 160 was offered by Panhandle Eastern Pipe Line Company and is entitled, "Panhandle Eastern Pipe Line Company—Purchase Agreement", dated February 2, 1942.

Mr. Wheat: I had missed that. My record has not been brought up to date. Thank you.

Trial Examiner: This will be marked for identification as Exhibit No. 163.

(Exhibit No. 163 was marked for identification.)

By Mr. Littman:

Q. Will you please explain the term "unassigned" which appears in the title of Exhibit No. 163 for identification?

A. I do not believe I can. In fact, I never noticed that word appearing on this exhibit. Where do you read it from the one which you put in evidence?

Mr. Baldridge: Was Exhibit 163 marked for identification?

Trial Examiner: It was.

Mr. Baldridge: It has not been put in evidence so far, am I right?

Trial Examiner: It has not been offered.

By Mr. Littman:

Q. So far as you know, the term has no particular significance?

[fol. 8239] A. It has none to me, Mr. Littman.

Q. Have you prepared a supplementary statement to the financial statement which has just been identified as Exhibit No. 163?

A. There was such a statement prepared by the company, Mr. Littman, yes, and we have copies of them here.

Q. I hand you a copy of a document consisting of two pages which I have been advised is a supplementary statement to Exhibit No. 163. Is that the document to which you have just referred? A. It is, yes, sir.

Mr. Littman: If your Honor please, I would like to have marked for identification as Exhibit No. 164, a document of two pages purporting to be a supplementary statement to the 1941 financial statement of Michigan Gas Transmission Corporation.

Trial Examiner: It will be so marked.

(Exhibit No. 164 was marked for identification.)

By Mr. Littman:

Q. Does Exhibit No. 163 and its supplement, Exhibit No. 164, bring down to December 31, 1941, all figures in your accounting exhibits except those which are shown in the pro forma statement, Exhibit No. 104?

A. They do, yes, sir.

Q. Do you propose to present a new pro forma statement based on the figures for the year ended December 31, [fol. 8240] 1941? A. I do not, no, sir.

Q. Do you propose that the pro-forma statement, Exhibit No. 104, be relied upon as a forecast or guide for the future?

A. I have no opinion regarding that Mr. Littman. I had none in the first instance as to Exhibit No. 104.

Q. You had a job to do and you did it?

A. Only in so far as there was factual information contained in that statement.

Q. We will, of course, discuss Exhibit No. 104 a little later, inasmuch as it is our program to take your exhibits up in the order in which they were presented.

Would you say, Mr. Spitznagle, whether the figures contained in Exhibits No. 163 and No. 164 were taken from the books and records of Michigan Gas Transmission Corporation?

A. In my opinion, they were, Mr. Littman. I have checked them sufficiently to ascertain that fact.

Q. Are the figures set forth in Exhibit 163 and 164 in accordance with the Commission's Uniform System of Accounts for Natural Gas Companies?

A. I think they are, Mr. Littman.

Q. At the close of yesterday's session, we were discussing the matter of the net investment in the plant and property of Michigan Gas Transmission Corporation as of September 30, 1941. Can you, by reference to Exhibits 163 and 164, determine the net investment in the gas plant [fol. 8241] of Michigan Gas Transmission Corporation as of December 31, 1941?

A. Yes, sir, that is obtainable from Exhibit 163.

Q. Now, you would determine that in the same manner as it was determined yesterday by you during the afternoon session?

A. That is correct, with this addition. There has accrued additional depreciation on the excluded item of $141,000 odd which would have to be computed and not directly taken directly from the report.

Q. About how long would it take you to determine the net investment in the gas plant of Michigan Gas Transmission Corporation as of December 31, 1941?

A. Well, it would take me some little time. I would prefer not to try to do it sitting here on the stand.

Q. Could you make such determination conveniently during the noon recess? A. I think so, Mr. Littman.

Q. Will you do so, please? A. I will try it, yes.

Q. Thank you. Will you please turn to your Exhibit No. 89. I refer you to Line 8, "Dividend Appropriations—Common Stock". Are the amounts set forth on that line all of the common stock dividends that have been paid from the date that Michigan Gas Transmission Corporation commenced doing business in 1936 to June 30, 1941?

[fol. 8242] A. They are, yes, sir.

Q. You do not show in this exhibit or in any of your exhibits, other exhibits, the percent of dividends as related to the paid-in value of the common stock, do you?

A. No, sir.

Q. Will you please state what those percentages are for each of the years 1936 through 1941?

A. I would have to compute them before I stated them and I have not computed them yet, Mr. Littman.

Q. That would only take a few minutes, would it not?

A. Well, it takes a little division to find out how much the stated value of the common stock was for each of those years. I presume I have it here somewhere.

Q. The stated value of the common stock is shown on your balance sheet, Exhibit No. 88, is it not? A. Yes, sir.

Q. I observe that on Page 2 of Exhibit 88, there appears the amount of $2,240,000 as "Common—No Par Value" for each of the years 1936 through 1940 and down to June 30, 1941.

A. That is correct. You wish the percent return of the aggregate amount of dividends for the whole period as applied to the average stated capital of $2,240,000?

Q. Yes, by years.

A. You want it by years and you also want the aggregate for all of the years?

[fol. 8243] Q. Yes. Mr. Spitznagle, while you are doing that, I would like to have you include the amounts for the full year 1941 which are reflected, of course, in the financial statement for that year, to-wit, Exhibits 163 and 164.

A. For the year 1936, the dividend of $112,000 paid in that period is equal to 5 percent of the stated value of $2,240,000 for common stock.

For the year 1937, the comparable percent is 4 percent.

For the year 1938, the comparable percent is 8 percent.

For the year 1939, the comparable percent is 24 percent.

Mr. Montgomery: What was that figure, again, please?

The Witness: 24 percent.

Mr. Wheat: That is for 1939?

The Witness: That is correct.

For the year 1940, the comparable percent is 19.

Do you wish the same information, Mr. Littman, for the 12-months' period ended June 30, 1941?

Mr. Littman: I believe the figure for the year ended December 31, 1941, would suffice.

The Witness: I would think so too and by the same token, for the six-months' period appearing in this statement, you do not want that because it would be historic.

Mr. Baldridge: Do you mind if I inject one question here?

Mr. Littman: Would you mind letting him read the next figure into the record and then the total?

[fol. 8244] Mr. Baldridge: All right.

The Witness: For the year 1941, the comparable figure is 29 percent.

Mr. Littman: Now, that makes a total of 89 percent of dividends paid on the stated value of the common stock during the life of the corporation?

The Witness: Yes, sir, that is correct.

Mr. Baldridge: May I ask my question now? What is the ratio between the stated value of the common stock and the present book investment of the company as of the last date? I believe that last date is December 31, 1941.

The Witness: Do I follow your question, Mr. Baldridge, that you want the ratio of the stated value of common stock?

Mr. Baldridge: To the net book investment.

The Witness: To the net book value of the gas plant?

Mr. Baldridge: Yes.

Mr. Littman: Or do you mean the net book value of the common stock?

Mr. Baldridge: No, I want the ratio between the stated value of the common stock and the net book investment to indicate what percentage of the investment is represented by the common stock.

Mr. Wheat: May I ask, too, that the witness, in connection with that answer, tell us—I do not know whether he did in answer to one of your questions, perhaps I did not hear it—whether this stated value of the common stock is the [fol. 8245] same through all these years you have mentioned?

The Witness: It is.

Mr. Wheat: What is that figure?

The Witness: $2,240,000.

Mr. Wheat: Thank you.

Mr. Baldridge: The total net book investment, as indicated by all securities of the company, including long-term debt outstanding, I mean capital stock, surplus, bonds, notes and other forms of securities—

Mr. Littman: (Interposing) As of what date?

Mr. Baldridge: As of the last available date, I think December 31, 1941. I think I stated including surplus too, of course.

Mr. Littman: Of course, the surplus amounts will vary each year.

Mr. Baldridge: Yes.

The Witness: I will answer your question in part first ly saying that the total long-term debt is $8,320,500; capital and surplus is $2,372,081.13 and the total long-term debt and capital and surplus is $10,692,581.13.

The ratio of the stated value of the common stock to the total long-term debt and capital and surplus is 20 percent plus, if that is close enough for your purpose.

Mr. Wheat: You mean between 20 and 21 percent?

[fol. 8246] The Witness: Between 20 and 21 percent, yes.

Mr. Littman: As of December 31, 1941?

The Witness: As of December 31, 1941.

Mr. Wheat: Mr. Littman, just to be sure I know what the mathematics of this are—does that mean you took your figure of $10,692,581.13 and divided that into $2,240,000 to arrive at the 20 plus percent?

The Witness: Correct, yes, sir.

By Mr. Littman:

Q. The period over which the 89 percent total of dividends on common stock has been paid is six years, is it not?

A. It is five years and ten months, Mr. Littman.

Q. During this entire period, Michigan Gas Transmission Corporation has paid 6 percent per annum on its long-term debt, has it not? A. That is correct, yes, sir.

Q. And all of its long-term debt during this period was held and owned by the sole owner of its common stock, to wit, Columbia Gas & Electric Corporation, was it not?

A. That is my understanding.

* * * * * * * *

[fol. 8247] Fred A. Spitznagle a witness, having been previously duly sworn, resumed the stand and testified further as follows:

Cross-Examination (Resumed)

By Mr. Littman:

Q. Mr. Spitznagle, you were going to calculate the net investment in gas plant, Michigan Gas Transmission Corporation, as of December 31, 1941. Are you now prepared to state the figure? A. Yes, I am.

Q. What is the net investment as of December 31, 1941?

A. As prepared from Exhibit 163 it is $10,755,372.15, computed as follows: Long-term debt, $8,320,500;

Stated value of common stock, $2,240,000;

Earned surplus, December 31, 1937, $132,081.13;

Capital surplus representing earned surplus acquired, $28,215.02;

Capital surplus donated—

Mr. Lee: (Interposing) What is that last word?

The Witness: Donated.

(Continuing) —$139,500. The aggregate of the preceding amounts is $10,860,296.15 from which has been de- [fol. 8248] ducted the intercompany profit previously described in the testimony of yesterday in the sum of $104,924. The amount of $104,924 is subject to reduction by depreciation accrued since June 30, 1941, which is approximately $2,000 but which has not been applied in determining the amount of $10,755,372.15.

. . . . . .

[fol. 8249] Q. What you have done is to give me the gross over-all investment in the business of Michigan Gas Transmission Corporation as reflected by its balance sheet as of December 31, 1941, isn't that correct?

A. Well, I gave you just what I first stated. It is the long-term debt, capital stock and surplus of the Michigan Gas Transmission Corporation.

Q. That is the gross investment in the business, isn't it?

A. Adjusted for this item of $104,924.

[fol. 8250] Q. Now, that amount is $10,755,372.15?

A. That is correct.

Q. And was obtained in the manner which you have just described? A. That is correct, yes, sir.

Q. Now, will you please state the net investment in the gas plant as of December 31, 1941, which is the figure that I was seeking all the time?

Mr. Baldridge: As shown by the books?

By Mr. Littman:

Q. As shown by the company's books, yes, and reflected in Exhibit 163.

A. The net gas plant in service as of December 31, 1941, is $10,929,098.47.

. . . . . .

The Witness: Determined as follows:

Gas plant in service, $12,804,341.16, from which I have deducted retirement reserve in the amount of $1,697,965.73;

Contributions in aid of construction, $9,352.96;

Net intercompany profit at June 30, 1941, in the amount of $104,924, making total deductions of $1,812,242.69.

The intercompany profit amount of $104,924 is subject to reduction of about $2,000, approximately.

By Mr. Littman:

[fol. 8251] Q. So that with the minor exception of the $2,000 item which you just mentioned, the sum of $10,992,098.47 represents the net investment in the gas plant of Michigan Gas Transmission Corporation as of December 31, 1941?

A. That is correct. I might add, net investment as determined from Exhibit 163, yes.

Q. Which exhibit is the financial statement of Michigan Gas Transmission Corporation for the year ended December 31, 1941? A. That is correct.

Q. Will you please turn to your Exhibit No. 92 entitled "Michigan Gas Transmission Corporation—Original Cost Depreciated to Present Condition as at June 30, 1941, and Observed Depreciation as at June 30, 1941"? Who originated the idea of presenting this exhibit, Mr. Spitznagle?

A. Well, I do not know as I recall who originated the idea of presenting the specific exhibit.

Q. Did you conceive of the idea?

A. It was discussed by myself and Mr. Green and I believe it was generally considered that an exhibit of this character should be presented in a rate case.

Q. You mean in a rate case or this rate case?

A. Well, this one, too, yes.

Q. Have you ever presented an exhibit like this in any other rate case?

[fol. 8252] A. I do not recall that I have, no.

Q. Do you recall of anyone else ever having presented an exhibit like this in a rate case?

A. No, sir, I do not. In fact, I have not attempted to find out whether anybody did or not.

Q. Well, do you accept responsibility for the presentation of this exhibit, not only with respect to the figures which are shown, but, also, with respect to the theory behind it?

A. No, not with respect to the theory behind the exhibit, if there is a theory behind the exhibit. I am responsible only for the proper expression of the original cost, the

amount shown in this statement and the computations resulting from the application of Mr. Haberly's percent condition.

Q. Well, that is what I wanted to determine, whether you were merely doing an accounting task of assembling the figures as shown? A. Primarily that.

Q. In Exhibit 92 that was primarily your undertaking?

A. That is right.

Q. You are not, then, expressing any view of your own with respect to Exhibit 92 as to the propriety of deducting the condition percents shown from the original cost?

A. No, sir.

[fol. 8253] Q. Well who is taking the responsibility for that, so that we may know whom to cross-examine?

A. Mr. Green, I presume.

Mr. Wheat: May I interpose a question there? This data that is shown on Exhibit 92 is data which can be obtained from other exhibits in the record, is it not? You state that it comes from certain exhibits there. All you did, as I understand your testimony, is to put it together on one sheet of paper?

The Witness: That is correct, yes, sir.

Mr. Wheat: Thank you.

By Mr. Littman:

Q. Does the sum of $310,226.50, shown as the total of the column headed "Observed Depreciation", in your opinion represent all of the depreciation that has accrued to date on the original cost of the property of Michigan Gas Transmission Corporation?

A. Well, I have no opinion on that matter, Mr. Littman.

Q. You did a strictly mechanical job of assembling figures, is that right? A. I think I so stated, yes, sir.

Q. In your examination of the books and records of Michigan Gas Transmission Corporation, you found no such figure as $310,226.50 representing any alleged depreciation, did you? A. No, sir, I did not.

[fol. 8254] Q. And when you prepared the balance sheet of the company for purposes of this proceeding, you did not set forth in that balance sheet what you have heretofore called the "true financial condition of the company" any such figure as $310,226.50 for alleged depreciation, did you?

A. I think the balance sheet speaks for itself, but I did not, no, that is correct.

Q. We have been unable to find such a figure in your balance sheet and we thought perhaps you might refer us to it if such existed.

Well, we will go to the next exhibit and defer further cross-examination with respect to this exhibit to Mr. Green.

Q. Mr. Spitznagle, will you please turn to the next exhibit number which is No. 93 entitled "Michigan Gas Transmission Corporation, Statement of Contributions Made to Customers for Business Development for the Years 1936, 1937 and Five Months Ended May 31, 1938 (Effective Date of Natural Gas Act, June 21, 1938)"? Did you prepare this exhibit at the specific instance and request of someone else?

A. Yes, at the request of Mr. Green and others associated with him, Mr. Green primarily.

Q. Mr. Green is president of Central Service Corporation, which company is your employer?

A. That is correct.

Q. Now, let us look at item 1 on page 1 of this exhibit [fol. 8255] which relates to the Detroit City Gas Company "Contractual Discount Allowed Per Provisions of Article 7 of Gas Contract Dated March 17, 1936" in the amount of $43,560. Will you amplify the description or characterization of this expenditure, inasmuch as the record thus far does not tell us very much about that payment or the reason for the payment?

. . . . . .

[fol. 8256] The Witness: I was about to suggest, Mr. Littman, that I am not familiar enough with these contracts to give you or anybody else a very good interpretation of the reasons for paying these sums of money and I was going to further suggest that Mr. Young would be the man for you to get that information from.

By Mr. Littman:

Q. Can you advise us of the purpose of the payment of the $43,560 to Detroit City Gas Company?

A. It is my understanding, generally, that the purpose of it was to assist somewhat in the change-over from artificial to natural gas.

Q. Do you know whether that was for the purpose of defraying certain expenses incurred by the Detroit City Gas Company in that connection as distinguished from the second item shown in Exhibit 93? Do you get my point?

A. No, I do not, Mr. Littman.

Q. I take it you are not familiar—

[fol. 8257] A. (Interposing) With the background of payments to give you a satisfactory answer, that is correct. I think Mr. Young would be far more able to do that for you.

Q. Do you know to what accounts these amounts were charged on the company's books?

A. Yes, sir, that I know.

Q. And what is the name of the account?

A. I cannot give you the designated account but it was charged to operating expenses.

Q. Would it refresh your recollection to say that these amounts, that is all of them shown on Exhibit 93 in the total amount of $182,626.69 were charged to "Sales Promotion Expense"?

A. I do not recall. I did know at one time, but I do not recall right now, Mr. Littman, but they were charged to operating expenses. Whether it was to sales promotion expenses or a portion of it to general expense, I do not recall.

Q. Will you please turn to Page 30 of Exhibit 163? I show you an item in the amount of $8,069.93 under the heading "Sales Promotion" on that page. Isn't it clear that the expenses of the character shown in Exhibit 93, which were incurred in the year 1941, were charged to that account?

Mr. Baldridge: Whose exhibit was that? Wasn't that a Panhandle Eastern exhibit?

Mr. Littman: 163 is the financial statement of Michigan [fol. 8258] Gas Transmission Corporation for the year ended December 31, 1941.

Mr. Baldridge: Oh, yes.

The Witness: I do not recall, Mr. Littman, that there were expenditures of the character detailed in Exhibit 93 incurred in the year 1941. I can ascertain the fact for you.

By Mr. Littman:

Q. I wish you would please ascertain and report to us whether it is a fact that all of the amounts shown in Exhibit 93, totaling $182,626.69 were charged to the operating expense account, "Sales Promotion", on the books of the corporation.

In your opinion, Mr. Spitznagle, would the Federal Power Commission's Uniform System of Accounts permit the capitalization of this item or any of these items shown in Exhibit 93?

. . . . . .

[fol. 8259] The Witness: I do not know what the Federal Power Commission has ruled with respect to items of this character, but in my opinion they might be includable under "Miscellaneous Intangible Plant" as representing a necessary expense in developing the business of the company.

By Mr. Littman:

Q. Well, are they now so carried on the books of the company? A. No, sir, they are not.

Q. Have they ever been so carried on the books of the company? A. No, sir, they have not.

Q. In your opinion, these amounts were properly charged by the company to sales promotion expense?

[fol. 8260] A. It was purely a matter of election on the part of the company as to whether they wished to treat them as miscellaneous intangible capital or whether they wanted to charge them to expense.

Q. And they elected to charge them to expense?

A. I so said before, yes, sir.

Q. Will you state the amount of sales promotion expense of a character similar to that set forth in Exhibit 93 which was incurred in the last seven months of 1938?

A. I am not in a position to do that, Mr. Littman. I do not have the information here, I can get it for you.

Q. Will you please furnish that information?

Or perhaps you had better let me read you the figures that we have and ask you to check them. It is our understanding that the following amounts were charged to sales promotion expense for the periods which I will name: The last seven months of 1938, which, incidentally, picks up where you left off in Exhibit 93, is $29,000.46; for the full

year 1929, $25,141.93; for 1940, $4,019.71; and for the full year 1941, $8,069.93.

Q. You will check those for me and report back later?

A. I will.

Q. What you propose to do now is to include in the rate base, for purposes of this proceeding, the amount of $182,626 which has been charged in the past to operating expense?

[fol. 8261] A. I do not propose to do anything in that respect, Mr. Littman.

Q. Who does?

A. Well, Mr. Green is supporting the philosophy of the conclusions that were reached in this case with respect to our exhibits prepared for Michigan Gas Transmission Corporation.

Q. Do you have any opinion on the subject as to the propriety of including these past operating expenses in a rate base for rate making purposes? A. No, sir.

Q. We discuss that with Mr. Green, do we not?

A. That is correct.

Q. If you were making up a balance sheet of this company, would you permit this amount of $182,626.69 to be restated on the books of the company and included in the capital accounts?

A. No, sir, and I have not in any of these statements included the item in any capital accounts, Mr. Littman.

Q. Have you been advised that the figures shown in Exhibit 93 are to be used in this proceeding as a basis for so-called going concern value?

Mr. Baldridge: May I make a slight correction? I do not think we use the term "going concern value", do we? I am asking you, Mr. Littman.

[fol. 8262] Mr. Littman: Well, I am asking this witness, Mr. Baldridge.

The Witness: In Exhibit 104 on Page 2, which I prepared, the items are included under the caption "Rate Base" and denominated "Cost of Developing Business."

By Mr. Littman:

Q. Have you ever heard this item referred to by any other name? A. No, sir, I have not.

Q. You know, do you not, that it is very similiar to amounts which have been designated in rate making proceedings as "Going Concern Value"?

A. Yes, it is one of the elements that sometimes is included in the computation of going concern value.

Q. I take it from your testimony with respect to Exhibit 93 that you do not take any responsibility for the inclusion of these figures in any suggested rate base for the purpose of this proceeding? A. No, sir.

Q. What instructions did you have, if any, with respect to securing these figures from the company's books?

A. Well, I was requested to secure the cost of developing business, particularly items of the nature described in the exhibit, and we did take the items in question from the company's books and I was instructed to include in the computation shown in Exhibit 104 the amounts shown in Exhibit 93.

[fol. 8263] Q. In other words, you did a mechanical job of accounting here. A. That is correct, yes, sir.

Q. We will now go to Exhibit No. 94 entitled, "Michigan Gas Transmission Corporation—Working Capital as at June 30, 1941."

. . . . . .

Trial Examiner: Very well.

By Mr. Littman:

Q. Suppose you tell us what responsibility you are taking with respect to this exhibit which shows a claimed working capital as of June 30, 1941, of $300,147.08?

A. I am taking no responsibility for the use of the item in connection with the conclusions reached in the matter of rate base and rate of return and any other matters reached in the conclusion presented in Exhibit 104 and presented in Mr. Green's testimony in connection with Exhibit No. 104.

Q. Mr. Green will take the responsibility on Exhibit No. 94? A. Not entirely.

Q. Suppose you state the instructions that you re- [fol. 8264] ceived so that we may be advised of what you did and what you are holding yourself responsible for?

A. The instructions I received were to prepare Page 2 of Exhibit 94 and it was more or less my recommendation

that the exclusions made on that exhibit from operating expenses should be made in order to determine the net for the cash fund computation.

Q. What of the other pages? A. Let's finish this one.

Q. I am sorry, I thought you had.

A. With respect to the computations shown in the last three lines of Page 2, I was instructed to use 45 days as the lag in recovery of the operating expenses shown in this exhibit. I was told that that was the period generally accepted by the Commission in many of its cases.

Q. Who told you that? A. I beg your pardon?

Q. Who told you that?

A. Mr. Green or someone in our organization working with him. I think Mr. Green told me. I also ascertained that fact by looking at a few cases of the Federal Power Commission as well, Mr. Littman.

Q. You verified the matter? A. That is right.

Q. By the way, none of those cases were related to [fol. 8265] Michigan Gas Transmission Corporation?

A. No, that is true. They were previously decided cases of the Commission. I have forgotten where they were, I believe 45 days was used in the Chicago Pipeline case or the case that is known as the Chicago Pipeline Case.

For Page 3 of that exhibit, I was told to gather the information shown on that exhibit and when the information shown on the exhibit was brought to Mr. Green's attention and to the attention of Michigan Gas Transmission Corporation, it was decided by Mr. Green that we should use the material and supplies on hand adjusted for the year amount shown in Column B at June 30, 1941, rather than the average for the 18-month period shown in this statement.

Q. And that decision was made by Mr. Green?

A. Yes, that is right, because the advent of the war was making it necessary to maintain a larger quantity of material and supplies on hand than formerly was thought necessary. I think I so stated in my direct testimony.

Q. This looks like a kind of "triple pass," doesn't it? That is, Mr. Green told you to get the actual figures from the company's books as of June 30, 1941, after you had

shown him the figures for each of the 12 months for the year 1940 and for the six months in 1941 and then Mr. Haberly was instructed to revise the prices on certain of those materials and supplies to June 30, 1941, and they [fol. 8266] came back to you and you included the total amount of $100,723.78 in Exhibit 94. Is that right?

A. I do not think that is quite right. I do not understand your language entirely, especially the "triple pass" and that sort of thing in the first part of your statement.

The fact of the matter is I was told to get the factual information represented by Column A for the 18-months' period.

Q. Just a moment. You did not use any of the figures in Column A in connection with your Exhibit 94, did you?

A. Only in arriving at the amount that we did use in Exhibit 164.

Q. Somebody got hold of it before you put the $100,723.78 in, isn't that right? A. That is right.

Q. And that was Mr. Haberly?

A. No, I doubt whether Mr. Haberly ever saw the figures in Column A prior to his determination of the amount expressed in Column B.

Q. Whether he saw it or not, when he got through it went up to $100,723.78, isn't that right? A. It did do that.

Q. And then you took it and put it on the first page of Exhibit 94? A. That is right.

Q. That is what I meant by "triple pass."

[fol. 8267] A. That is right.

Q. At any rate, you are not taking any responsibility in connection with the reasons or theories behind the readjustment of the figures?

A. I just gave you what I understood to be the reason but I am not taking the responsibility for it.

Q. Are there any other pages of Exhibit 94, Mr. Spitznagle, that you wish to elucidate for us with respect to your particular assignment? How about Page No. 4?

A. Page No. 4, again, I was requested to get the factual information displayed on that page and I was directed to use the amount shown on Exhibit 94 in the compilation shown on Page 1.

Q. You exercised no judgment of your own in assembling those figures other than to take them from the company's books? A. That is all.

Q. Very well. Let's turn to Page 2 of Exhibit 94. You have just testified that you decided to make the deductions shown on that page entitled "Purchased Gas," "Taxes," "Pre-payments included in operation and maintenance," "Depreciation or amortization," isn't that correct?

A. I suggested that those items be excluded, yes.

Q. And your suggestion was accepted by Mr. Green?

A. That is right.

Q. Why did you exclude the purchase gas expense? [fol. 8268] A. For the reason that I found upon examination of the company's records that they collected for the sale of their gas and services, because they are a transportation company at about the same time they paid for the natural gas that they purchased.

Q. In other words, you made the deduction and did not include purchased gas expense in working capital because you found there was no lag between the date of payment and the day of receipt of revenue? A. That is correct.

Q. And of course, that is a proper deduction, isn't it?

A. I think so.

Q. We think so too. We wish Mr. Sperry had done that.

Trial Examiner: Upon examination of the Order of the War Production Board presented by Mr. Baldridge this morning, it appears that this Order probably should be incorporated into the record in some manner.

I wish to ask whether the document from which this photostatic copy was made was an original document?

Mr. Baldridge: Yes, Mr. Examiner.

. . . . . .

[fol. 8269] Trial Examiner: In any event, this photostatic reproduction presents an original order issued to the Panhandle Eastern Pipe Line Company by the War Production Board?

. . . . . .

Mr. Littman: Wouldn't it be a little more accurate to say this order was not issued directly to Panhandle Eastern Pipe Line Company but was issued as a general order [fol. 8270] affecting all companies referred to?

. . . . . .

Trial Examiner: In accordance with the statement made this morning, this order has now been examined and is deemed in all respect proper and necessary for the record and will, therefore, be extended by the reporter into the record.

. . . . . .

[fol. 8272] Title 32—National Defense WPB 230

24033 Chapter IX—War Production Board

Subchapter B—Division of Industry Operations

Part 1056—Natural Gas

Limitation Order L-31

To Curtail Consumption of Natural Gas.

Whereas, because of increased gas requirements for war production and civilian uses, and because of scarcity of materials for the construction of pipe lines and other facilities, shortages of natural gas have occurred in certain areas of the United States and are threatened on others, and

Whereas, during periods of adverse weather conditions, the demand for natural gas in many areas will increase beyond the capacity of existing facilities to meet such demand; and

Whereas, the limitations upon deliveries of natural gas and the integration of gas system operations hereinafter ordered are necessary in order to maintain gas deliveries to war industries and essential civilian services;

Now, Therefore, It Is Ordered That:—

Part 1056.1—General Limitation Order

(a) Definitions. For the purpose of this Order:

(1) "Persons" means any individual, partnership, association, business trust, corporation, governmental corporation, or any organized group of persons whether incor-
[fol. 8273] porated or not.

(2) "Utility" means any person in the United States supplying natural gas or mixed natural and manufactured gas, directly or indirectly, for general use by the public.

(3) "Consumer" means an ultimate user of gas purchased or otherwise received from any Utility.

(4) "Standby Facilities" means equipment in serviceable operating condition designed to use oil, electricity, coal or other fuel to replace natural gas, and for the operation of which a supply of such fuel is available.

(b) Integration of Gas System Operation. Each Utility shall so operate its gas manufacturing, transmission, storage, distribution, and other facilities, and shall so interchange gas with other Utilities as to achieve as far as practicable maximum output in the area or areas in which a shortage exists or is imminent, and each Utility shall make such pooling arrangements as may be necessary to effectuate such purpose. Where necessary for such purpose, the Director of Industry Operations will, from time to time, issue specific directions as to the operation of gas manufacturing, transmission, storage, distribution, and other facilities, and as to deliveries of gas.

(c) Limitation on Deliveries of Natural or Mixed Natural and Manufactured Gas.

(1) In the event that the supply of natural or mixed
[fol. 8274] natural and manufactured gas available in an area served by any Utility is insufficient to meet the demand therefore, and reduction in deliveries to Consumers becomes necessary, the Utility supplying such area shall reduce deliveries to its Consumers in the following manner and in accordance with such other specific directions as the Director of Industry Operations may from time to time issue:

(i) First, the Utility shall, within the limits of its contractual rights, reduce deliveries to all dump or surplus Consumers not engaged in war production, and deliveries

to Consumers who have Standby Facilities, the operation of which can directly or indirectly reduce the total demand for natural or mixed natural and manufactured gas in the area.

(ii) Second, the Utility shall to the extent necessary, operate all of its available gas manufacturing equipment so as to effect directly or indirectly the maximum increase in the supply of gas in the area.

(iii) Third, the Utility shall, without regard to its contractual rights or those of any Consumer, reduce deliveries to all other Consumers who have Standby Facilities to the extent that the operation of such facilities can directly or indirectly alleviate the shortage of natural or mixed natural and manufactured gas in the area, and no such Consumer, after notification of the reduction in deliveries required shall accept deliveries of gas unless his [Fol. 8275] Standby Facilities are being operated so as to effect the required reduction in his purchase of gas.

(iv) Fourth, the Utility shall, without regard to its contractual rights or those of any Consumer, reduce as far as practicable deliveries to Consumers in such manner as will cause the least interference with war production, and each Consumer who receives notification of the reduction in deliveries required shall reduce his acceptance of deliveries accordingly.

(2) Whenever any Utility finds it necessary to make any reduction in deliveries of gas to any Consumer in accordance with paragraphs (c) (1) (iii) and (c) (1) (iv) of this Order, it shall promptly notify the Consumer and at the same time give telegraphic notice therof, to the Power Branch, War Production Board.

(3) Following each such shortage period, each affected Utility shall submit a detailed report of the quantities of gas conserved by the operation of Standby Facilities and the duration of curtailment and the extent to which each industrial Consumer was curtailed. Such report shall be filed on Form PD-283.

(4) Any consumer who considers that any reduction in deliveries to him interferes materially with war production shall have the right to apply by telegram for relief

to the Director of Industry Operation, who may grant such [fol. 8276] specific exemptions or take such other action as may be consistent with the purposes of this Order. Such application shall state the nature of the war materials being manufactured, the extent to which production has been curtailed because of reduced delivery of gas, and the increase in delivery of gas required for restoration of full production.

(5) No consumer shall be relieved of the requirements of section 944.2 or any other section of Priorities Regulation No. 1 Amended, by reason of the provisions of this paragraph (c). (d) Restrictions upon Increased Deliveries to Non-residential Consumers. No Utility shall, after ten days following the effective date of this Order, deliver natural or mixed natural and manufactured gas to any new non-residential Consumer in the areas specified in Exhibit "A" annexed hereto, as the same may be amended from time to time, or increase deliveries of such gas to any existing non-residential Consumer in such areas for the operation of any new gas equipment, unless:

(1) Such new existing non-residential Consumer shall have installed, prior to the date of the increase in deliveries, Standby Facilities of sufficient capacity to replace the new or increased deliveries of such gas during periods of shutoff, or

(2) Such new or existing non-residential Consumer cannot reasonably use any fuel other than gas, natural, or mixed natural and manufactured, because of technical utilization factors or process requirements.

[fol. 8277] (3) Such new delivery or increase in deliveries shall have been specifically approved in advance by the Director of Industry Operations. Any Consumer or Utility who considers that such deliveries are necessary for war production may apply for such approval to the Director of Industry Operations, who may grant such specific exemptions or take such other action as may be consistent with the purpose of this Order. (e) Prohibition against Delivery to New Space Heating Installations.

(1) No Utility shall deliver and no Consumer shall accept delivery of natural gas or mixed natural and manufactured gas in the areas specified in Exhibit "A" annexed hereto; as the same may be amended or modified from time to time by the Director of Industry Operations, for either of the following purposes:

(i) for the operation of central space heating equipment (or for heating requirements of the premises), unless such equipment was installed prior to March 1, 1942, or unless, in the case of new construction, the equipment was specified in the construction contract, and the foundation under the main part of the structure in which the equipment is to be installed was completed prior to March 1, 1942; or

(ii) for the operation of central space heating equipment for (or heating equipment supplying the major portion of the heat requirements of the premises), which has [fol. 8278] been converted from other fuel to natural or mixed natural and manufactured gas unless such conversions has been completed prior to ten days after the effective date of this Order.

(2) Any Utility affected by the provisions of this paragraph (e) or any governmental agency which considers that supply of gas available on any particular system or portion thereof is adequate to take care of all existing and estimated future requirements of war industry, and unrestricted civilian use for the period ending April 1, 1944, may apply for exemption of the system or any portion thereof from the provisions of this paragraph to the Director of Industry Operations, who may grant such specific exemptions or take such other action as may be consistent with the purposes of this Order.

(f) Appeal. Any person affected by this Order who considers that compliance therewith would work an exceptional and unreasonable hardship on him may appeal for relief to the Director of Industry Operations, who may grant such specific exemptions or take such other action as may be consistent with the purposes of this Order.

(g) Reports and Information.

(1) Each Utility shall keep and preserve for not less than two years accurate and complete records concerning deliveries of natural gas to Consumers.

(2) Such records shall be subject to inspection by duly, [fol. 8279] authorized representatives of the War Production Board.

(2) All persons affected by this Order shall execute and file with the War Production Board such reports and questionnaires as said Board shall, from time to time, request. (h) Communications to War Production Board. All reports required to be filed hereunder, and all communications concerning this Order, shall, unless otherwise directed, be addressed to:

"War Production Board

Washington, D. C. Ref.: L-31"

(i) Violations. Any persons who wilfully violates any provisions of this Order, or any other order, direction or regulation, issued pursuant hereto, or who by any act or omission falsifies records to be kept or information to be furnished pursuant to this Order, may be prohibited from delivering or receiving gas, or any other material subject to allocation, and such further action may be taken as is deemed appropriate, including a recommendation for prosecution under Section 35 (A) of the Criminal Code (18 USC. 80).

(j) Effective Date. This Order shall take effect immediately and, unless sooner terminated, shall continue in full force and effect until April 1, 1943.

(P.D. Reg. 1 Amended, Dec. 23, 1941, 6 F.R. 8680; W.P.B. Reg. 1, Jan. 26, 1942, 7 F.R. 561; E.O. 9024, Jan. [fol. 8280] 16, 1942, 7 F.R. 329; E. O. 9040, Jan. 24, 1942, 7 F.R.; sec. 2 (a), Public No. 671, 76th Congress, Third

Session, as amended by Public No. 89, 77th Congress, First Session.)

Issued this 16th day of February, 1942.

J. S. KNOWLSON,
Director of Industry Operations.

Exhibit A

Areas subject to prohibitions contained in paragraph (e) of Limitation.

California—District of Columbia—Georgia—Illinois—Indiana—Kentucky—Maryland—Michigan—Mississippi—(except the area served by the United Gas Pipe Line Company)

Missouri — New York — Ohio — Pennsylvania — Tennessee—Virginia—West Virginia.

[fol. 8284] Trial Examiner: Proceed, Mr. Littman.

By Mr. Littman:

Q. Will you please refer to the 1941 financial statement of Michigan Gas Transmission Corporation which has been identified as Exhibit No. 163 and state whether the operating and maintenance expenses, exclusive of gas purchase cost, taxes and depreciation, amounted to $417,848 for the year ended December 31, 1941?

A. Mr. Littman, don't you think it might be well for you to give me the figures that you used and where you located them?

Mr. Littman: Yes, I think I could do that. The figures which go to make up the amount of $417,848 are shown on Page 4-B of Exhibit 163.

Mr. Wheat: Do they appear on that page as a single figure at any place, Mr. Littman?

Mr. Littman: I had not completed my explanation.

Mr. Wheat: Pardon me.

By Mr. Littman:

Q. The total operating expenses shown for the full year 1941 on that page amount to $4,506,302.99, do they not? A. Yes, sir.

Q. Following the method that you have used to arrive at the sums called "Net for cash fund computation" shown on Page 2 of your Exhibit 94, we first deduct "gas pur-
[fol. 8282] chased—others" in the amount of $3,249,178.39. Do you find that? A. I do, yes, sir.

Q. We then deduct the item shown on Page 4 of Exhibit 163 called "Taxes — Federal" in the amount of $329,837.20. Do you find that? A. Yes, sir.

Q. And also there is deducted the State taxes as shown in the amount of $142,655.06. Do you find that?

A. Yes, sir.

Q. Then a deduction is made for depreciation called "Provision for retirements & depletion" in the amount of $366,785.40? A. I find that item, yes, sir.

Q. Now, after those deductions are made, there is a total produced of $417,848. Is that right?

A. $417,854.94, I believe.

Q. Yes, the difference is probably because we dropped the pennies in our calculation. A. Yes.

Q. Now, that figure which you have just read of $417,000-odd is comparable, is it not, to the sum of $349,301.30 shown on Page 2 of your Exhibit 94 for the year ended June 30, 1941 called "Net for cash fund computation," is it not?

A. With one exception. You have not excluded in your latter figure the prepayments that were included in our [fol. 8283] operating expenses.

Q. Suppose you deduct those.

A. That is impossible because it would be a very meticulous computation and the amount is not very large.

Q. It would not affect—

A. (Interposing) Not materially, no, Mr. Littman.

Q. All right. You understand what we are seeking to do now is to apply your method to get the figure for the year ended December 31, 1941? A. Yes, sir.

Q. Now, in order to get the amount comparable to that which you allow for cash funds for operating expenses, we must take 45/365 of the $417,800-odd figure, do we not? A. Yes, that is correct.

Q. And what is the result of that? We get $51,520, is that about right?

A. That is approximately correct, Mr. Littman.

Q. In other words, if the Commission were to take the company's book figures for the full year, 1941, rather than for the period which you used ended June 30, 1941, the result would be $51,520 as compared with the figure which you have used?

A. Approximately that amount, Mr. Littman. I have not completed the computation. I simply roughed it off and know it would be in the neighborhood of $50,000.

[fol. 8284] Q. And that is comparable to your figure of $447,175.05 "Cash fund operating expenses" shown on Page 1 of Exhibit 94? A. That is correct, yes, sir.

Q. In other words, a slightly higher figure would result? A. Yes, sir.

Q. Now, the next item which you show on Page 1 of your Exhibit 94 for working capital is an item of $100,723.78 for materials and supplies. What was the actual amount of materials and supplies on hand at June 30, 1941, as shown on the company's books?

A. The amount was $93,412.78.

Q. Now, Mr. Haberly repriced certain of the materials and supplies which resulted in an upward revision of that figure to the extent of $7,311, did he not? A. That is correct.

Q. Making the total which you have used on Page 1 of your Exhibit 94 $100,723.78? A. That is correct, yes, sir.

Q. What was the amount of materials and supplies on hand at December 31, 1941, as shown by the company's books?

A. Shown by the company's books and as reported on Page 1 of Exhibit 163, Line 53, the amount of materials and supplies on hand was $115,053.90.

Q. Do you know the average monthly inventory of materials and supplies for the full year 1941?

[fol. 8285] A. No, sir, I do not.
